

## KENTUCKY TRANSPORTATION CENTER

### TRAFFIC FORECASTING REPORT 2007

## **OUR MISSION**

**We provide services to the transportation community**  
through research, technology transfer and education.

We create and participate in partnerships  
to promote safe and effective  
transportation systems.

## **OUR VALUES**

### **Teamwork**

Listening and communicating along with  
courtesy and respect for others.

### **Honesty and Ethical Behavior**

Delivering the highest quality  
products and services.

### **Continuous Improvement**

In all that we do.

Research Report  
KTC-08-06/PL14-07-01F

## **TRAFFIC FORECASTING REPORT - 2007**

by

## INTRODUCTION

This is the sixth edition of the Traffic Forecasting Report (TFR). This edition of the *TFR* contains the latest (predominantly 2007) forecasting/modeling data as follows:

- Traffic forecasting products and customers
- Functional class average traffic volume growth rates, multipliers, and trends
- Vehicle miles traveled and mileage totals
- ATR locations and data summary
- Functional class average K-factors, D-factors, and average traffic parameters from ATR data
- Average daily and peak hour truck percentages and volumes
- Modified aggregated ESALs
- Travel activity
- Kentucky Statewide Traffic Model summary
- MPO (urbanized) and county-level model status
- Socioeconomic and travel data sources
- Kentucky Traffic Model Users Group (MUG) meeting summary
- Hourly volume percentages by functional class
- Monthly and daily volume count factors by functional class
- Monthly and daily design hour volume count factors by functional class
- Kentucky population summaries and projections by county
- Traffic volume growth rates by county and functional class
- Number of traffic count stations by county and functional class

# 1.0 TRAFFIC FORECASTING PROCESS UPDATE

## 1.1 BACKGROUND

Information on the traffic forecasting process can be found on the web at <http://www.planning.kytc.ky.gov/traffic.asp>. The *TFR* serves to update new data and processes used in traffic forecasting.

## 1.2 PROCESS IMPROVEMENT

Several mechanisms are used to improve the forecasting process including the Kentucky Traffic Model Users Group (KY MUG), research studies, further GIS implementation, new data sources, and the constant improving of the process implemented by Kentucky Transportation Cabinet (KYTC) staff. The traffic forecasting area is always evolving in response to new customers and ever-changing transportation demands. A summary of traffic forecasting products and customers of the products are presented in Table 1.

**1.2.1 Innovations.** Research has primarily been conducted by KYTC staff since the previous TFR (Traffic Forecast Report) update in 2004. One innovation was breaking down the ATR (Automatic Traffic Recorder) data in Excel rather than relying on the mainframe to provide K-factors and D-factors by functional class (see Tables 4 and 5). This provided much more accurate data, and also led to the development of ADT and DHV count factors by Functional Class and day and week of the count (see Appendix D). These factors allow KYTC to take a peak hour count and easily estimate a DHV, or take a 48-hour count and better estimate an ADT. KYTC has also implemented these factors in their turn movement DHV calculations.

Another innovation was the development of a comprehensive, forecasting friendly vehicle classification database. The database includes all classification counts performed from January 1, 1997 through December 31, 2007 by KYTC. The database can easily be updated from the mainframe into Excel. The database allowed for a comprehensive classification breakdown by vehicle type (see Table 6 and Table 9).

Another forecasting breakthrough was the breakdown of all historical traffic volumes by count station. In November, 2007 all the historical counts for every count station in Kentucky were analyzed. The previous 25 years of count data was used to develop linear and exponential trends for the current and future years. Averages of the two trends were used to create a growth rate for all 13,000+ traffic count stations in Kentucky. They were grouped to obtain functional class average growth rates by county (see Table 2 and Appendix F). This tool has expedited the forecasting process. KYTC can quickly analyze a corridor or county's traffic volume growth using this tool. Also this is a major improvement over using only ATRs for functional class traffic volume growth rates. There are only 79 ATRs upon which projections could be developed, now KYTC uses over 13,000 stations for use in developing projections.

