PREFACE

With the enactment of the Hazardous Materials Transportation Act in early 1975, the U.S. Department of Transportation (DOT) was called upon to consolidate the multi-modal regulatory power in unified offices, not oriented toward any particular mode of transportation. Although the regulations pertaining exclusively to a single mode of transportation are still under some degree of control by the appropriate modal DOT operating administration, the bulk of the authority for issuing the hazardous materials regulations is now the province of the DOT, Materials Transportation Bureau (MTB). Within the MTB are two offices, one pertaining to pipeline safety and another devoted specifically to hazardous materials, called the Office of Hazardous Materials Operations (OHMO). The regulations naturally evolved along the lines of the administrative groups that were handling them. Thus, until the massive regulatory consolidation accomplished in DOT's rule making Docket No. HM-112, the regulations for air shipment and water shipment have appeared in different places than those for rail and highway shipments.

The regulations of the Federal government generally are found in a series of volumes called the Code of Federal Regulations (CFRs). The CFRs are divided into titles, or subject groupings, with a total of 50 titles in all.

Title 49 of the total of 50 titles is addressed to "Transportation." In turn, Title 49 is divided into subtitles and chapters, each of which contain a designated series of "Parts," such as: Chap. I Materials Transportation Bureau (Parts 100-199).

As part of its responsibility for regulating the transportation of hazardous materials over the nations' highways, the U.S. Department of Transportation developed specifications for cargo tanks used to transport hazardous materials in bulk. This report will focus on two types of pressurized cargo tanks (MC 330 & MC 331) used in the transportation of these commodities. The structural design specifications for the tank types such as the MC 331*, are contained in the Code of Federal Regulations, Title 49, Part 178, Subpart J, "Specifications for Containers for Motor Vehicle Transportation."

The American trucking industry is regulated in a multitude of ways by various components of the Department of Transportation. All pertinent safety aspects of the vehicle, its driver, and the roadway he runs on are affected by DOT regulations. So too, with regard to hazardous materials cargo, DOT regulations apply to motor carriers. There are two sets of regulations that are administered by the Bureau of Motor Carrier Safety that may apply: The Motor Carrier Safety Regulations, particularly 49 CFR Parts 390-397, and the Hazardous Materials Regulations, particularly 49 CFR Parts 172, 173 and 177.

* New construction of the MC 330 is not authorized and accordingly the specifications have been dropped from the Code of Federal Regulations. However, the MC 330 may be continued in service.

TABLE OF CONTENTS

INTRODUCTION

Under Section 177.824 (f) Title 49, Code of Federal Regulations, each motor carrier is required to file with the Director, DOT, Bureau of Motor Carrier Safety (BMCS), a written listing of all MC 330 and MC 331 Cargo tanks which it has in service, and upon placing new vehicles in service or withdrawing such vehicles from service, a supplemental report to BMCS is required. These filings currently numbering in excess of 5,000 are stored in hardcopy by BMCS.

Cargo tank motor carriers are required to file their reports with the BMCS. The majority of the motor carriers use the National Tank Truck Carriers Suggested Report Form #1 (see Appendix B), others use an equivalent form. These forms are sent to the BMCS in Washington D.C. where they are validated, after which, copies are forwarded to the Transportation Systems Center (TSC) in Cambridge, Massachusetts, for data processing and analysis.

Prior to November 1979, the data collected on report form #1 was compiled and reported in a series of hard copy documents. A problem central to the standardized report approach is the inevitable difficulty in analyzing the data, since data extraction becomes slow, labor intensive and at times, costly.

In the fall of 1979, TSC was invited by BMCS to participate in a review of the existing cargo tank registration system. This review provided the basis for an approach to implement an automated data management system. The objectives were to build a system which enables the BMCS to fully utilize the data by converting it to a machine readable form, store it in a computerized data base making it easily accessible and provide report generating capabilities.

