EXECUTIVE SUMMARY

MDOT prepared this greenhouse gas (GHG) emission inventory for fiscal year (FY) 2011 (October 1, 2010 September 30, 2011). The GHG emissions that were able to be quantified for MDOT governmental operations in FY 2011 were approximately **42,623 metric tons (mt) of carbon dioxide equivalent (CO_2e);** or **16.82 mt CO_2e per full-time equivalent personnel (FTE)** and **1.55 mt CO_2e per Lane Mile**.

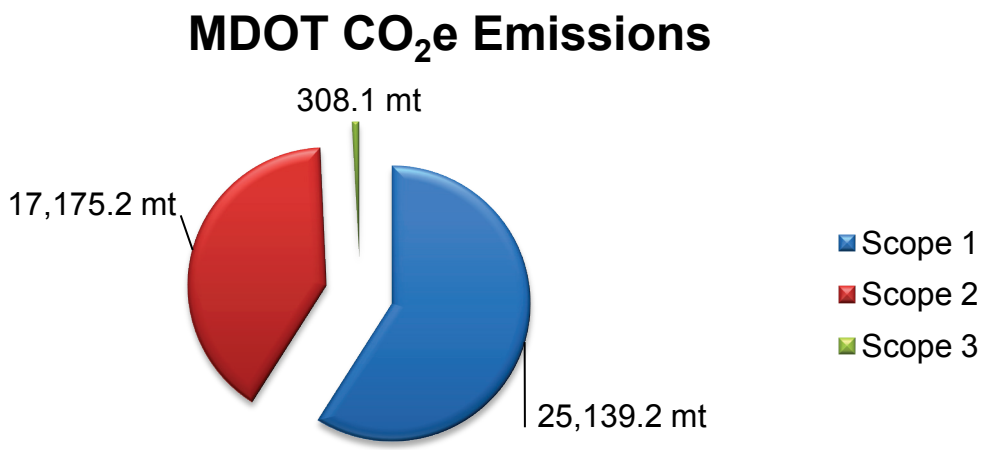

Figure 1

The majority of MDOT's GHG emissions (more than 46%) result from the consumption of fuels in its fleet vehicles.

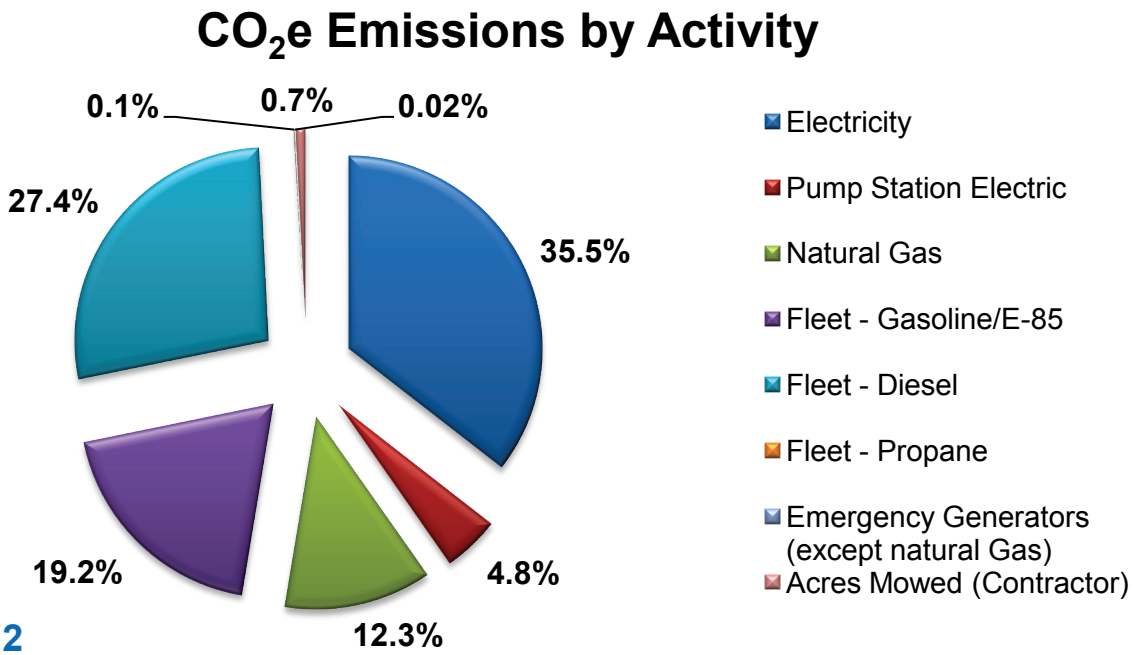

Figure 2

MDOT GREENHOUSE GAS EMISSION PHILOSOPHY

MDOT is committed to reducing our future carbon footprint while continuing to provide its State of Michigan customers with an efficient and superior transportation infrastructure.

INTRODUCTION

In 2011, MDOT initiated a program to quantify its GHG emissions. To that end, it funded a research opportunity through its Research Administration Section.

The risk of climate change to governmental operations is not yet fully understood; however, it is changing the way organizations think about the impact of their operations on the environment. How MDOT addresses this issue is driven by a combination of forces: State of Michigan priorities, regulations, social responsibility, and cost, as well as customer needs and expectations. The first step is to develop a framework for reporting GHG emissions resulting from MDOT's activities. The purpose of the inventory is to provide the baseline information, which will allow MDOT to make informed and effective policy decisions.

MDOT team members responsible for providing information and data for this effort included:

- Mr. Niles Annelin, Project Manager
- Mr. Michael Townley, Research Manager
- Ms. Sonja Scheurer
- Ms. Kristin Schuster
- Mr. Steve Urda (Pump Stations)
- Mr. Gary Mayes (Energy Consumption, Pump Stations)
- Mr. Don Whiteside (Building Energy Consumption)
- Mr. Tom Briggs (Building Energy Consumption)
- Mr. Tim Croze (Movable Bridges)
- Mr. Andy Bannasch (Fleet Vehicles)

LITERATURE REVIEW

A literature search was conducted to identify the best practices of other states' Departments of Transportation (DOTs) and other large transportation organizations and their respective efforts to reduce and monitor GHGs. A summary table of the best practices applicable to MDOT activities or operations has been compiled. It is fully annotated with document links and sources. The summary is included as Appendix 1.

METHODOLOGY

ORGANIZATIONAL BOUNDARIES

For the purposes of this GHG inventory, MDOT focused on its built infrastructure and fleet, as MDOT has both financial and operational control of these operations. MDOT operates facilities throughout the State of Michigan. The following infrastructure and activities are included in the FY 2011 analysis:

- Buildings – Offices, Transportation Service Centers (TSCs), Maintenance Garages, Warehouses, Welcome Centers, and Rest Areas
- Emergency Generators
- Fleet Vehicles
- Construction and Maintenance Signs
- Movable Bridges
- Lighting Infrastructure (includes only buildings and associated parking facilities)
- Pump Stations and Water Management Infrastructure

A list of buildings is included as Table 1.

