Part 1 - Background and Purpose

In January 1996, Secretary Peña set a goal of deploying the integrated metropolitan Intelligent Transportation System (ITS) infrastructure in 75^1 of the nation's largest metropolitan areas by 2006:

"I'm setting a national goal: to build an intelligent transportation infrastructure across the United States to save time and lives, and improve the quality of life for Americans. I believe that what we do, we must measure . . . Let us set a very tangible target that will focus our attention . . . I want 75 of our largest metropolitan areas outfitted with a complete intelligent transportation infrastructure in 10 years."²

-- Secretary Peña, 1996

In 1997, the U.S. Department of Transportation initiated an effort to track progress toward fulfillment of this goal by conducting a survey of deployment in the nation's largest metropolitan areas. Traditionally, the product of a transportation infrastructure investment consists of a fixed asset such as a highway, bridge, or public transportation vehicle developed, constructed, or purchased by a single agency. Tracking the level of deployment for such traditional fixed assets can be accomplished by simply counting the number of such assets deployed. Measuring the deployment of the metropolitan ITS infrastructure is more complex because it consists of a set of systems, often deployed by multiple agencies, and integrated through a combination of complex institutional and technical arrangements. In brief, it is often difficult to simply count the number of systems deployed without first devising a measurement approach that captures the essential features of such systems in a consistent fashion across many deployment environments.

In order to track progress toward fulfillment of the Secretary's goal for deployment, the U.S. Department of Transportation ITS Joint Program Office developed the metropolitan ITS deployment tracking methodology. This methodology tracks deployment of the nine components that make up the Metropolitan ITS infrastructure: Freeway Management; Incident Management; Arterial Management; Emergency Management; Transit Management; Electronic Toll Collection; Electronic Fare Payment; Highway-Rail Intersections; and Regional Multimodal Traveler Information. Through a set of indicators tied to the major functions of each component, the level of deployment is tracked for the nation's largest metropolitan areas. In addition, the integration links between agencies operating the infrastructure are also tracked. The details of

¹ Since Secretary Peña's speech, the number of metropolitan areas that DOT will measure has been increased from 75 to 78. However, to maintain reporting consistency across the 10-year goal period, this report considers only the original 75 metropolitan areas.

² Excerpt of a speech delivered by Secretary of Transportation Peña at the Transportation Research Board in Washington, DC on January 10, 1996.

the methodology are explained elsewhere.³

During the summer and fall of 1999, the U.S. DOT undertook a new data collection effort for the purpose of examining ITS deployment progress in the nation's largest metropolitan areas. The St. Louis metropolitan area was among the areas surveyed in 1997 and again in 1999. This report presents the results of the 1999 survey efforts and compares the results of the 1997 survey against those observed in 1999. The overall response rate for the surveys administered in the St. Louis region was 78% in 1997 and 82% in 1999.

Part 2 contains a summary of the 1999 survey results, and Part 3 provides a comparison of 1999 survey results and the 1997 survey results.

The report also contains a set of appendices containing a map of the survey area, the list of local contacts surveyed along with a status of their response to the survey and a summary of the data collected from the surveys.

Agencies are encouraged to review the data presented in this report for completeness and accuracy and to direct any comments or corrections to the data provided to the contacts listed below:

Part 2 - Summary 1999 Survey Results

Deployment indicators have been developed for two broad areas of interest: (1) the individual components, including their basic functions and characteristics and (2) integration of components, including how these components work together to provide coordinated regional service. As mentioned earlier, these indicators are expressed as percentages of the possible deployment opportunity and not necessarily what should be deployed based on local needs. Requirements for deployment and integration between each component will vary based on local conditions and cannot be assigned without extensive coordination with individual metropolitan areas.

