## **INTRODUCTION**

The Washington State Department of Transportation (WSDOT) constructs about 150 large diameter drilled shafts to support bridge foundations and retaining walls annually. Shafts are generally uncased, 30 to 200 feet deep, and 2-10 feet in diameter. Construction of uncased drilled shafts requires the use of thousands of gallons of synthetic slurry for stability.

The WSDOT approves the use of “Novagel”, “Shore Pac GCV”, “SlurryPro CDP”, and “Super Mud” as synthetic slurries to construct drilled shafts. There is always some loss of synthetic slurries in the surrounding soils under the groundwater table. The impact of loss of WSDOT approved synthetic slurries on groundwater quality is not known and needs to be investigated.

## **OBJECTIVE**

The overall objective of this project is to evaluate the effect of the aforementioned synthetic slurries on groundwater quality. The objective of Phase I (this report), however, was to conduct a comprehensive literature survey to gather data to evaluate the effect of the WSDOT approved synthetic slurries on groundwater quality.

## **SURVEY METHODOLOGY**

The survey was comprised, primarily, of a review of documents sent by the WSDOT, consulting with the manufacturers for relevant information, and a survey of published scientific literature of interest.

The World Wide Web connected by “Google” was explored for any published information on the synthetic slurries of interest. Scientific databases subscribed by the Washington State University (WSU) were also explored. Further, the webpages maintained by the manufacturers were investigated for pertinent information.

The WSDOT provided a boxful of documents on the following synthetic slurries.

1. Polybore™ polymer
2. Shore Pac GCV

3. Slurry Pro CDP
4. Super Mud

The documents are listed in Appendix A. Some documents were supplied in duplicate as indicated in the Appendix.

## **RESULTS**

The review enabled us to obtain material safety data sheets (MSDS) of the slurries of concern. The MSDS obtained are included in Appendix B. The review also made it possible to obtain bioassay and chemical analysis data for some of the slurries. These data are included in Appendix C.

### **The MSDS**

Novagel is described as a mixture based on acrylate/acrylamide copolymer and is not considered a hazardous waste, according to the manufacturer. It can be disposed as a non-hazardous liquid waste in compliance with state and local regulations. It is reported to be a very low toxicity substance.

Shore Pac GCV is described as a copolymer of sodium acrylate and acrylamide. It is considered neither hazardous nor carcinogenic. The product is claimed to have no known adverse effect on human health. The material is not expected to be harmful to aquatic life under normal use. However, ecological injuries are not known or are not expected under normal use. This product may yield oxides of nitrogen and ammonia, carbon dioxide, carbon monoxide, and low molecular weight hydrocarbons upon decomposition.

Slurry Pro CDP is reported to belong to the “chemical family” of “vinyl polymer”. It is reported to be neither hazardous nor regulated. It is reported to have low toxicity on fish. If incinerated, thermal decomposition byproducts would include low levels of carbon monoxide, carbon dioxide, and various nitrous oxides.

Super Mud is described as an “anionic polyacrylamide in water-in-oil emulsion”. It is reported to contain 24% petroleum distillate. Its acute oral (rat) and acute dermal (rabbit) LD50 is reported to be greater than 10 ml/kg. It is highly volatile (~70% by weight). Acute overexposure to petroleum distillate may cause eye and throat irritation. Severe skin irritation is expected with direct skin contact of the petroleum distillate. Pertinent information of these slurries obtained from the respective MSDS are presented in Table 1.

Table 1. Pertinent Information from MSDS Datasheets.

Slurry	Chemical Family	Skin & Eye Irritation	Flammability	pH	Aquatic Toxicity	Source
Novagel	Acrylate/acrylamide	Minor	Not flammable	6-8 <sup>1</sup>	Very low	MSDS 3/15/03
Shore PAC	Sodium acrylate/acrylamide	Yes	Not available	Not available	Expected not to be harmful	MSDS 1/29/09
SlurryPro CDP	Vinyl Polymer	Yes (Appears to be)	Not flammable	Not available	Low	MSDS 08/03/07
Super MUD	Anionic polyacrylamide	Minimal eye and moderate skin	Flash point > 200°F	Not available <sup>2</sup>	Not available	MSDS

<sup>1</sup>pH of a simple system (simple system is not defined in the MSDS)

<sup>2</sup>In a CD, the optimum pH is reported to be 8-10

### Chemical Analysis and Bioassay Test Results

Shore Pac GCV and Super Mud were tested for a host of chemical constituents and toxicity. The results are summarized below and the detailed test results are presented in Appendix C.

#### Shore PAC GCV Slurry

A 1 lb per 500 gal slurry of Shore PAC was sent for chemical testing in October of 1998 and was tested by Great Lakes Analytical in Buffalo Grove, IL. We are assuming that the pound/500 gal concentration is representative of the slurry used during field application. The slurry was analyzed for chemical oxygen demand (COD), biochemical oxygen demand (BOD), pH, oil and grease, and priority pollutants. The priority pollutant scan includes cyanide, a list 13 metals, polychlorinated biphenyls (PCB), volatile organic compounds (VOC), semi-volatile organic compounds (SVOC) and organochlorine pesticides. Standard EPA protocol was used for all

analyses. The pH of the slurry was reported as 7.3. The only constituents that were above the method detection limits were acetone (noted as likely being an artifact from laboratory contamination), bromodichloromethane (4.4 µg/L) and chloroform (7.6 µg/L). The latter two compounds are in the VOC group. It was noted in the analytical report that the concentrations of these two VOCs are “characteristic of those found in chlorinated drinking water”.

The Shore PAC slurry was also tested for toxicity using the fathead minnow as the test species under standard toxicity testing protocol. The slurry was diluted, per protocol, with synthetic moderately hard water. The dilutions ranged from 0% (moderately hard water only) up to 10%. We are assuming that the percentage is reported on a volume basis. The number of deaths is reported after a 96 hour exposure period. Essentially no deaths occurred at the highest (10%) concentration. As a result, the lethal concentration that results in 50% of the test organisms dying (LC50) was reported as > 10%. Table 2 summarizes the results for Shore PAC and the actual test results can be found in Appendix C.

Table 2. Chemical Analysis Results for Shore PAC GCV.

Analyte	EPA Method	Results/Comments
BOD <sub>5</sub>	405.1	ND <sup>1</sup>
COD	410.4	ND
pH	150.1	7.3
Oil and Grease		ND
Metals	3015	ND
Pesticides	8081	ND
PCB's	8082	ND
VOC's	8260	ND except acetone (15A) <sup>2</sup> , bromodichloromethane (4.4 µg/L), chloroform (7.6 µg/l)
Semi-VOC's	8270	ND
Cyanide	9012	ND

<sup>1</sup> non-detectable concentration

<sup>2</sup> not described in the report

### Super Mud

Super Mud was also tested for priority pollutants and toxicity, but unlike Shore PAC, the pure product was tested. The only constituents that tested above detection limits were cyanide (4.8 mg/kg) and copper (3.9 mg/kg). In the analysis report supplied by the manufacturer, they present comparisons to California and Federal allowable drinking water concentrations. We are confused regarding this comparison because the drinking water standards are in mg/L units but

the reported constituent concentrations are in mg/kg and µg/kg. It is not clear, therefore, if this comparison can be made.

Super Mud was also tested for toxicity in a similar fashion as Shore PAC. However, it was tested by making dilutions into moderately hard water using the full-strength product, not the field strength product (diluted at 1 gal per 800 gal). The reported LC50 was 3.2%. Table 3 summarizes the results for Super Mud and the actual test results can be found in Appendix C.

Table 3. Chemical Analysis Results for Super Mud.

Analyte <sup>1</sup>	EPA Method <sup>3</sup>	Results/Comments
VOC's	624	ND <sup>2</sup>
Acid Extractable Organics	625	ND
Base Neutral Compounds	625	ND
Pesticides	608	ND
PCB's	608	ND
Cyanide		4.8 mg/kg
Copper		3.9 mg/kg
pH		8 – 10 (optimum zone)

<sup>1</sup> The priority pollutant list testing was performed on PURE PRODUCT. In usage “the product is diluted to 800 parts water to one part Super Mud.” These statements are taken directly from the report.