The MDOT Research Administration team elected not to include the following activities in the analysis due to the challenges in collecting the necessary data, or a lack of available data to support robust emissions calculations:

- Snow Removal (neither contracted nor in-house)
- Street and Highway Lighting
- Road Painting/Striping
- Mackinaw, International , and Blue Water Bridges (operated by separate authorities)
- Road Construction and Maintenance (provided by Contractors)

If additional data is collected, GHG emissions from the following activities will be included in future inventories:

- Air Travel
- MDOT Business Travel in non-MDOT vehicles
- Losses from heating, ventilating, and air conditioning (HVAC) equipment in MDOT owned or operated buildings

PROTOCOL SELECTION

MDOT followed the GHG emission inventory protocol established by the World Resources Institute (WRI) and the World Business Council for Sustainable Development (WBCSD) in the *Greenhouse Gas Protocol: Corporate Accounting and Reporting Standard (*WRI and WBCSD, September 2001) and further refined in the *Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard, Revised Edition* (WRI and WBCSD, August 2012), hereafter referred to as the GHG Protocol. These protocols were designed to address the treaty of the Kyoto Protocol – a treaty developed to set binding obligations on industrialized nations to reduce their impacts on climate change. Additional protocols from *Greenhouse Gas Emission Inventory Methodologies for State Transportation Departments* (American Association of State Highway and Transportation Officials, July 2011), the Climate Registry, and the U.S. Environmental Protection Agency (USEPA) were used.

The GHG Protocol is the most widely used international accounting tool to quantify and manage GHG emissions. It is the framework used by most multinational companies, as well as for The Climate Registry (currently used in select areas of the U.S., Mexico, and Canada), the European Union Emission Trading Scheme, and the International Standards Organization.

A verification process is part of the GHG Protocol, developed to ensure that the data, assumptions, and procedures used to develop the inventory are reliable and defensible. MDOT has developed this inventory with the intent that it could be verified by a third-party auditor.

The 6 GHGs identified in the Kyoto Protocol are addressed in this inventory:

- Carbon Dioxide (CO_2)
- Methane (CH_4)
- Nitrous Oxide (N_2O)
- Hydrofluorocarbons (HFCs)
- Perfluorocarbons (PFCs)
- Sulfur Hexafluoride (SF_6)

Of these gases, MDOT activities result predominately in emissions of CO_2, CH_4, and N_2O, which are released by the combustion of fossil fuels. The remaining gases in the Kyoto Protocol are man-made and are generally released through specific refrigeration and building cooling equipment as well as energy transmission activities.

EMISSION SOURCES

Scope 1 and 2 emissions from MDOT operations are direct and indirect GHG emissions, respectively.

Direct GHG Emissions (Scope 1 Emissions) are a result of the following MDOT activities:

- Combustion of fuel or natural gas in facility boilers, furnaces, and generators; and
- Consumption of fuel oil or gasoline in MDOT owned/leased vehicles.

Indirect GHG Emissions (Scope 2 Emissions) are a result of the following MDOT activities:

- The use of purchased electricity for facility use.

Scope 3 Emissions are other indirect emissions by contractors. For the purposes of this inventory, this includes the roadside mowing and maintenance contractors.

DATA SOURCES

The data used to calculate Scope 1 and Scope 2 GHG emissions came from sources and matrices already recorded and maintained by MDOT Facilities personnel. Material use and storage records, when available, were reviewed to identify potential emissions sources of the three less common GHGs (HFCs, PFCs, and SF_6). These data include:

- Electricity Consumption
- Natural Gas Consumption
- Fuel Oil Consumption
- Vehicle Fuel Consumption

During the inventory project, MS Excel® workbooks were established for each activity. Each MDOT project team member was sent instructions to aid in the inventory process and ensure that the appropriate activities were identified and captured by the inventory.

EMISSION FACTORS

Emission factors for most of the common emission sources at the MDOT facilities are from the following:

- Emissions & Generation Resource Integrated Database (eGRID)
- GHG Protocol
- Intergovernmental Panel on Climate Change
- The USEPA Climate Leaders Program
- The Climate Registry
- The USEPA AP-42[1]
- Sound Engineering Judgment

All GHGs are calculated separately and converted to CO_2e on the basis of their global warming potential (GWP). For instance, the GWP for N_2O is 21 times that of CO_2, and the GWP of CH_4 is 310 times that of CO_2. All GHGs in this analysis are presented as their CO_2e value. A summary of MDOT's GHG emissions in included as Appendix 2.

Emission factors used in the calculations are summarized in the facility workbooks developed for MDOT and are included as Appendix 3.

[1] AP-42 Compilation of Air Pollutant Emission Factors by the USEPA

EMISSION CALCULATIONS

Emissions were calculated in an MS Excel-based workbook, populated with the MDOT raw consumption data and applicable emission and conversion factors. The complete workbooks are located in Appendices 4 through 8.

ASSUMPTIONS AND UNCERTAINTY ASSESSMENT

Generally, emissions are based on the purchase records and the assumption that all materials were processed, consumed, wasted, or emitted. However, for certain activities, site-specific knowledge of the activity and/or emission factors are used to determine actual emissions. For this inventory, the assumption is that the information provided by each member of the MDOT Project Team is accurate and verifiable through any audit process. The quality of this GHG inventory is reliant on this assumption.

MDOT established its fiscal year differently from a calendar year. Some facilities maintain and report selected data on a calendar year basis in lieu of the MDOT fiscal year. If the information was available, a weighted average of the two calendar years represented in the fiscal year was calculated. If additional information was unavailable, then the calendar year information provided by the facility was used in the fiscal year calculations.

The most reliable data available was used and this inventory fairly represents MDOT's GHG emissions; however, there are uncertainties associated with the emission estimates. Selected estimates, such as those for CO_2 emissions from energy-related activities, are considered to have low levels of uncertainty. For some other categories of emissions, such as the emissions from vehicle use (lack of data or details regarding the vehicle make/model), increases the uncertainty level associated with the estimates presented. MDOT is working toward improving the quality and accuracy of the data collected and used for future inventories.

FINDINGS

MDOT'S GHG INVENTORY

GHG EMISSIONS

MDOT's GHG emissions from the activities that had adequate data are 42,623 mt of CO_2e. A summary of the GHG emissions from the broad MDOT activity categories is presented in Table 2

Table 2 - Summary of GHG Emissions for FY 2011

	CO_2 (mt)	CH_4e (mt)	N_2Oe (mt)	Total CO_2e Emissions (mt)
Electricity	15,063	6.0	78	15,147
Pump Station Electric	2,017	0.802	10.51	2,028.1
Natural Gas	5,246	2.1	3.1	5,251
Fleet - Gasoline/E-85	8,133	4.9	40	8,178
Fleet - Diesel	11,667	1.0	11	11,679
Fleet - Propane	22	0.04	1.2	23
Emergency Generators (except Natural Gas)	7.9	0.01	0.07	8.0
Acres Mowed (Contractor)	304.9	0.92	2.37	308.1
TOTAL	**42,460**	**16**	**147**	**42,623**

CH_4e methane equivalent
mt metric tons
N_2Oe nitrous oxide equivalent

The emissions illustrated in Figure 3, 4, and 5 are primarily from the combustion of fuels at MDOT buildings and in fleet vehicles (59% Scope 1 emissions) and from the generation of electricity by third-party facilities and purchased for MDOT use (40% Scope 2 emissions). The Scope 3 emissions quantified are from contractor-supplied roadside mowing services (1% Scope 3 emissions).

