AASHTO's National Transportation Product Evaluation Program

Report NTPEP 8001.42

LABORATORY RESULTS OF EVALUATIONS ON GEOTEXTILES & GEOSYNTHETICS (JULY 2008 TO DECEMBER 2010 CYCLE 4)

AASHTO
THE VOICE OF TRANSPORTATION

April 2011

American Association of State Highway and Transportation Officials (AASHTO)
444 North Capitol Street, NW, Suite 249 - Washington, DC - 20001 - (t) 202.624.5800 - (f) 202.624.5469 - www.NTPEP.ORG

PROLOGUE

General Facts about NTPEP Reports,

- NTPEP Reports contain data collected according to laboratory testing and field evaluation protocols developed through consensus-based decision by the AASHTO's NTPEP Committee. These test and evaluation protocols are described in the *Project Work Plan* found in the Appendix of this Report.

- Products are voluntarily submitted by manufacturers for testing by NTPEP. Testing fees are assessed from manufacturers to reimburse AASHTO member departments for conducting testing and to report results. AASHTO member departments provide a voluntary yearly contribution to support the administrative functions of NTPEP.

- AASHTO/NTPEP does not endorse any manufacturer's product over another. Use of certain proprietary products as "test control specimens" does not constitute endorsement of those products.

- AASHTO/NTPEP does not issue product approval or disapproval; rather, test data is furnished for the User to make judgment for product prequalification or approval for their transportation agency.

Guidelines for Proper Use of NTPEP Results,

- The User is urged to carefully read any introductory notes at the beginning of this Report. Also, to consider any special clauses, footnotes or conditions which may apply to any test reported herein. Any of these notes may be relevant to the proper use of NTPEP test data.

- The User of this Report must be sufficiently familiar with the product performance requirements and/or (standard) specification of their agency in order to determine which test data is relevant to meeting those qualifying factors.

- NTPEP test data is intended to be predictive of actual product performance. Where a transportation agency has successful historical experience with a given product it is suggested to factor that precedence in granting or withholding product approval or prequalification.

NTPEP Report Special Advisory for Geotextiles (GTX),

- Products included in this edition of **NTPEP Report 8001** are required to resubmit to NTPEP every three (3) years for qualification. Hence, all products included in this Report supercede previous Editions of **NTPEP Report 8001**.

- The User is guided to read the Minimum Average Roll Values (MARV) Advisory provided in the introductory text of this Report.

- For specific questions regarding this NTPEP Report or for advice on how to implement NTPEP data furnished in this Report the User is encouraged to contact the NTPEP Manager at (202) 624-7830 for a listing of NTPEP Lead States.

INTRODUCTION

The purpose of the American Association of State Highway and Transportation Officials (AASHTO) National Transportation Product Evaluation Program (NTPEP) is to provide an efficient, cost effective way of evaluating products that are used by member transportation departments in the construction of transportation facilities.

Manufacturers/suppliers wishing to have their products considered for use on transportation projects submit their materials to a lead State agency, which coordinates a testing program by one or more testing facilities. A report is generated showing the results of the testing, and is distributed to member departments for their use in determining the applicability of the products for use in their State.

GEOTEXTILE PROGRAM

For the geotextile program, New York State Department of Transportation acts as the lead State. After conducting a national survey, the AASHTO/NTPEP Geotextile Panel selected the following tests for inclusion in the program:

Test	ASTM Designation
Permittivity	D4491
Apparent Opening Size	D4751
Grab Strength/Elongation	D4632
Mass/Unit Area	D5261
Puncture Resistance Static Puncture – 50mm Probe	D4833[1] D6241[2]
Trapezoid Tear Strength	D4833
UV Stability	D4355[3]

[1] Test Cycle 05-09 and all preceding cycles.
[2] Test Cycle 06-01 and all subsequent cycles.
[3] Test Cycle 09-01 and all subsequent cycles.

Once an application for testing has been received and approved by the NTPEP Manager, each material is assigned an NTPEP GTX number. The lead State makes arrangements to have the material sampled, the material is sent to the lead State for preparation and distribution to the other test centers (when applicable), the testing is completed, the results are summarized by the lead State and forwarded to the NTPEP Manager.