Perhaps the biggest innovation since the last TFR update is the enhanced travel demand modeling and GIS tools that have been implemented into the forecasting process. On the modeling side, the major highlights include developing a standard user interface for all models,

constant improvements to the statewide model, developing a county model in-house, and improving staff expertise in the modeling process. For more on modeling please see section 3.0.

GIS mapping has visually upgraded the quality of KYTC forecasting reports. In addition to aesthetics, GIS has expedited the forecasting process. KYTC now has a veritable one stop shop for all forecasting data in the form of one GIS map .mxd file. Latest traffic volume counts, milepoints, aerial photography, roads, schools, stop signs and signal locations, number of lane and functional class information, and all six-year plan projects are some of the more notable layers in the GIS file. The traffic count layer can be viewed online via the interactive maps at: <http://kytcgis.ky.gov/TrafficCounts/viewer.htm>.

In addition to the innovations listed above, KYTC also strives to improve forecasting tools. The turn movement, ESAL, and CTS trend line analysis spreadsheets are all much improved since the last TFR update. Kentucky Transportation Center (KTC) provided aggregated ESAL factors that were used in the ESAL spreadsheet (see Table 8).

**1.2.2 Kentucky Traffic Model Users Group.** The Traffic Model Users Group (MUG) is a forum that discusses current forecasting issues and shares information. The MUG consists of Transportation Cabinet forecasters/modelers, MPO modelers, consultant partners, research partners (Kentucky Transportation Center at the University of Kentucky), the Federal Highway Administration, and interested Transportation Cabinet decision-makers.

The MUG meets as needed and has sponsored several workshops. The MUG web page is at: <http://www.planning.kytc.ky.gov/traffic/MUG.asp>. A summary of previous meetings of the Traffic Model Users Group is presented in Appendix C.

**1.2.3 Other Developments.** Other developments include a much improved electronic archiving system for all traffic forecasts and a comprehensive database of all historical traffic forecasts in Excel format. Every forecast is now written as a report and made into an electronic (PDF) file. KYTC strives to send out all forecasting reports electronically via email. The reports have been scrutinized thoroughly and improved upon. There is a basic standard structure for all reports including an executive summary which outlines the data parameters and methodology used to make the traffic estimates.

## 2.0 TRAFFIC FORECASTING DATA SOURCES UPDATE

Traffic forecasting is a very data intensive process. This section covers traffic forecasting data sources, including traffic monitoring data, socioeconomic data, trip data, and HPMS data.

### 2.1 TRAFFIC MONITORING DATA

A primary source of traffic monitoring data is information obtained from 13,000+ traffic count stations in Kentucky. Each station is counted for traffic volume at least once every 3 years and a third of the counts are classification counts. KYTC collects this information in a database and can easily obtain functional class averages. Another traffic monitoring source is automatic traffic recorders. Table 4 lists the ATRs, their location, functional classification, D-factors, K-factors, and most recent average daily traffic. Table 5 groups the ATRs by functional classification. Table 8 includes weigh-in-motion (WIM) data collected at selected ATRs by functional classification. This data is used primarily for ESAL calculations.

Data representing functional class averages derived from the traffic count stations, ATRs and other traffic monitoring stations are presented in the following tables:

- Table 2– 2007-2027 Functional Class Average Growth Rates, Multipliers and Trends
- Table 5– Functional Class Average Traffic Parameters, K-Factors, and D-Factors from ATR Data for 2007
- Table 6– Average Daily and Peak Hour Truck Percentages and Volumes by Functional Class
- Table 8– Modified Aggregated ESALs – Three-Year Averages with Smoothed Growth Rates
- Table 9– Travel Activity by Functional Class and Vehicle Type

Appendix D contains more ATR data grouped together by functional class. Table D1 shows average weekday traffic by hour as a percentage of daily weekday traffic. Table D2 provides average ADT factors by functional class, month, and day of week of the count. Therefore if a count were taken for an entire day, the appropriate factor would be found and applied to estimate ADT. Similarly, DHV factors are provided in Table D3. The DHV factor tables allow a peak hour count to be factored based on functional class and month to estimate the 30<sup>th</sup> highest hour of the year by day of the week. 25, and 2030.

Appendix F contains traffic volume and station by functional class. Table F1 shows traffic volume growth rates by county and functional class while Table F2 provides the number of traffic count stations by county and functional class.