To establish the data base, TSC selected the data base reporting system known as System 1022. This system is considered by many, to be a leading method of reporting from a computer-stored data base with simple entry commands and the flexibility of report format modification. Upon receipt of the forms at TSC, they are reviewed individually and processed into the cargo tank registration data base on TSC's DECsystem-10 computer. The reports received from the carriers cover the years 1968 to 1979.

Information required by Section 177.824(f) Title 49, CFR was the basis for designing the information system. The elements needed to establish the data base were extracted from report form #1. All of these elements were used to create the format of a cargo tank data record. The record information was divided into two sections (or files); Table C-1 (see Appendix C) - information regarding actual tank cars, i.e., equipment number, manufacturer's name*, serial number, etc., and Table C-2 - Name and address information. The decision to split the data had two purposes; first, to eliminate the storage of redundant data and secondly, to provide a name and address file to generate future letters to motor carriers automatically.

1.0 SUMMARY OF STATISTICS

SUMMARY OF STATISTICS

- 540 Motor Carriers reported to BMCS under section 177.824(f) Title 49, CFR.
- 8074 Cargo Tanks were reported, of which:
 - 7866 Cargo Tanks were reported to be in-service as follows:
 - 3596 MC 330 Cargo Tanks
 - 3531 MC 331 Cargo Tanks
 - 24 ASME* Cargo Tanks
 - 715 Cargo tanks of unknown specifications
 - 3748 Cargo Tanks constructed of quenched and tempered steel (QT).
 - 3954 Cargo Tanks not constructed of quenched and tempered steel (NQT)
 - 164 Cargo Tanks with steel construction unknown
- 706 Twin Tanks (7160 Cargo Tanks are non-twin).
- 208 Cargo Tanks were withdrawn from service.

*Note: Carriers inadvertently reported by the ASME code in lieu of the DOT specifications.

*Cargo tanks manufactured after March 31, 1974 must have internal shutoff valves at discharge openings.

U.S. DEPARTMENT OF TRANSPORTATION

FEDERAL HIGHWAY ADMINISTRATION

BUREAU OF MOTOR CARRIER SAFETY

Figure A-1. Specification MC 331 Cargo Tank for Compressed Gases.

MC 331 Cargo Tanks

A typical specification MC 331 cargo tank is illustrated in Fig. A-1. These tanks are used to transport compressed gases such as LPG, chlorine, and anhydrous ammonia. The specifications are given in Section 178.337 title 49, Code of Federal Regulations. These specifications were originally issued in 1965 and applied to tanks constructed after September 1, 1965.

separately at the other location or in the side of the shell. (3) One plugged opening of 2-inch National Pipe Thread or less provided for maintenance purposes may be located elsewhere. (4) Loading and unloading connections may be located in the bottom of the tank.

(d) *Reflective design.* Every uninsulated cargo tank permanently attached to a tank motor vehicle shall, unless it be covered with a jacket made of aluminum, stainless steel, or other bright non-tarnishing metal, be painted all over a white, aluminum, or similar reflecting color.

(e) *Insulation for carbon dioxide, chlorine and nitrous oxide cargo tanks.* See § 73.33(p) of this chapter.

§ 78.336-2 Material.

(a) *General.* All material used for the construction of the tank and appurtenances shall be suitable for use with the commodity to be transported therein. See also § 73.33(n) of this chapter.

(b) *For chlorine.* All plates for tank, manway nozzle and anchorage of tanks used in the transportation of chlorine must be made of steel complying with requirements of A.S.T.M. Specification A-300-52T titled "Steel Plates for Pressure Vessels for Service at Low Temperatures," Class 1, Grade "A", flange or fire box quality. Impact test specimens made by the plate manufacturers shall be of the Charpy Keyhole notch type and must meet impact requirements (in both longitudinal and transverse directions of rolling) of this specification at a temperature of minus 50° F.

§ 78.336-3 Thickness of metal.