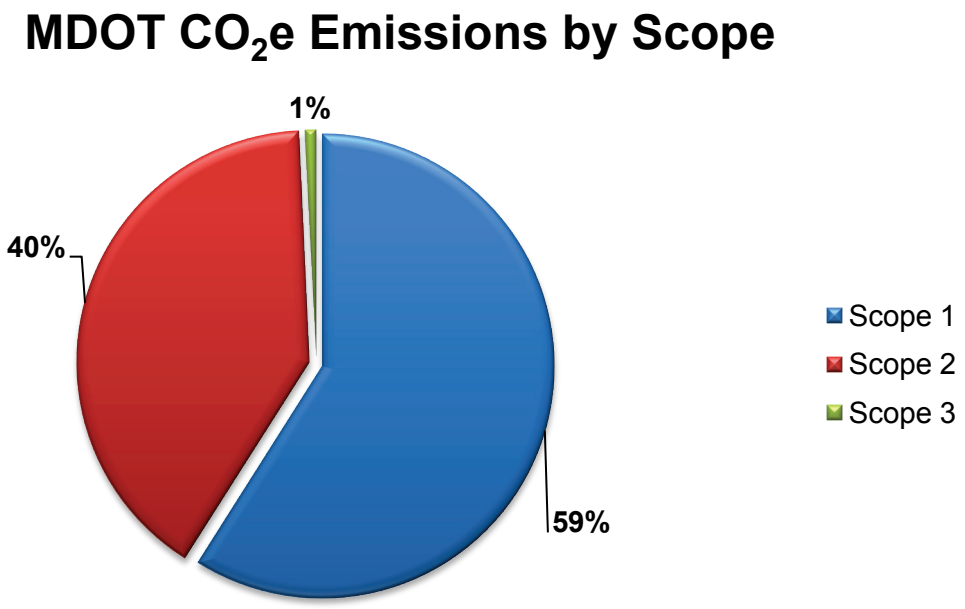

Figure 3

Based on the data available, the major source of MDOT's GHG emissions are from its buildings (48%), followed by its fleet (46%) as illustrated in Figure 4.

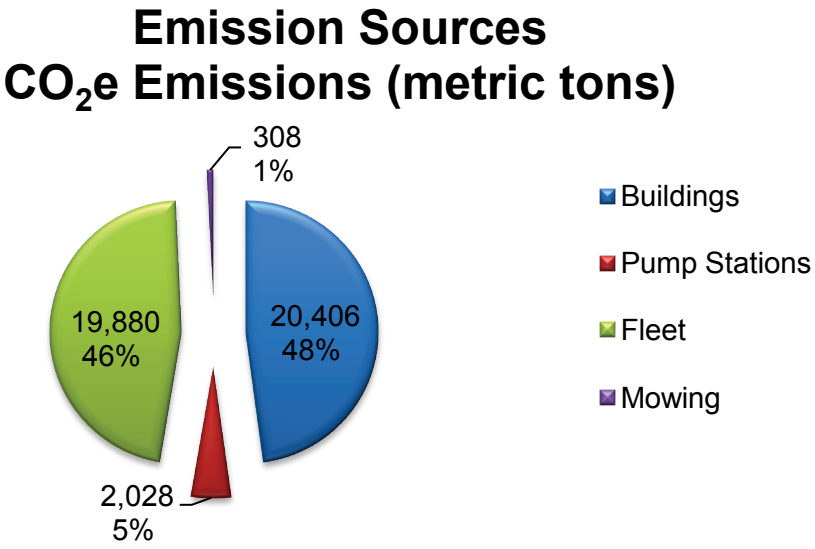

Figure 4

In FY 2011, MDOT's fleet was comprised of more than 1,900 trucks, vans, and cars; 250 signs, lights, generators, welders, chippers, and compressors; 300 tractors; and approximately 140 specialty vehicles. The fleet emissions are largely from its consumption of diesel as illustrated in Figure 5.

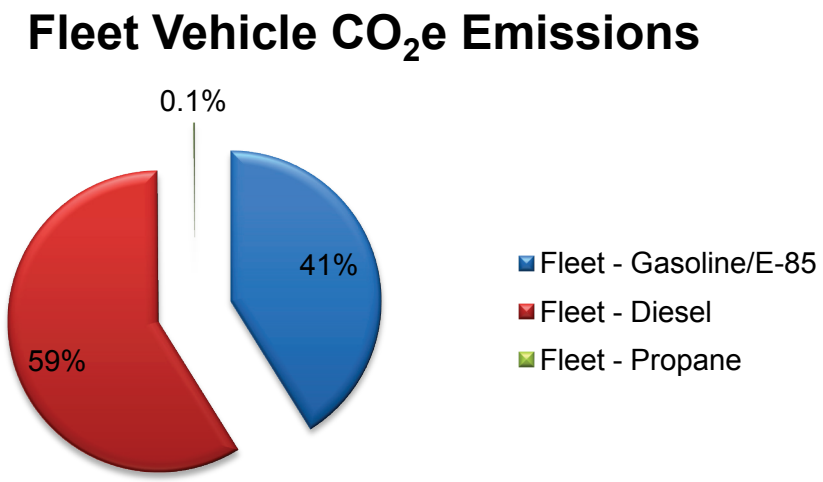

Figure 5

INDEXED RESULTS

MDOT has determined an intensity ratio by contrasting CO_2e generation per FTE and per Lane Mile. MDOT's intensity ratio of GHG emissions for FY 2011 is **16.82 mt CO_2e/FTE** (42,623 mt of CO_2e generated by 2,534 FTE) or **1.55 mt CO_2e/Lane Mile** (42,623 mt of CO_2e generated over 27,437 Lane Miles).

CONCLUSIONS AND INITIAL IMPLEMENTATION ACTION PLAN

RECOMMENDATIONS FOR FUTURE GHG EMISSION INVENTORIES

To improve the GHG inventory for MDOT operations, Fishbeck, Thompson, Carr & Huber, Inc. (FTCH) proposes the following recommendations:

- Collect fuel consumption data for the MDOT owned, leased, or controlled air fleet on a trip-by-trip basis.
- Collect vehicle make and model data for employees using personal or other non-MDOT controlled vehicles for business travel.
- Request refrigerant replacement data from HVAC maintenance contractors.
- Conduct a study of six different construction and road maintenance scenarios to develop a model to predict GHGs from MDOT contractor activities:
    - Concrete road full-depth replacement (*per lane mile*)
    - Asphalt road full-depth replacement (*per lane mile*)
    - Concrete road overlay (*per lane mile*)
    - Asphalt road overlay (*per lane mile*)
    - Bridge reconstruction (*select an indexing metric*)
    - Pump station construction (*select and indexing metric*)
- Request fuel consumption data from MDOT-contracted snow removal contractors/municipalities.

RECOMMENDATIONS FOR GHG EMISSION REDUCTIONS

There are few GHG emission inventories from state transportation agencies to use as a benchmark or comparison. However, based on a review of MDOT's GHG sources quantified, and using good engineering judgment, recommendations for GHG emission reductions are:

- The largest source of GHG emissions is from MDOT owned and operated buildings. Responsible for more than 35% of the total emissions, even a 10% reduction in energy consumption would significantly influence MDOT's carbon footprint. Recommendations for building energy reductions include:

- Establish an exhaust fan control strategy and obtain control by setpoint adjustments, control modifications, and rewiring where necessary. Generally, exhaust and make up air systems use excess energy due to lack of controlled operation.
- Determine a sequence of operation for the HVAC systems at the TSCs and for the hot water floor heating systems at the rest areas. Some systems operate in heating mode when the outside temperature is warm.
- Reduce excessive lighting in buildings with foot candle levels above the recommended level of 35, as long as it is appropriate for the activities in a particular facility.
- Replace aging light fixtures with LED or modern fluorescent systems.
- Replace older interior light fluorescent T-12 fixtures with T-8.
- Establish minimum design and energy efficiency construction requirements for all new and renovated buildings.
- Keep exterior fixtures free of bug debris to provide more light and to dissipate fixture heat.
- Evaluate demand and capacity of domestic hot water systems in buildings to facilitate optimization – generally these systems are oversized for the demand required.
- Install aerators in lavatory faucets to reduce flow.