The Division of Planning provides access to traffic volume counts via interactive maps available on their web site at: <http://kytcgis.ky.gov/TrafficCounts/viewer.htm>. The CTS computer

program, which contains historical traffic volume data and current year estimates at more than 13,000 count locations in Kentucky is also available at:  
<http://www.planning.kytc.ky.gov/data/cts/cts.asp>.

## **2.2 OTHER DATA**

While traffic monitoring data is the most important source of data for traffic forecasts, other data is also needed. Supplemental data to support the traffic forecasting process include socioeconomic data, trip data, land use data, and highway characteristics data from the Highway Performance Monitoring System (HPMS).

**2.2.1 Socioeconomic Data.** The most recent population data is available from the 2000 decennial census. This data, along with census data for each Kentucky county for 1970, 1980, and 1990 population data; and projections for 2005, 2010, 2015, 2020, 2025, and 2030 are presented in Appendix E. Census data was obtained from the Kentucky State Data Center at the University of Louisville (<http://ksdc.louisville.edu/>). Various sources of socioeconomic data and travel data are presented in Table 13. The most prominent of which is the QCEW (Quarterly Census of Employment Wages) employment data obtained from the Kentucky Education Cabinet. This data is used in KYTC travel demand models.

**2.2.2 Travel Data.** Travel data consists of information derived from travel diaries, origin-destination surveys, census data, and other specialized data sources. As noted in the previous section, the sources for census data and other forms of travel data are presented in Table 13.

In the past, the KYTC has obtained data from the Bureau of Transportation Statistics' National Personal Transportation Survey (NPTS). The NPTS nationwide survey is conducted every five years and contains information representing trip making, stratified by income, rural/urban, race, gender, and many other categories. These surveys provide Kentucky-specific data for use in traffic modeling. This information now comes from the National Household Travel Survey (NHTS) that is similar to the old NPTS.

Census Transportation Planning Package (CTPP) data obtained from the 2000 Census includes valuable journey-to-work data (<http://www.fhwa.dot.gov/ctpp/>). This data is used in the Kentucky Statewide Model.

**2.2.3 HPMS Data.** Another important source of information for traffic forecasting is the Highway Performance Monitoring System (HPMS). A summary of average daily vehicle miles traveled (DVMT) by functional class for the years 1999 through 2006 is presented in Table 3.

## **3.0 TRAFFIC DEMAND MODEL UPDATE**

The most complex tools used by traffic forecasters are computerized traffic demand models. Listed below are the types of models and other traffic model information.

### **3.1 MODEL TYPES**

- County Models
- Kentucky Statewide Model
- MPO Models
- Other Models

**3.1.1 Kentucky Statewide Traffic Model Update.** KYTC has used a statewide traffic model (KYSTM) for many years. The KYSTM is constantly improved by KYTC staff. Table 10 gives a history of major updates along with model specifications.

**3.1.2 MPO Models** Each Metropolitan Planning Organization (MPO) is responsible for development of their area-specific models. A listing of urbanized area model status is presented in Table 11. KYTC provides technical support as needed. Recent major model activities include:

- New Ashland model developed in TransCAD
- New Owensboro model developed in TransCAD
- New Bowling Green model update to be developed in 2008 in TransCAD
- New E-town/Radcliff model update to be developed in 2008 in TransCAD
- New Clarksville (Christian County) model update to be developed in 2008 in TransCAD

**3.1.3 County-Level Models.** The county level models completed in recent years include Nelson, Woodford, and Rowan counties. The Nelson and Rowan county models were done by KYTC staff and the Woodford county model was done by KTC. Table 12 lists the county-level models developed to date.

**3.1.4 Model Innovations.** KYTC has worked with a team of consultants to develop a standard model user interface. This will be used on all models that KYTC oversees.