(a) Material thickness shall be as required by the Code (see § 78.336-1(a)), except that material of thickness less than $\frac{3}{16}$ inch shall not be used for the shell; heads and protective housings or devices, except for chlorine tanks the wall thickness shall be not less than $\frac{3}{16}$ inch, including corrosion allowance.

§ 78.336-4 Joints.

(a) Joints shall be as required by the Code (see § 78.336-1(a)).

§ 78.336-5 Bulkheads, baffles and ring stiffeners.

(a) No applicable provision.

§ 78.336-6 Closures for manholes.

(a) No applicable provision.

§ 78.336-7 Overturn protection.

(a) See § 78.336-10.

§ 78.336-8 Outlets.

(a) See § 78.336-1(c).

§ 78.336-9 Safety relief devices, valves and connections.

(a) *Safety relief devices.* See § 73.315 (l) of this chapter.

(b) *Piping, valves and fittings.* See § 73.33(m) of this chapter. For manifolding of cargo tank containers, see § 73.301(f) of this chapter.

(c) *Marking inlets and outlets.* All tank inlets and outlets, except safety relief valves, shall be marked to designate whether they communicate with vapor or liquid when the tank is filled to the maximum permitted filling density.

(d) *Refrigerating and heating coils.* See § 73.33(q) of this chapter.

§ 78.336-10 Protection of fittings.

(a) All valves, fittings, accessories, safety relief devices, gauging devices, and the like shall be adequately protected against mechanical damage.

Exception: On chlorine tanks there shall be a protective housing and cover plate conforming to the Chlorine Institute, Inc., Dwg. 137-1 dated November 7, 1962 to permit the use of standard emergency kits for controlling leaks in fittings on the dome cover plate.

(b) The protective device or housing shall comply with the requirements under which the tanks are fabricated with respect to design and construction, and shall be designed to withstand static loadings in any direction equal to twice the weight of the tank and attachments when filled with the lading using a safety factor of not less than four, based on the ultimate strength of the material to be used.

§ 78.336-11 Emergency discharge control.

(a) *Excess-flow valves.* See § 73.33 (c) of this chapter.

(b) *Shut-off valves.* See § 73.33(c) (3) of this chapter.

§ 78.336-12 Shear section.

(a) No applicable provision.

§ 78.336-13 Anchoring of tank.

(a) *Hold-down devices.* Adequate "hold-down" devices shall be provided which will anchor each cargo tank to the cradle, frame or chassis in a suitable and safe manner that will not introduce undue concentration of stresses. The

§ 178.337-3

Title 49—Transportation

made on a lot basis. A lot is defined as 100 tons or less of the same heat treatment processing lot having a thickness variation no greater than plus or minus 25 percent. The minimum impact required for full size specimens must be 20 foot-pounds in the longitudinal direction at -30° F., Charpy V-Notch and 15 foot-pounds in the transverse direction at -30° F., Charpy V-Notch. The required values for subsize specimens must be reduced in direct proportion to the cross-sectional area of the specimen beneath the notch. If a lot does not meet this requirement, individual plates may be accepted if they individually meet this requirement.

(3) The fabricator shall record the heat, and slab numbers, and the certified Charpy impact values, where required, of each plate used in each tank on a sketch showing the location of each plate in the shell and heads of the tank. Copies of each sketch shall be provided to the owner and retained for at least five years by the fabricator and made available to duly identified representatives of the Department of Transportation.

(4) The direction of final rolling of the shell material shall be the circumferential orientation of the tank shell.

(b) *For a chlorine tank.* Plates, the manway nozzle, and anchorage shall be made of carbon steel which meets the following requirements:

(1) For a tank manufactured on or before December 31, 1974—

(i) Material shall conform to ASTM Specification A-300 -58, titled "Steel Plates for Pressure Vessels for Service at Low Temperatures";

(ii) Material shall be Class 1, Grade A, flange or firebox quality;

(iii) Plate impact test specimens, as required under paragraph (a) of this section, shall be of the Charpy key-hole notch type; and

(iv) Plate impact test specimens shall meet the impact test requirements in paragraph (a) of this section in both the longitudinal and transverse directions of rolling at a temperature of minus 45.5 C. (-50° F.).

