ARCHIVE DATA TAPE LIBRARY (ADTL)

DIRECTORY JULY 1983

Preface

As a result of the Centerwide reorganization in the Fall of 1982, the Center for Transportation Information (CTI) assumed many of the functions previously administered by the Transportation Information Division (DTS-23). One function was to provide a central point for the receipt and disposition of complex data sets. This function was achieved by establishing and operating the Archive Data Tape Library (ADTL).

The purpose of this directory is to describe the procedures involved in using the ADTL as well as to identify and describe the data tapes contained in the ADTL.

INTRODUCTION

The Archive Data Tape Library (ADTL) at TSC contains approximately 3,000 statistical data tapes and receives in the neighborhood of 300 additional tapes each year. The objective of the ADTL is to provide to the transportation community information to support their research projects. The ADTL provides the cataloging and storage mechanism for data tapes received at TSC.

This directory provides a listing of the data tapes contained in the ADTL by mode of transportation, identifying each tape's archive number, control number, title, time span, subject, abstract, tape characteristics, etc.

A computerized data base has been developed by CTI in order to store information pertaining to each data tape and to allow on-line searches by a number of keywords including subject matter, title, transportation category, etc. This system, the Automated Archive Data Tape Library (AADTL), provides users with on-line searches and report generation and is described in detail in the TSC's Automated Archive Data Tape Library (AADTL) User Manual, July 1983.

