15. Supplementary Notes					
16. Abstract This report summarizes the financial and operating data submitted annually to the Urban Mass Transportation Administration (UMTA) by the nation's public transit operators, pursuant to Section 15 of the UMT Act of 1964, as amended. The report consists of two sections: Section 1 contains industry aggregate statistics only, while Section 2 contains detailed financial and operating data on individual transit properties. The current edition contains transit industry statistics compiled from the Section 15 data submitted by the transit properties for fiscal years ending between July 1, 1978 and June 30, 1979, the first year of operation of the Section 15 reporting system.					
17. Key Words Transit Data, Revenues, Expenses, Accidents, Energy Consumption, Maintenance, Employee Count, Vehicle Miles, Vehicle Hours, Passenger Trips, Passenger Miles, Fleet Inventory, Performance Indicators			18. ADMINISTRATOR

May 22, 1981

Dear Transit Associate:

I am pleased to present the first annual report from the Urban Mass Transportation Administration's Section 15 Reporting System. This document is a significant milestone for mass transportation and represents the culmination of several years of effort by many individuals. For the first time, uniform data has been collected, reported, validated, and is now being presented for the use of transit authorities, Federal, State, and local governments, and the public.

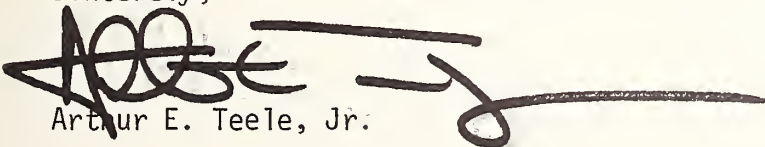

The information becomes available at a very opportune time in the history of mass transit. Productivity in transit has been decreasing for the past several years by whatever measure one may wish to use. The proposed reduction and eventual elimination of Federal operating assistance calls for transit operations to be analyzed at every level to ensure that all available resources are used to their best effect. This data will assist in identifying areas that need closer evaluation. It will also assist State and Federal governments in assessing the impact of investment decisions and in policy analysis. Other benefits will become apparent as the system matures.

I would, however, suggest a word of caution in using this data for making comparative evaluations. While the data may facilitate comparative analysis, thorough study of the reasons for individual differences in performance is essential to sound and fair judgments. Abuse of the data can be as damaging to the Section 15 Reporting System as its proper use can be helpful in making transit a more productive, efficient, and effective service through better decisions at all levels of government.

We are most interested in improving the system, and welcome suggestions for doing so:

Warm regards.

Sincerely,

Arthur E. Teele, Jr.

PREFACE

This issue of *National Urban Mass Transportation Statistics* is the first in a series of annual reports summarizing the financial and operating data submitted annually to the Urban Mass Transportation Administration (UMTA) by the nation's public transit operators, pursuant to Section 15 of the UMT Act of 1964, as amended. The report consists of two sections: Section 1 contains industry aggregate statistics only, while Section 2 contains detailed financial and operating data on individual transit properties. In both Section 1 and Section 2, data are given at the mandatory level of aggregation.¹ The current report contains transit industry statistics compiled from the Section 15 data submitted by the transit properties for fiscal years ending between July 1, 1978 and June 30, 1979, the first year of operation of the Section 15 reporting system. A complete list of all transit properties which submitted Section 15 data to UMTA for this time period is contained in the Appendices.

For a thorough understanding of the Section 15 reporting system in general and of the contents of this document in particular, it is highly recommended that the reader review the report *Urban Mass Transportation Industry Uniform System of Accounts and Records and Reporting System* (UMTA-IT-06-0094-77-1), which is available to the public through the National Technical Information Service (NTIS). The report is in four volumes:

- Volume I —General Description
- Volume II —Uniform System of Accounts and Records
- Volume III —Reporting Forms and Instructions—Required
- Volume IV —Reporting Forms and Instructions—Voluntary

Henceforth, Volumes I and II of this report will be referred to as Reference 1. Volumes III and IV have been superseded by the following four individual

¹ Under Section 15 there exist two reporting concepts: a mandatory or required reporting system (level R) which specifies the minimum data that must be reported to the Federal government by all transit properties receiving Section 5 funds and a three-tiered (levels A, B and C) voluntary reporting system based upon transit system fleet size. Levels A, B and C all satisfy the minimum reporting requirements but provide more detailed revenue and expense data than the required level.

Section 15 reference manuals, one for each reporting level:

- Volume I —Required Reporting Manual and Sample Forms
- Volume II —Level C Reporting Manual and Sample Forms
- Volume III —Level B Reporting Manual and Sample Forms
- Volume IV —Level A Reporting Manual and Sample Forms

These four documents will be referred to collectively as Reference 2. They contain samples of all the Section 15 reporting forms cited in this report together with detailed instructions for filling them out.

Suggested procedures for obtaining the service consumed data required under Section 15 (e.g., passenger trips, passenger miles, etc.) can be found in the following two publications which will henceforth be referred to as Reference 3 and Reference 4, respectively:

- UMTA Circular 2710.1 —Sampling Procedures for Obtaining Fixed Route Bus Operating Data Required Under the Section 15 Reporting System.
- UMTA Circular 2710.2 —Sampling Procedures for Obtaining Demand Responsive Bus System Operating Data Required Under the Section 15 Reporting System.

References 2, 3, and 4 are available to the public through UMTA's Office of Transportation Management, Information Services Division (UPM-44).

Some general comments on the quality of the data and the limitations of their applicability are in order. The Section 15 data submitted to UMTA by the transit properties were subjected to extensive editing, both manual and automated. The data forms were first checked for completeness to make sure the necessary forms had been submitted and that all the forms submitted had been completed. The data were then checked for both internal consistency (e.g., the revenue reported for Federal

Cash Grants and Reimbursements on Form 201, line 13 should equal the revenue reported as Total Federal Assistance on Form 203, line 03) and for reasonableness of absolute values (e.g., a single mode motor bus operator with fewer than 25 vehicles in his fleet should not report a number greater than 25 for the number of vehicles in operation on an average weekday). When missing data or apparent errors were detected as a result of this editing process, every effort was made to resolve the problems. The transit properties themselves were contacted directly and were most cooperative and of great assistance in resolving difficulties with the data. However, in many cases, missing data were not available or errors could not be corrected for one reason or another. In such cases, the data from the properties involved were excluded from the corresponding statistical tables in this document. In spite of this extensive editing however, erroneous data undoubtedly have found their way into this report. Consequently, care should be taken in the application and use of the data as presented. Such reporting deficiencies were anticipated for the first reporting year and should decrease in successive years.

Finally, it should be borne in mind that although the use of the statistics in a comparative evaluation is appealing, analysis of such statistics by themselves is insufficient to account for differences in performance. A more thorough evaluation is re-

quired which moves beyond the statistics to determine whether the explanation for differences in performance is due to unusual events in the period covered, the operating environment of the transit system, specific management practices, varying labor rates, consumer price index, varying fiscal years, or other important factors which affect transit operations.

Throughout the development of the Section 15 data collection and reporting system, a close cooperative working relationship has existed between industry and government. All parties involved have recognized the importance of and the need for timely and accurate data on which to base the continued development of the nation's mass transportation system. In this spirit of continuing cooperation, UMTA would like to urge all interested parties (transit operators, state and local governments, MPO's, the research community, organized labor, etc.) to review and critique this first issue of *National Urban Mass Transportation Statistics* and forward their comments and suggestions to Donald M. Chapman, Chief, Information Services Division, UPM-44, Rm. 6432 Nassif Bldg., 400 7th Street, S. W., Washington, D. C., 20590 (202/426-9157). Special requests for Section 15 data should be directed to Stephen J. Morin, U. S. Department of Transportation, Transportation Systems Center, DTS-422, Kendall Square, Cambridge, MA 02142 (617/494-2213).

SECTION 1

AGGREGATE TRANSIT STATISTICS

1.1 INTRODUCTION

Section 1 of *National Urban Mass Transportation Statistics* consists of a series of statistical tables which report industry aggregate statistics developed from the Section 15 data. These tables have been grouped generically into four main sections:

- 1.2 Transit Revenues
- 1.3 Transit Expenses
- 1.4 Non-Financial Operating Data
- 1.5 Performance Indicators

The tables contained in each of these sections are described in the ensuing text. Before proceeding with the detailed description of these tables however, some general observations are in order.