The following two figures portray the surrogate indicators for each of the nine components in St. Louis and the same indicators at the national level. These are judged to be the single best representative of a component and are being used as summary indicator for component. The summary indicators are expressed as a percentage; however, because deployment goals have yet to be established, these indicators should not be read as a comparison of what is deployed versus eventual deployment goals. Instead, they only reflect what is deployed compared to full market saturation (i.e., opportunity for deployment).

Each component indicator was selected to reflect a critical function of the individual components. For example, in the case of Freeway Management, three basic functions were defined: surveillance, traffic control, and information display. The three indicators developed to reflect these functions are: percentage of freeway centerline miles under electronic surveillance (surveillance function), percentage of freeway entrance ramps managed by ramp meters (traffic control function), and percentage of freeway centerline miles covered by permanent VMS, HAR, or in-vehicle signing (information display function). The indicators are surrogates that do not necessarily reflect the full breadth of metropolitan ITS deployment activity.

A critical aspect of ITS that provides much of its capability is the integration of individual components to form a unified regional traffic control system. Individual ITS components routinely collect information that is used for purposes internal to that component. For example, the Arterial Management component monitors arterial conditions to revise signal timing and to convey these conditions to travelers through such technologies as variable message signs and highway advisory radio. Other ITS components can make use of this information in formulating their control strategies. For example, Transit Management may alter routes and schedules based on real-time information on arterial traffic conditions, and Freeway Management may alter ramp metering or diversion recommendations based on the same information.

As with the component indicators, definitions for inter- and intra-component integration were developed for each component, and indicators, derived from these definitions, were produced for each component. A total of 34 individual integration indicators was specified and is portrayed in the third figure which follows. Each integration indicator has been assigned a number and an origin/destination path from one ITS infrastructure component to another. For example, the

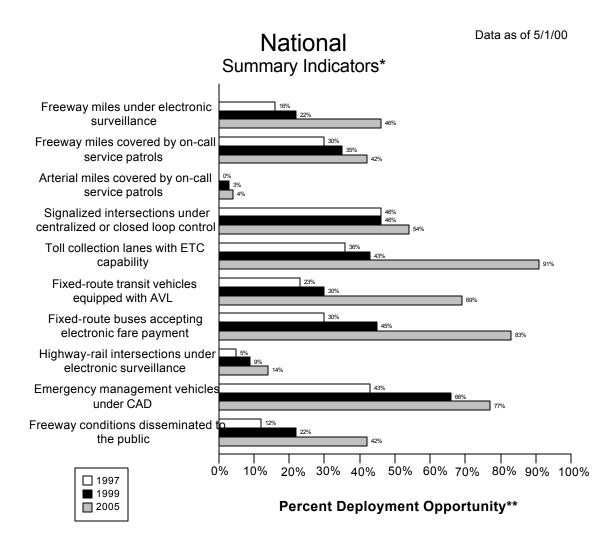

integration of information from the Freeway Management component to the Regional Multimodal Traveler Information component is identified by the number "10."

Summary Indicators* Freeway miles with real-time traffic 0% data collection technologies 33% Freeway miles covered by on-call 7% service patrols Arterial miles covered by on-call 0% No Response service patrols No Response Signalized intersections under 55% 28% centralized or closed loop control 37% Toll collection lanes with ETC No Response No Response capability No Response Fixed-route transit vehicles No Response No Response equipped with AVL No Response Fixed-route buses accepting No Response 100% electronic fare payment 100% Highway-rail intersections under 0% No Response electronic surveillance No Response Emergency management vehicles under CAD Freeway conditions disseminated to the public 33% 0% 10% 30% 40% 50% 60% 70% 80% 90% 100% 20% 1997 1999 Percent Deployment Opportunity** 2005

Part 3 - Detailed 1999 Survey Results

The following figures and tables summarize the complete set of component and integration indicators developed for the St. Louis metropolitan area. The figures summarizing the component indicators consist of a bar chart portraying the deployment levels for 1997, 1999, and 2005 accompanied by detailed tables of the data used to calculate each component indicator value (*Num* stands for numerator and *Den* stands for denominator; blank space indicates that no response was received.)