**Table 1. Traffic Forecasting Products and Customers**

Data Products	Forecast Year	Customers					
		Design	Planning	Air Quality	Materials	HPMS	Traffic
ESALs	10yr/20yr/40yr	X			X		
ADTs	Current, Construction, Design, Air Quality	X	X	X	X	X	X
DHVs	Current, Construction, Design, Air Quality	X	X	X		X	X
Truck Percentages	Current, Construction, Design, Air Quality	X	X	X		X	
Measures of Effectiveness (VMT, VHT)	Current, Construction, Design, Air Quality		X	X		X	
Speed Estimation	Air Quality		X	X			

Notes: Data products come in various formats including maps, worksheets, intersection turning movement diagrams, summary computer files, and reports.

**Table 2. 2007 – 2007 Functional Class Average Growth Rates, Multipliers, and Trends**

FC	FC Description	Number of Stations	Number of Station Miles	Growth Rate	20-year Multiplier	2007 Trend	2027 Trend
1-19	All Functional Classes	13,533	28,132	2.40%	1.61	4,407	7,082
1-9	All Rural FCs	9,891	24,933	2.36%	1.59	2,835	4,520
1	Rural Interstate	125	532	2.57%	1.66	35,246	58,510
2	Rural Principal Arterial	806	2,290	2.62%	1.68	8,891	14,917
6	Rural Minor Arterial	757	1,706	2.44%	1.62	4,787	7,758
7	Rural Major Collector	2,469	6,134	1.83%	1.44	2,321	3,334
8	Rural Minor Collector	3,221	8,986	1.91%	1.46	757	1,105
9	Rural Local	2,513	5,285	2.33%	1.58	445	705
11-19	All Urban FCs	3,642	3,199	2.45%	1.62	16,659	27,052
11	Urban Interstate	124	228	2.79%	1.73	84,352	146,193
12	Urban Freeway/Expressway	43	70	3.31%	1.92	33,453	64,141
14	Urban Principal Arterial	787	764	1.84%	1.44	20,774	29,929
16	Urban Minor Arterial	1,207	1,018	2.40%	1.61	10,588	17,015
17	Urban Collector	1,286	986	2.62%	1.68	4,795	8,050
19	Urban Local	195	134	2.21%	1.55	2,835	4,388

Notes: Data based on analysis done in November 2007. The past 25 years of count data was analyzed on all 13,000+ traffic count stations in Kentucky. Though traffic has flattened off in recent years, this is based on exponential and linear trends (an average of the two) from the previous 25 years.

Notes: Data based on all 2007, 2006, and 2005 Classification Counts performed by KYTC

**Table 10. Kentucky Statewide Traffic Model Summary**

## **KYSTM History**

1971: First model, designed by Alan M. Voorhees & Associates

1991: Model Update by Wilbur Smith Associates (WSA)

1999: Model Update by WSA

2004: Model Created by WSA using TransCAD

## **Applications**

- Corridor studies
- New routes
- System questions

## **1999 Model Update**

This update basically created a completely new model in MINUTP although the 1991 network and TAZs were used.

- Number of zones=1,530 (includes 823 Kentucky zones)
- Number of links=28,282
- Trip purposes: HBW, Truck, Tourist, External, Other Person (Combined NHB/HBO)
- Current year: 1999: Future year: 2030
- Assignment methodology: AON
- Calibration: 10 screenlines, final ground adjustment program
- Network development: use existing 1991 Kentucky network plus National Highway Planning Network outside of Kentucky
- No new data collected

## **2001 I-66 Corridor Calibration**

This converted link-based external truck trip to trip table format, updated network and trip matrices to reflect existing plus committed I-66 conditions, and updated networks/matrices to include I-66 network implementation.

## **2002 Combined Zone**

This revised existing TAZs.

## **2004 Model Update and Conversion (Version 1.0)**

This work created a true GIS network in Trans CAD with a network covering the entire USA for trucks and also included:

- Updated truck travel using the latest Transearch data by commodities.
- Updated long distance truck travel using an ATS-based long distance person travel model.
- Updated trip generation/trip distribution using new journey-to-work and NPTS data.
- Developed TransCAD GISDK procedures and interface.

