SECTION IV. CUTTER CHARACTERISTICS

NOTES

- (1) The endurance of a cutter to operate without provisioning is highly dependent upon several variables which change based on mission conditions. Coast Guard cutters are not designed to specific endurance but rather to a set of performance requirements. The performance requirements are utilized to determine such parameters as maximum and cruising speeds, fuel capacity, water capacity, stores capacity, armament, crew size, and special mission characteristics (ice breaking, buoy handling, towing, etc.). The original performance requirements assume a specific set of operating conditions such as most economical speed. Actual endurance will vary depending on mission demands. Endurance is listed in days. Fuel with 10% reserve, water, and provisions at economical speed.
- (2) Hull 615 has a displacement of 1020.
- (3) Hulls 622 and 628 have a draft of 11 and displacement of 1110.
- (4) Hulls 388 and 396 have a max range of 23500 and a range at max spd of 8000. Hull 404 has a shaft hp of 1650, a max range of 22500, a max spd of 14.5, an econ spd of 8.0, and a range at max spd of 7500. Hull 407 has a max range of 25500 and a range at max spd of 8000.