Example: Calculating Component Indicators for Freeway Management

Consider a metropolitan area with 100 miles of freeway and 25 freeway entrance ramps. The area has no ramp meters, 10 freeway miles for which traffic data are collected electronically, and 5 freeway miles, which are covered by highway advisory radio.

The component indicator for electronic surveillance is calculated as (10/100) or 10%.

The component indicator for ramp meter control is calculated as (0/25) or 0%.

The component indicator for HAR coverage is calculated as (5/100) or 5%.

The summary indicator for the metropolitan area is calculated as (10%+0%+5%)/3 = 5%.

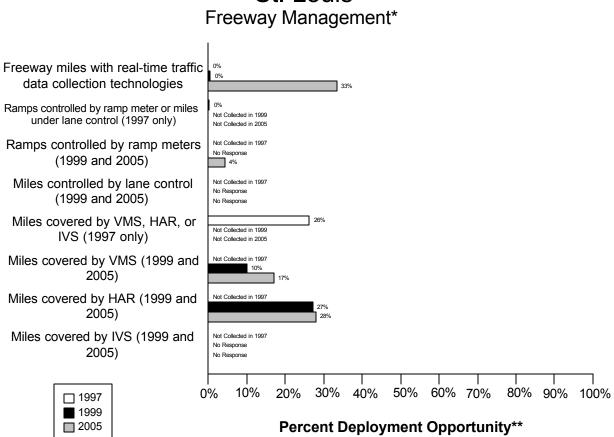

The figures summarizing the integration indicators consist of a diagram for each of the nine metropolitan ITS components portraying the integration level for 1999 (*italic*) and 2005 (**bold**), accompanied by tables providing an explanation of the data and calculations performed to develop each integration indicator value for 1999 and 2005. Each diagram portrays the proportion of agencies providing information to a component (e.g., the flow of incident information from Incident Management to Freeway Management) and the proportion of agencies providing information to other components (e.g., the flow of freeway travel condition information from Freeway Management to Arterial Management).

Example: Calculating Integration between Arterial Management and Regional Multimodal Traveler Information

Consider a metropolitan area with three arterial management agencies. One out of three provides information to the public using a Regional Multimodal Traveler Information Media (e.g., internet, kiosk, pager, etc...). The integration indicator is 1/3 or 33%.

	1999	2005	1999	2005	1999	2005
Agency Returned Survey?	Yes		Yes		2	
	165		163		2	
Number of freeway centerline miles that agency owns or maintains	135		225		360	
Number of freeway centerline miles that is used for planning	50		120		170	
Number of freeway entrance ramps that agency owns, operates or maintains	105		340		445	
Number of freeway entrance ramps that is used for planning	20		300		320	
Type of facilities used to conduct freeway/incident management activities	20		000		020	
Activities housed in a free-standing dedicated building?	No		No		0	
Activities housed in a building shared with other activities?	Yes		Yes		2	
Activities conducted in a dedicated control room?	No		Yes		1	
Control room contains operator console(s)?	No		No		0	
Control room contains electronic wall map?	No		Yes		1	
Control room contains CCTV display(s)?	No		No		0	
Activities conducted in a room containing workstations or PCs that manage traffic?	No		No		0	
Facilities are electronically linked to other transportation mgt facilities?	No		Yes		1	
Staffing and hours of operation of freeway/incident management activities						
Number of full-time agency staff members	NR		NR		0	
Number of full time contractor staff members	NR		NR		0	
Number of part-time agency staff members	NR		NR		0	
Number of part-time contractor staff members	NR		3		3	
Staffed 24 hours day by agency staff or by others	agency		NR		0	
Staffed during peak hours only by agency staff or by others	NR		others		0	
Staffed by others during off-peak hours	No		Yes		1	
Agency staff perform transportation management as an ancillary duty	No		No		0	
Agency staff dedicated to transportation management duty	No		No		0	
Types of operations conducted for freeway/incident management						
Incident detection and management?	Yes		Yes		2	
This metropolitan area?	Yes		Yes		2	
Other metropolitan area?	No		No		0	
Statewide?	No		No		0	
Monitoring and troubleshooting status of system components?	No		Yes		1	
Manual override of ramp metering rates at freeway on-ramps?	No		Yes		1	
Operating transportation management roadside devices?	Yes		Yes		2	
Radio communications with other agencies?	Yes		No		1	
Exchange of electronic data with other agencies such as computer aided dispatch?	No		Yes		1	
Real-Time Traffic Data Collection Technologies