## **2005 Model Update (Version 2.0)**

Fine tuned model for better run time and included:

- Aggregated truck commodities.
- Removed functions not available in to the model.
- Established RMSE using 12028 ADT records

## **Table 10. Kentucky Statewide Traffic Model Summary (continued)**

### **2006 Model Update (Version 3.0)**

Further tuned model for improved operation and included:

- Removed unnecessary links shorter than 100 feet.
- Amended population and growth rates to match Kentucky Data Center.
- Altered NHB trip production code to utilize MSA and Claritas type TAZ designations
- Identified missing and extraneous links in the network configuration and repaired
- Enhanced RSC files to allow an additional MSA designation for non-MSA areas
- Increased to 12270 the ADT records used to determine RMSE

### **2007 Model Update (Version 4.0)**

Initiated systematic review of modeled flow and improved RMSE by 22% to a total of 78%:

- Adjusted Centroid Connectors to improve trip assignment
- Amended speeds to further tune trip assignment
- Studied Jefferson, Fayette, Jessamine and Henderson County
- Identified missing and extraneous links in the network configuration and repaired
- Enhanced RSC files to allow an additional MSA designation for non-MSA areas

Notes: Kentucky MPOs that have performed household surveys are Cincinnati (OKI), Louisville (KIPDA) and Evansville (EUTS).

## **APPENDIX-A**

### **Acronyms**

**CTS** – Traffic Counts System

**HPMS** – Highway Performance Modeling System

**KTC** - Kentucky Transportation Center

**KYSTM** - Kentucky Statewide Traffic Model

**KYTC** - Kentucky Transportation Cabinet

**MUG** – Traffic Model Users Group

**NPTS** - National Personal Transportation Survey

**TAZ** - Traffic Analysis Zone

## APPENDIX-B

### Glossary

**Automated Traffic Recorder (ATR)** – ATRs record traffic data continuously (365 days/yr.). They are used as source data for k-factors and d-factors.

**Average Daily Traffic (ADT)** – ADT is the average traffic volume going past a point in one day. It is interchangeable with Annual Average Daily Traffic (AADT).

**Design Hour Volume (DHV)** – DHV is a volume unit based on the 30th highest hourly volume on a road in a year. It is commonly used for highway capacity analysis.

**Directional Factor (D-Factor)** – D-Factors are measures of the peak hour directionality. They are based on the average weekday peak hour.

**Equivalent Single Axleload (ESAL)** – ESALs are measures of pavement damage and are used in pavement design.

**K-Factor** - This factor is based on the 30th highest hour of the year and is used to compute DHVs.

**Metropolitan Planning Organization (MPO)** – MPOs are the planning authority in areas populations over 50,000.

**Milepoint** – The milepoints used in this report describe the locations of ATRs (increase easterly and northerly)

**Urban Areas** – These areas are cities with a population of 5,000 to 49,999. Roads in these areas have urban classifications.

**Urbanized Areas** – These areas are cities with a population greater than 50,000.

**Vehicle Miles Traveled (VMT)** – VMTs are the common unit of measure of travel for an area (e.g. county). One VMT is the equivalent of one vehicle traveling one mile

## APPENDIX-C

### Kentucky Traffic Model Users Group Meeting Summary

Date	Presentation	Presenter
10/3/2007	Welcome & Introduction	Scott Thomson
	KIPDA Model Application for Restore-64 Project	Scott Walker
		Randy Simon
	KYSTM Model Application for Jefferson County Interchange Study	Scott Thomson
	Sub-Area Analysis Options and Techniques	Vince Bernardin
	Discussion/Wrap up	Scott Thomson
6/20/2007	Model Standardization Framework	Ken Kaltenbach
	Network Geometry Data Files	Nathan Wilkinson
	Social Economic Data Files	David Hamilton
	Add-on Report Workshop	Vince Bernardin
	Add-on Report Prioritization	Rob Bostrom
	Discussion / Wrap-up	Scott Thomson
10/26/2006 Joint Mtg. Bowling Green	Kentucky Statewide Travel Demand Model	Rob Bostrom
	KYTC Update and Tools of the Trade Small and Medium Size	Amy Thomas
	Communities Conference Review	Fred Wegman
	Tennessee Modeling Updates	Jerry Everett
	Memphis Travel Demand Model	Bob Rock
	TransCAD 5.0 and TransModeler	Ken Monrow
		Paul Ricotta
7/28/2006	KYTC Freight Plan	Jill Asher
	Status of Current Modeling Efforts	Scott Thomson
	Review of Previous MUG Standardization Meeting: Where do we go from here?	Amy Thomas
	TransCAD Standardization; TransModeler Demo	Paul Ricotta
	Modeling Trends	Rob Bostrom
5/25/2006	Why Standardize	Scott Thomson
	Group Brainstorm Sessions	Amy Thomas
		Scott Thomson
		Amy Thomas
	Results from Group Sessions and Discussions	David Hamilton
9/13/2005	Microscopic Simulation & Highway Capacity Software Workshop	Paul Slone
	Synchro and CORSIM Similarities, Differences, & Practical Uses	Jagan Kaja
10/29/2004	Kentucky-specific travel demand modeling techniques in the areas of trip distribution, trip assignment and validation / calibration	Ken Kaltenbach
		Vince Bernardin
		John Gliebe
		Scott Walker
5/27/2004	Network Development & Trip Generation	Ken Kaltenbach
		Vince Bernardin
		Diane Zimmerman
		Scott Walker