- For MDOT fleet vehicles, as replacement opportunities arise, and the infrastructure exists or can be installed to support it, alternative fuel vehicles should be considered, including:
  - **Biodiesel** - Biodiesel is a clean burning, renewable alternative fuel produced from vegetable oils or animal fats and which can be blended with petroleum diesel to create a biodiesel blend.
  - **Ethanol** - Ethanol can be blended with gasoline in varying quantities. E85, a mixture of 85% ethanol and 15% unleaded gasoline, is an alternative fuel for use in flexible fuel vehicles.
  - **Electricity** - Vehicles that run on electricity have no tailpipe emissions.
  - **Propane** - Also known as liquefied petroleum gas (LPG). LPG has a high octane rating and excellent properties for spark-ignited internal combustion engines.

- **Compressed Natural Gas** - Natural gas that is extracted from wells and compressed. Natural gas vehicles have been found to produce fewer GHG emissions than gasoline vehicles.
- **Hydrogen** - Hydrogen is a renewable alternative fuel that can be used to create electricity with the only resulting emission being water vapor.

- Use of low-rolling resistance tires in larger MDOT fleet trucks.
- Use of conference calling and video meetings in lieu of travel for routine meetings.

									Arizona's Climate Change Advisory Group (CCAG): http://www2.law.ucla.edu/jelp/Articles/27-2%20Article/UCLA%20JELP%2027-2%20Owens.pdf	Steve Owens of CCAG, under the direction of then Gov. Janet Napolitano	CCAG: 1. Arizona's Clean Car GHG Standards are much like CA's standards. However, this cannot go into effect unless the USEPA grants a waiver under the federal Clean Air Act to the State of CA. If the State of CA is granted the waiver, then other states may adopt similar or more robust standards. 2. In states like AZ, it is important to have standards set on transportation, since the growth in population is so rapid and transportation is one of the leading GHG emission sources.

Caltrans Journal site describes the many changes the State of CA is going to do to lower GHG emissions. CA is said to be the leader in climate change policy. * CA has called for more fuel efficient vehicles to meet the plans to reduce emissions. Cars need better gas mileage and also need to emit less carbon. * Encourage the development of new housing near the already existing community shopping centers and employment to reduce the reliance on vehicles that commuters own. * The Dept has installed a green fleet promoting alternative fuels and low emission vehicles using E85 blend and ethanol and propane fuel.
								Inventory is mainly in spreadsheet form.	http://www.arb.ca.gov/cc/inventory/inventory.htm	California EPA, Air Resources Board: Webster Tasat Climate Change: City of LA, Director of Climate and Air Quality Programs: Gretchen Hardison: gretchen.hardison@lacity.org 213-978-0852	1. CA noticed a drop in their transportation emissions in 2008 due to CA guidelines and rising fuel costs. 2. CA has a GHG Emissions Inventory Query Tool used for 2000-2008 that will allow you to pick an emissions sector and type of activity to produce a summary of what was inputted into the query. 3. CA has mandatory GHG emissions reporting for Vehicles, Power Entities, Fuel Meters, and other emission sources. 4. Inventory tables are regularly maintained so that data and information is easily accessible in the future. http://www.arb.ca.gov/app/ghg/2000_2008/ghg_sector.php http://www.arb.ca.gov/cc/reporting/ghg-rep/updated_faq.pdf http://www.arb.ca.gov/cc/reporting/ghg-rep/ghg-rep.htm

											the fleet) and convert City commuter transportation to more efficient low-emissions gas. 3. The City wanted to focus on mobility for the people, not cars - promote means of transportation other than private vehicles, expand the railroad system, and make the transit information easy to understand and available in multiple languages.
Colorado	Colorado DOT	Yes	No	Yes	No	Yes	Yes	Statewide Transportation Plan.	2035 Statewide Transportation Plan: http://www.coloradodot.info/programs/statewide-planning/documents/2035%20Statewide%20Transportation%20Plan.pdf	2035 Statewide Transportation Plan: Colorado DOT (Not sure if she is the actual contact, but should be able to direct you) Air Quality Specialist, Sabrina Williams sabrina.williams@dot.state.co.us 303-757-9257	Whole Plan: 2035 Plan - Lists ways to reduce GHGs 1. Improving vehicle efficiency to reduce GHGs. 2. CDOT has begun to identify sustainable transportation systems: "walking, cycling, carpooling and public transit; planning corridors that support multiple options for travel; using telecommunications to reduce or replace physical travel; and using cleaner fuels and technologies, such as biodiesel, hybrid or electric cars." 3. Promote shared rides. 4. List their top ten strategies for improving GHG emissions throughout the state by improving the CDOT projects.
									Amendment: http://www.coloradodot.info/programs/statewide-planning/documents/2035PlanAmendmentMay2011_Final.pdf		Amendment: 1. Transportation Improvement Program, Six-Year Plan. 2. Update the gas tax, since it has not changed since 1993. 3. Public Involvement – Involve the public in meetings so they too can discuss priorities and better understand the need to lower GHGs and what it means to them. Send post cards and inform public using websites and other public communications.
			No		No			Written by CCS.	CCS: http://www.coloradoclimate.org/ewebeditpro/items/O14F13894.pdf	CCS	CCS: The list for guidelines and practices is listed below the document. 1. Annual growth rates for population, employment, goods services, electricity sales, and vehicle miles travel were studied and predicted for the future. 2. Goal of the study: Provide simple and straightforward estimates. To do this, reference forecasts from state and regional sources were used. When forecasts were not available, spreadsheet analysis and growth rate estimates were used, not complex modeling. 3. Main Sources for transportation and energy: USEPA State GHG Inventory tool (SGIT) is a collection of spreadsheets linked together and provided to help develop state GHG inventories. US DOE Energy Information Administration provides energy use data in each state, annually to 2003. EIA AEO2006 projects energy supply and demand for the US from 2003-2030. 4. Reduction: Use of wind and solar plants, recycle, and reduction in railroad (reduction in fuel), which historically had already been declining.
			Yes		Yes			Climate Change report for Colorado DOT. 										Colorado DOT, EPB Manager: Jane Hann – 303-757-9630 Administrative Asst: Stephanie Hartfield – 303-757-9281 Cultural Resources Section Manager: Dan Jepson – 303-757-9631 Air Quality (Under Dan Jepson): Sabrina Williams – 303-757-9257	with the Dept public health and environment to better understand how to prevent air quality problems. 2. Research and collaboration with other city departments to understand the efforts, work, and studies that will need to be conducted (sharing air quality emission and modeling, field work to obtain results, research on traffic controls/impact from vehicles, and ways to extend the service life of infrastructure including concrete and asphalt.
									Climate Change: http://www.coloradodot.info/programs/research/pdfs/2011/restareas	Colorado State University Sponsored by CDOT Research rick.kreminski@colostate-pueblo.edu 719-549-2340	Colorado State University 1. Using alternative energy sources at state rest areas can help reduce GHG emissions and help save the CDOT financially in the long term. 2. Method: Onsite evaluations of rest areas (site conditions, do they recycle?, the environment and air quality), research other state rest area studies (summaries for each in paper from LEED certification to wind energy), work with CDOT and coordinate, develop, and apply a scoring system, developed database, and calculate rest areas carbon footprints.
Connecticut	Connecticut DOT	Yes	No	Yes	No	Yes	Yes	USDOT and CDOT information used in transportation section.	Dept of Energy & Environmental Protection: http://www.ct.gov/dep/cwp/view.asp?a=2684&q=322070#	Department of Energy & Environmental Protection General Info e-mail: dep.webmaster@ct.gov c4info@ctclimatechange.com General Info phone: 860-424-3000	First Repot: 1. Several recommended actions to reduce GHGs: * Establish incentives/initiatives to encourage acquisition of low-GHG vehicles in public, private, and state fleets. * Double transit ridership by 2020. * Renewable fuel standards. * Consider fuel efficiency/carbon tax, commercial/municipal parking fees, and GHG tax on gas. * Look at speed limits; reduction in speed helps the performance of the fuel. Second Report: 1. Method: SIT - developed by USEPA to help agencies develop accurate assessments of their GHG emissions for sectors on a statewide basis. 2. GHG Emissions - 22% electric power, 43% transportation, 21% residential, and 14% industrial. 3. Transportation - the largest GHG source. Based on gasoline and diesel fuel consumption data from 2005-2007, which showed a reduction; however, the vehicle miles traveled estimates had been showing an increase. 4. GHG data is based on reported fuel consumption monitored by the United States Dept of EIA.
									GHG Dept of Energy & Environmental Protection: http://www.ct.gov/dep/lib/dep/air/climatechange/inventory/2009_ghg_update_final_-_070110_edit.pdf	State of Connecticut's Official Climate Change Website c4info@ctclimatechange.com	Climate Change: 1. Michigan Department of Transportation (DOT)