800 MHz trunked radio	No		No		0	
Cellular telephone	No		Yes		1	
Hand-held (i.e., walkie-talkie)	No		No		0	
Automated data systems (i.e., CAD)	No		No		0	
Which police agencies typically respond to incidents on freeways?						
State Police	Yes		Yes		2	
County Police or Sheriff	No		No		0	
City Police	No		Yes		1	
Who provides on-site emergency medical response?						
Fire	Yes		Yes		2	
Emergency Management Service Agency	No		Yes		1	
Private hospital	No		Yes		1	
Has a multi-agency contact list been developed in area containing the						
names, phone numbers, etc. for the appropriate response personnel?	DK		Yes		1	
Is the Incident Command System used to manage incident scenes?	DK		Yes		1	
Is there a legal specification by state law or formal agreement as to who						
is "in charge" at the incident scene?						
Specified by state law?	No		No		0	
Formal agreement?	No		No		0	
Not specified or don't know?	Yes		Yes		2	
On-scene command post used to manage activities of responding agencies?	DK		No		0	
Are there communication linkages to a communications traffic/freeway mgt center?	NR		NR		0	
Plan developed and adopted by responding agencies for staging and parking response vehicles and equip. at incident site that minimizes lane blockage						
response venicies and equip, at incident site that minimizes lane blockage						

	Illinois Department of Transportation		Missouri Department of Transportation		Totals	
	1999	2005	1999	2005	1999	2005
and facilitates the re-opening of lanes?	No		No		0	
Respondents protected through law or court opinion for liability claims						
for damages to vehicles or cargoes during clearance activities?	Yes		DK		1	
Are overturned tank trucks, which are intact and not leaking, uprighted						
without first off-loading?	No		No		0	
Does your state or local jurisdiction have a law that requires drivers						
involved in property-damage-only accidents to move the vehicles						
from travel lanes to a safe location to exchange info and wait for police?	Yes		Yes		2	
Have laws or policies regarding the removal of stalled/abandoned vehicles						
from freeway shoulders?	Yes		Yes		2	
Hours abandoned vehicles are allowed to remain on a freeway shoulder?	0-24		0-24		0	
Have policies or procedures for quick removal of vehicles?	Yes		Yes		2	
Is Total Station equipment used to investigate major incidents?	DK		No		0	
Handling of Towing Responses to Incidents						
Formal contract based on qualifications?	Yes		No		1	
Rotation with companies under contract?	No		No		0	
Separate lists kept for light and heavy response and for specialty recovery?	NR		NR			
Rotation list with minimal qualifications?	No		Yes		1	
In towing qualifications, do you require towers to be certified under the						
Towing and Recovery Ass. of America's National Drivers Cert. Program?	DK		DK		0	
DK: Don't know						
NR: No Response						
Leg: Legislation or action being planned