### Kentucky Traffic Model Users Group Meeting Summary (continued)

Date	Presentation	Presenter
03/16/2004 3/19/2004	TransCAD Workshop	Paul Ricotta
11/7/2003	Congestion Performance Measures	Marc Clark
	TTI's Annual Urban Mobility Study	Tim Lomax
	Texas Business Council	Tim Lomax
	Simpson County Model Congestion Analysis	Marc Williams
	Mobility Monitoring at Trimarc	Rich Margiotta
	Archived Data Management System in Kentucky	Mei Chen
7/22/2003	Simpson County Model	Scott Walker
	Lexington Model	Kyeil Kim
	Madison County Model	Diane Zimmerman
	Mobile6 Parameter Update	Jesse Mayes
	Purpose of Meeting & History/Use of Ky. Statewide Model	Rob Bostrom
	Update on Current Activities: Network and TransCAD	Tom Cooney
	KySTM Brainstorming (Draft Wishlist of Model Objectives)	Marc Williams
	Statewide Model State of Practice	Tom Cooney
		Mark Byram
		Vince Bernardin
		Steve Smith
4/22/2003	Purposes of Data Collection, Sample Travel Diary & Survey Types	Elaine Murakami
	Survey Process	
	Household Travel Surveys	
	KIPDA's Household Survey	Randy Simon
	Kentucky's NHTS Add-On Surveys	Ben Pierce
	Geocoding & GPS	Elaine Murakami
		Ben Pierce
01/28/2003 1/30/2003	TransCAD Workshop	Paul Ricotta
12/6/2002	Summary of Speed Requirements for MOBILE6	Jesse Mayes
	Review of Atlanta Speed Study	Andrew Smith
	TMIP Review	Rob Bostrom
	Review of Current Methodology for Determining Speeds	
	from Transportation Demand Models	
10/25/2002	Madison Model TransCAD GISDK Script	Marc Williams
	Kentucky Statewide Model Combined Zones	
	KY 22/ Old Henry Road/ Crestwood Connector Subarea Model	Nick Uhren
	Lexington Regional Model	Vince Bernardin
	Ashland Regional Model	Ken Kaltenbach
8/14/2002	Seminar on Speed Estimation for Planning Purposes	Rich Margiotta
4/4/2002	Transearch Database	Joe Bryan
	North-South Initiative (Cincinnati to Datona) Freight Model	John Gliebe
	Freight Analysis Framework	Mohammed Alam
	Critical Issues Facing Freight Data Collection	Fawn Thompson