State	DOT Agency Name	GHG Inventory Available	GHG Inventory Specifically for DOT	Statewide GHG Inventory	DOT Data Shown in Statewide GHG Inventory	Energy Reduction Initiatives Identified	Climate Change Plan	Comments	Website	Responsible Official and Contact information	Significant Findings
Delaware	Delaware DOT (DELDOT)	Yes	No	Yes	No	Yes	Yes		GHG Inventory: Unable to locate; however, it is documented that one has been completed for the state, not for the DOT Statewide Climate Change Plan: http://www.ceep.udel.edu/publications/globalenvironments/reports/deccap/fullreport.pdf	Center for Energy and Environmental Policy: Dr. John Byrne, Director: jbbyrne@udel.edu 302-831-8405 Main: 202-535-2600	* Statewide climate change plan, not just for DELDOT. The climate change plan sited a GHG Inventor that was done by the Delaware State of Energy Office in 1995; to locate document.
District of Columbia	District DOT (DDOT)	Yes	No	Yes	Maybe	Yes	Yes	Emissions for fleet, signal lights. Emissions are calculated for streetlights/traffic signals, vehicle fleet, off-road fleet, and employee commute for statewide.	Statewide Plan: http://ddoe.dc.gov/ddoe/lib/ddoe/DC_GreenHouseGas_Inventory.pdf Statewide Plan: District Dept of the Environment: http://rrc.dc.gov/green/lib/green/2010_1_12__ghgemissionsinventoryreport.pdf	Air Quality Division Bureau of Environmental Quality Environmental Health Administration District of Columbia Department of Health: -- Document located on District Department of the Environment's website George Hawkins - Former Director	A) Reducing emissions from City operations. 1. Strengthen the recycling program to reduce emissions from solid waste. 2. Tele-work/tele-communications and flex work weeks to reduce the amount of miles the city workforce is traveling. 3. Public transit. 4. Energy efficient lights and motion sensors in offices and buildings to ensure energy is only being used when needed. B) This inventory mainly identifies the amount of usage for each sector; it does not identify ways to reduce. 1. Streetlights and traffic signals - energy used to power signals is a large GHG source; in fact, it is close to the same amount of emissions that the Districts vehicle fleet uses.
Florida	Florida DOT (FDOT)	Yes	No	Yes	No	Yes	Yes	Written by CCS. Transportation sector covered, but not for DOT only.	CCS: http://www.flclimatechange.us/ewebeditpro/items/O12F20490.pdf Division of Air Resource Management Florida Department of Environmental Protection (FDEP): http://www.google.com/url?sa=t&rct=j&q=&esrc=s&frm=1&source=web&cd=3&ved=0CDcQFjAC&url=http%3A%2F%2Fwww.dep.state.fl.us%2Fair%2Fabout_air%2Fclimate%2FFLGHG%2520Inventory_1990thru2007.doc&ei=9TjNTg22O6nq2AWb_9jbAQ&usg=AFQjCNHSx0IN6XBHiezA_aNqyL_kiejHOg&sig2=wx-eP64O8mq0tT9VpO_39w	CCS Division of Air Resource Management FDEP http://www.dep.state.fl.us/air/emission/inventory.htm Cadedra Parmer Hodge: Cadedra.Parmer@dep.state.fl.us Cadedra Parmer Hodge: 850-717-9014 Regulatory Programs: 850-245-2036 Kris Lanh: Kris.Lanh@dep.state.fl.us Kris Lanh: 850-717-9094	CCS: 1. Method: In order to provide simple and straightforward estimates of emissions, forecasts from best available state and regional sources were used. When forecasts were not available, a spreadsheet analysis was used to look at historical trends. No complex modeling was done. These forecasts were made with the most local data available. 2. General Principles and guidelines: Transparency, consistency, priority of existing state and local data sources, priority of significant emissions sources, comprehensive coverage of gases, use of consumption-based emissions estimates. 3. Facilities (hospitals, city halls, and other major departments throughout the state) were studied and emissions were calculated for each. Facility data is the most local data that could be provided and often is the best. The Division of Air Resource Management: 1. Used the USEPA's SIT tool to conduct their inventory. This tool estimates GHG emissions for 14 different sectors. SIT relies on "activity" data for each sector. Data is reported by different industries. Electric power is reported by U.S. Energy Information Administration. If data cannot be obtained, there is a "default" built into the tool. 2. This is just an inventory of the sectors within the state that were evaluated. Transportation was one of the largest sources (45%) and electric power was the largest source (48%). 3. Mandatory reporting for all facilities with the potential

												to emit 10 tons per year.
Georgia	Georgia DOT (GDOT)	Yes	**Yes**	**Yes**	**Yes**	Yes	Yes		GHG Inventory: http://www.fta.dot.gov/documents/GHGCompendGTv2.pdf	Georgia GHG Inventory Prepared by: Frank Southworth, Michael D. Meyer and Brent A. Weigel, School of Civil and Environmental Engineering and Seth Coan Southeast Energy Efficiency Alliance (SEEA). Sponsored by: Federal Transit Administration Office of Research, Demonstration, and Innovation U.S. DOT.	Georgia Institute of Technology 790 Atlanta, GA 30332-0355 SEEA P.O. Box 13909 Atlanta, GA 30324	Provides ways to reduce GHG emissions, not only with the vehicle fleet in the Dept, but also with the buildings and facilities. *Majority of transit agency GHG emissions arise from the energy and material processes supporting vehicle fleet propulsion. 1. Planning for System Expansions and Major Construction Project. GHG emissions during the construction process is becoming available and allows the process to consider GHGs more: • System Planning • Getting GHGs on the Agenda • Project Development • Putting GHG Impacts into the Assessment Construction • Selecting Greener Construction Materials • Applying Energy Efficient Construction Equipment and Practices • Limiting Travel for Workers, Construction, and Waste Materials (trying to use recycled materials in the construction process can help reduce the emissions in not just the state of GA) 2. Vehicle Procurement Practices: Choosing the vehicle fleet is one of the largest choices when considering emissions reduction. Not only the choice of fleet, but also how it will be managed and maintained. • Selecting a Vehicle/Fuel Technology • Benefits of Electric, Electric-Hybrid, Biofuel, and Fuel Cell Buses. Could reduce the amount of emissions and cost of fuel currently being paid. • Emissions Reducing Railcar Technologies • Battery Supported Light Rail Systems • Hybrids for Paratransit, Non-Revenue, & Ferryboat Services 3. Successful GHG Emissions Reduction Technologies • Regenerative Braking • On-Board and Wayside Energy Storage Systems • Advanced Transmissions Technology • Lightweight Materials. Making buses lighter can allow for more passengers (~5 more than before) and mean a reduced cost in maintenance. • Smart Grid Technology • In-Wheel Electric Motors 4. GHG emissions calculators were used.