(2) For a tank manufactured on or after January 1, 1975—

(i) Material shall conform to ASTM Specification A-612-72a, Grade B or A-516-72, Grade 65 or 70;

(ii) Material shall meet the Charpy V-notch test requirements of ASTM Specification A-20-72a; and

(iii) Plate impact test specimens shall meet the impact test requirements in paragraph (a) of this section in both the longitudinal and transverse directions of rolling at a temperature of minus 40° C. (-40° F.).

(c) *For ammonia.* See § 173.33(g)(1) of this subchapter.

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53 (e)) [Order 59-B, 30 FR 579, Jan. 16, 1935. Redesignated at 32 FR 5606, Apr. 5, 1967]

NOTE: For amendments to § 178.337-2 see the List of CFR Sections Affected appearing in the Finding Aids section of this volume.

§ 178.337-3 Thickness of tank metal.

(a) Tank metal thickness must be as required by the ASME Code and paragraph (b) of this section, except that metal of thickness less than three-sixteenths inch may not be used for the shell or heads. A corrosion allowance of 20 percent or 0.10 inch, whichever is less, must be added to the thickness otherwise required for sulfur dioxide and chlorine tank material. In chlorine tanks the wall thickness must be at least five-eighths inch, including corrosion allowance.

(b) The minimum thickness of metal in the tank shell must be such that at no point therein will the stress on a plane normal to the cylindrical axis exceed 25 percent of the minimum specified tensile strength of the metal. For purposes of this requirement, calculation must be made by the formula:

$$S = (T/2) + [(T^2/4) + S_e^2]^{0.5}$$

where, at any given point under consideration and for the worst combination of loadings:

S=Effective stress as limited by this requirement;

§ 178.337-7

may not be located on the front head of the tank.

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53(e))
[Amdt. 178-7, 34 FR 18250, Nov. 14, 1969, as amended by Amdt. 178-52, 43 FR 58820, Dec. 18, 1978]

§ 178.337-7 Overturn protection.

(a) See § 178.337-10.

[Order 59-B, 30 FR 580, Jan. 16, 1965. Re-designated at 32 FR 5606, Apr. 5, 1967]

§ 178.337-8 Outlets.

(a) *Outlets generally.* (1) An opening shall be provided on each tank used for the transportation of liquefied materials to afford complete drainage.

(2) With the exception of gauging devices, thermometer wells, and safety relief valves, every opening in every tank used for the transportation of compressed gases other than carbon dioxide shall be (i) closed with a plug, cap, bolted flange, or plate or (ii) protected with an excess flow valve or back flow check valve (see § 178.337-11(a)) or (iii) be fitted with a remote control valve as specified in § 178.337-11(c).

(b) *Chlorine tank valves.* See § 173.33(f)(9), (h) (4), and (5) of this subchapter. Regarding chlorine tank outlets, see also § 178.337-1(c)(2) of this part.

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53 (e))

[Order 59-B, 30 FR 580, Jan. 16, 1965. Re-designated at 32 FR 5606, Apr. 5, 1967]

NOTE: For amendments to § 178.337-8 see the List of CFR Sections Affected appearing in the Finding Aids section of this volume.

§ 178.337-9 Safety relief devices, valves and connections.

(a) *Safety relief valves.* (1) See § 173.315(i) of this subchapter.

(2) On tanks for carbon dioxide or nitrous oxide see § 173.315(i)(9) and (i)(10) of this subchapter.

(3) Each valve must be designed, constructed, and marked for a rated pressure not less than the tank design pressure at the temperature expected to be encountered.

(b) *Piping, valves, and fittings.* (1) See § 173.33(f) (1) and (3) of this subchapter.

(2) Piping and fittings must be in conformance with § 173.33(f) of this

Title 49—Transportation

subchapter and must be protected from damage as required by § 178.337-10 of this section.