### Kentucky Traffic Model Users Group Meeting Summary (continued)

Date	Presentation	Presenter
01/07/2002	Workshop on Statewide Travel Forecasting	Alan Horowitz
1/9/2002		Bob Gorman
10/18/2001	New Traffic Simulation Product from Caliper	Paul Ricotta
	TRANSIMS: Microsimulation Package	Larry Rilett
	TRANSIMS: Software Development Update	Naveem Lamba
	Integrated Model	David Schmitt
		Paul Dorothy
	Simulation Case Studies	Karen Mohammadi
		Brian Aldridge
	Comparison of Industry Traffic Simulation Packages	Marc Williams
	KYTC Usage of Traffic Simulation	Dawn Jones
	Traffic Simulation Usage Roundtable	David Smith
7/27/2001	Summary of KYTC Air Quality Activities and How They Relate to Traffic Modeling	Jesse Mayes
	Air Quality Interface to Owensboro Model	Ken Kaltenbach
	Impact of Parameter Adjustments to Air Quality Models	Paul Lederer
	Traffic Growth Rates Research for VMT Estimation/Prediction	Barry House
5/17/2001	Socioeconomic Data Collection & Use in Kentucky's Traffic Models	Joe Barkevich
	Population Estimating and Growth Trends in Kentucky	Ron Crouch
	Economic Data Inputs into Transportation Planning	Eric Thompson
	Studies and Traffic Models in Kentucky	
2/15/2001	County Level Modeling Using TransCAD	Marc Williams
		Alan Davis
	Consolidated Travel Demand Modeling System	Rosella Picado
	for OKI and MVRPC	
10/17/2000	Innovative Modeling Technologies	Charlie Crevo
	Freight Modeling Data: TransSearch Applications in Ky.	Lisa Aultman-Hall
	KYTC's GIS and HIS Using Arcview & EXOR	Bill Jones
		Greg Witt
	TransCAD Network Data	Carroll Collins
	Viper Network Data and Manipulations	David Schmidt
	Census Data	Ed Christopher
	NPTS Usage and ITS Traffic Data	Patricia Hu
	Traffic Survey Data: Origin-Destination & Household Surveys	Mark Byram
	Traffic Monitoring Data Issues	Clark Graves
7/14/2000	TRANSIMS Overview	Kim Fisher
4/17/2000	Florida Land Use Allocation Model	Mike Brown
	Discussion of Kentucky L.U. Allocation Practice	
	Discussion of MUG Organizational Issues	
2/16/2000	TransCAD Model Conversion	Rob Bostrom
	KY Statewide Model Update	Marc Williams
	Mobile 6.0	Tom Creasey
		Lynn Soporowski
	Air Quality Issues	Charles Shaub
		Randy Simon
		Brent Sweger

### Kentucky Traffic Model Users Group Meeting Summary (continued)

Date	Presentation	Presenter
7/16/1999	Use of Demand Model Network to Create a Traffic Simulation Model	Tom Creasey
	The Density Saturation Gradient L.U. Model	Max Conyers
	Using GIS in Travel Demand Models w/ Application of the Indianapolis Model	Sunil Saha
	Get Prepared for the 2000 CTPP	Derek Hungness
3/17/1999	TransCAD Software Demonstration	Howard Slavin
		Andres Requeros
11/17/1998	Discussion of Traffic Model Alternatives	
	External Trip Synthesizing	Vince Bernardin
	Ky. Small Urban Modeling Practice	Diane Zimmerman
	Roundtable Discussion on model updates of MPO models, small urban models, statewide model and freight model	
5/6/1998	Viper Software Presentation	Victor Siu
	TP+ Software Presentation	Larry Seiders
	Discussion of Traffic Model Alternatives	
1/21/1998	Introduction to Transportation Conformity	Charles Schaub
	MPO Discussion: Modeling for Conformity	
	Modeling Software Discussion	
7/18/1997	Kentucky Statewide Traffic Model Study	Tom Cooney
	Switching to Life Style Models of Trip Generation	Sunil Saha
2/5/1997	Traffic Model Availability (Who owns the data?)	Barry House
	Improving Travel Survey Methods Research	David Wagner
	Project (GPS O-D)	
	Ohio-Kentucky-Indiana Travel Model Study	Cheng I Tsai
	Area Household Survey	
7/17/1996	Statewide Traffic Model Update	Rob Bostrom
	Report on Traffic Model Briefing to Secretary of KYTC	Charles Schaub
	Nodal Modeling Using TMODEL2	Bob Hazlett
	Traffic Model Calibration, Assignment Post-Processing and O-D Simulation	Vince Bernardin
3/20/1996	Statewide Traffic Model Update	Tom Cooney
	TMIP Overview	Charles Schaub
	Northern Kentucky O-D Survey Status Report	Cheng I Tsai
11/17/1995	Usage of Traffic Data by Designers	John Sacksteder
	TMIP Overview	Charles Schaub
9/13/1995	Louisville MPO External Station O-D Survey	Harold Tull
	Cincinnati MPO Traffic Model Update	Cheng I Tsai
	Maptitude Report	Rob Bostrom
7/12/1995	New Developments in MINUTP and TRANPLAN	Ken Kaltenbach
	Scope of Users Group Discussion	

