AGENDA

- Problem and Objectives
- Verification of the Finite Element Model (FEM)
- Exploring Potential Solutions
- Recommendations

GIRDER END CRACKS

Inclined cracks

Web cracks

Y cracks

PROJECT GOALS

Through Finite Element Analysis:

- Investigate the stress pattern at the girder ends
- Understand causes of cracking
- Explore possible solutions to limit cracking

VERIFICATION of the FEM

Test data available on Girders:

- Spancrete W54
- County W54
- Texas Tx70

SPANCRETE W54 GIRDER - Cracks

ODB: 36in_sym_damaged_wrf_06-15-2010_try7

Step: Step-1, 2 draped (layer 1 from top)
Increment 0: Step Time = 0.000

POTENTIAL SOLUTIONS

- Rebar Pattern
- Debonding Strands
- Combination of Debonding and Rebar Size
- Removing or Lowering draped strands
- Strand Cutting Order
- Coping Upper Flanges
- Limiting Number of Strands

REBAR PATTERN – Web Cracks

Web cracks

REBAR CONFIGURATIONS

30 STRANDS

40 STRANDS

Girder End

COPING the UPPER FLANGES

STRAND CUTTING ORDER

Almost identical results

CONCLUSIONS

- ✓ The rebar size increase leads to 20%-40% strain decrease in the mid web at the girder ends

CONCLUSIONS

- ✓ Debonding leads to 50-70% strain decrease, and could be helpful especially for inclined and Y cracks at the girder ends
- ✓ Removal of the draped strands eliminates the inclined cracks

CONCLUSIONS

- ✓ A combination of mild debonding and rebar size increase is a viable option

CONCLUSIONS

- ✓ Girder lifting causes the strains to jump and cracks to open

CONCLUSIONS

- ✓ Coping the upper flanges or changing the order of strand cutting does not affect the results
- ✓ Lowering the draped strands condenses the cracked area but does not decrease the strains at the ends

SUGGESTED FUTURE TASKS

- Build a girder with debonding, inspect cracks and test for shear
- Model girders with no draped strands
- Model the girder lift & crack opening
- Model the rebar slip for more realistic results
- Investigate bottom flange bursting strains further
- Create models to simulate the cracks explicitly

The text 'THANK YOU' is rendered in a large, bold, red 3D font with a slight shadow, centered on the slide. A solid red horizontal bar is positioned at the top of the slide, and a thin black vertical line runs down the left side.