Which police agencies typically respond to incidents on arterials?								
State Police	No		No		No		0	
County Police or Sheriff	No		No		No		0	
City Police	No		No		No		0	
Who provides on-site emergency medical response?								
Fire	No		No		No		0	
Emergency Management Service Agency	No		No		No		0	
Private hospital	No		No		No		0	
Has a multi-agency contact list been developed in area containing the								
names, phone numbers, etc. for the appropriate response personnel?	NR		NR		NR		0	
Is the Incident Command System used to manage incident scenes?	NR		NR		NR		0	
Is there a legal specification by state law or formal agreement as to who								
is "in charge" at the incident scene?								
Specified by state law?	No		No		No		0	
Formal agreement?	No		No		No		0	
Not specified or don't know?	No		No		No		0	
On-scene command post used to manage activities of responding agencies?	NR		NR		NR		0	
Are there communication linkages to a communications traffic/freeway mgt center?	NR		NR		NR		0	
Plan developed and adopted by responding agencies for staging and parking								
response vehicles and equip. at incident site that minimizes lane blockage								
and facilitates the re-opening of lanes?	NR		NR		NR		0	
Respondents protected through law or court opinion for liability claims								
for damages to vehicles or cargoes during clearance activities?	NR		NR		NR		0	
Are overturned tank trucks, which are intact and not leaking, uprighted								
without first off-loading?	NR		NR		NR		0	
Does your state or local jurisdiction have a law that requires drivers								
involved in property-damage-only accidents to move the vehicles								
from travel lanes to a safe location to exchange info and wait for police?	NR		NR		NR		0	
Have laws or policies regarding the removal of stalled/abandoned vehicles								
from freeway shoulders?	NR		NR		NR		0	
Hours abandoned vehicles are allowed to remain on a freeway shoulder?	NR		NR		NR		0	
Have policies or procedures for quick removal of vehicles?	NR		NR		NR		0	
Is Total Station equipment used to investigate major incidents?	NR		NR		NR		0	1

Appendix J Transit Management Integration

	Bi-State Development Agency						
Agency Name	1999	2005					
Agency Returned Survey?	Yes						
Transit operators in the region that use the same electronic payment system	None listed						
Toll operators from whom you accept electronic payment of transit							
fare through the use of ETC media	None listed						
Receiving real-time information via electronic means from others							
Freeway Management agencies from which your agency receives							
freeway travel times, speeds, and conditions							
Receive Information	None listed	None listed					
Share Infrastructure	None listed	None listed					
Arterial Management agencies from which your agency receives							
arterial travel times, speeds, and conditions							
Receive Information	None listed	None listed					
Share Infrastructure	None listed	None listed					
Incident Management agencies from which your agency receives							
incident severity, location, and type							
Receive Information	None listed	None listed					
Share Infrastructure	None listed	None listed					

Appendix K Transit Management Information Collection and Dissemination

K - 1

	Bi-State Development Agency					
Agency Name	1999	2005				
Agency Returned Survey?						
	Yes					
Methods used to disseminate transit information to the public						
Technologies your agency uses to disseminate:						
Transit routes, schedules and fares	Internet Web Sites, Telephone System, Facsimile	Internet Web Sites, Telephone System, Kiosks				
Real-time transit schedule adherence or arrival and departure times	NR	NR				
Technologies employed by other organization receiving your data						
Transit routes, schedules and fares	NR	Internet Web Sites				
Real-time transit schedule adherence or arrival and departure times	NR	NR				
Internet web site reporting transit routes, schedules and fare, etc.	schedules fares					
Telephone system for reporting transit information to the public	transit routes, scehd	ules, fares				
Organizations your agency sends information for dissemination to the public	department of labor and industrial relations. State of Missouri					
Data collected, archived, and/or transferred to another agency						
Collected by your agency	Passenger count	Passenger count, Passenger information (e.g., surveys, O/D), Trip itinerary planning records				
Archived by your agency	NR	NR				
Transferred to another agency by your agency	NR	NR				
Importance of making information available to the public						
Ranked High	NR					
Ranked Medium	NR					
Ranked Low	NR					
Groups that make requests for the data	Consultants, MPOs, Media (I.e., TV stations, radio stations), Universities					
What is the data used for?	Dissemination to the Traffic analysis	Dissemination to the public, Planning,