## APPENDIX-D

Table D1. Hourly Volume Percentage by Functional Class

FC 1: RURAL INTERSTATE	
Hour	Percentage
12 - 1 AM	1.72%
1 - 2 AM	1.33%
2 - 3 AM	1.14%
3 - 4 AM	1.10%
4 - 5 AM	1.27%
5 - 6 AM	1.84%
6 - 7 AM	2.95%
7 - 8 AM	4.29%
8 - 9 AM	4.60%
9 - 10 AM	5.03%
10 - 11 AM	5.54%
11 - 12 PM	5.90%
12 - 1 PM	6.11%
1 - 2 PM	6.32%
2 - 3 PM	6.54%
3 - 4 PM	6.90%
4 - 5 PM	7.18%
5 - 6 PM	6.92%
6 - 7 PM	5.85%
7 - 8 PM	4.79%
8 - 9 PM	4.03%
9 - 10 PM	3.49%
10 - 11 PM	2.88%
11 - 12 AM	2.27%

FC 2: RURAL PRINCIPAL ARTERIAL	
Hour	Percentage
12 - 1 AM	0.95%
1 - 2 AM	0.60%
2 - 3 AM	0.52%
3 - 4 AM	0.58%
4 - 5 AM	0.97%
5 - 6 AM	2.01%
6 - 7 AM	3.98%
7 - 8 AM	5.61%
8 - 9 AM	5.18%
9 - 10 AM	5.16%
10 - 11 AM	5.50%
11 - 12 PM	5.82%
12 - 1 PM	6.22%
1 - 2 PM	6.37%
2 - 3 PM	6.74%
3 - 4 PM	7.51%
4 - 5 PM	8.07%
5 - 6 PM	7.80%
6 - 7 PM	5.99%
7 - 8 PM	4.39%
8 - 9 PM	3.52%
9 - 10 PM	2.86%
10 - 11 PM	2.17%
11 - 12 AM	1.48%

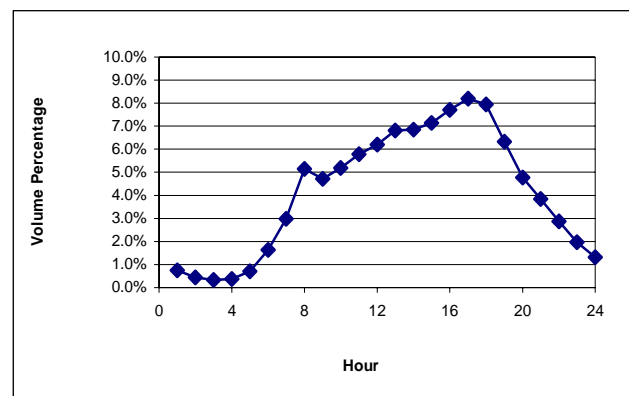

Notes: Hourly volume percentages come from an average of 2006 weekday ATR data.

Notes: Data based on analysis done in November 2007. The past 25 years of count data was analyzed on all 13,000+ traffic count stations in Kentucky. Caution, there may be anomalies such as small counties where one road drives the entire county's growth rate up (see Bracken). Also there may be a small number of stations the growth rate is based upon. Please see table F2 for number of stations by county and Functional Class.

Notes: Data based on analysis done in November 2007. The past 25 years of count data was analyzed on all 13,000+ traffic count stations in Kentucky. Caution, there may be anomalies such as small counties where one road drives the entire county's growth rate up (see Bracken). Also there may be a small number of stations the growth rate is based upon. Please see table F2 for number of stations by county and Functional Class.