<sup>2</sup> non-detectable concentration

<sup>3</sup> The numbers were assumed to be referring to EPA methods

It appears that similar tests were done for Slurry Pro CDP, however, we were unable to obtain the test results.

## SUMMARY

Based on the results of the priority pollutant analysis and toxicity testing for Shore PAC and Super Mud, one can conclude, as it was concluded by the manufacturer, that these products, when used at field concentrations, are unlikely to pose a threat to groundwater quality. However, the state of Washington has its own groundwater standard and the testing was done in other states. Further, geochemical environment can change the chemistry and associated toxicity of the slurries.

## **RECOMMENDATION**

Since chemical and bioassay information exists for only two products and the analyses were performed in 1991 and 1998, it is our recommendation that the slurries currently being used by WSDOT contractors be tested again for priority pollutants and toxicity. New testing would result in a consistent data set as all samples would undergo the same, most recent EPA protocol. Analysis should be performed on samples that are representative of field conditions (at the working concentration and containing any additives). The results would be used to assist in evaluation of potential groundwater contamination as well as slurry disposal issues. In summary, the following analytical testing is suggested.

1. Test the fresh slurries for priority pollutants, toxicity, pH, alkalinity, biochemical oxygen demand (BOD, and chemical oxygen demand (COD) at field concentrations and containing any additives.
2. Test for priority pollutants, toxicity, pH, alkalinity, BOD, COD, and total suspended solids (TSS) of the used slurries prior to preparing them for disposal.
3. Test for priority pollutants, toxicity, pH, alkalinity, BOD, COD, and TSS of the slurries following preparation for disposal.

The priority pollutant testing includes testing for 128 compounds (organics, metals, asbestos, and total cyanide). The list of compounds is outlined in volume 40 of the Code of Federal Regulations (40 CFR), Part 423. The recommended toxicity testing is the 96 hour acute toxicity using trout and daphnia. It is suggested that these tests be performed at laboratories certified in Washington state and would be done on representative samples for field application.

The recommended testing would also assist in making decisions regarding ultimate disposal of the used slurries. In addition to toxicity and priority pollutants, values of pH, alkalinity, BOD, COD and TSS would be important if disposal is considered in a wastewater treatment facility.

## MATERIAL SAFETY DATA

Geo-Tech Drilling Fluids  
22 Free Street  
Hingham, MA 02043, USA  
1-781-875-1140  
1-888-932-3299  
info@geotech.us

---

### 1. CHEMICAL PRODUCT IDENTIFICATION

Product Name: **NOVAGEL™ Drilling Fluid**  
Synonyms: "Polymer slurry"  
Chemical Family: Mixture based on acrylate/acrylamide copolymer  
CAS Reg. No.: None  
Formula: Mixture  
Emergency Phone No.: 1-781-875-1140, 1-888-932-3299

---

### 2. COMPOSITION/INGREDIENTS

NAME	CAS N°	%
Aqueous solution of water-soluble polymer(s). Trade secret. Basic fluid contains Novagel™ polymer and water. Optional formulations may contain pH buffers, Sand Magnet™ additive, Depth Charge™ additive, mineral flour, et al.		100

---

### 3. HEALTH HAZARD INFORMATION

Inhalation: Not applicable.  
Ingestion: May cause discomfort or gastrointestinal disturbance. Low oral toxicity.  
Skin: May cause minor irritation, especially after prolonged or repeated contact.  
Eyes: Contact may cause temporary blurring of vision and/or minor irritation.  
Permissible Conc. in Air: Not applicable.  
Unusual Chronic Toxicity: None known.

---

### 4. EMERGENCY AND FIRST AID PROCEDURES

Skin: Wash off with water. Wipe and dry skin with paper towel or cotton towel.  
Eyes: Immediately flush with water for 5 minutes. If there is irritation, seek medical attention.  
Ingestion: If conscious, immediately give 2 to 4 glasses of water. Get medical attention.

---

**5. FIRE AND EXPLOSION DATA****FLAMMABLE PROPERTIES**

Flash Point:	Not flammable
Flammable Limits:	Not flammable
Autoignition Temp:	Not applicable
Decomposition Temp:	Not available

---

**6. PHYSICAL AND CHEMICAL PROPERTIES**

Material is (at normal conditions):	Liquid
Appearance and Odor:	Clear viscous liquid ("thick water"). Odorless.
pH:	pH of simple system 6 to 8. With buffers may range between 7 and 11.
Boiling Point:	>200° F
Melting Point:	Not applicable
Specific Gravity:	1.00 – 1.20
Vapor Pressure:	Negligible (at 20° C / 68° F)
Vapor Density:	1.00 absolute
Solubility in Water:	Material is a water solution/dispersion.
% Volatiles by Weight:	>99.5% in unweighted formulations
Evaporation Rate:	Less than butyl acetate

---

**7. STABILITY AND REACTIVITY**

Stability:	Stable
Conditions to Avoid:	None known
Incompatibility (materials to avoid):	If pH of fluid is above 10, may cause corrosion to aluminum, or to galvanized metal parts.
Hazardous Decomposition Products:	None known.
Hazardous Polymerization:	Will not occur.

---

**8. PERSONAL PROTECTIVE EQUIPMENT**

Respiratory Protection:	None required for prepared fluid.
Ventilation:	Ventilation is not a major concern, but should be provided in closed areas.
Eye & Face Protection:	Goggles advised.
Hands, Arms, & Body:	Standard work clothing adequate for handling prepared fluid.

---

**9. PRECAUTIONS & PROCEDURES**

Fire Extinguishing Agents Recommended:	Not applicable. The fluid is not flammable.
Fire Extinguishing Agents to Avoid:	None.
Special Fire Fighting Precautions:	Not applicable.
Ventilation:	Natural ventilation is normally adequate, as this fluid is normally used outdoors. In enclosed areas, provide positive ventilation.
Normal Handling:	Minimize contact with skin, eyes or clothing. Use normal personal hygiene and housekeeping.
Storage:	Store prepared fluid in open or closed vessels.
Spill or Leak	Use available soil or sand as absorbent to soak up spilled fluid. Dike up with same soil. Scoop up and dispose of in suitable manner. Destroy any slippery residue on spill surface by soaking with bleach water (1 part Clorox to 4 parts water). Hose off with clean water.
Special Precautions / Procedures / Label Instructions:	<b>CAUTION! Novagel fluids are extremely slippery!</b>

---

**10. ENVIRONMENTAL**

Aquatic Toxicity:	96-hour LC <sub>50</sub> fathead minnows >750,000 mg/L (very low toxicity)
Octanol/Water Partition Coefficient:	Not determined
Waste Disposal Methods:	Dispose as non-hazardous liquid waste in compliance with state and local regulations.
RCRA Status of Unused Material if Discharged:	Not a "Hazardous Waste".
Hazardous Waste Number:	NA
DOT Status:	Not regulated.
Reportable Quantity:	EPA 40 CFR 302 (CERCLA 102): NA
Threshold Planning Quantity:	EPA 40 CFR 355 (SERA 311-304): NA
Toxic Chemical Release Reporting:	EPA 40 CFR 372 (SERA 311-313): NA
EPA Hazard Classification Code:	Acute - No; Chronic - No; Fire - No; Pressure - No; Reactive - No

---

**11. TRANSPORT INFORMATION**

## MATERIAL SAFETY DATA SHEET

### 1. Product and Company Identification

<b>Material name</b>	SHORE PAC®
<b>Version #</b>	11
<b>Revision date</b>	29-January-2009
<b>Chemical name</b>	Copolymer of Sodium Acrylate and Acrylamide
<b>Chemical description</b>	Powder
<b>CAS #</b>	Mixture
<b>Manufacturer</b>	CETCO Construction Drilling Products 2870 Forbs Avenue Hoffman Estates, IL 60192 US safetydata@amcdl.com <a href="http://www.constructiondrilling.com/">http://www.constructiondrilling.com/</a> General Information (800) 527-9948 CHEMTREC® (800) 424-9300

### 2. Hazards Identification

<b>Emergency overview</b>	Health injuries are not known or expected under normal use. No hazards resulting from the material as supplied.
<b>OSHA regulatory status</b>	This product is considered not hazardous under 29 CFR 1910.1200 (Hazard Communication).
<b>Potential health effects</b>	
<b>Eyes</b>	Contact with eyes may cause irritation.
<b>Skin</b>	This product may cause irritation to the skin.
<b>Inhalation</b>	Inhalation of dusts may cause respiratory irritation.
<b>Ingestion</b>	Health injuries are not known or expected under normal use.