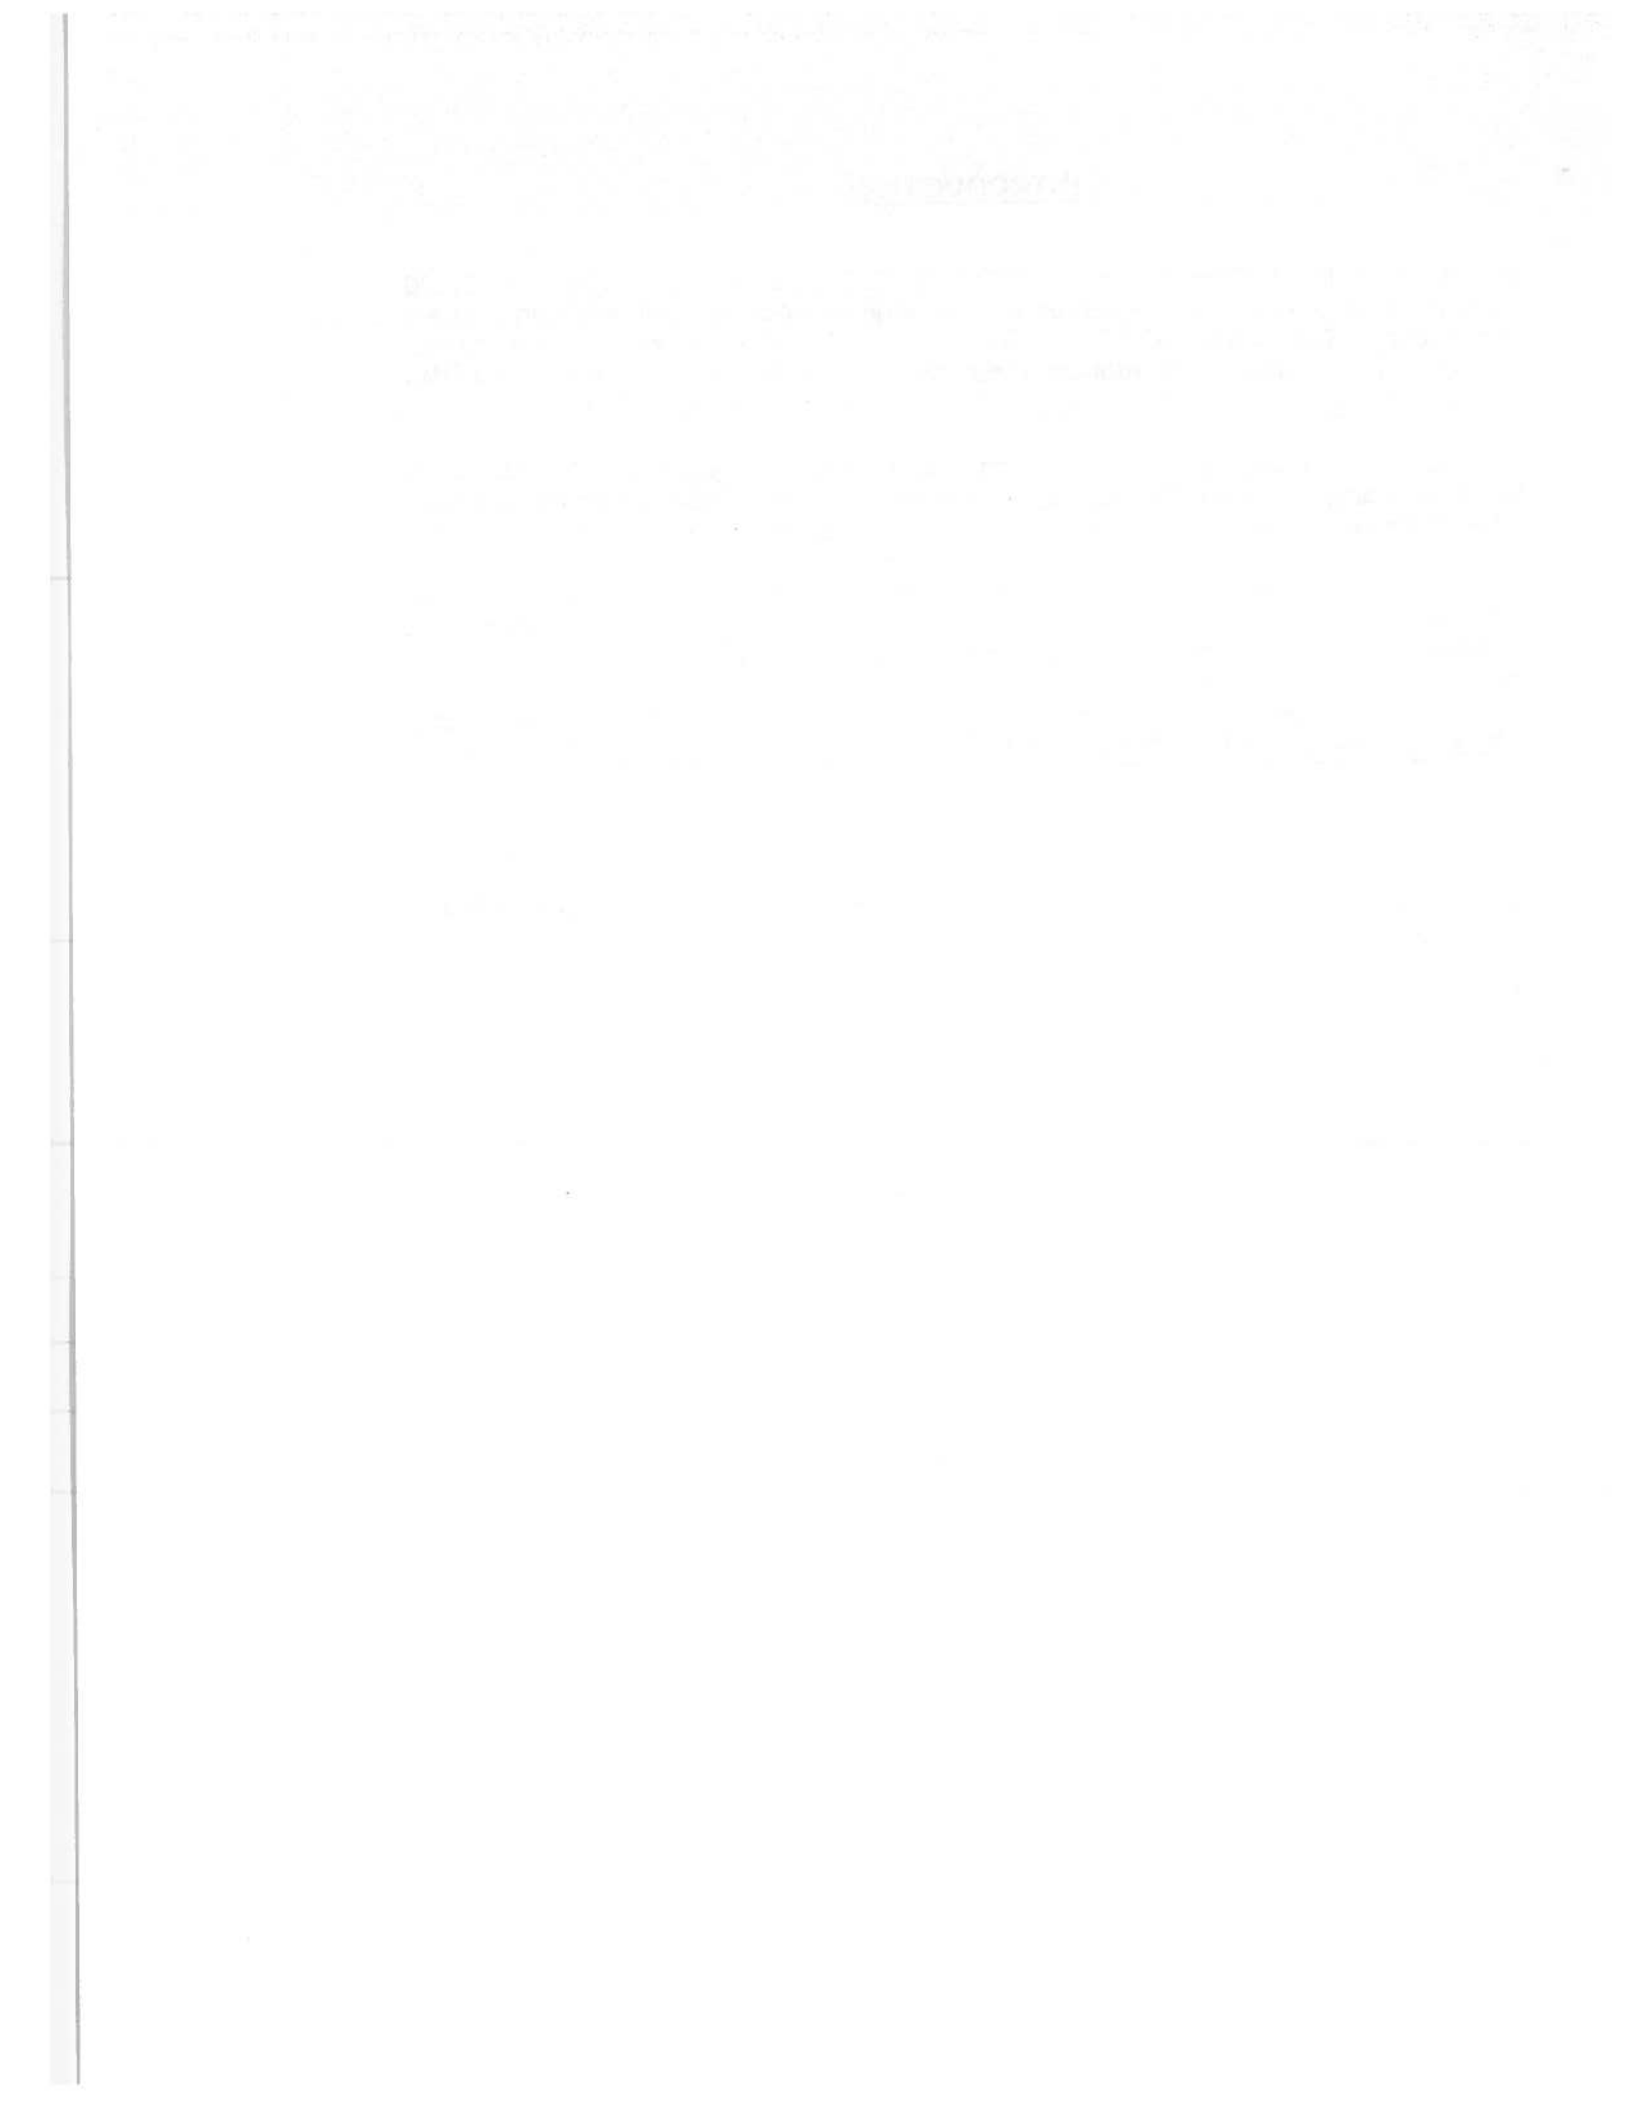

A bibliography of statistical and/or data base sources of transportation related information is provided for researchers who may require additional information.