To the extent possible, the tables in Section 1 of this report have been developed with a common format to facilitate the use of the data. In particular, nearly all¹ of the statistical tables provide break outs of industry aggregate financial and operating data by transit system fleet size in accordance with the following eight level stratification schema:

- 1. Systems with under 25 revenue vehicles.
- 2. Systems with 25-49 revenue vehicles.
- 3. Systems with 50-99 revenue vehicles.
- 4. Systems with 100-249 revenue vehicles.
- 5. Systems with 250-499 revenue vehicles.
- 6. Systems with 500-999 revenue vehicles.
- 7. Systems with 1000 and over revenue vehicles.
- 8. All Systems (regardless of fleet size).

This stratification of the data enables, for example, a transit property to compare its own performance in a particular financial or operational domain with the performance of other transit properties of comparable size as well as with the performance of the industry as a whole. It should be noted that in cases where the data are presented by mode (e.g., most expense and operating data), the various fleet size categories (Under 25, 25-49, etc.) refer to modal fleet size (i.e., the number of revenue vehicles operated by a transit property in a particular mode). On the other hand, in cases where the data are presented as system totals (e.g., all revenue data), the various fleet size categories refer to total system fleet size (i.e., the total number of revenue

vehicles operated by a transit property obtained by summing over all modes). Fleet size information was derived from data reported on Form 001 (Ref. 2, Vols. I, II, III, and IV).

Typically, the statistical tables contain eight data columns, one for each of the eight system fleet size categories listed above. The rows in the tables correspond to the various financial and operating elements reported under Section 15 (e.g., passenger fares for transit service, labor expenditures for vehicle operations, number of unlinked passenger trips, etc.). On some tables, the data entries are percentages (e.g., the percentage of the total revenue of all transit properties in a particular fleet size category attributable to passenger fares), while on other tables, the data entries are absolute values (e.g., the total number of collision accidents experienced during the year by all transit properties in a particular fleet size category). As a typical example, the reader is referred to the table entitled *Sources of Transit Revenue: Details by Transit System Size, Single Mode Motor Bus Properties* on page 1-14.

As a general rule, the last two rows of each table or, in cases where a table contains several major subsections, the last two rows of each such subsection are labeled Number of Transit Systems Reporting and Total Number of Transit Systems, respectively. In the row labeled Total Number of Transit Systems are listed by fleet size the total number of transit properties which submitted data to UMTA under Section 15. In the row labeled Number of Transit Systems Reporting are listed by fleet size the number of transit properties whose data were actually used to compile the information in the particular table. The entries in these two rows may differ because of unresolved problems revealed in the editing of the data.

As was noted in the preface, the Section 15 data submitted to UMTA by the transit properties were subjected to extensive editing, both manual and automated. In cases where missing data were not available or apparent errors could not be corrected, the data from the properties involved were not used to develop the corresponding aggregate statistical tables. Therefore, it is possible that the Number of Transit Systems Reporting (i.e., the number of systems whose data were actually used to develop the information in a given table and in a given fleet size category) can be less than the Total Number of Transit Systems (i.e., the total number of systems

¹ The only exceptions are the tables on pages 1-51 and 1-63 which report transit way mileage data and fleet inventory data, respectively. It was inconvenient to stratify these types of data by system fleet size.

in a given fleet size category which submitted data). A comparison of the numbers in these two rows in a data column allows one to determine what percentage of the universe of potentially available data was actually used to develop the statistical information presented in that column.

The remainder of this introduction provides background and explanatory information to assist the reader in understanding and using the data in each of the four sections of statistical tables which comprise Part I of this report.

Transit Revenues

The *Transit Revenues* section contains five basic types of statistical tables:

1. Sources of Transit Revenue: Details by Transit System Size.
2. Sources of Public Operating Assistance for Transit: Details by Transit System Size.
3. State and Local Taxes Dedicated at Their Source for Transit Operations: Details by Transit System Size.
4. Sources of Public Capital Assistance for Transit : Details by Transit System Size.
5. State and Local Taxes Dedicated at Their Source for Transit Capital: Details by Transit System Size.

Before describing each of these tables, two general comments should be made. First, since revenues are reported under Section 15 as system totals only and not separately by individual mode, the revenue tables do not provide break outs of transit revenues by mode. Second, since nearly 70% of all transit properties are single mode motor bus operators, it was decided to accommodate this large group of operators by generating a separate single mode motor bus properties table as well as an all properties table (single mode motor bus plus all other properties) for each of the five basic revenue tables listed above.

SOURCES OF TRANSIT REVENUE

The first two revenue tables report on sources of transit revenue by revenue object class for single mode motor bus properties and for all properties, respectively. Referring to the first table, *Sources of Transit Revenue: Details by Transit System Size, Single Mode Motor Bus Properties* on page 1-14, it will be noted that the data are presented in the last eight columns of the table which are labeled in accordance with the eight level stratification schema based upon transit system fleet size which was described previously. The data column headed All Systems in this instance means all single mode motor bus systems. Revenue object class codes and names are listed in the first two columns of the table. The revenue object classes 402 (Special Transit Fares), 403 (School Bus Services Rev-

enues), 404 (Freight Tariffs), 405 (Charter Service Revenues) and 406 (Auxiliary Transportation Revenues) have been combined for convenience and labeled Other Transportation Revenues. The entries in the first ten rows of the data columns are percentages of the total revenues of all single mode motor bus properties in each system size category attributable to the various revenue object classes. For example, the entry in the first row of the first data column (headed Under 25) indicates that 32.6% of the total revenues of all single mode motor bus properties with fewer than 25 revenue vehicles comes from Passenger Fares for Transit Service, revenue object class code 401. This percentage was obtained by adding up the revenues from passenger fares for all single mode motor bus properties with fewer than 25 revenue vehicles and then dividing by the total revenue of such properties from all sources. All of the percentages presented in the table were calculated in a similar fashion. They are, in effect, industry average percentages of total revenue attributable to the corresponding revenue object classes for the various system fleet size categories. The final column (All Systems) gives industry wide averages independent of fleet size.

The last four rows in the table are labeled Total, Total Revenue, Number of Transit Systems Reporting, and Total Number of Transit Systems, respectively. In the row labeled Total in each of the data columns appears the entry 100% which serves to formally indicate that the percentage contributions of the various revenue object classes to the Total Revenue do in fact add up to 100 percent.¹ In the row labeled Total Revenue appear the total revenues from all sources in millions of dollars of all single mode motor bus operators in each system fleet size category. Note that the entry in this row in the All Systems column equals the sum of the entries in the preceding seven columns. Each dollar value in this row can be multiplied by the various percentages in the same column to yield dollar values for the contributions of each revenue object

¹ In some instances in this and other tables, the percentages as shown may not add up exactly to 100 because of round off imprecision.

class to the total revenues of all the properties in that particular fleet size category. In the row labeled Number of Transit Systems Reporting are listed by fleet size the number of single mode motor bus operators whose data were actually used to compile the information in the table. In the row labeled Total Number of Transit Systems are listed, again by fleet size, the total number of single mode motor bus operators who submitted data to UMTA under Section 15. Any differences between the entries in these two rows are attributable to missing or apparent erroneous data in some of the submissions received by UMTA. The data used to develop this table were compiled from the mandatory reporting level Form 201 (Ref. 2, Vol. I) and the voluntary reporting level Form 202 (Ref. 2, Vols. II, III, and IV). For additional information on revenue accounting procedures and for a list and definitions of revenue object classes, the reader is referred to Ref. 1, Vol. II, Secs. 2.10, 6.1, and 6.2.

The second revenue table, *Sources of Transit Revenue: Details by Transit System Size, All Properties* on page 1-14, is structurally identical to the first table and provides analogous statistical information about all properties (single mode motor bus properties plus all others). The data used to develop the table were likewise compiled from Form 201 and Form 202. For this table, the fleet size of a given transit property was determined by summing the number of revenue vehicles in each mode operated by that property. For example, a transit property which operates 20 motor buses and 10 street cars would have a total of 30 revenue vehicles and therefore would fall into the system fleet size category *25-49 revenue vehicles*. This table should require no additional explanatory information since it is in all other particulars identical to the single mode motor bus table.