### 3. Composition / Information on Ingredients

The manufacturer lists no ingredients as hazardous according to OSHA 29 CFR 1910.1200.

<b>Composition comments</b>	This product is not considered to be a carcinogen by IARC, ACGIH, NTP, or OSHA.
-----------------------------	---

### 4. First Aid Measures

<b>First aid procedures</b>	
<b>Eye contact</b>	Flush eyes with water as a precaution. Get medical attention if irritation develops or persists.
<b>Skin contact</b>	Wash off with soap and water. Launder contaminated clothing before reuse. Get medical attention if irritation develops or persists.
<b>Inhalation</b>	Remove to fresh air. Call a physician if symptoms develop or persist.
<b>Ingestion</b>	Have victim rinse mouth thoroughly with water. If ingestion of a large amount does occur, seek medical attention.
<b>General advice</b>	If you feel unwell, seek medical advice (show the label where possible).

### 5. Fire Fighting Measures

<b>Extinguishing media</b>	
<b>Suitable extinguishing media</b>	Small Fires: Dry chemical, CO <sub>2</sub> , water spray or regular foam. Large Fires: Water spray, fog or regular foam.

### 6. Accidental Release Measures

<b>Environmental precautions</b>	Prevent further leakage or spillage if safe to do so.
<b>Methods for cleaning up</b>	Sweep up or gather material and place in appropriate container for disposal. Avoid dust formation. Small Dry Spills: With clean shovel place material into clean, dry container and cover loosely; move containers from spill area.

Material name: SHORE PAC® CETCO - Construction Drilling Products  
4085 Version #: 11 Revision date: 29-January-2009 Print date: 29-January-2

MSDS US  
1 / 4

## 7. Handling and Storage

<b>Handling</b>	Handle and open container with care. Minimize dust generation and accumulation.
<b>Storage</b>	Keep the container tightly closed and dry.

## 8. Exposure Controls / Personal Protection

### Personal protective equipment

<b>Eye / face protection</b>	Avoid contact with eyes. Wear dust goggles.
<b>Skin protection</b>	Not normally needed. Wear suitable protective clothing.
<b>Respiratory protection</b>	No personal respiratory protective equipment normally required. Use a particulate filter respirator for particulate concentrations exceeding the Occupational Exposure Limit.

## 9. Physical & Chemical Properties

<b>Appearance</b>	Free flowing wettable powder.
<b>Color</b>	White.
<b>Odor</b>	Not available.
<b>Odor threshold</b>	Not available.
<b>Physical state</b>	Solid.
<b>Form</b>	Solid. Powder.
<b>pH</b>	Not available.
<b>Melting point</b>	Not available.
<b>Freezing point</b>	Not available.
<b>Boiling point</b>	Not available.
<b>Flash point</b>	Not available.
<b>Evaporation rate</b>	Not available.
<b>Flammability</b>	Not available.
<b>Flammability limits in air, upper, % by volume</b>	Not available.
<b>Flammability limits in air, lower, % by volume</b>	Not available.
<b>Vapor pressure</b>	Not available.
<b>Vapor density</b>	Not available.
<b>Specific gravity</b>	0.8 - 1
<b>Relative density</b>	Not available.
<b>Solubility (water)</b>	Solubility limited by viscosity
<b>Partition coefficient (n-octanol/water)</b>	Not available.
<b>Auto-ignition temperature</b>	Not available.
<b>Decomposition temperature</b>	Not available.
<b>VOC</b>	0 % estimated
<b>Percent volatile</b>	0 % estimated

## 10. Chemical Stability & Reactivity Information

<b>Chemical stability</b>	Stable at normal conditions.
<b>Incompatible materials</b>	Strong oxidizing agents.
<b>Hazardous decomposition products</b>	Upon decomposition, this product may yield oxides of nitrogen and ammonia, carbon dioxide, carbon monoxide and other low molecular weight hydrocarbons.
<b>Possibility of hazardous reactions</b>	Will not occur.

## 11. Toxicological Information

<b>Further information</b>	This product has no known adverse effect on human health.
----------------------------	---

## 12. Ecological Information

**Ecotoxicity** This material is not expected to be harmful to aquatic life.  
**Environmental effects** Ecological injuries are not known or expected under normal use.  
**Persistence and degradability** Not available.

## 13. Disposal Considerations

**Disposal instructions** Dispose in accordance with all applicable regulations.

## 14. Transport Information

### DOT

Not regulated as dangerous goods.

### IATA

Not regulated as dangerous goods.

### IMDG

Not regulated as dangerous goods.

## 15. Regulatory Information

**US federal regulations** This product is not known to be a "Hazardous Chemical" as defined by the OSHA Hazard Communication Standard, 29 CFR 1910.1200.  
CERCLA/SARA Hazardous Substances - Not applicable.

OSHA Process Safety Standard: This material is not known to be hazardous by the OSHA Highly Hazardous Process Safety Standard, 29 CFR 1910.119.

### CERCLA (Superfund) reportable quantity

None

### Superfund Amendments and Reauthorization Act of 1986 (SARA)

**Hazard categories** Immediate Hazard - No  
Delayed Hazard - No  
Fire Hazard - No  
Pressure Hazard - No  
Reactivity Hazard - No

**Section 302 extremely hazardous substance** No

**Section 311 hazardous chemical** No

### Inventory status

Country(s) or region	Inventory name	On inventory (yes/no)*
Australia	Australian Inventory of Chemical Substances (AICS)	No
Canada	Domestic Substances List (DSL)	No
Canada	Non-Domestic Substances List (NDSL)	No
China	Inventory of Existing Chemical Substances in China (IECSC)	No

A "Yes" indicates that all components of this product comply with the inventory requirements administered by the governing country(s)

**State regulations** This product does not contain a chemical known to the State of California to cause cancer, birth defects or other reproductive harm.

## 16. Other Information

### Further information

This safety datasheet only contains information relating to safety and does not replace any product information or product specification.

### Recommended restrictions

Workers (and your customers or users in the case of resale) should be informed of the potential presence of respirable dust and respirable crystalline silica as well as their potential hazards. Appropriate training in the proper use and handling of this material should be provided as required under applicable regulations.

### HMIS ratings

### NFPA ratings

Health: 0  
Flammability: 0  
Instability: 0

### Disclaimer

The information provided in this Safety Data Sheet is correct to the best of our knowledge, information and belief at the date of its publication. The information given is designed only as a guidance for safe handling, use, processing, storage, transportation, disposal and release and is not to be considered a warranty or quality specification. The manufacturer expressly does not make any representations, warranties, or guarantees as to its accuracy, reliability or completeness nor assumes any liability, for its use. It is the user's responsibility to verify the suitability and completeness of such information for each particular use.

Third party materials: Insofar as materials not manufactured or supplied by this manufacturer are used in conjunction with, or instead of this product, it is the responsibility of the customer to obtain, from the manufacturer or supplier, all technical data and other properties relating to these and other materials and to obtain all necessary information relating to them. No liability can be accepted in respect of the use of this product in conjunction with materials from another supplier. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any process, unless specified in the text.

#### 5. FIRE AND EXPLOSION DATA

---

<b>Flash Point:</b>	Not flammable
<b>Auto Ignition Temperature:</b>	ND
<b>Flammable Limits in Air % by Volume:</b>	ND
<b>Unusual Fire and Explosion Hazards:</b>	See decomposition products

---

#### 6. HEALTH HAZARD INFORMATION

---

<b>Inhalation:</b>	Dust may irritate respiratory tract.
<b>Ingestion:</b>	May cause discomfort or gastrointestinal disturbance. Low oral toxicity.
<b>Skin:</b>	May cause irritation, especially after prolonged or repeated contact.
<b>Eyes:</b>	Dust contact and solution contact may cause irritation.
<b>Permissible Concentration in Air:</b>	None published for polymer.
<b>Unusual Chronic Toxicity:</b>	None known.