Questions related to the ADL data tapes and the AADTL on-line query system should be directed to one of the following individuals:

ADTL
William D. Boucher
ADTL Information Analyst, Raytheon Service Company

AADTL
William F. Gay
AADTL Task Manager, Center for Transportation Information

Pamela Spaulding
AADTL Information Analyst, Center for Transportation Information

ADTL PROCEDURES

Data Base Acquisition Procedures

When a member of the TSC staff has a requirement for a specific data base, and has determined that the data base is not available in-house, it is his/her responsibility, in coordination with the ADTL, to locate the data source. All pertinent information regarding the source and the nature of the data base is documented and presented to the Center for Transportation Information (CTI) for review. CTI assists in a make/buy decision, advising on technical problems, alternatives, and contracting sources. Justification for its purchase and allocation of funds are then noted. The appropriate procurement forms are presented to the ADTL information analyst for the tape characteristics required to assure compatibility with TSC computing equipment. Appropriate signatures are obtained and the purchase order submitted to the Acquisition Division. All TSC data tapes are shipped directly to the ADTL before going to the initiator for the purpose of logging in the tape(s) and checking the enclosed documentation. The initiator is then notified of the receipt of the data, and decides on whether to store the tape or to hold for immediate processing.

Depositing a Data Base in the ADTL

Whenever a TSC staff member has data base tapes not already resident in the ADTL; and if those tapes are judged by CTI to be of sufficient value to be stored in the ADTL; then the data tapes should be entered into the tape library along with its documentation.