SOURCES OF PUBLIC OPERATING ASSISTANCE

The next two revenue tables report on sources of public operating assistance for transit for single mode motor bus properties and for all properties, respectively. The information presented in these tables was compiled from the Section 15 reporting Form 203 (Ref. 2, Vols. I, II, III and IV). Referring to the first of these tables, *Sources of Public Operating Assistance for Transit: Details by Transit System Size, Single Mode Motor Bus Properties* on page 1-15, it will be noted that the data are stratified by system fleet size in accordance with the previously described schema. The various sources of public operating assistance for transit (e.g., Section 5, General Revenues, etc.) have been listed separately for Federal, state and local governments. The data entries corresponding to these

various sources of public assistance are percentages of the total public operating assistance received by all single mode motor bus properties in each system fleet size category attributable to those sources. For example, the entry in the first row of the first data column (Under 25) indicates that 41.5% of the total public operating assistance received from all sources (Federal, state and local) by all single mode motor bus operators with fewer than 25 revenue vehicles comes from funds made available under Section 5 of the UMT Act of 1964, as amended. Total Federal, state and local operating assistance as percentages of total public operating assistance for transit from all sources are listed by system fleet size in the rows labeled Total Federal, Total State, and Total Local. In the row labeled Total Public Assistance appear the total public funds for operating assistance in millions of dollars from all sources received by all single mode motor bus operators in each system fleet size category.

The table on page 1-16, *Sources of Public Operating Assistance for Transit: Details by Transit System Size, All Properties*, is structurally identical to the table just described and provides analogous information for all transit properties (single mode motor bus properties plus all others). The information for this table was also compiled from Form 203.

DEDICATED STATE AND LOCAL TAXES FOR TRANSIT OPERATIONS

The next two revenue tables report on the state and local taxes dedicated at their source for transit operations by type of tax for single mode motor bus properties and for all properties, respectively. As was the case for the preceding two tables, the information presented in these tables was compiled from Form 203. Referring to the first of these tables, *State and Local Taxes Dedicated at Their Source for Transit Operations: Details by Transit System Size, Single Mode Motor Bus Properties*, on page 1-17, it will be noted that data on the dedicated taxes from state and local governments have been listed in separate sections. Within each section, the data entries are percentages of the total dedicated state or local taxes for transit operations received by all single mode motor bus properties in each fleet size category attributable to the various types of taxes (e.g., Income, Sales, Property, etc.). For example, the entry in the second row of the first column in the State Government section indicates that 29.1% of the total dedicated state taxes for transit operations received by all single mode motor bus operators with fewer than 25 revenue vehicles came from state sales taxes. Total dedi-

cated state and local taxes for transit operations in millions of dollars by system fleet size are given in the rows labeled Total Dedicated State Taxes and Total Dedicated Local Taxes, respectively.

The table on page 1-18, *State and Local Taxes Dedicated at Their Source for Transit Operations: Details by Transit Size, All Properties*, is identical in format to the table just described and provides analogous data for all transit properties.

SOURCES OF PUBLIC CAPITAL ASSISTANCE

The next two revenue tables report on sources of public capital assistance for transit for single mode motor bus properties and for all properties, respectively. The information presented in these tables was compiled from reporting Form 103 (Ref. 2, Vols. I, II, III, and IV). Referring to the first of these tables, *Sources of Public Capital Assistance for Transit: Details by Transit System Size, Single Mode Motor Bus Properties* on page 1-19, it will be noted that the data are stratified by fleet size in accordance with the usual schema. The various sources of public capital assistance for transit (e.g., Section 3, General Revenues, etc.) are listed separately for Federal, state and local governments. The data entries corresponding to the various sources of public capital assistance are percentages of the total public capital assistance received by all single mode motor bus properties in each system fleet size category attributable to those sources. For example, the entry in the first row of the first data column (Under 25) indicates that 26.4% of the total capital assistance received from all sources (Federal, state, and local) by all single mode motor bus operators with fewer than 25 revenue vehicles comes from funds made available under Section 3 of the UMT Act of 1964, as amended. Total Federal, state, and local capital assistance as percentages of total public capital as-

sistance for transit are listed by system fleet size in the rows labeled Total Federal, Total State, and Total Local. In the row labeled Total Public Assistance appear the total public funds for capital assistance in millions of dollars from all sources received by all single mode motor bus operators in each system fleet size category.

The table on page 1-20, *Sources of Public Capital Assistance for Transit: Details by Transit System Size, All Properties*, is structurally identical to the table just described and provides analogous information for all transit properties (single mode motor bus properties plus all others). The information for this table was also compiled from Form 103.

DEDICATED STATE AND LOCAL TAXES FOR TRANSIT CAPITAL

The last two revenue tables report on the state and local taxes dedicated at their source for transit capital by type of tax for single mode motor bus properties and for all properties, respectively. As was the case for the preceding two tables, the information presented in these tables was compiled from Form 103. In both tables, *State and Local Taxes Dedicated at Their Source for Transit Capital: Details by Transit System Size, Single Mode Motor Bus Properties* on page 1-21, and *State and Local Taxes Dedicated at Their Source for Transit Capital: Details by Transit System Size, All Properties* on page 1-22, data on the dedicated taxes from state and local governments have been listed in separate sections. Within each section, the data entries are percentages of the total dedicated state or local taxes for transit capital in each fleet size category attributable to the various types of taxes (e.g., Income, Sales, Property, etc.). Total dedicated state and local taxes for transit capital in millions of dollars by system fleet size are given in the rows labeled Total Dedicated State Taxes and Total Dedicated Local Taxes, respectively.

Transit Expenses

The *Transit Expenses* section contains four basic types of statistical tables:

1. Transit Operating Expenses by Mode and Function: Details by Transit System Size
2. Transit Operating Expenses by Mode and Object Class: Details by Transit System Size
3. Operating Expenses by Function and Object Class: Single Mode Motor Bus Transit
4. Employer and Employee Paid Fringe Benefits: Details by Transit System Size

Like the transit revenue tables, the transit expense tables provide statistical information about transit expenses broken out by system fleet size in accordance with the previously described stratification schema (i.e., Under 25 revenue vehicles, 25-49 revenue vehicles, etc). In addition, however, the expense tables provide break outs by individual mode of transit expenses since expenses, unlike revenues, are reported under Section 15 separately by mode and not simply as system totals.

EXPENSES BY FUNCTION

The first expense table, *Transit Operating Expenses by Mode and Function: Details by Transit System Size* on page 1-24, provides statistical information about transit industry expenditures in four major functional areas: Vehicle Operations, Vehicle Maintenance, Non-Vehicle Maintenance, and General Administration. The information is reported separately for the following modes:

1. Motor Bus
2. Rail Rapid
3. Streetcar
4. Trolleybus
5. Demand Response
6. Ferryboat
7. Other (e.g., Cable Car)

An eighth category, Total All Modes, provides data on aggregate expenditures by function for all modes. The various fleet size categories (Under 25, 25-49, etc.) here indicate *modal* fleet size (i.e., the number of revenue vehicles in each mode). Only in the category Total All Modes do they refer to total *system* fleet size. For example, a transit property with 35 motor buses and 20 demand response vehicles would fall into the following fleet size categories: Motor Bus (25-49); Demand Response (under 25), Total All Modes (50-99). The data entries are percentages of total operating expenditures by mode for all transit properties in the various modal fleet size categories attributable to each of the four major functional areas (i.e., Vehicle Operations, Vehicle Maintenance, Non-vehicle Maintenance, and General Administration). Functional expenditures by mode include both direct and fully allocated joint expenses. For example, the first entry in the first column under Motor Bus indicates that 53.9% of the total funds expended for motor bus operations by all transit properties operating fewer than 25 motor buses were for Vehicle Operations. These percentages are formally shown to add to 100% by mode in each modal fleet size category in the rows labeled Total.¹ Total operating expenditures in millions of dollars by mode and by modal fleet size are listed in the rows labeled Total Expenses. The data used to develop this table were compiled from the following Section 15 reporting forms: Forms 301, 310 (Required, Ref. 2, Vol. I); Forms 304, 313 (Level C, Ref. 2, Vol. II); Forms 303, 312 (Level B, Ref. 2, Vol. III); Forms 302, 311 (Level A, Ref. 2, Vol. IV). For a list and detailed definitions of expense functions, the reader is referred to Ref. 1, Vol. II, Secs. 7.3 and 7.4.