---

#### 7. EMERGENCY AND FIRST AID PROCEDURES

---

<b>Inhalation:</b>	Remove to fresh air. Apply mouth-to-mouth artificial respiration if not breathing. Get immediate medical attention.
<b>Skin:</b>	Flush with plenty of soap and water for at least 15 minutes. If irritation persists, get medical attention.
<b>Eyes:</b>	Immediately flush with water, continuing for 15 minutes. Get medical attention.
<b>Ingestion:</b>	If conscious, immediately give 2 to 4 glasses of water. Get medical attention.

---

#### 8. PERSONAL PROTECTIVE EQUIPMENT

---

<b>Respiratory Protection:</b>	If dusty conditions are encountered, wear NIOSH approved dust respirator.
<b>Ventilation:</b>	General room ventilation should be satisfactory.
<b>Eye &amp; Face Protection:</b>	Safety glasses for normal handling conditions. Goggles when handling solutions. Do not wear contact lens.
<b>Hands, Arms, &amp; Body:</b>	Rubber gloves and full work clothing. Add protective (rubber) clothing if splashing or repeated contact with solution is likely.

---

#### 9. PRECAUTIONS & PROCEDURES

---

<b>Fire Extinguishing Agents Recommended:</b>	Foam, carbon dioxide, or dry chemical
<b>Fire Extinguishing Agents to Avoid:</b>	Water may cause extremely slippery conditions.
<b>Special Fire Fighting Precautions:</b>	Wear self-contained breathing apparatus. Solutions of product are extremely slippery.
<b>Ventilation:</b>	Local exhaust if dusting occurs. Natural ventilation - adequate in absence of dust.

---

**9. PRECAUTIONS & PROCEDURES - Continued**

---

<b>Normal Handling:</b>	Avoid contact with skin, eyes or clothing. Do not inhale dusts. Use normal personal hygiene and housekeeping.
<b>Storage:</b>	Store in a cool, dry place.
<b>Spill or Leak (Always Wear Personal Protective Equipment):</b>	Sweep up or shovel into metal or plastic container. Immediately cover with commercial or other available absorbent. Close and store as above. Water may be used to complete cleaning. Large spill: Dike up with same material. Mop up or pump into same container and so forth.
<b>Special Precautions / Procedures / Label Instructions:</b>	Product solutions are extremely slippery.

---

**10. ENVIRONMENTAL**

---

<b>Degradability / Aquatic Toxicity:</b>	In combination with UV light for 48 hours, the resulting test solutions are biodegradable in 38 days to at least 29% to <3,000 Daltons (size of mass fragments) in a certified test study. The product is rated as a low toxicity to fish, LC 50/96 hours is 357 mg/L to Brachydanio; Bioaccumulation partition coefficient (Pow)=0; No potential to bio accumulate.	
<b>Octanol/Water Partition Coefficient:</b>	Not determined	
<b>Waste Disposal Methods:</b>	Dispose as non-hazardous solid waste in compliance with state, and local regulations.	
<b>RCRA Status of Unused Material if Discharged:</b>	Not a "Hazardous Waste".	
<b>Hazardous Waste Number:</b>	NA	
<b>DOT Status:</b>	Not regulated.

**MSDS for SUPER MUD**

## MATERIAL SAFETY DATA

### 1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME : Super Mud  
SYNONYMS : Anionic polyacrylamide in water-in-oil emulsion  
CHEMICAL FAMILY : Anionic polyacrylamide copolymer  
MOLECULAR FORMULA : Mixture  
MOLECULAR WEIGHT : Mixture

PDSCo, P.O. BOX 507, WEST SHARP STREET, EL DORADO, AR 71730 USA  
EMERGENCY PHONE: For emergency call PDSCo: 1 (800) 243-7455

### 2. COMPOSITION/INFORMATION ON INGREDIENTS

OSHA REGULATED COMPONENTS				
COMPONENT	CAS. NO.	%	TWA/CEILING	REFERENCE
Petroleum distillate	064742-47-8	24	400 ppm	OSHA
Hydrotreated light				

### 3. HAZARDS IDENTIFICATION

#### EMERGENCY OVERVIEW

APPEARANCE AND ODOR : White, viscous, opaque liquid; slight hydrocarbon odor  
STATEMENTS OF HAZARD : WARNING! MAY CAUSE SKIN IRRITATION  
IMPORTANT! SPILLS OF THIS PRODUCT ARE VERY SLIPPERY WHEN WET

#### POTENTIAL HEALTH EFFECTS

##### EFFECTS OF OVEREXPOSURE:

Acute oral (rat) LD50 and acute dermal (rabbit) LD50 of > 10 ml/kg. Direct contact with this material may cause minimal eye and moderate skin irritation.

Refer to Section 11 for toxicology information on the OSHA regulated components of this product.

### 4. FIRST AID MEASURES

In case of skin contact, wash affected areas of skin with soap and water. Do not reuse clothing without laundering.

In case of eye contact, immediately irrigate with plenty of water for 15 minutes.

### 5. FIRE FIGHTING MEASURES

#### FLAMMABLE PROPERTIES

FLASH POINT : >200°F (>93.3°C) METHOD : Pensky-Martens Closed Cup  
FLAMMABLE LIMITS (% BY VOL) : Not applicable  
AUTOIGNITION TEMP : Not available  
DECOMPOSITION TEMP : Not available

#### EXTINGUISHING MEDIA AND FIRE FIGHTING INSTRUCTIONS

Use water spray, carbon dioxide or dry chemical to extinguish fires. Use water to keep containers cool. Wear self-contained, positive pressure breathing apparatus and full fire-fighting protective clothing. See Section 8 (Exposure Controls/Personal Protection) for special protective clothing.

**6. ACCIDENTAL RELEASE MEASURES****STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED**

Cover spill with some inert absorbent material; sweep up and place in waste disposal container. Flush area thoroughly with water. Residual may be very slippery. If slipperiness remains, apply more dry-sweeping compound.

**7. HANDLING AND STORAGE**

Avoid contact with skin. Wash thoroughly after handling. To avoid product degradation and equipment corrosion, do not use iron, copper, or aluminum container or equipment. OSHA regulations (29 CFR 106.a.14), require that the flashpoint of materials of this type be determined by the Pensky-Martens Closed Tester method. The test for this product indicated it has flash point at  $>200^{\circ}\text{F}$  ( $93.3^{\circ}\text{C}$ ); therefore, caution should be exercised in storage and handling.

**8. EXPOSURE CONTROLS/PERSONAL PROTECTION****ENGINEERING CONTROLS AND PERSONAL PROTECTIVE EQUIPMENT (PPE)**

Engineering controls are not usually necessary if good hygiene practices are followed. Before eating, drinking, or smoking, wash face and hands thoroughly with soap and water. Avoid unnecessary skin contact. Impervious gloves are recommended to prevent prolonged skin contact. For operations where eye or face contact can occur, eye protection is recommended.

**9. PHYSICAL AND CHEMICAL PROPERTIES**

APPEARANCE AND ODOR	:	White, viscous, opaque liquid; slight hydrocarbon odor.
BOILING POINT	:	$\sim 347^{\circ}\text{F}$ ; $\sim 175^{\circ}\text{C}$ (value for oil phase)
MELTING POINT	:	$0^{\circ}\text{F}$ ; $-18^{\circ}\text{C}$
VAPOR PRESSURE	:	Not available
SPECIFIC GRAVITY	:	1.0
VAPOR DENSITY	:	Not available
% VOLATILE (BY WT)	:	$\sim 70$
pH	:	Not available
SATURATED IN AIR (BY VOL)	:	Not available
EVAPORATION RATE	:	$<1$ (Butyl Acetate = 1)
SOLUBILITY IN WATER	:	Appreciable

**10. STABILITY AND REACTIVITY**

STABILITY	:	Stable
CONDITIONS TO AVOID	:	None known
POLYMERIZATION	:	Will not occur
CONDITIONS TO AVOID	:	None known
INCOMPATIBLE MATERIALS	:	Strong oxidizing agents
HAZARDOUS DECOMPOSITION PRODUCTS	:	Thermal decomposition or combustion may produce carbon monoxide, carbon dioxide, ammonia, and/or oxides of nitrogen.