Sampling is monitored by a DoT representative from the State where the manufacturer/supplier is located, or by an NTPEP-approved independent monitor if the manufacturer/supplier is located outside of the U.S. Sampling consists of obtaining five samples, each three feet long by roll width, taken from a single representative roll of each style designation to be tested. The lead State agency laboratory prepares one set of specimens for each test, from three of the five samples. The number of specimens is based on the requirements of the individual test procedure. The remaining two samples are stored for use in the event a manufacturer appeals the initial test results.

Each manufacturer/supplier receives a Draft Final Report for review. If a manufacturer/supplier appeals the results, the original testing laboratory will be provided another set of specimens, from the fourth sample, on which to perform a second round of testing. If the test results from the second round are questioned, one of the other test centers (if applicable) will be asked to perform tests on specimens from the fifth sample.

The lead State keeps on file the results of the testing for the individual specimens. The Report contains the average of these results.

When a firm sells their products under a private label agreement with another manufacturer, the private label firm submits an application to NTPEP identifying the original product designation, their designation and a letter of certification from the primary manufacturer verifying the information. A Report is issued under the private label firms name and material designations. The results that are reported are those which were obtained on the materials as submitted by the primary manufacturer.

NTPEP GTX code explanation for products tested prior to 2010, the GTX code is a follows: The NTPEP Manager assigns sample numbers (GTX YY-MM-xx) to products as applications are approved for a testing cycle. The explanation of numbering is as follows: "GTX" refers to the geotextile products evaluation program; "YY" refers to the last two digits of the calendar year (eg YY = 08, 09, 10, etc); "MM" refers to the submission month of the program ("01" = January, "04" = April, etc.); "xx" represents sequential sample numbers which are assigned to samples listed on the application. In the tables, missing sequential numbers may indicate the testing of a particular material is incomplete, or the manufacturer withdrew the material from the program prior to testing. The results for the incomplete testing will be included in the report edition following completion of the testing. Starting in 2010, the GTX code is the following (Year(YYYY)-Testing Cycle (XX)-Sample Number(xxx)). For example, 2010-02-023 represents a product that was twenty-third product tested in the second cycle of 2010.

Each Final Report issued for a testing cycle will include all results from previous submissions so that all the information obtained during the three year test cycle will be in one report, and easily accessible. Also contained in the report will be the product Drop Date (month and year). This month and year indicates when the product data will no longer be reported in NTPEP reports

NOTE: 36th Edition is the first Edition to include the Drop Date. All future addition will include current products as per the publish date and the three year cycle.

ADVISORIES

Since a private label company must identify their geotextile supplier in the AASHTO/NTPEP submission process, this source must not change throughout the three-year reporting period without written notification to AASHTO, thirty days prior to delivery of geotextiles from the new supplier. If written notification is not provided, the State should notify AASHTO and the product will be removed from the report immediately.

The data shown in this report are averages of test results of specimens taken from laboratory samples of each product designation submitted. These results should not be considered minimum, minimum average roll values (MARV), or typical values, nor should they be used as the sole criterion for material acceptance. It is strongly suggested that a project quality assurance program be established by agencies using the product information in this report.

MARV values found in the report are as provided by the manufacturer in their submission. The product NTPEP test results summarized in the table (mean, COV) only represent the sample tested and do not represent the property statistics for the product in general. The test results summarized in the table only demonstrate whether or not the properties of the sample tested meet or exceed the MARV's provided by the manufacturer as representative of their product. Therefore, the NTPEP test results and associated statistics summarized in the table should not be used to estimate a MARV for the product or be considered characteristic of the product properties.

MISCELLANEOUS INFORMATION - The following pictures are of various manufactured structures of geotextiles.

"The National Transportation Product Evaluation Program (NTPEP) was established by the American Association of State Highway and Transportation Officials (AASHTO) in early 1994. The program pools the professional and physical resources of the AASHTO member departments in order to test materials, products and devices of common interest. The primary goals of the program are to provide cost-effective evaluations for the states by eliminating duplication of routine testing by the states; and to reduce duplication of effort by the manufacturers who produce and market commonly used proprietary, engineered products." **NTPEP**

-- Rick Smutzer, former NTPEP Chairman (Chief Engineer, Indiana DOT)