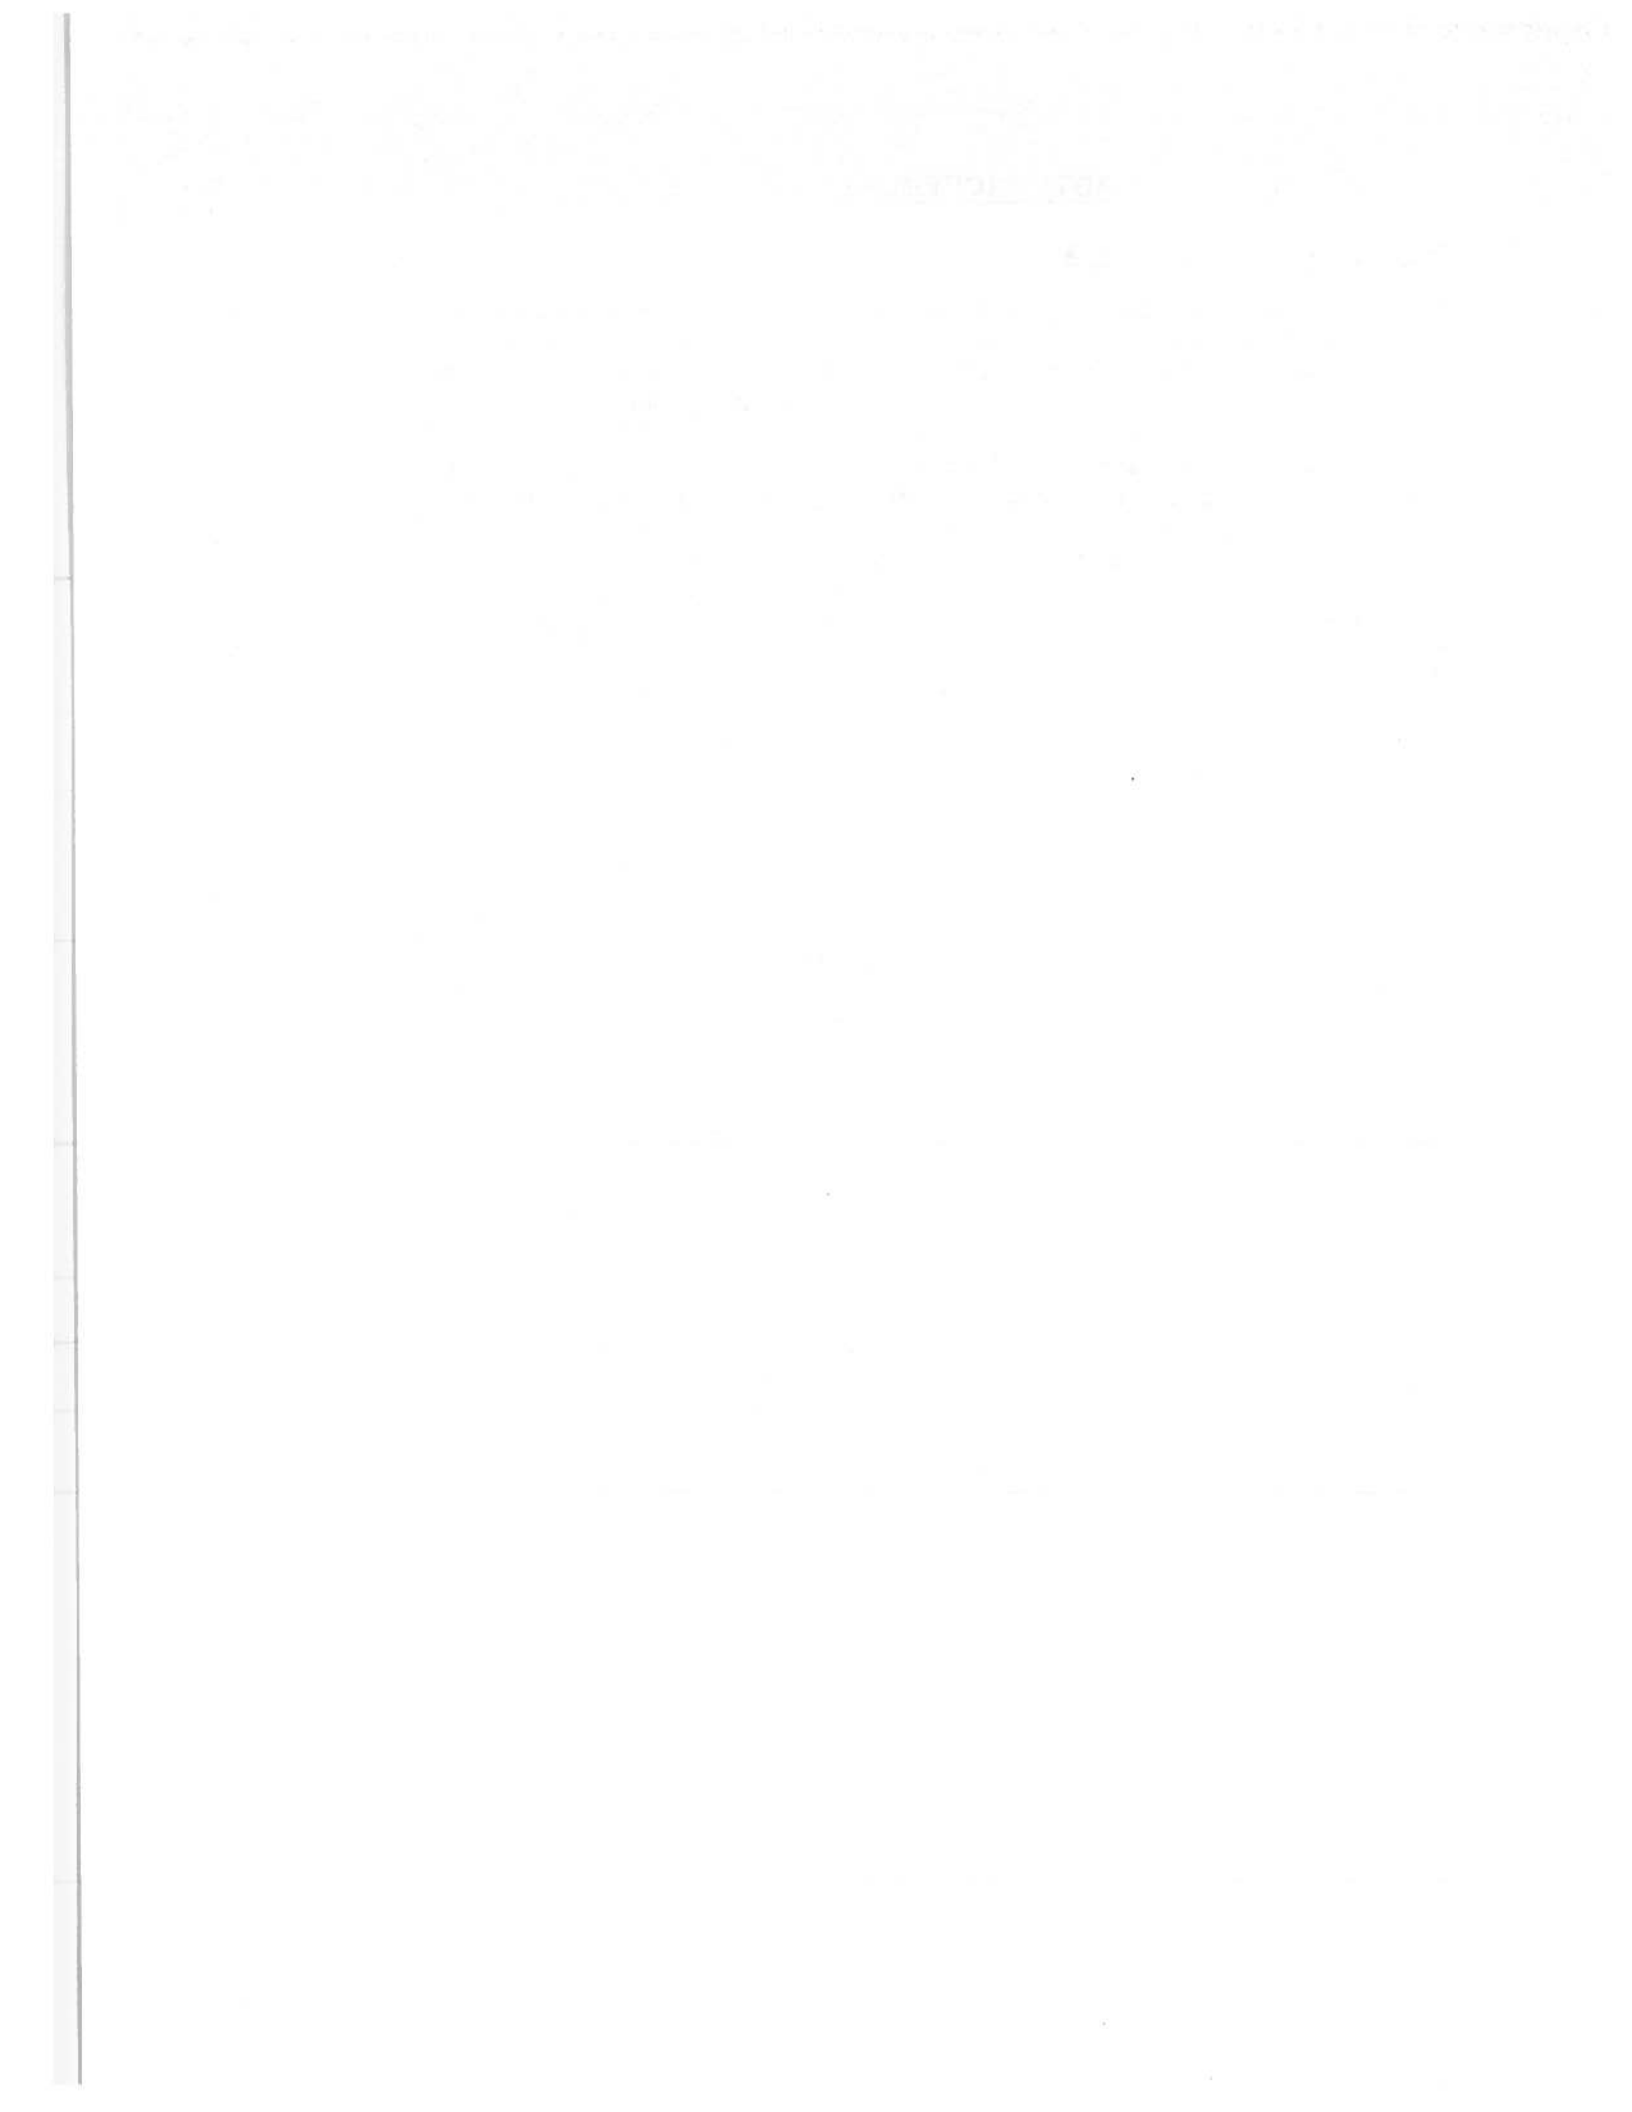

All data bases purchased by or deposited in the ADTL are understood to be the custodial property of the TSC ADTL. The master tapes and accompanying documentation reside in the ADTL in a controlled environment. Neither the tapes nor their documentation may be removed. Duplicate copies of the documentation are processed as necessary.