(c) *Marking inlets and outlets.* All tank inlets and outlets, except safety relief valves, shall be marked to designate whether they communicate with vapor or liquid when the tank is filled to the maximum permitted filling density.

(d) *Refrigeration and heating coils.*

(1) Refrigeration and heating coils, when installed in any tank, shall be securely anchored with provision for thermal expansion. They shall be tested externally to at least the tank test pressure, and internally to at least the tank test pressure or at least twice the working pressure of the heating or refrigeration system, if higher, and the tank shall not be placed in or returned to transportation service if any leakage or other evidence of damage is found in these tests. The refrigerant or heating medium to be circulated through the coils must be such as to cause no adverse chemical reaction with the tank or tank contents in case of leakage.

(2) Where any liquid susceptible to freezing, or the vapor of any such liquid, is used for heating or refrigeration, the heating or refrigeration system shall be arranged to permit complete drainage.

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53(e))

[Order 59-B, 30 FR 580, Jan. 16, 1965. Re-designated at 32 FR 5606, Apr. 5, 1967]

NOTE: For amendments to § 178.337-9 see the List of CFR Sections Affected appearing in the Finding Aids section of this volume.

§ 178.337-10 Protection of fittings.

(a) All valves, fittings, safety relief devices, and other accessories to the tank proper shall be protected in accordance with paragraph (b) of this section against such damage as could be caused by collision with other vehicles or objects, jackknifing and overturning. In addition, safety relief valves shall be so protected that in the event of overturn of the vehicle on to a hard surface, their opening will not be prevented and their discharge will not be restricted.

(b) The protective devices or housing must be designed to withstand static loading in any direction equal to twice

§ 178.337-12

tuating means may be mechanical. This station must be at one end of the tank, away from the discharge connection area.

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53(e))
[Order 59-B, 30 FR 581, Jan. 16, 1965. Redesignated at 32 FR 5606, Apr. 5, 1967]

NOTE: For amendments to § 178.337-11 see the List of CFR Sections Affected appearing in the Finding Aids section of this volume.

§ 178.337-12 Shear section.

(a) Design or installation of valves specified in § 178.337-8(a)(2) shall provide adjacent to and outboard of such valves a section which will break under undue strain.

[Order 59-B, 30 FR 581, Jan. 16, 1965. Redesignated at 32 FR 5606, Apr. 5, 1967]

§ 178.337-13 Supporting and anchoring.

(a) A cargo tank that is not permanently attached to or integral with a vehicle chassis must be secured by turnbuckles or equally efficient securing devices for drawing the tank down tight on the frame. Anchors, stops, or other means must be provided to prevent relative motion between the tank and the vehicle chassis when the vehicle is in operation.

(b) A tank motor vehicle designed and constructed so that the cargo tank constitutes in whole or in part the stress member used in place of a frame must have the tank supported by external cradles. A cargo tank mounted on a frame must be supported by external cradles or longitudinal members. The cradles, where used, must subtend at least 120 degrees of the shell circumference. The design calculations for the supports must include beam stress, shear stress, torsion stress, bending moment, and acceleration stress, for the loaded vehicle as a unit, using a factor of safety of 4, based on the ultimate strength of the material and on a 2 "g" longitudinal and lateral loading and 3 times the static weight in vertical loading (see Appendix G of the ASME Code).

(c) Where any tank support is attached to any part of a tank head, the stresses imposed upon the head shall be provided for as required in paragraph (b) of this section.

Title 49—Transportation

(d) No tank support or bumper may be welded directly to the tank. All supports and bumpers shall be attached by means of pads of the same material as the tank. The pad thickness shall be no less than ¼ inch, or the thickness of the shell material if less, and no greater than the shell material. Each pad shall extend at least 4 times its thickness, in each direction, beyond the weld attaching the support or bumper. Each pad shall be preformed to an inside radius no greater than the outside radius of the tank at the place of attachment. Each pad corner shall be rounded to a radius at least one-fourth the width of the pad, and no greater than one-half the width of the pad. Weep holes and telltale holes, if used shall be drilled or punched before the pads are attached to the tank. Each pad shall be attached to the tank by continuous fillet welding using filler material having properties conforming to the recommendations of the maker of the shell and head material.