**11. TOXICOLOGICAL INFORMATION**

Toxicological information on the OSHA regulated components of this product is as follows:

Acute overexposure to petroleum distillate vapors may cause eye and throat irritation. On direct skin contact, petroleum distillate may produce a severe skin irritation.

**12. ECOLOGICAL INFORMATION**

No aquatic LC50, BOD, or COD data available.  
 OCTANOL/H<sub>2</sub>O PARTITION COEF: Not available

**13. DISPOSAL CONSIDERATIONS**

Disposal must be made in accordance with applicable governmental regulations.

**14. TRANSPORT INFORMATION**

**15. REGULATORY INFORMATION**

**INVENTORY INFORMATION**

- US TSCA : This product is manufactured in compliance with all provisions of the Toxic Substances control Act, 15 U.S.C.
- CANASA DSL : Components of this product have been reported to Environment Canada in accordance with subsection 25 of the Canadian Environmental Protection Act and are included on the Domestic Substances List.
- EEC EINECS : All components of this product are included on the European Inventory of Existing Chemical Substances [EINECS] in compliance with Council Directive 67/548/EEC, Amended 79/831/EEC.

**OTHER ENVIRONMENTAL INFORMATION**

The following components are defined as toxic chemicals subject to reporting requirements of Section 313 of Title III and of 40 CFR 372 or subject to other EPA regulations.

COMPONENT	CAS. NO.	%	TPQ(lbs)	RQ (lbs)	S313	RCRA	TSCA 12B
This product does not contain any components regulated under these sections of the EPA							

PRODUCT CLASSIFICATION UNDER SECTION 311 OF SARA
Not applicable under SARA TITLE III

**16. OTHER INFORMATION**

**NFPA HAZARD RATING (National Fire Protection Association)**

- Fire 1 FIRE : Materials that must be preheated before ignition can occur.
- Health 0 HEALTH : Materials which on exposure under fire conditions would offer no hazard beyond that of ordinary combustible material.
- REACTIVITY : Materials which in themselves are normally stable, even under fire exposure conditions, and which are not reactive with water.
- Special

RE: Benefits of Synthetic Slurry Vs Mineral Slurry

Dear Sir:

As requested a comparison has been prepared for drilling with synthetic drilling slurry Vs conventional mineral slurry. The advantages of using high performance polymer slurry over mineral slurry yield multiple benefits, which improve construction economics in many ways. Shore Pac GCV saves time and money while improving construction quality and reducing defects.

- Highly concentrated. Very small quantities required.
- Controls fluid loss in sands and gravels. Stabilizes excavations.
- Reduces chipping and cleaning of poured concrete.
- Improves productivity of machines and crews.
- Requires less mixing/processing equipment, reducing capital investment, jobsite congestion and fuel costs.
- Reduces are eliminates disposal costs. Product is environmentally safe.
- Reduces transport costs and storage space requirements.

Shore Pac GCV polymer slurry replaces mineral slurry at ratios ranging between 1 to 50 and 1 to 200 in typical application. When using salt water as the mix water only a special mineral called Attapulgate can be used, these ratios mean that 20 pounds of Shore Pac GCV can replace 4 tons of mineral slurry.

Shore Pac GCV slurry cohesively binds excavated soil solids together, facilitating their removal from the excavation and preventing them from dispersing into the slurry. Shore Pac GCV maximizes spoil loading on augers increasing excavation rates. Shore Pac GCV makes it possible to drill with augers, even in sand and gravel, eliminating the need to use a bucket. This feature can reduce drilling time, increase productivity and reduce slurry wastage. With mineral slurry a bucket must be used and half of the spoil is liquid slurry that dumps out over the job-site.

### PROVEN ADVANTAGES OVER MINERAL SLURRY

Shore Pac GCV polymer systems have been shown, in definitive laboratory research and in numerous full-scale load tests and construction projects, to provide the following advantages over mineral slurries:

- Greater frictional load testing capacity (skin Friction) in bored piles; higher success rate on load tests.
- Cleaner, harder top surfaces on concrete in bored piles and diaphragm walls; reduces or eliminates cleaning, chipping and dressing.
- Seawater tolerant.
- Improved recyclability and reusability.
- Cleaner more manageable sites.
- Drier, cleaner, firmer spoil which can be used for fill.
- Simplified disposal.

When all of Shore Pac's advantages are taken into consideration and their economic impact is understood, it becomes clear that Shore Pac GCV is the technology that is replacing mineral slurries because mineral slurries ultimately cannot remain competitive. Numerous foundation contractors, including some of the largest and most respected companies in the international industry, have adopted this new technology after trying it on critical, high profile jobs where efficient performance was required to meet schedules and make a profit. Polymer slurry has been tried only after repeated load test failures in problem soils with mineral slurry systems, and in every case has shown better results.

Removing uncertainty on load tests and keeping projects on schedule translates into large monetary savings and reduced liability.

**Shore Pac™ GCV** is a very high molecular weight synthetic polymer with negative charges on the backbone. Its high molecular weight gives viscosity to water at low concentrations.

When **Shore Pac™ GCV** is dissolved in aqueous solution, the very long polymer chains dissolve and orient randomly in the fluid in coils. In fresh water, the repulsion of the negative charges on the backbone of the polymer chains causes the coils to expand and to occupy a large volume in the fluid. When the fluid is sheared, the expanded polymer chains are located in different fluid layers in the shear field. The uncoiling of these expanded polymer chains dissipates mechanical energy and results in viscosity.

The high molecular weight polymer chains are so long that different parts of individual polymer chains bridge different solid particles. It is this adsorption on surfaces and bridging of solid surfaces that makes this polymer effective in keeping solids consolidated while drilling a foundation. In addition, the adsorbed layer of hydrophilic polymer on rock surfaces slows down the diffusion of water into the rock.

If you have any questions do not hesitate to contact me at 847.910.4334.

Sincerely,  
John H. Berry, P.G./Hydrogeologist Product Manager/CETCO Drilling Product

**TEST OVERVIEW**

A 96-hour static-renewal toxicity test was conducted by Environmental Enterprises to determine toxicity of a lab sample, SHORE PAC GCV SLURRY, to *Pimephales promelas* larvae. Test organisms were cultured at Environmental Enterprises and 2-days-old when this test was initiated. Reconstituted laboratory-prepared water was used as the diluent and a laboratory performance control was evaluated. Four replicates of the laboratory control and five lab sample concentrations were prepared initially and renewed daily. Lab sample concentrations tested were 1.0%, 1.8%, 3.2%, 5.6%, and 10.0%. With the exception of dilution to the concentrations listed previously, the lab sample was tested as received.

Lowest Observable Effect Concentration (LOEC): N/A

Principal Investigator: Veronica McNew   
Effluents Testing Supervisor

Report Date: October 17, 1998 Conclusion: Pass

Methods, materials, and results are presented in this document. The test was conducted from October 2 - 6, 1998, at the laboratory of Environmental Enterprises. Those involved in performing this test and in preparation of this report were Mark O'Neil, Alicia Jewell, Veronica McNew, and David L. Daniel.

#### MATERIALS AND METHODS

Materials and methods for the work performed are stated in EPA 600 4-90 027F: Methods for Measuring the Acute Toxicity of Effluents and Receiving Waters to Freshwater and Marine Organisms. Actual materials and methods are detailed below. This test was performed with strict adherence to the requirements of EPA 600 4-90 027F, Section 9. Additionally, the recommendations and suggestions made elsewhere in EPA 600 4-90 027F were incorporated whenever applicable to optimize the experimental design.

*P. promelas* was cultured and maintained in reconstituted moderately hard water at 25±1°C. Several clutches from different females comprised the embryo pool from which the test organism population hatched. Test organisms were fed *Artemia nauplii* less than 24-hours old twice daily.