Tape Access

Tapes stored in the ADTL can be used by TSC analyst/computer programmers by contacting the ADTL information analyst, whose function is to assist in defining the requirements, checking for usage restrictions and completing an Archival Tape Access Control form and a Magnetic Tape File Properties form (SF-277). These forms authorize the computer I/O Control personnel to mount the master tape for the purpose of generating a tape copy. This procedure protects the master tape from possible damage in routine processing. An approved Project Plan Agreement and job order number must be cited on the form in order for the request to be processed.

Dissemination to External Users

Copies of tapes are prepared and distributed to requestors from other government agencies and the private sector, upon request, for a fee (currently \$150.00 per tape). The ADTL performs all associated tasks involved in responding, including liason with requestors relative to their processing requirements, provision for prepayment, packaging and mailing of the tapes, and providing hardcopy documentation.

OBJECTIVE OF THE SURVEY WAS TO ACQUIRE INFORMATION
ON THE ACTIVITY, AVIONICS EQUIPMENT, BASE
LOCATION, FUEL CONSUMPTION, AND OTHER
CHARACTERISTICS OF THE 1979 GENERAL AVIATION

ABSTRACT COMMODITY TRANSPORTATION SURVEY (CTS) ORIGIN AND
DESTINATION POINTS WERE CONVERTED TO BEA ECONOMIC
AREAS USING THE 173 POINT BEA AREA SYSTEM IN
EFFECT FOR THE YEAR WHEN THE 1977 CTS DATA WAS
COLLECTED. A LIMITED NUMBER OF CTS DESTINATION
POINTS COULD NOT BE SUCCESSFULLY CONVERTED TO
VALID BEA AREAS. THESE CONTAIN 989 IN THE
DESTINATION FIELD. DURING THE 1977 CTS PROCESSING
RECORDS WERE CREATED WHICH COULD NOT BE ASSIGNED
A SPECIFIC DESTINATION. THESE WERE ORIGINALLY
CODED AS UNKNOWN AND CONTAIN 999 IN THE
DESTINATION FIELD.

ABSTRACT DATA CONCERNS PHYSICAL, OPERATING PERFORMANCE AND MARKET CHARACTERISTICS OF LIGHT DUTY TRUCKS FOR THE MODEL YEARS 1972, 1975, 1977 AND FUTURE YEARS. EACH VEHICLE CONFIGURATION IS DEFINED BY APPROXIMATELY SIXTY ATTRIBUTES. VEHICLES ARE REPORTED BY MODEL YEAR AND GROUPED BY MANUFACTURER USING PRODUCTION VOLUME, MODEL, BODY TYPE, ENGINE DISPLACEMENT, TRANSMISSION AND GVW CLASS ATTRIBUTES AS CRITERIA TO SELECT REPRESENTATIVE VEHICLE CONFIGURATIONS. CHARACTERISTICS ARE DOCUMENTED FOR VEHICLES REPRESENTATIVE OF TOTAL U.S. SALES OF DOMESTIC AND IMPORTED LIGHT-DUTY TRUCKS FOR THE MODEL YEARS INDICATED. INFORMATION WAS COLLECTED FROM PUBLISHED AND UNPUBLISHED SOURCES WITH EXTRAPOLATION AND CORRELATIONS BEING MADE WHEN RAW DATA WAS NOT AVAILABLE. FOR A COMPLETE UNDERSTANDING OF THE DATA CONTAINED ON THIS TAPE IT IS NECESSARY TO READ THE INTRODUCTORY MATERIAL IN THE HARDCOPY VERSION. THIS DESCRIPTION WILL ONLY TOUCH ON A FEW IMPORTANT POINTS. THERE ARE TWO MAJOR SECTIONS. THE FIRST SECTION IS A FILE CONTAINING INFORMATION DESCRIBING THE PLANTS THAT MANUFACTURE OR IMPORT THE CHEMICALS IN THE INVENTORY. THE SECOND SECTION IS A FILE DESCRIBING THE PRODUCTION OR IMPORTATION VOLUMES OF EACH CHEMICAL AT EACH SITE. THIS TAPE DOES NOT SUPPLANT THE ORIGINAL INVENTORY, BUT MUST BE USED IN CONJUNCTION WITH IT TO IDENTIFY CHEMICALS BY NAME. ON THIS TAPE, CHEMICALS ARE IDENTIFIED ONLY BY CAS REGISTRY NUMBER.