¹ See footnote on page 1-4.

EXPENSES BY OBJECT CLASS

The next eight expense tables report on aggregate transit operating expenses by mode and expense object class. There is separate table for each of the following seven modes: Motor Bus, Rail Rapid, Streetcar, Trolleybus, Demand Response, Ferryboat, and Other (e.g., Cable Car). In addition, there is a table for Joint Expenses and a summary table, Total All Modes. A separate Joint Expenses table is required because under Section 15 expenses are fully allocated to the individual modes only by function and not by expense object class.

The first of these eight tables, *Transit Operating Expenses by Mode and Object Class: Details by Transit System Size, Motor Bus*, on page 1-25, is typical of the modal tables. The data in this table covers the operations of all transit properties which operate motor buses, both single mode and multi-mode properties. The first two columns list expense object class codes and names. The entries in the eight data columns are percentages of total expenditures of motor bus operators by system fleet size attributable to the various expense object classes. For example, the first entry in the first data column (Under 25) indicates that 34.7% of the total funds expended for motor bus operations by all transit properties operating fewer than 25 motor buses was for Operators' Salaries and Wages, expense object class 501.01. Total expenditures for motor bus operations in millions of dollars by system fleet size are shown in the row labeled Total Operating Expenses.

The remaining modal tables are structurally identical to the Motor Bus table. The Joint Expenses table on page 1-30 provides statistical data on those operating expenditures of multimodal systems which cannot be assigned directly to a particular mode. For example, the first entry in the second data column (25-49) in the Joint Expenses table indicate that 27.6% of the total funds expended for joint operations by all transit properties with between 25 and 49 revenue vehicles of all types in their fleets was for Operators' Salaries and Wages. The Total All Modes table on page 1-30 provides statistical data on total system expenditures by expense object class and fleet size. It is identical to the individual mode and joint expenses tables except for the fact that it has two additional rows which show reconciling items (e.g., interest expenses, leases and rentals, depreciation, etc.) and total expenses including reconciling items in millions of dollars by fleet size. Under Section 15, reconciling items are reported only as system totals and not separately by mode. Reconciling items are so called because they are needed to provide an overall total which is consistent with local published

reports. They are reported separately under Section 15 because accounting practices for handling such items (particularly depreciation and amortization) differ widely as a result of local ordinances and conditions. The data used to develop these tables were compiled from the following Section 15 reporting forms: Forms 301, 310 (Required, Ref. 2, Vol. I); Forms 313, 315 (Level C, Ref. 2, Vol. II); Forms 312, 315 (Level B, Ref. 2, Vol. III); Forms 311, 315 (Level A, Ref. 2, Vol. IV). For a list and detailed definitions of expense object classes, the reader is referred to Ref. 1, Vol. II, Secs. 7.1 and 7.2. Property and depreciation accounting and lease accounting are discussed in Ref. 1, Vol. II, Secs. 2.6 and 2.8, respectively.

EXPENSES BY FUNCTION AND OBJECT CLASS

The next eight expense tables deal exclusively with single mode motor bus properties. They provide statistical data on operating expenditures by function and expense object class and by fleet size. There is one table for each of the system fleet size categories (i.e., 1000 and Over, 500-999, 250-499, 100-249, 50-99, 25-49, Under 25 and All Systems). The first of these tables, *Operating Expenses by Function and Object Class: Single Mode Motor Bus Transit, Systems with 1000 and Over Revenue Vehicles* on page 1-31, is typical of all of them. The data is recorded in the last five columns which correspond to the four main functional areas (i.e., Vehicle Operations, Vehicle Maintenance, Non-vehicle Maintenance and General Administration) and to the total of all the functions (Total All Functions). The first two columns list expense object class codes and names. The data entries are percentages of total expenditures by functional area attributable to the various expense object classes. For example, the first entry in the first data column (Vehicle Operations) indicates that 54.7% of the total funds expended on vehicle operations by all single mode motor bus operators with 1000 or more vehicles was for Operators' Salaries and Wages. Note

that these tables contain rows which show reconciling items and total expenses including reconciling items in millions of dollars in the Total All Functions column only since under Section 15, reconciling items are not reported separately by function. The data used to develop these tables were compiled from the following Section 15 reporting forms: Form 301 (Required, Ref. 2., Vol. I); Form 305 (Level C, Ref. 2, Vol. II); Form 306 (Level B, Ref. 2, Vol. III); Form 307 (Level A, Ref. 2, Vol. IV). Lists and definitions of expense object classes and expense functions can be found in Ref. 1, Vol. II, Secs. 7.1, 7.2, 7.3 and 7.4.

FRINGE BENEFITS

The final expense table on page 1-39 is entitled *Employer and Employee Paid Fringe Benefits: Details by Transit System Size*. This table provides statistical information by transit system fleet size on the various categories of fringe benefits paid separately by transit system employers and employees. The information presented in this table represents system totals since fringe benefit payments are not reported separately by mode. The data entries are percentages by fleet size of the total expenditures for fringe benefits incurred by employers and employees attributable to the various fringe benefit object classes identified in the first two columns. For example, the first entry in the second column (25-49) of the Employer Paid Fringe Benefits section of the table indicates that 18.8% of the total funds for fringe benefits paid by the employers of all transit systems with between 25 and 49 revenue vehicles was for FICA or Railroad Retirement. As the footnote on the table indicates, the data for properties with fewer than 25 revenue vehicles were reported voluntarily. The data presented in the table were compiled from the Section 15 reporting Form 331 (Ref. 2, Vols. I, II, III and IV). For more detailed information on labor distribution and fringe benefits accounting, the reader is referred to Ref. 1, Vol. II, Secs. 2.1 and 2.2.

Non-Financial Operating Data

The *Non-Financial Operating Data* section contains seven basic types of statistical tables:

1. Transit Accidents and Energy Consumption: Details by Transit System Size.
2. Revenue Vehicle Maintenance Performance: Details by Transit System Size.
3. Transit Way Mileage: National Summary
4. Transit System Employee Count: Details by Transit System Size.
5. Aggregate National Transit Operating Statistics: Service Supplied and Service Consumed: Details by Transit System Size (Non-Rail Modes).
6. Aggregate National Transit Operating Statistics: Service Supplied and Service Consumed: Details by Transit System Size (Rail Modes).
7. Summary Age Distribution of Revenue Vehicle Inventory: Details by Mode.

SAFETY AND ENERGY CONSUMPTION

The first series of tables report on transit accidents and energy consumption by mode and system fleet size. There is a separate table for each mode (i.e., Motor Bus, Rail Rapid, Streetcar, Trolleybus, Demand Response, Ferryboat, and Other). The first table in this series, *Transit Accidents and Energy Consumption: Details by Transit System Size, Motor Bus* on page 1-42, is typical. The upper portion of the table lists the total number of accidents, fatalities and injuries for the year related to motor bus operations by system fleet size. Accidents, fatalities and injuries are classified as being either Collision, Non-Collision, or Station. For example, the first entry in the first column (Under 25) indicates that properties with fewer than 25 motor buses in their fleets reported for the year a total of 2,787 collisions involving their motor buses. Total accidents, fatalities and injuries are also listed by fleet size. The lower portion of the table reports on the consumption of diesel fuel, gasoline, LPG or LNG, bunker fuel and electric power by system fleet size. For example, the first entry in the first column in the energy consumption section of the table indicates that properties operating fewer than 25 motor buses consumed a total of 6.53 million gallons of diesel fuel during the year. The accident and energy consumption data presented in the safety and energy consumption tables were compiled from reporting Forms 405 and 402, respectively (Ref. 2, Vols. I, II, III and IV). Definitions and classifications of safety elements can be found in Ref. 1, Vol. II, Sec. 8.6 while definitions and classifications of fuel elements can be found in Ref. 1, Vol. II, Sec. 8.5.