State	DOT Agency Name	GHG Inventory Available	GHG Inventory Specifically for DOT	Statewide GHG Inventory	DOT Data Shown in Statewide GHG Inventory	Energy Reduction Initiatives Identified	Climate Change Plan	Comments	Website	Responsible Official and Contact information	Significant Findings
Hawaii	Hawaii DOT	Yes- but not publicly available yet	No	Yes	No	Yes	Yes		GHG Inventory: Links to report broken; still trying to locate document or useable link. USEPA Site with description: http://www.epa.gov/region9/climatechange/states.html and http://www.epa.gov/statelocalclimate/state/tracking/individual/hi.html	Prepared by: Mayor's Green Team County's Department of Environmental Management: (member of the Green Team), Acting Director: Dara Beck: 808-961-8083	USEPA site states the Energy Efficiency Actions and the status in Hawaii. They have several, some are: 1. Energy Efficiency Portfolio Standards (Senate Bill 3185). 2. Public Benefits Funds for Energy Efficiency (HB 1003 Act 253 Law, signed in July 2007) is a fund for the development of renewable energy and energy efficient technologies through partnership with the University of Hawaii. 3. Interconnection Standards - Net Metering (Bill signed in 2008) 4. GHG Registry - a member of the Climate Registry, a group that works at developing and managing a common GHG emissions reporting system. 5. Complete a GHG Inventory (done in 1990 and updated in 2007).
	County of Hawaii	Yes	No	No	Maybe	Yes	Yes	Streetlights, traffic signals, vehicle fleet, and transit fleet information provided, but not strictly by or for DOT (for county-owned).	GHG Inventory: http://www.hawaiicountyrandd.net/site-resources/island-of-hawaii-green-economy-report/Final%20County%20of%20Hl%20GHG%20Emissions%20Inventory.pdf	County's Department of Environmental Management: (member of the Green Team), Acting Director: Dara Beck: 808-961-8083	1. "The use of fossil fuel, to generate electricity and maintain our transportation systems, is responsible for 75 percent of the total island emissions." 2. Sectors looked at by the county: Building and other facilities, streetlights and traffic signals, water delivery facilities, wastewater facilities, solid waste, vehicle fleet, transit fleet, employee commute, and other. 3. Local data was used and entered into Climate Action Plan software. 4. Calculations were conducted in the ICLEI's Clean Air and Climate Protection software. This means only one tool is needed to calculate the emissions.
									Sustainable Action Day Site (2009): http://sustainableactionday.com/node/163		2009 Sustainable Action Day site states the many things the Mayor announced, they are doing (i.e., preparing parking stalls for electric vehicles, adopted the Model Energy Code, and more).
Idaho	Idaho Transportation Department	Yes, but no longer publicly available	Yes, but no longer publicly available	Yes	No			State information site.	Idaho DEQ: http://www.deq.idaho.gov/air-quality/air-pollutants/greenhouse-gases.aspx	Idaho DEQ:Air Quality Analyst: Sue Richards: 208-373-0586	Idaho Dept of Environmental Quality Website: 1. A summary of GHG emissions for the 15 state agencies that completed GHG emission inventories in or around 2007.
								Written by CCS.	CCS Report: http://www.deq.idaho.gov/media/345475-ghg_inventory_idaho_sp08.pdf	CCS	CCS: 1. Transportation and agriculture are the two highest emission sources in Idaho (unlike the transportation and electricity seen in other states). 2. Emissions based on estimates not models: USEPA's SGIT Tool, US DOE EIA, State Energy Data, American Gas Association, USEPA LMOP, and other sources for data spreadsheets to estimate emissions. 3. Times where electricity was higher was when there was less water available. Idaho uses hydro-electric generation much of the time as a current way to reduce emissions, but it depends on water supply.
Illinois	Illinois DOT	No									
Indiana	Indiana DOT	No									

Appendix 1 - Summary of Best Practices
Greenhouse Gas (GHG) Inventory
Michigan Department of Transportation (DOT)

State	DOT Agency Name	GHG Inventory Available	GHG Inventory Specifically for DOT	Statewide GHG Inventory	DOT Data Shown in Statewide GHG Inventory	Energy Reduction Initiatives Identified	Climate Change Plan	Comments	Website	Responsible Official and Contact information		Significant Findings
	City of Bloomington, Indiana Bloomington Transit	Yes	No	No - City of Bloomington only	No	Yes	No	Transportation included private, public, and city fleet. Emissions calculated by fuel sales within the city.	City's GHG Inventory: http://bloomington.in.gov/media/media/application/pdf/5047.pdf	City of Bloomington Environmental Commission; City of Bloomington Commission on Sustainability; City of Bloomington Office of Mayor: Prepared by: Mark Lemon, Patrick Foley, and Frances Gary	City of Bloomington Environmental Commission: http://bloomington.in.gov environmentenvironment@bloomington.in.gov 812-349-3423 City of Bloomington Commission on Sustainability: http://bloomington.in.gov/Sustainability	1. ICLEI (An international association of over 800 local government and governmental organizations working on sustainable developments). Software was used to report the reduction strategies and current emissions, as well as the CACP software. 2. This inventory found that commercial, transportation, and residential sectors are the largest sources of emissions. Recommendations to improve emissions are: changing light bulbs, promote alternative transportation services, limit vehicle emissions, promote more energy-efficient buildings, and search for more renewable energy sources.
Iowa	Iowa DOT	Yes	No	Yes	No	Yes	Yes	Written by CCS.	CCS: http://www.iaclimatechange.us/ewebeditpro/items/O90F20577.pdf	CCS		CCS: Guidelines and practices for documents by CCS are listed below.
								Some DOT information; not broken down.	Iowa Policies: http://www.iaclimatechange.us/ewebeditpro/items/O90F14169.pdf and Iowa Climate Change Advisory Council: http://www.iaclimatechange.us/	Iowa Climate Change Advisory Council houses the document, but no responsible party is noted: Chairman of the Iowa Climate Change Advisory Council: Dr. Jerald Schnoor: jerald-schnoor@uiowa.edu 319-335-5649		Iowa Climate Change: 1. Renewable electricity to reduce emissions (wind and solar energy is the main form) are to be funded with state renewable energy production tax credits, tax exemption, and other areas. 2. Energy efficiency - using energy efficiency programs, building codes, and electric vehicle registration fees. 3. The public sector is going to complete calculations on the lifecycle of equipment, use alternative fuel, hybrid vehicles (all diesel vehicles operate on biodiesel blends when available), and recycling. 4. Many grants and loans are available to assist both the technology and research of lower GHG emission sources.
Kansas	Kansas DOT (KSDOT)	Yes	No	Yes	No	Yes	Yes	Written by CCS.	CCS: http://www.ksclimatechange.us/ewebeditpro/items/O1F17410.pdf	CCS		CCS: Same as all the other reports written by this company. Emissions were studied for various sectors (transportation, electric, waste management, agriculture, and other) from historic data (1990-2005) through current and predicted into year 2025. 1. This inventory and forecast estimates serve as a starting point to assist the state in understanding the current and future emissions. 2. The top emission sources are electricity (34%) and transport and agriculture (17%). A table is available showing all the emissions and what they are projected to be in the future, as well as a current pie chart showing percentages for each sector. 3. Data: A higher priority was placed on local and state data analyses and then regional. A table with the sources used that provided data is included (USEPA State GHG Inventory Tool, US DOE EIA Forms; State Energy Data, Kansas DOT, and others.)