[Order 59-B, 30 FR 581, Jan. 16, 1965. Redesignated at 32 FR 5606, Apr. 5, 1967, and amended by Amdt. 178-29, 38 FR 27598, Oct. 5, 1973]

§ 178.337-14 Gauging devices.

(a) *Liquid level gauging devices.* See § 173.315(h) of this subchapter.

(b) *Pressure gauges.* See §§ 173.33(f)(7) and 173.315(h) of this subchapter.

(c) *Orifices.* See § 173.315(h) (3) and (4) of this subchapter.

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53(e))
[Amdt. 178-29, 38 FR 27599, Oct. 5, 1973 as amended by Amdt. 178-51, 43 FR 48646, Oct. 19, 1978]

§ 178.337-15 Pumps and compressors.

See § 173.33(f) (6) and (10) of this subchapter.

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53(e))
[Amdt. 178-29, 38 FR 27599, Oct. 5, 1973 as amended by Amdt. 178-51, 43 FR 48646, Oct. 19, 1978]

§ 178.337-16 Testing.

(a) *Inspection and tests.* Inspection of materials of construction of the tank and its appurtenances and original test and inspection of the finished

each valve and the arrangement of all piping associated with the tank.

(1) The certificate must contain a statement indicating whether or not the cargo tank was postweld heat treated for anhydrous ammonia as specified in § 178.337-1(f).

(b) The owner shall retain the copy of the data report and certificates and related papers in his files throughout his ownership of the tank and for at least one year thereafter; and in the event of change in ownership, retention by the prior owner of nonfading photographically reproduced copies will be deemed to satisfy this requirement. Each motor carrier using the tank, if not the owner thereof, shall obtain a copy of the data report and certificate and retain them in his files during the time he uses the tank and for at least one year thereafter.

[Order 59-B, 30 FR 583, Jan. 16, 1965. Redesignated at 32 FR 5606, Apr. 5, 1967, and amended by Amdt. 178-7, 34 FR 18250, Nov. 14, 1969; Amdt. 178-37, 40 FR 24904, June 11, 1975]

APPENDIX D

DEFINITIONS

DEFINITIONS

Cargo Tank

A cargo tank is a bulk liquid or gas tank not permanently mounted on a highway vehicle chassis but which by reason of its size, construction, or attachment to the chassis is loaded or unloaded without being removed from the chassis. Each cargo tank used for the shipment of gases must be marked with the shipping name of the contents, although it is permitted to mark such tanks with an appropriate common name for the material such as "Refrigerant Gas."

Letters must be at least two inches high with a one-fourth inch stroke in the prescribed colors. This marking is in addition to the placarding required for cargo tanks transporting gases. As with portable tanks, marking the name of one material on the cargo tank precludes its use with another material unless the first marking is removed or appropriately changed to reflect the current contents.

Each DOT specification MC 330 and MC 331 cargo tank must be appropriately marked "QT" or "NQT" to indicate whether it is constructed of quenched and tempered steel or of some other material. Cargo tanks, of course, must bear the appropriate specification markings, described in detail in the specifications for each tank. The "QT" or "NQT" must be marked near this specification marking.

Carrier

A person engaged in the transportation of passengers or property (1) by land or water as a common, contract or private carrier, or (2) by civil aircraft.

Bureau of Motor Carrier Safety

A bureau of the Federal Highway Administration of the Department of Transportation. One of the many responsibilities of the the BMCS is to employ specialists in the inspection of hazardous materials shipped by highway and the enforcement of regulations on such transportation.

Hazardous Material

"Hazardous material" means a substance or material which has been determined by the Secretary of Transportation to be capable of posing an unreasonable risk to health, and safety, and property when transported in commerce, and which has been so designated.