TRANSIT MAINTENANCE

The next series of tables report on transit maintenance performance by system fleet size. A separate table is provided for each mode. Referring to the first of these tables, *Revenue Vehicle Maintenance Performance: Details by Transit System Size, Motor Bus*, on page 1-47, it will be noted that the upper portion of the table reports on the number of roadcalls for maintenance purposes while the lower portion provides an inventory of light maintenance facilities. Roadcalls are classified as being either for mechanical failure or for other reasons. For example, the first entry in the first column (Under 25) indicates that properties with fewer than 25 motor buses in their fleets made a total of 10,893 road calls during the year because of mechanical failures. Total roadcalls for all causes are also given by fleet size. Light maintenance facilities are classified as serving under 200 vehicles, between 200 and 300 vehicles, or more than 300 vehicles. For

example, the first entry in the first column (Under 25) of the maintenance facilities section indicates that properties with fewer than 25 motor buses in their fleets have a total of 99 light maintenance facilities serving under 200 vehicles. Total light maintenance facilities are also listed by fleet size. The data presented in the maintenance tables were compiled from reporting Form 402 (Ref. 2, Vols. I, II, III and IV). Definitions and classifications of maintenance performance elements can be found in Ref. 1, Vol. II, Sec. 8.5.

TRANSIT WAY MILEAGE

The next table, *Transit Way Mileage: National Summary* on page 1-51, essentially replicates in format reporting Form 403 (Ref. 2, Vols. I, II, III and IV). The table reports aggregate transit mileage by mode for the modes Rail Rapid, Streetcar, Ferryboat, Motor Bus and Trolleybus for all transit systems regardless of fleet size. In addition to transit mileage data, the table reports on the number of crossings nationwide for the Rail Rapid and Streetcar modes and the total number of stations for the Rail Rapid mode. Definitions of facilities and equipment elements and classifications can be found in Ref. 1, Vol. II, Sec. 8.3.

TRANSIT EMPLOYEE COUNT

The next series of statistical tables report transit system employee counts by mode and fleet size. There is a separate table for each mode. The first of these tables, *Transit System Employee Count: Details by Transit System Size, Motor Bus* on page 1-52, is typical. In the first column of the table appear ten employee job classifications (e.g., Transportation Executive, Professional and Supervisory Personnel; Transportation Support Personnel; Revenue Vehicle Operators; etc.). Each of these job classifications is further subdivided into two groups: Operating and Capital. To the extent that an employee works on capital projects, his labor is considered a capital expense in contrast with labor which is considered strictly an operating expense. In each job category, the number of employees is expressed in terms of the number of employee equivalents for the year to the nearest one-tenth employee (one employee equivalent = 2000 man hours of work). This accounts for the fractions which appear in the row labeled Total Number of Transit System Employees. The data entries are percentages by system fleet size of the total number of employees attributable to the various job classifications. For example, the first entry in the first column (Under 25) indicates that 5% of all transit system employees engaged in motor bus related activities for all transit properties with fewer

than 25 motor buses can be classified as Transportation Executive, Professional and Supervisory Personnel doing work related to system operations. The total number of employees by system fleet size in the operating and capital categories appear in the row labeled Total Number of Transit System Employees. The data presented in this table were compiled from reporting Form 404 (Ref. 2, Vols. I, II, III and IV). For definitions of employee elements and classifications, the reader is referred to Ref. 1, Vol. II, Sec. 8.4.

TRANSIT OPERATING STATISTICS

The next series of statistical tables report aggregate national operating statistics on service supplied and service consumed by mode and by fleet size. There is a separate table for each mode. It should be noted that the format of the four non-rail mode tables (Motor Bus, Trolleybus, Demand Response, and Other) differs from the format of the rail mode tables (Rapid Rail and Streetcar). Specifically, the categories of services supplied differ between the two types of tables. In particular, the rail mode tables report both train statistics and passenger car statistics (e.g., Total Annual Train Miles and Total Annual Passenger Car Miles). The ratio of a given passenger car statistic to the corresponding train statistic provides a measure of the average number of passenger cars per train. In addition, the rail mode tables do not report charter service statistics since the rail modes normally do not provide charter services.

The first of the tables, *Aggregate National Transit Operating Statistics: Service Supplied and Service Consumed: Details by Transit System Size, Motor Bus* on page 1-59, illustrates all of them. The table is divided into two main sections: Service Supplied and Service Consumed. In the Service Supplied section are reported such operating statistics as Total Annual Vehicle Miles, Total Annual Vehicle Revenue Miles, Total Annual Vehicle Revenue Hours, etc., by system fleet size. In the Service Consumed section are reported such statistics as Total Annual Unlinked Passenger Trips, Total Unlinked Passenger Miles, etc. In general, the data entries are totals of these various operating statistics taken over all properties in each fleet size category. For example, the first entry in the first column of the Service Supplied Section indicates that all transit properties operating fewer than 25 motor buses had a total of 865 buses in service on an

average weekday. The only exceptions are the entries in the row labeled Average Time Per Unlinked Weekday Trip in the Service Consumed section. These entries are *averages* for all the properties in each fleet size category and not totals. The information presented in these tables was compiled from reporting Form 406 for non-rail modes and Form 407 for rail modes (Ref. 2, Vols. I, II, III and IV). Forms 406 and 407 report average daily (weekday and weekend) statistics on service supplied and service consumed. To obtain the annual totals presented in the tables, the average weekday data were multiplied by 253, the average Saturday and Sunday data were multiplied by 53 and 59, respectively, and finally, the products were summed. The number 253 was obtained by subtracting from the normal total of 260 annual weekdays 7 Sunday-like holidays (an assumed national average). These 7 holidays were added to the number of Sundays to give a total of 59 Sunday-like days. For further information on the definitions of service supplied and on vehicle utilization elements and classifications and on the definitions of passenger utilization elements and classifications, the reader is referred to Ref. 1, Vol. II, Secs. 8.7 and 8.8.

Suggested procedures for obtaining service consumed data can be found in References 3 and 4 (see Preface). Many, but not all, transit properties adopted the data gathering procedures outlined in those two documents.

SUMMARY FLEET AGE DISTRIBUTION

The final table in the *Non-financial Operating Data* section on page 1-63 is entitled *Summary Age Distribution of Revenue Vehicle Inventory: Details by Transit System Size*. The table presents by mode both the total number of revenue vehicles nationwide and the age distribution of the fleet as percentages among six age categories (e.g., 5 years or less, 6 - 10 years, etc.). For example, in the row labeled Motor Bus, the data entries in the columns headed Number of Vehicles and 5 Years or Less indicate, respectively, that there are 47,907 motor buses operating nationwide and that 39.9% of these are less than or equal to 5 years old. In addition, the final data column lists by mode the average age of the fleet in years. The information presented in this table was compiled from reporting Form 408 (Ref. 2, Vols. I, II, III and IV). Definitions of property object classes can be found in Ref. 1, Vol. II, Sec. 3.3.

Performance Indicators

The *Performance Indicators* section contains the following basic table for each mode:

1. Transit Performance Indicators: Details by Transit System Size.

Referring to the first of these tables, *Transit Performance Indicators: Details by Transit System Size, Motor Bus*, on page 1-66, it will be noted that the data are presented by system fleet size in accordance with the usual schema (i.e., Under 25, 25 - 49, etc.). In the first column of the table are listed various operational and financial elements (e.g., Total Revenue Vehicles, Total Annual Vehicle Miles, Total Operating Expenses etc.) and below each of these elements, various key performance indicators developed from them (e.g., Total Revenue Vehicles per Thousand Line Miles, Total Annual Vehicle Miles per Operator, Total Operating Expenses per Vehicle Mile, etc.). The values of the

elements themselves, which are totals obtained by summing over all transit properties in each fleet size category, and the performance indicators developed from them are presented in the data columns by system fleet size. The All Systems column, of course, lists industry wide performance indicators independent of fleet size. The remaining tables are identical in format to the Motor Bus table.

The performance indicators presented in these tables were calculated using data compiled from a number of Section 15 reporting forms. Specifically, the performance indicators were calculated from data compiled from the expense Forms 301,310 (Required); 305, 313, 315 (Level C); 303, 312, 315 (Level B); and 302 ,311 ,315 (Level A) and from the non-financial operating data Forms 402, 404, 405, 406 and 407. Samples of these forms can be found in the appropriate volumes of Ref. 2.