Sensitivity of test organisms to a known toxicant was determined by performing a chronic Standard Reference Toxicant (SRT) test, PP9810, with sodium dodecyl sulfate (Sigma Chemical, Lot 106H0112, 95% purity). The SRT test, was initiated on September 11, 1998, with less than 24-hour old *P. promelas* larvae.

	SURVIVAL	GROWTH
NOEC:	3.0 mg/l	3.0 mg/l
LOEC:	5.0 mg/l	N/A

On October 1, the SHORE PAC GCV SLURRY sample used in this test was delivered to Environmental Enterprises (Appendix B). Daily, a portion of the sample was warmed to 25°C and used to prepare the test solutions. Test chambers were labeled with concentration, replicate identification, and Environmental Enterprises' project number. Six treatments, five sample concentrations and a laboratory performance control, were prepared and pH was measured in the undiluted sample daily (Appendix A).

Each treatment was poured into a new acid-washed 1-gallon plastic container and placed in an environmental chamber to warm up to test temperature. After the test solutions reached test temperature, initial water quality parameters (temperature, conductivity, and dissolved oxygen (DO)) were measured. At the end of each 24-hour exposure period, prior to renewal, the ending DO, temperature, and pH in each treatment were recorded also (Appendix A, pages 4 - 5). Alkalinity, hardness, and conductivity were measured in the laboratory performance control and undiluted effluent sample October 2 (Appendix A, page 4).

On Day 0, the treatments were poured into their respective test chambers, ten *P. promelas* larvae were distributed randomly to each, and then this test was placed in the environmental chamber. On Days 1-3, the test was renewed: 90% of the treatment solution, excess food, and debris were poured or siphoned out of each replicate. Aliquots of freshly prepared treatments were poured gently into each replicate as appropriate. Surviving test organisms were disturbed as little as possible during renewal. Every 24 hours, survival was recorded (Appendix A, pages 2 - 3). After four days, the final survival data were recorded and this test was terminated.

**CETCO Drilling Products  
Laboratory Request  
Research and Development Department**

**Project:** Submittal for analytical testing CETCO's Shore Pac GCV slurry mixed @ 1 lb per 500 gallons.

**Purpose:** Shore Pac GCV synthetic slurry must meet strict California Department of Health Services codes for toxic or hazardous waste disposal in California.

The California Code of Regulations Title 22 hazardous waste criteria has demanding regulations more stringent than the Federal EPA standards. Therefore test results certified from an independent laboratory confirming test results for Shore Pac GCV Title 22 non toxic status and documentation of EPA non-toxic conformance must be submitted to the California Department of Health Services for review. This must be completed as part of the approval process to have Shore Pac GCV used on construction projects approved by the State of California.

**Laboratory Testing:**

- |    |   |           |
|----|---|-----------|

Project: Shore PAC GCV Sluury

Enclosed are the results from 1 water sample received at Great Lakes Analytical on September 30, 1998. The requested analyses are listed below:

SAMPLE#	SAMPLE DESCRIPTION	DATE OF COLLECTION	TEST METHOD
8095574	Water: 1lb per 500 gal. sluury	9/30/98	COD, EPA 410.4 BOD, EPA 405.1 pH, EPA 150.1 Oil & Grease, EPA 413.1 Priority Pollutants Cyanide, EPA 9012 PCB, EPA 8082 VOC, EPA 8260 SVOC, EPA 8270 Organochlorine Pesticides, EPA 8081

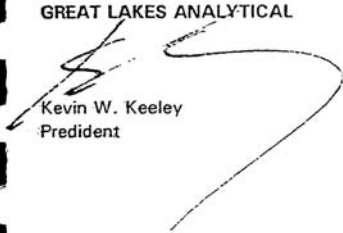

The concentrations of Chloroform and Bromodichloromethane detected in this sample by EPA 8260 are characteristic of those found in chlorinated drinking water.

This report may not be reproduced, except in full, without the written approval of the laboratory.

Please contact me if you have any questions. In the meantime, thank you for the opportunity to work with you on this project.

Very truly yours,

GREAT LAKES ANALYTICAL

## **SUPER MUD**

**POLYMER DRILLING SYSTEMS**

Tel: (870) 863-5707 • (800) 243-7455  
Fax: (870) 863-0603 • E-Mail: [pdsco@pdscoinc.com](mailto:pdsco@pdscoinc.com)

RE: Super Mud (synthetic polymer soil stabilizer) environmental issues.

In response to questions on the environmental impacts of Super Mud we submit the following:

1: Common disposal practice.

In general we recommend oxidation of the slurry prior to disposal to break the polymers and other ingredients in this product into inert products such as CO<sub>2</sub>, H<sub>2</sub>, and minute traces of Nitrogen. Super Mud degradation can be accelerated by oxidation with oxidizers such as hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>) or 5.25% sodium hypochlorite (household bleach).

The procedure for usage of household bleach to degrade the polymer is simple. A 1:1 ratio of bleach to Super Mud is added to the slurry. For example 1 gallon of household bleach is added to 800 gallons of slurry when the recommended dosage of 800:1 (water:Super Mud) is used. This is then mixed well by methods such as recirculating pumps attached to the slurry tank or by auger rotation until the viscous nature of the slurry is gone.

Hydrogen peroxide may be the preferred oxidant in many applications due to the H<sub>2</sub>O<sub>2</sub> degrading to oxygen and inert water. Unlike bleach, no extra chemicals are added to the water such as sodium chloride or chlorine. The procedure for usage of hydrogen peroxide is the same with the exception of dosage. One gallon of household grade H<sub>2</sub>O<sub>2</sub> (3% H<sub>2</sub>O<sub>2</sub>) should be added to the slurry for every 5 gallons of Super Mud.

2: Super Mud is environmentally friendly.

Super Mud is inert and presents no harm to the environment. The volume of pure Super Mud is approximately:

- 40% H<sub>2</sub>O & emulsifier
- 35% polymer (an inert polyacrylamide polymer similar to polymers used in water and wastewater as flocculents).
- 25% base oil (light hydrocarbon, contains the identical petroleum distillate which is approved by the FDA for the production of food contact papers and for the clarification of beet, cane sugar juice, liquor, and by the EPA for the treatment of potable water).

The CAS number of the petroleum distillate in Super Mud is 064742-47-8. Please note that the

P.O. BOX 507, El Dorado, Arkansas 71731-0507 USA

used slurry is diluted with water 800:1 (water:Super Mud). Super Mud slurry is non-toxic and non-hazardous and disposal should not present a problem. Enclosed is a copy of the official laboratory analysis report on pure Super Mud and a copy of the priority pollutant list content (United States Environmental Protection Agency, EPA). This priority pollutant list indicates that the pure product contains some cyanide and copper however please note the following:

A. The priority pollutant list testing was performed on pure product. In usage the product is diluted, 800 part water to one part Super Mud. During usage the product may undergo further dilution. Regardless, if the product is used at normal dosage or even at a higher dose the resulting slurry would meet the very strict EPA drinking water criteria (criteria for treatment of water for use as a drinking water source).

B. If Super Mud is disposed as pure product, the waste would be classified as non-hazardous per EPA regulations.

C. There are no TCLP (Toxic Characteristics Leaching Procedure) limits for the small quantity of Cyanide and Copper found in the pure product. This is a very intensive testing procedure, required by the EPA, using an acid to determine the potential of a waste or its contaminating constituents to enter into groundwater. Also enclosed is testing performed on Super Mud slurry in regards to the toxicity of this product. From this information it can be observed that this product is non-toxic.

### 3: Collection and storage.

When a drilled shaft is constructed, the slurry stabilizes the shaft. Once the shaft has been drilled to the desired depth and size, concrete is usually placed in the shaft beginning at the bottom. As the concrete is placed the slurry is displaced and pumped to a storage tank for reuse on the next shaft. Following completion of the project, the slurry is mixed in the tank with the oxidants, (if forced degradation is specified), and disposed of per site requirements.

### 4. Super Mud is biodegradable.

Enclosed is a copy of a letter from our analytical laboratory stating the biodegradability potential for Super Mud. It is felt that this product will biodegrade over time to yield inorganic nitrogen. This product will also photodegrade if left in sunlight.

If you have any questions or if we can be of assistance please let us know.