									Climate Action Plan - Includes GHG Inventory Update: http://www.mdot.maryland.gov/Planning/Plans_Programs_Reports/Documents/Climate_Change_2011.pdf	Prepared by: Cambridge Systematics, Inc.: General Info: info@camsys.com with	Climate Action Plan: Completely focused on MDOT and reducing GHG emissions for the transportation sector in Maryland. 1. A multi-phase plan to improve the GHG emissions for Maryland transportation. * Phase I - Develop strategies to reduce GHG emissions. * Phase II - Organize the developed strategies into six development groups: National Renewable Fuel Standards, National Vehicle Standards, Maryland Clean Car, Transportation Systems, Transportation Emission Reduction Measures, and Unfunded Strategies. Each of these is described and studied in detail in the report. * Phase III - Provide an update on all the previous work completed and revise.
										Michael Baker Jr., Inc. Contact Page: http://www.mbakercorp.com/index.php?option=com_content&task=category&sectionid=11&id=162&Itemid=323 (Prepared in Bethesda, MD, location no longer on website)	2. USEPA's MOVES model was used. This model estimates the reductions of GHGs associated with the standards to come in future calendar years. MOVES uses local traffic, vehicle fleet, fuel, and control strategy data to estimate statewide emissions. It is considered to be a "bottom up" approach. 3. Report written by MDOT and studies types of transportation and ways to reduce the emissions, such as Maryland Clean Car program, better fuels, intercity passenger transportation, and more.
Massachusetts	Massachusetts DOT (massDOT)	Yes	No	Yes	No	Yes	-		MassDOT: Reduction Initiatives: http://www.massdot.state.ma.us/greendot.aspx	MassDOT:Manager of Sustainable Transportation: Catherine Cagle, LEED AP, RLA catherine.cagle@state.ma.us	MassDOT Website: Provides information on all the ways MassDOT is trying to reduce their GHG emissions. 1. Programs - Healthy Transportation Compact, Bicycle Transportation, Pedestrian Transportation, MassRIDES, NuRide, and others.
									Commonwealth of Massachusetts: http://www.mass.gov/dep/air/climate/ghg08inv.pdfhttp://www.mass.gov/dep/air/climate/1990_2020_final.pdf	Commonwealth of Massachusetts Executive Office of Energy & Environmental Affairs Department of Protection: Author Not Listed, MassDEP Emissions Inventory: Ken Santlal kenneth.santlal@state.ma.us Contact list for DEP: http://www.mass.gov/dep/about/organization/aircont.htm	Commonwealth of Massachusetts: 1. The USEPA tool SGIT was used to estimate the GHG emissions for each sector. When data is not provided, a default option is available; however, not all categories studied are available in the tool. 2. It is a concern that changes with technology, methodology, and data will cause future inventories to differ from this current one.
Michigan	Michigan DOT (MDOT)	Yes	No	Yes	No	Yes	Yes		GHG Inventory: http://www.michigan.gov/documents/deq/MI_Greenhouse_Gas_Inv_1990_2002_277467_7.pdf	GHG Inventory: Prepared for: MDEQ, Prepared by: Center for Sustainable Systems, School of Natural Resources and Environment, and University of Michigan Unable to Locate a specific contact, use below	GHG Inventory: 1. Method used is outlined by the USEPA's State and Local Capacity Building Branch and the Emissions Inventory Improvement Program (EIIP). 2. SIT was used to calculate emissions (spreadsheet based emissions calculation tool), provided by the USEPA. 3. Five sectors were studied. 4. Data: Data came from sources specific to MI, and data approximated from national data and trends.
									Climate Action Plan: http://www.michigan.gov/deq/0,4561,7-135-50990-213752--,00.html	Climate Action Plan: Michigan Climate Action Council DEQ, Clean Air Assistance: ostrowskij2@michigan.gov 517-373-8057	Climate Action Plan: Some of the ways to reduce GHG emissions are: * Adopt more stringent building codes for energy efficiency

Minnesota	Minnesota DOT	Yes	No	Yes	No	Yes	Yes	Written by CCS.	CCS: http://www.mnclimatechange.us/ewebeditpro/items/O3F16231.pdf	CCS	CCS: 1. Historical, recent, and future GHG emissions were calculated and estimated using data tables and growth rates. 2. USEPA State GHG Inventory Tool (SGIT) software methodology was used to calculate emissions. Table D1 shows the approach to how estimates were made. 3. Local and state data is used when available, before regional. 4. Different types of vehicles were also studied; light-duty vehicles to buses. And the VMT (vehicle miles traveled) rates for current and future.
									Minnesota Pollution Control Agency: http://www.pca.state.mn.us/index.php/view-document.html?gid=9230	Minnesota Pollution Control Agency: Authors: Peter Ciborowski and Anne Clafin Contact Number on Document: 651-296-6300 or 800-657-3864	Minnesota Pollution Control Agency: 1. Emissions studied were measured by multiplying the nominal tons of GHGs by their global warming potential. This was done for historical through future data. 2. Practices: * All data used is archived and multiple databases are maintained. * Data is obtained at the most local level possible; facility level data is very important and maintained. * Vehicle and fuel emissions are modeled based on the type of vehicle. * Maintain a record of all methods, equations, and meetings. 3. Methods: Several methods were used to get estimates: * Intergovernmental Panel on Climate Change, 2006 Guidelines for National GHG Inventories (2006). * Environmental Protection Agency, Inventory of US GHG Emissions and Sinks: 1990-2006 (2008a). * The Climate Registry, General Reporting Protocol (2008). * USEPA, Climate Leaders Inventory Guidance (2008b). * World Business Council for Sustainable Development/World Resources Institute, GHG Protocol (2004).