END OF REPORT

SECTION 2

INDIVIDUAL TRANSIT

PROPERTY STATISTICS

2.1 INTRODUCTION

Section 2 of National Urban Mass Transportation Statistics consists of a series of statistical tables which report detailed financial and operating data on individual transit properties. As was the case in Section 1, these tables have been grouped generically into four main sections:

- 2.2 Transit Revenues
- 2.3 Transit Expenses
- 2.4 Non-Financial Operating Data
- 2.5 Performance Indicators

To the extent possible, the statistical tables in Section 2 of this document have been developed with a common format to facilitate the use of the data. In particular, all of the statistical tables have been structured so that the transit properties and the corresponding data are grouped by total system fleet size in accordance with the following seven level stratification schema:

- 1. Systems with 1000 and over revenue vehicles
- 2. Systems with 500-599 revenue vehicles
- 3. Systems with 250-499 revenue vehicles
- 4. Systems with 100-249 revenue vehicles
- 5. Systems with 50-99 revenue vehicles
- 6. Systems with 25-49 revenue vehicles
- 7. Systems with under 25 revenue vehicles

The fleet size of a given transit property is determined by summing the number of revenue vehicles

in each mode operated by that property as reported on Form 001 (Ref. 2, Vols. I, II, III, and IV). This stratification of the data enables, for example, a transit property to easily compare its own financial and operational characteristics with those of other transit properties of comparable size. Within each system fleet size category, the transit properties and the corresponding data are listed in descending order by fleet size (i.e., the largest transit property first and the smallest last). The first and second columns of every statistical table in this document list the four digit transit property identification codes and the corresponding transit property names, respectively. The first digit of each identification code identifies in which of the ten UMTA regions the corresponding property is located (e.g., property 1005 is Region I, property 2017 is in Region II, property 0012 is in Region X, etc.).

In some instances, it may happen that data for a particular transit property may not be reported in one or more of the statistical tables. When this occurs, it is due either to the fact that corresponding the data were not reported by the property or were excluded because of unresolved problems revealed in the editing of the data (see Preface).

The remainder of this introduction provides background and explanatory information to assist the reader in understanding and using the data in each of the four sections of statistical tables which comprise Part II of this report.

Transit Revenues

The *Transit Revenues* section contains the following seven statistical tables:

- 1. Sources of Transit Revenue: Details by Transit System
- 2. Sources of Public Operating Assistance for Transit: Details by Transit System
- 3. State Taxes Dedicated at Their Source for Transit Operations: Details by Transit System
- 4. Local Taxes Dedicated at Their Source for Transit Operations: Details by Transit System
- 5. Sources of Public Capital Assistance for Transit: Details by Transit System

- 6. State Taxes Dedicated at Their Source for Transit Capital: Details by Transit System
- 7. Local Taxes Dedicated at Their Source for Transit Capital: Details by Transit System

Since revenues are reported under Section 15 as system totals only and not separately by individual mode, the revenue tables do not provide break outs of transit revenues by mode for multimodal systems.

SOURCES OF TRANSIT REVENUE

The first revenue table, *Sources of Transit Revenue: Details by Transit System* which begins on page 2-10, reports on sources of transit revenue by

revenue object class. The first two data columns report Total Number of Revenue Vehicles (summed over all modes) and Total Revenue in thousands of dollars, respectively. The next ten data columns report the percentages of Total Revenue attributable to the various revenue object classes, the names of which head those data columns. For example, the entry under Transportation Revenue: Passenger Fares (revenue object class 401) for transit property 2008, the New York City Transit Authority, indicates that 55.5% of the total revenue received by the NYCTA during the fiscal year came from passenger fares. The column headed Transportation Fares: Other represents a combination of revenue object classes 402 (Special Transit Fares), 403 (School Bus Service Revenues), 404 (Freight Tarriffs), 405 (Charter Service Revenues), and 406 (Auxiliary Transportation Revenues). This is to be distinguished from the next to last column which is labeled Other and which corresponds to revenue object class 420 (Subsidy from Other Sectors of Operations). In the last column, labeled Total, appears the entry 100% for each transit property which serves to formally indicated that the percentage contributions of the various revenue object classes to the Total Revenue do in fact add up to 100 percent.¹ The data used to develop this table were compiled from the mandatory reporting level Form 201 (Ref. 2, Vol. I) and the voluntary reporting level Form 202 (Ref. 2, Vols. II, III, and IV). For additional information on revenue accounting procedures and for a list and definitions of revenue object classes, the reader is referred to Ref. 1, Vol. II, Secs. 2.10, 6.1, and 6.2.

SOURCES OF PUBLIC OPERATING ASSISTANCE

The second revenue table, *Sources of Public Operating Assistance for Transit: Details by Transit System* which begins on page 2-17, reports on sources of Federal, state, and local operating assistance to transit. The first two data columns report Total Number of Revenue Vehicles and Total Public Assistance for transit operations in thousands of dollars, respectively. The next ten data columns report the percentages of Total Public Assistance for transit operations attributable to the various public sources the names of which head those columns. Federal sources of public operating assistance to transit are classified as either funds made available under Section 5 of the UMT Act of 1964, as amended, or Other. State and local sources of public assistance are classified as either

General Revenue (funds allocated to transit out of general revenues) or Dedicated (funds dedicated to transit at their source). Dedicated sources, both state and local, are further classified as either Taxes (income, sales, etc.), Tolls (bridges, tunnels, etc.) or Other. The entry 100% for each transit property in the last column, labeled Total, serves to formally indicate that the percentage contributions of the various sources of public operating assistance to the Total Public Assistance for transit operations add to 100 percent. The data presented in this table were compiled from the Section 15 reporting Form 203 (Ref. 2, Vols. I, II, III, and IV).

DEDICATED STATE AND LOCAL TAXES FOR TRANSIT OPERATIONS

The next two revenue tables, *State Taxes Dedicated at Their Source for Transit Operations: Details by Transit System* beginning on page 2-24, and *Local Taxes Dedicated at Their Source for Transit Operations: Details by Transit System* beginning on page 2-25, report statistics which break out the state and local taxes dedicated to transit operations by type of tax. The tables distribute dedicated state and local taxes as percentages among eight tax categories: Income, Sales, Property, Payroll, Utility, Commuter, Gasoline, and Other. The data presented in these tables were also compiled from Section 15 reporting Form 203 (Ref. 2, Vols. I, II, III, and IV).

SOURCES OF PUBLIC CAPITAL ASSISTANCE

The fifth revenue table, *Sources of Public Capital Assistance for Transit: Details by Transit System* which begins on page 2-27, reports on sources of Federal, state, and local capital assistance for transit. The first two data columns report Total Number of Revenue Vehicles and Total Public Assistance for transit capital in millions of dollars, respectively. The next thirteen data columns distribute Total Public Assistance for transit capital as percentages among the various public sources, the names of which head those data columns. Five categories of sources of Federal capital assistance to transit are shown: Section 3 of the UMT Act of 1964, as amended; Section 5 of the UMT Act of 1964, as amended; Other UMTA; Other DOT; and Other Federal. State and local sources of capital assistance are classified as either General Revenue or Dedicated. Dedicated sources are further classified as either Taxes, Tolls, or Other. Data for this table were compiled from reporting Form 103 (Ref. 2, Vols. I, II, III, and IV).

¹ In some instances in this and other tables, the percentages as shown may not add up exactly to 100 because of round off imprecision.

DEDICATED STATE AND LOCAL TAXES FOR TRANSIT CAPITAL

The last two revenue tables, *State Taxes Dedicated at Their Source for Transit Capital: Details by Transit System* beginning on page 2-32, and *Local Taxes Dedicated at Their Source for Transit Capital: Details by Transit System* beginning on page 2-

33, report statistics which break out the state and local taxes dedicated to transit capital by type of tax. The tables distribute dedicated state and local taxes as percentages among eight tax categories: Income, Sales, Property, Payroll, Utility, Commuter, Gasoline, and Other. The data presented in these tables were also compiled from reporting Form 103 (Ref. 2, Vols. I, II, III, and IV).

Transit Expenses

The *Transit Expenses* section contains the following four statistical tables:

1. Transit Operating Expenses by Mode and Function: Details by Transit System
2. Transit Operating Expenses by Mode and Object Class: Details by Transit System
3. Single Mode Motor Bus Transit Systems, Operating Expenses by Function and Object Class: Details by Transit System
4. Employer and Employee Paid Fringe Benefits: Details by Transit System

Since expenses, unlike revenues, are reported under Section 15 separately by mode and not simply as system totals, the expense tables provide break outs by individual mode of transit expenses for multimodal systems.