Best regards,

Rob Newsom

RE: Super Mud Dry (synthetic polymer soil stabilizer) environmental issues.

In response to questions on the environmental impacts of Super Mud Dry we submit the following:

1: Common disposal practice.

In general we recommend oxidation of the slurry prior to disposal to break the polymers and other ingredients in this product into inert products such as CO<sub>2</sub>, H<sub>2</sub>, and minute traces of Nitrogen. Super Mud Dry degradation can be accelerated by oxidation with oxidizers such as hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>) or 5.25% sodium hypochlorite (household bleach).

The procedure for usage of household bleach to degrade the polymer is simple. A 1:1 ratio of bleach to Super Mud Dry is added to the slurry. For example 1 gallon of household bleach is added to 800 gallons of slurry when the recommended dosage of 1 lbs Super Mud Dry to 300 gallons of water is used. This is then mixed well by methods such as recirculating pumps attached to the slurry tank or by auger rotation until the viscous nature of the slurry is gone.

Hydrogen peroxide may be the preferred oxidant in many applications due to the H<sub>2</sub>O<sub>2</sub> degrading to oxygen and inert water. Unlike bleach, no extra chemicals are added to the water such as sodium chloride or chlorine. The procedure for usage of hydrogen peroxide is the same with the exception of dosage. One gallon of household grade H<sub>2</sub>O<sub>2</sub> (3% H<sub>2</sub>O<sub>2</sub>) should be added to the slurry for every 5 gallons of Super Mud.

2: Super Mud Dry is environmentally friendly.

Super Mud Dry is inert and presents no harm to the environment. The volume of pure Super Mud Dry is approximately:

- 99% polymer (an inert polyacrylamide polymer similar to polymers used in water and wastewater as flocculents).
- less than 1% water or inert matter

Enclosed is a copy of the official laboratory analysis report on pure Super Mud and a copy of the priority pollutant list content (United States Environmental Protection Agency, EPA). This

P.O. BOX 50

priority pollutant list indicates that the pure product contains some cyanide and copper however please note the following:

A. The priority pollutant list testing was performed on pure product. In usage the product is diluted, 300 gallons of water to one lbs Super Mud Dry. During usage the product may undergo further dilution. Regardless, if the product is used at normal dosage or even at a higher dose the resulting slurry would meet the very strict EPA drinking water criteria (criteria for treatment of water for use as a drinking water source).

B. If Super Mud Dry is disposed as pure product, the waste would be classified as non-hazardous per EPA regulations.

C. There are no TCLP (Toxic Characteristics Leaching Procedure) limits for the small quantity of Cyanide and Copper found in the pure product. This is a very intensive testing procedure, required by the EPA, using an acid to determine the potential of a waste or its contaminating constituents to enter into groundwater. Also enclosed is testing performed on Super Mud slurry in regards to the toxicity of this product. From this information it can be observed that this product is non-toxic.

3: Collection and storage.

When a drilled shaft is constructed, the slurry stabilizes the shaft. Once the shaft has been drilled to the desired depth and size, concrete is usually placed in the shaft beginning at the bottom. As the concrete is placed the slurry is displaced and pumped to a storage tank for reuse on the next shaft. Following completion of the project, the slurry is mixed in the tank with the oxidants, (if forced degradation is specified), and disposed of per site requirements.

4. Super Mud is biodegradable.

Enclosed is a copy of a letter from our analytical laboratory stating the biodegradability potential for Super Mud Dry. It is felt that this product will biodegrade over time to yield inorganic nitrogen. This product will also photodegrade if left in sunlight.

If you have any questions or if we can be of assistance please let us know.

Best regards,

Rob Newsom

**APPENDIX A: Super Mud Priority Pollutant test report**

Please note that where the value(s) is/are shown as "<" (less than), this should be interpreted as "non-detectable."

As you can see from the data below, there are low levels of certain metals in the product samples tested. The Priority Pollutant constituents which are present in pure Super Mud are summarized below:

Volatile Organic Compounds	None Detected
Base Neutral Compounds	None Detected
Acid Extractable Organics	None Detected
Pesticides	None Detected
PCB's	None Detected
Metals/Miscellaneous	
Cyanide	4.8 mg/kg
Copper	3.9 mg/kg

In an effort to put these low levels in prospective, the tables below compare the results observed to potentially applicable regulatory criteria:

**Super Mud Comparison With California Standards**

	Concentration Detected in Priority Pollutant	California Title 22 Toxicity Regulatory level (section 66261.2)(mg/l)	California Title 22 Drinking Water Standards (section 64435)(mg/l)
<u>Chemical Observed</u>	<u>Scan (mg/L)</u>		
Copper	3.9	25	Not listed
Cyanide	4.8	Not listed	0.05

**Super Mud Comparison With Federal Standards**

	Concentration Detected in Priority Pollutant	Federal RCRA Hazardous Waste Standard (40 CFR 261)	Federal Drinking Water Standard (40 CFR 141, 143)	Federal Water Quality Criteria (40 CFR 131)
<u>Chemical Observed</u>	<u>Scan (mg/L)</u>			
Copper	3.9	Not Regulated	1.0	0.18
Cyanide	4.8	250	0.2	0.02

This priority pollutant list indicates that the pure product contains some cyanide and copper however please note the following:

A. The priority pollutant list testing was performed on PURE PRODUCT. In usage the product is diluted to 800 parts water to one part Super Mud. During usage the product may

undergo further dilution. Regardless, if the product was used in the normal dosage or even at a higher dose the resulting slurry would meet the very strict drinking water criteria.

B. If Super Mud is disposed of as a pure product, the waste would be classified as non-hazardous.

C. There are no TCLP (Toxic Characteristics Leaching Procedure) limits for the small quantity of Cyanide and Copper found in the PURE product. This is a very intensive testing procedure, required by the US EPA, using an acid to determine the potential of a waste or its contaminating constituents to enter into groundwater.

Mr. Robert Ryan  
POLYMER DRILLING SERVICES  
P.O. Box 507  
El Dorado, AR 71731

Dear Mr. Ryan:

Re: Your Product--PDS Supermud

In response to your request, we have reviewed the probable fate of the subject product in the soil. Based on our knowledge of the primary constituent--the ammonium salt of a copolymer of acrylamide and acrylic acid--we would anticipate that this polymer would slowly biodegrade in soil to yield inorganic nitrogen.

Very truly yours,

T. Harris

Environmental Specialist

RE: Land application of drilling fluids

Dear Mr. Bailey:

This is in response to your request dated March 15, 1996, to land apply drilling fluids generated in drilling shafts for the Hwy. 31 railroad overpass near Pine Bluff in Jefferson County. By this letter the Department grants approval to your request with the following conditions:

1. The material must be applied evenly to the site.
2. Land application shall not occur when soils are saturated or when significant precipitation is anticipated within the next 24 hours.

Please contact me at 682-0655 if you have any questions.

Sincerely, -

Bruce Kirkpatrick, P.E.  
Assistant Chief  
Water Division

Mr. Rob Newsom, Marketing Director  
PDSCo  
PO Box 507  
El Dorado, Arkansas 71731-0507]

Dear Mr. Newsom:

It is my pleasure to inform you that the Department of Environmental Protection has found the requested use of PDSCo Super Mud acceptable for the FDOT applications, assuming compliance with the best management practices proposed in your August 1995 report.

Your company's regard for Florida's environment is greatly appreciated. If I can be of further assistance, please contact me at 904/488-3601.