Missouri	Missouri DOT	Yes	No	Yes	No				Missouri Dept of Natural Resources: http://www.dnr.mo.gov/energy/cc/ghg.htm	Prepared by: John Noller, Energy Specialist for Missouri DNR, Division of Energy energy@dnr.mo.gov 800-361-4827	Method: USEPA State Workbook was used, as well as the procedures used in the previous 1990 report. 1. There are other types of methods to use when predicting future emissions: You can assume that current patterns will continue as they are ("steady state"), you can assume that recent trends will continue ('continuing trends'), and you can assume that the future consumption will mirror energy use projections made in the *Annual Energy Outlook, 1997* (AEO method). 2. No reduction ideas were listed.
Montana	Montana DOT	Yes	No	Yes	No	Yes	Yes	Written by CCS.	Montana DEQ and CCS: http://www.mtclimatechange.us/ewebeditpro/items/O127F13145.pdf	CCS	CCS: 1. Historical, recent, and future GHG emissions were calculated and estimated using data tables and growth rates. 2. Method: Data, inventory, and methods are listed in table 7. The main tool used was the USEPA SGIT tool.
								Climate Change Plan	Climate Change Action Plan: http://www.mtclimatechange.us/ewebeditpro/items/O127F14041.pdf	Climate Action Plan, Montana Dept of Environmental Quality Montana DEQ Contacts List: http://svc.mt.gov/deq/staffdir.asp Montana DEQ General Contact: 406-444-2544	Montana DEQ: Montana Climate Change Action Plan 1. A panel of people reviewed the 1990 GHG inventory and update and they came up with several recommendations to reduce GHG emissions (table EX-1). Some are listed below. * Transportation and Land Use: Clean Car Standards, Low Carbon Fuels, and Replacement Tire Program. * Agriculture, Forestry, and Waste Management: Preserve Open Space, Enhanced Solid Waste Recovery, and Recycling.
Nebraska	Nebraska Department of Roads	No				Yes	No	No reports or plans.	EPA List for Energy Efficiency Actions: http://www.epa.gov/statelocalclimate/state/tracking/individual/ne.html	USEPA	USEPA site states the Energy Efficiency Actions and the status in Nebraska. They have a few that have been completed or are in process: 1. Public Benefits Fund for Energy Efficiency was completed. 2. Energy efficiency and alternative fuel goals for public fleets have been set.
Nevada	Nevada DOT	Yes	No	Yes	No	Yes	Yes	Data directly from NVDOT, but not all data.	Nevada Statewide GHG Emissions Inventory: http://ndep.nv.gov/baqp/technical/docs/NV_Statewide_GHG_Inventory2008.pdf	Nevada Statewide GHG Emissions Inventory: Nevada Division of Environmental Protection Bureau of Air Quality Planning (Contact Number on Document): 775-687-4670	Nevada Statewide GHG Emissions Inventory: 1. Sector inventories were completed for historic, current, and future. 2. Used the same approach as the USEPA in most cases, as well as the tools provided on their website (information listed below in document). 3. Guidelines were based on those from the Intergovernmental Panel on Climate Change. 4. Data: highest priority was placed on local data. 5. Emissions reported were caused by activities that occur within the state. 6. Some reduction strategies were listed (such as recycling).
									Climate Change: http://www.epa.gov/statelocalclimate/documents/pdf/nevada_final_report.pdf	Climate Change: Nevada Climate Change Advisory Committee Administrator, Environmental Protection: Leo Drozdoff: 775-687-4670	

Appendix 1 - Summary of Best Practices
Greenhouse Gas (GHG) Inventory
Michigan Department of Transportation (DOT)

New Hampshire	New Hampshire DOT	No				Yes	Yes	Statewide Climate Change Plan	NH Climate Change Action Plan: http://des.nh.gov/organization/commissioner/pip/forms/ard/documents/ard-01-1.pdf	NH Climate Change Action Plan: New Hampshire Department of Environmental Services Contact Number on Document: 603-271-1370	NH Climate Change Action Plan: 1. Data chosen was the most recently available from the Department of Energy, EIA. 2. Five sectors were studied. 3. A table of Global Warming Potential for GHG is available (table 2-1). The GHG emission x the global warming potential = the amount of GHG emission (there are 7 gases in the table, with global warming potential factors). This was done with historical data, current data, and future projections. 4. Reduction Strategies were suggested: Reduce vehicle miles traveled (VMT), Ride Share and public transit, rail revitalization, expand public walkways and bikeways, promote home-based working (reduces the cost in travel and facility use), and others.
New Jersey	New Jersey DOT (NJDOT)	Yes	No	Yes	No	Yes	Yes	The default setting was used in the SGIT tool.	New Jersey GHG Inventory: NJ Dept of Environmental Protection: http://www.nj.gov/globalwarming/home/documents/pdf/20081031inventory-report.pdf Updates to the inventory http://www.nj.gov/dep/oce/ggi.htm)	New Jersey GHG Inventory: NJ Dept of Environmental Protection - Office of Climate and Energy Contact: 609-341-2183	NJ Dept of Environmental Protection: 1. Used the USEPA's state guideline for creating a GHG Inventory. The guidelines used were generally based off the Intergovernmental Panel on Climate Change (IPCC). 2. Strategies used for this study were gathered by talking to the CCS and others, thus the guidelines are pretty much the same. 3. Guidelines: Transparency, Consistency, Priority of Existing State and Local Data Sources, Priority of Significant Emissions Sources, Comprehensive Coverage of Gases/Sectors/State Activities and Time periods, and Use of Consumption-Based Emissions Estimates. 4. Used the EIA for state electricity data for each year. 5. USEPA tools were used to give a starting point (SGIT tool).
								Statewide Climate Change Plan	Climate Change Plan: http://www.nj.gov/globalwarming/home/gwra_report.html	State of New Jersey: Global Warming	
New Mexico	New Mexico DOT (NMDOT)	Yes	No	Yes	No	Yes	Yes	Most data provided for the transportation section was not provided by NMDOT.	New Mexico GHG Inventory: NM Environmental Department: http://www.nmenv.state.nm.us/cc/documents/GHGInventoryUpdate3_15_10.pdf	New Mexico GHG Inventory: New Mexico Environmental Dept Both are by NM Environment Dept: Sandra Ely: sandra.ely@state.nm.us 505-821-0351	New Mexico GHG Inventory: 1. Worked with the CCS to identify trends and evaluate data. 2. Relied on the USEPA's tool SIT to input data from the EIA; sometimes this tool was only used as a building block. This tool is constantly updated. 3. Some sectors used other calculations such as fossil fuels: New Mexico Emissions = US Emissions x (NM Activity/US Activity). With the development of renewable energy sources and other technology, the growth of emissions as predicted will more than likely be different than shown.
								Statewide Climate Change Plan	Climate Change Action Plan, New Mexico Climate Change Advisory Group: http://www.nmclimatechange.us/	Climate Change Action Plan: NM Environment Department Energy & Environment Coordinator: Sandra Ely	Climate Change Plan: The advisory group came up with 69 ways to reduce GHG emissions; some are listed below: * Having a standard of building energy performance requirements * Solid waste recycling * State Clean Car Program * Alternative fuels * Low Rolling Resistance Tires * Low GHG operation of state fleet vehicles * Promote LEED for new neighborhood and building developments * Lower speed limits

Appendix 3

Appendix 3 - Emission Factors

Emission Factors for Greenhouse Gas Inventories

Last Modified: 7 November 2011

Typically, greenhouse gas emissions are reported in units of carbon dioxide equivalent (CO_2e). Gases are converted to CO_2e by multiplying by the gas' global warming potential (GWP). The emission factors listed in this sheet have not been converted to CO_2e. In order to do so, multiply the emissions by the corresponding GWP listed in the table below.

Gas	GWP
CH_4	21
N_2O	310

Comments:

Quarterly reports include facilities identified as MDOT-owned or leased (with energy payment directly to utility) regardless if originally included in base year or prior reports. Newly opened or identified facilities are footnoted at the time of addition. Cells on region pages with missing data points (late bill, etc.) indicated with an "X."

Totals will differ from those shown on previous reports when formerly missing data is received or corrections are made by regions; see footnotes on individual region pages for details if a discrepancy exists. Values from prior fiscal year are based on the final report for that year; due to data corrections throughout the fiscal year, the amounts shown may not agree with the original quarterly reports.

Beginning in FY 2011, utility consumption data for Welcome Centers is included in their respective regions; the FY 2010 YTD data has been adjusted accordingly.

**** The totals for these lines include Nixon Warehouse energy usage; however, the total percentage change calculations exclude the Nixon Warehouse.***