EXPENSES BY FUNCTION

The first expense table, *Transit Operating Expenses by Mode and Function: Details by Transit System* beginning on page 2-36, reports transit expenses by mode in four major functional areas: Vehicle Operations; Vehicle Maintenance; Non-Vehicle Maintenance; and General Administration. The first data column, labeled Mode, lists the modes operated by each transit property (MB = Motor Bus, RR = Rail Rapid, SC = Streetcar, TB = Trolleybus, DR = Demand Response, FB = Ferryboat and OR = Other). The second data column, labeled Fleet Size, lists the number of revenue vehicles in each mode. In the third column appear Total Operating Expenses in dollars for each transit property for each mode operated by that property. The next four data columns distribute Total Operating Expenses for each property by mode as percentages among the four major functional areas (i.e., Vehicle Operations, Vehicle Maintenance, Non-Vehicle Maintenance, and General Administration). For multimodal systems, total system fleet size, total operating expenses, and the distribution of total operating expenses among the four major functional areas are listed in the row labeled Total. Functional expenditures by mode include both direct and fully

allocated joint expenses. The data used to develop this table were compiled from the following Section 15 reporting forms: Forms 301, 310 (Required, Ref. 2, Vol. I); Forms 304, 313 (Level C, Ref. 2, Vol. II); Forms 303, 312 (Level B, Ref. 2, Vol. III); Forms 302, 311 (Level A, Ref. 2, Vol. IV). For a list and detailed definitions of expense functions, reader is referred to Ref. 1, Vol. II, Secs. 7.3 and 7.4.

EXPENSES BY OBJECT CLASS

The next expense table, *Transit Operating Expenses by Mode and Object Class: Details by Transit System* beginning on page 2-46, reports statistics on transit operating expenditures by expense object class. For each transit property, the table distributes Total Operating Expenses for each mode and for the property as whole as percentages among nine expense categories: Labor: Operators' Salaries and Wages; Labor: Other Salaries and Wages; Fringe Benefits; Services; Materials and Supplies: Fuel and Lubricants; Materials and Supplies: Tires and Tubes; Materials and Supplies: Other; Casualty and Liability Costs; and Other. The expense category Other represents a combination of expense object classes 505 (Utilities), 507 (Taxes), 508 (Purchased Transportation), 509 (Miscellaneous Expense), and 510 (Expense Transfers). It will be noted that for some multimodal systems there is data row labeled JE which stands for Joint Expenses. A separate row for Joint Expenses is required because under Section 15, expenses are fully allocated to the individual modes only by function and not by expense object class. The data used to develop this table were compiled from the following Section 15 reporting forms: Forms 301, 310 (Required, Ref. 2, Vol. I); Forms 313, 315 (Level C, Ref. 2, Vol. II); Forms 312, 315 (Level B, Ref. 2, Vol. III); Forms 311, 315 (Level A, Ref. 2, Vol. IV). For a list and detailed definitions of expense object classes, the reader is referred to Ref. 1, Vol. II, Secs. 7.1 and 7.2.

EXPENSES BY FUNCTION AND OBJECT CLASS

The next expense table, *Single Mode Motor Bus Transit Systems, Operating Expenses by Function and Object Class: Details by Transit System* beginning on page 2-57, deals exclusively with single mode motor bus properties which constitute nearly 70% of the nation's transit operators. The table reports operating expenses by function and expense object class. The first data column reports Total Number of Revenue Motor Buses for each property. The second data column, labeled Function, lists function codes for the four major functional areas (i.e., code 010 = Vehicle Operations; code 041 = Vehicle Maintenance; code 042 = Non-Vehicle Maintenance; and code 160 = General Administration). The next data column, labeled Total Operating Expenses by Function, lists total operating expenditures in dollars for each function listed in the preceding column and, in addition, total operating expenses for all functions. The next nine data columns distribute operating expenses by function and total operating expenses for all functions as percentages among the nine expense object classes, the names of which head those columns (e.g., Labor: Operators' Salaries and Wages, Fringe Benefits, etc.). The data used to develop this table were compiled from the following Section 15 reporting forms: Form 301 (Required, Ref. 2, Vol. 1); Form 305 (Level C, Ref. 2, Vol. II); Form 306 (Level B, Ref. 2, Vol. III); Form 307 (Level A, Ref. 2, Vol.

IV). Lists and definitions of expense object classes and expense functions can be found in Ref. 1, Vol. II, Secs. 7.1, 7.2, 7.3, and 7.4.

FRINGE BENEFITS

The last expense table, *Employer and Employee Paid Fringe Benefits: Details by Transit System* beginning on page 2-79, reports on the various categories of fringe benefits paid by transit employers and employees. For each transit property, there are two rows of data, one labeled Employer Paid and the other labeled Employee Paid. In the first two data columns, labeled Total Employer Paid Fringe Benefits and Total Employee Paid Fringe Benefits, respectively, are listed for each transit property the total amount of fringe benefits in dollars paid by employers (in the Employer Paid row) and by employees (in the the Employee Paid row). These total dollar values are distributed in the next thirteen data columns as percentages among the various categories of fringe benefits, the name of which head those columns (e.g., FICA or Railroad Retirement, Pension Plans, Sick Leave, etc.). Under Section 15, fringe benefit payments are reported as system totals only so that break outs by mode are not provided. The data presented in this table were compiled from reporting Form 331 (Ref. 2, Vols. I, II, III, and IV). For more detailed information on labor distribution and fringe benefits accounting, the reader is referred to Ref. 1, Vol. II, Secs. 2.1 and 2.2.

Non-Financial Operating Data

The *Non-Financial Operating Data* section contains the following seven statistical tables:

1. Revenue Vehicle Maintenance Performance: Details by Transit System
2. Energy Consumption: Details by Transit System
3. Transit Way Mileage: Details by Transit System
4. Transit System Employee Count: Details by Transit System
5. Transit Accidents: Details by Transit System
6. Transit Operating Statistics: Service Supplied and Service Consumed: Details by Transit System
7. Age Distribution of Revenue Vehicle Inventory: Details by Transit System

TRANSIT MAINTENANCE

The first table, *Revenue Vehicle Maintenance Performance: Details by Transit System* beginning

on page 2-96, reports on transit maintenance performance by mode. The modes operated by each property and the number of revenue vehicles in each mode are listed in the first and second data columns, respectively. The next three data columns report, respectively, the number of roadcalls due to mechanical failure, the number of roadcalls for reasons other than mechanical failure, and the total number of roadcalls for all reasons by mode and for the whole system. In the column labeled Total Labor Hours for Inspection and Maintenance are listed by mode and for the system as a whole the labor hours of transit system maintenance personnel working on revenue vehicles. The last four data columns report by mode and for the whole system the number of light maintenance facilities which are classified by the number of revenue vehicles they serve (i.e., Under 200, 200-300, Over 300, and Total). If in a multimodal system a light maintenance facility serves more than one mode, then a fraction of that facility to the nearest one tenth is

assigned to each of the modes in question based upon the proportion of the total light maintenance labor hours attributable that mode. The data presented in this table were compiled from reporting Form 402 (Ref. 2, Vols. I, II, III, and IV). Definitions and classifications of maintenance performance elements can be found in Ref. 1, Vol. II, Sec. 8.5.

ENERGY CONSUMPTION

The next table, *Energy Consumption: Details by Transit System* beginning on page 2-106, reports statistics on the consumption of energy by mode. Consumption of liquid fuels (i.e., diesel fuel, gasoline, LPG, LNG, and bunker fuel) is reported in thousands of gallons while the consumption of electric power is reported in thousands of kilowatt hours. The data presented in this table were compiled from reporting Form 401. (Ref. 2, Vols. I, II, III, and IV). Definitions and classifications of fuel elements can be found in Ref. 1, Vol. II, Sec. 8.5).

TRANSIT WAY MILEAGE

The next table, *Transit Way Mileage: Details by Transit System* beginning on page 2-116, reports aggregate transit way mileage by transit system for the modes Motor Bus, Trolleybus, Rail Rapid, Street Car, and Ferryboat. In addition to transit way mileage, the table reports the number of crossings for the Rail Rapid and Streetcar modes and the number of stations for the Rail Rapid mode. The data presented in this table were compiled from reporting Form 403 (Ref. 2, Vols. I, II, III, and IV). Definitions of facilities and equipment elements and classifications can be found in Ref. 1, Vol. II, Sec. 8.3.