Sincerely,

Mary E. Williams, Chief  
Bureau of Drinking Water and Ground Water  
Resources

## MATERIAL SAFETY DATA

### 1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME : **Super Mud**  
SYNONYMS : Anionic polyacrylamide in water-in-oil emulsion  
CHEMICAL FAMILY : Anionic polyacrylamide copolymer  
MOLECULAR FORMULA : Mixture  
MOLECULAR WEIGHT : Mixture

PDSCo, P.O. BOX 507, WEST SHARP STREET, EL DORADO, AR 71730 USA  
EMERGENCY PHONE: For emergency call PDSCo: 1 (800) 243-7455

### 2. COMPOSITION/INFORMATION ON INGREDIENTS

OSHA REGULATED COMPONENTS	CAS. NO.	%	TWA/CEILING	REFERENCE
COMPONENT				
Petroleum distillate	064742-47-8	24	400 ppm	OSHA
Hydrotreated light				

### 3. HAZARDS IDENTIFICATION

#### EMERGENCY OVERVIEW

APPEARANCE AND ODOR : White, viscous, opaque liquid; slight hydrocarbon odor  
STATEMENTS OF HAZARD : WARNING! MAY CAUSE SKIN IRRITATION  
IMPORTANT! SPILLS OF THIS PRODUCT ARE VERY SLIPPERY  
WHEN WET

#### POTENTIAL HEALTH EFFECTS

##### EFFECTS OF OVEREXPOSURE:

Acute oral (rat) LD50 and acute dermal (rabbit) LD50 of > 10 ml/kg. Direct contact with this material may cause minimal eye and moderate skin irritation.

Refer to Section 11 for toxicology information on the OSHA regulated components of this product.

### 4. FIRST AID MEASURES

In case of skin contact, wash affected areas of skin with soap and water. Do not reuse clothing without laundering.

In case of eye contact, immediately irrigate with plenty of water for 15 minutes.

### 5. FIRE FIGHTING MEASURES

#### FLAMMABLE PROPERTIES

FLASH POINT : >200°F (>93.3°C) METHOD : Pensky-Martens Closed Cup

#### FLAMMABLE LIMITS

(% BY VOL) : Not applicable

AUTOIGNITION TEMP : Not available

DECOMPOSITION TEMP : Not available

#### EXTINGUISHING MEDIA AND FIRE FIGHTING INSTRUCTIONS

Use water spray, carbon dioxide or dry chemical to extinguish fires. Use water to keep containers cool. Wear self-contained, positive pressure breathing apparatus and full fire-fighting protective clothing. See Section 8 (Exposure Controls/Personal Protection) for special protective clothing.

**6. ACCIDENTAL RELEASE MEASURES****STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED**

Cover spill with some inert absorbent material; sweep up and place in waste disposal container. Flush area thoroughly with water. Residual may be very slippery. If slipperiness remains, apply more dry-sweeping compound.

**7. HANDLING AND STORAGE**

Avoid contact with skin. Wash thoroughly after handling. To avoid product degradation and equipment corrosion, do not use iron, copper, or aluminum container or equipment. OSHA regulations (29 CFR 106.a.14), require that the flashpoint of materials of this type be determined by the Pensky-Martens Closed Tester method. The test for this product indicated it has flash point at >200°F (93.3°C); therefore, caution should be exercised in storage and handling.

**8. EXPOSURE CONTROLS/PERSONAL PROTECTION****ENGINEERING CONTROLS AND PERSONAL PROTECTIVE EQUIPMENT (PPE)**

Engineering controls are not usually necessary if good hygiene practices are followed. Before eating, drinking, or smoking, wash face and hands thoroughly with soap and water. Avoid unnecessary skin contact. Impervious gloves are recommended to prevent prolonged skin contact. For operations where eye or face contact can occur, eye protection is recommended.

**9. PHYSICAL AND CHEMICAL PROPERTIES**

APPEARANCE AND ODOR	:	White, viscous, opaque liquid; slight hydrocarbon odor.
BOILING POINT	:	~ 347°F; ~ 175°C (value for oil phase)
MELTING POINT	:	0°F; -18°C
VAPOR PRESSURE	:	Not available
SPECIFIC GRAVITY	:	1.0
VAPOR DENSITY	:	Not available
% VOLATILE (BY WT)	:	~ 70
pH	:	Not available
SATURATED IN AIR (BY VOL)	:	Not available
EVAPORATION RATE	:	<1 (Butyl Acetate = 1)
SOLUBILITY IN WATER	:	Appreciable

**10. STABILITY AND REACTIVITY**

STABILITY	:	Stable
CONDITIONS TO AVOID	:	None known
POLYMERIZATION	:	Will not occur
CONDITIONS TO AVOID	:	None known
INCOMPATIBLE MATERIALS	:	Strong oxidizing agents
HAZARDOUS DECOMPOSITION PRODUCTS	:	Thermal decomposition or combustion may produce carbon monoxide, carbon dioxide, ammonia, and/or oxides or nitrogen.

**11. TOXICOLOGICAL INFORMATION**

Toxicological information on the OSHA regulated components of this product is as follows:

Acute overexposure to petroleum distillate vapors may cause eye and throat irritation. On direct skin contact, petroleum distillate may produce a severe skin irritation.

**12. ECOLOGICAL INFORMATION**

No aquatic LC50, BOD, or COD data available.  
 OCTANOL/H<sub>2</sub>O PARTITION COEF: Not available

**13. DISPOSAL CONSIDERATIONS**

Disposal must be made in accordance with applicable governmental regulations.

## MATERIAL SAFETY DATA

### 1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME : Super Mud Dry  
SYNONYMS : None  
CHEMICAL FAMILY : Anionic polyacrylamide copolymer  
MOLECULAR FORMULA : Polymer  
MOLECULAR WEIGHT : Polymer

PDSCo, P.O. BOX 507, 105 WEST SHARP STREET, EL DORADO, AR 71730 USA  
EMERGENCY PHONE: For emergency call PDSCo: 1 (800) 243-7455

### 2. COMPOSITION/INFORMATION ON INGREDIENTS

OSHA REGULATED COMPONENTS	CAS. NO.	%	TWA/CEILING	REFERENCE
---------------------------	----------	---	-------------	-----------

No permissible Exposure Limits (PEL/TLV) have been established by OSHA or ACGIH

### 3. HAZARDS IDENTIFICATION

#### EMERGENCY OVERVIEW

APPEARANCE AND ODOR : Off-white granular solid  
STATEMENTS OF HAZARD : IMPORTANT! SPILLS OF THIS PRODUCT ARE VERY SLIPPERY WHEN WET

#### POTENTIAL HEALTH EFFECTS

##### EFFECTS OF OVEREXPOSURE:

This product has an acute oral (rat) LD50 and acute dermal (rabbit) LD50 of > 2.5 g/kg and >10.0 g/kg respectively. This product produced no eye irritation and no dermal irritation during primary irritation tests in rabbits. The inhalation of the vapors is not likely to cause adverse health effects.

### 4. FIRST AID MEASURES

In case of skin contact, wash affected areas of skin with soap and water.  
In case of eye contact, immediately irrigate with plenty of water for 15 minutes.

### 5. FIRE FIGHTING MEASURES

#### FLAMMABLE PROPERTIES

FLASH POINT : Not applicable  
FLAMMABLE LIMITS (% BY VOL) : Not applicable  
AUTOIGNITION TEMP : Not available  
DECOMPOSITION TEMP : Not available

#### EXTINGUISHING MEDIA AND FIRE FIGHTING INSTRUCTIONS

As with many solids, any dust that is generated may be explosive if mixed with air in critical proportions and in the presence of a source of ignition. Use water, carbon dioxide or dry chemical to extinguish fires. Wear self-contained, positive pressure breathing apparatus.

**6. ACCIDENTAL RELEASE MEASURES****STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED**

Spilled material becomes very slippery when wet. Sweep up spills and place in a waste disposal container. Flush the area thoroughly with water and scrub to remove residual. If slipperiness remains, apply more dry-sweeping compound. Do not flush large quantity of the material to sewer.

**7. HANDLING AND STORAGE**

Spills should be scooped up or wiped up immediately, and spill area flushed with water. Maintained good housekeeping to control dust accumulations. To avoid product degradation and equipment corrosion, do not use iron, copper or aluminum container or equipment.

**8. EXPOSURE CONTROLS/PERSONAL PROTECTION****ENGINEERING CONTROLS AND PERSONAL PROTECTIVE EQUIPMENT (PPE)**

Engineering controls are not usually necessary if good hygiene practices are followed. Before eating, drinking, or smoking, wash face and hands thoroughly with soap and water. Avoid unnecessary skin contact. Impervious gloves are recommended to prevent prolonged skin contact. For operations where eye or face contact can occur, eye protection is recommended.