TRANSIT EMPLOYEE COUNT

The next table, *Transit System Employee Count: Details by Transit System* beginning on page 2-123, reports transit system employee counts by mode in ten distinct job classifications (e.g., Transportation Executive, Professional and Supervisory Personnel; Transportation Support Personnel; Revenue Vehicle Operators, etc.). Each of these job classifications is further divided into two groups: Operating and Capital. To the extent that an employee works on capital projects, his labor is considered a capital expense in contrast with labor which is considered strictly an operating expense. In each job category, the number of employees is expressed in terms of the number of employee equivalents for the year to the nearest one-tenth employee (one employee equivalent = 2000 man hours of work). The data presented in this table were compiled from reporting Form 404 (Ref. 2, Vols. I, II, III, and IV). For definitions of employee

elements and classifications, the reader is referred to Ref. 1, Vol. II, Sec. 8.4.

SAFETY

The next table, *Transit Accidents: Details by Transit System* beginning on page 2-149, reports on the numbers of transit accidents, fatalities, and injuries by mode. Accidents, fatalities, and injuries are classified as being either Collision, Non-Collision, or Station. The data presented in this table were compiled from reporting Form 405 (Ref. 2, Vols. I, II, III, and IV). Definitions and classifications of safety elements can be found in Ref. 1, Vol. II, Sec. 8.5.

TRANSIT OPERATING STATISTICS

The next statistical table in the *Non-Financial Operating Data* section is entitled *Transit Operating Statistics: Service Supplied and Service Consumed: Details by Transit System*, and begins on page 2-159. The table reports statistics on service supplied and service consumed by system and by mode. There are thirteen categories of service supplied (e.g., Annual Vehicle/Passenger Car Miles, Annual Train Miles, Annual Revenue Capacity Miles, etc.) and three categories of service consumed (e.g., Annual Unlinked Passenger Trips). Note that for the rail modes (i.e., Rail Rapid and Streetcar) both train and passenger car statistics are reported. The ratio of a given passenger car statistic to the corresponding train statistic provides a measure of the average number of passenger cars per train. The table is divided into two sections. The first section from page 2-159 to 2-167 reports the first nine categories of service supplied while the second section from page 2-168 to 2-175 reports the final four categories of service supplied and the categories of service consumed.

The information presented in this table was compiled from reporting Form 406 for non-rail modes and form 407 for rail modes (Ref. 2, Vols. I, II, III, and IV). Forms 406 and 407 report average daily (weekday and weekend) statistics on service supplied and service consumed. To obtain the annual totals presented in the table, the average weekday data were multiplied by 253, the average Saturday and Sunday data were multiplied by 53 and 59, respectively, and finally, the products were summed. The number 253 was obtained by subtracting from the normal total of 260 annual weekdays 7 Sunday-like holidays (an assumed national average). These 7 holidays were added to the number of Sundays to give a total of 59 Sunday-like days. For further information on the definitions of service supplied and on vehicle utilization elements and classifications and on the definitions of passenger utilization ele-

ments and classifications, the reader is referred to Ref. 1, Vol. II, Secs. 8.7 and 8.8.

Suggested procedures for obtaining service consumed data can be found in References 3 and 4 (see Preface). Many, but not all, transit properties adopted the data gathering procedures outlined in those two documents.

FLEET AGE DISTRIBUTION

The final statistical table in the *Non-Financial Operating Data* section is entitled *Age Distribution of Revenue Vehicle Inventory: Details by Transit System* and begins on page 2-176. The table reports by transit system and by mode the age distribution of the fleet as percentages among six age categories (e.g., 5 years or less, 6-10 years, etc.). In the last data column, labeled Average Age of Fleet in Years, are listed by mode the average ages

of the revenue vehicles. The age distribution of the whole fleet and the average age of the whole fleet are reported for each transit property in the row labeled Total. The information presented in this table was compiled from reporting Form 408 (Ref. 2, Vols. I, II, III, and IV). As was noted in the Introduction, the transit properties in this and all other tables in Section 2 are listed in descending order by system fleet size as calculated using the fleet inventory data reported on Form 001. Inconsistencies among the fleet inventory data reported on Form 408 and Form 001 will be observed when comparing the values reported in the column labeled Total Number of Revenue Vehicles (from Form 408) with the rank ordering of the properties in the column labeled Transit System (from Form 001). Definitions of property object classes can be found in Ref. 1, Vol. II, Sec. 3.3.

Performance Indicators

The Performance Indicators section contains the following statistical table:

1. Transit Performance Indicators: Details by Transit System

This statistical table, which begins on page 2-188, reports key financial and operational performance indicators by transit system and by mode. The table actually consists of six sections. The first section from page 2-188 to 2-196 reports key performance indicators based upon Total Revenue Vehicles Operated, Total Annual Vehicle Miles, and Total Annual Vehicle Hours (e.g., Total Revenue Vehicles Operated per Line Mile, Total Annual Vehicle Miles Per Operator, etc.). The second section from page 2-196 to 2-203 reports performance indicators based on Total Annual Vehicle Revenue Miles and Total Annual Vehicle Revenue Hours (e.g., Total Annual Vehicle Revenue Hours Per Operator). The third section from page 2-204 to 2-211 reports various fuel consumption performance indicators (e.g., Fuel Consumption Per Passenger Mile). The fourth section from page 2-211 to page 2-219 reports key performance indicators based upon Total Operating Expenses (e.g., Total Operating Expenses Per Vehicle Mile). The fifth section from page 2-220 to

page 2-228 reports performance indicators based upon Total Annual Passenger Miles, Total Passengers, and Total Employees (e.g., Total Employees Per Vehicle). The sixth and final section of the report from page 2-229 to page 2-237 reports miscellaneous performance indicators based upon Total Administrative Employees, Total Annual Vehicle Miles, Total Revenue Vehicles, Total Number of Collision Accidents, and Total Number of Non-Collision Accidents (e.g., Total Revenue Vehicles Per Maintenance Employee). The performance indicators presented in these tables were calculated using data compiled from a number of Section 15 reporting forms. Specifically, the performance indicators were calculated from data compiled from the expense Forms 301, 310 (Required); 305, 313, 315 (Level C); 303, 312, 315 (Level B); and 302, 311, 315 (Level A) and from the non-financial operating data Forms 402, 404, 405, 406 and 407. Samples of these forms can be found in the appropriate volumes of Ref. 2. Note that in some instances, performance indicators for certain properties are reported as zero. This normally implies that the data were either unreported or excluded during the editing process.

SECTION 2.2

TRANSIT REVENUES

MATRIS—RPT002.01.1 AS OF 11-Apr-81

SOURCES OF TRANSIT REVENUE: DETAILS BY TRANSIT SYSTEM

END OF REPORT

APPENDIX A

LIST OF TRANSIT PROPERTIES SORTED ALPHABETICALLY BY STATE

INTRODUCTION

The following table lists all of the transit properties which submitted financial and operating data to UMTA for fiscal years ending between July 1, 1978, and June 30, 1979, pursuant to Section 15 of the UMT Act of 1964, as amended. The properties are listed alphabetically by state and, within a state, alphabetically by city. Within a city, properties are ranked in ascending order by total fleet size (i.e., smallest to largest). In addition to transit ID code, property name and address, and name and phone number of the Section 15 contact person, the table lists for each transit property urban area code and population, UMTA region, fiscal year end date, Section 15 reporting level (R, A, B, or C) and the number of revenue vehicles by mode. With the exception of urban area code and population, all of this information was compiled from the Section 15 reporting Form 001 (Ref. 2, Vols. I, II, III, and IV).

END OF REPORT

APPENDIX B

LIST OF TRANSIT PROPERTIES SORTED BY TRANSIT PROPERTY IDENTIFICATION CODE

INTRODUCTION

The following table lists all of the transit properties which submitted financial and operating data to UMTA for fiscal years ending between July 1, 1978, and June 30, 1979, pursuant to Section 15 of the UMT Act of 1964, as amended. The properties are listed in ascending order by the four digit transit ID code. In addition to transit ID code, property name and address, and name and phone number of the Section 15 contact person, the table lists for each transit property urban area code and population, UMTA region, fiscal year end date, Section 15 reporting level (R, A, B, or C) and the number of revenue vehicles by mode. With the exception of urban area code and population, all of this information was compiled from the Section 15 reporting Form 001 (Ref. 2, Vols. I, II, III, and IV).
