<p><b>16. Abstract</b></p> <p>Despite having an extensive network of public transit, traffic congestion and transportation-related greenhouse gas (GHG) emissions are significant concerns in New Jersey. This research hypothesizes that traffic congestion and air quality concerns in the state would be much greater in the absence of public transit. With this hypothesis, the study examines the congestion and GHG impacts of transit by exclusively focusing on local buses in selected parts of the state.</p> <p>While the primary objective of this research is to estimate the congestion and GHG impacts of local buses, its secondary objective is to examine the rider and travel characteristics of bus riders. To fulfill these objectives, a survey of bus riders was necessary. A list of 50 bus routes in four County Groups was prepared for the survey. Rider surveys were conducted on 23 of these routes as a part of this research. This research document pertains to the analysis of survey data from those 23 routes.</p> <p>The survey revealed that a large proportion of riders would drive their own cars, carpool with others, or use app-based services or taxis to travel to their destinations in the absence of buses. Such diversions to the automobile would generate a significant amount of vehicle miles traveled, which in turn would generate a significant amount of GHG. The traffic simulation model also indicated that diversion of riders from buses to automobile would increase traffic delay by a discernible level. Based on these results, the study concludes that local buses can potentially help to reduce congestion and GHG emissions.</p> <p>The analysis of rider and trip characteristics showed that the surveyed buses mostly serve riders from households without cars who have limited options to travel. Survey data analysis also showed that the buses serve a large number of low-income and minority populations, most of whom use buses to travel to work and school. Based on the results, a few recommendations have been made.</p>			
17. Key Words Local Bus; Rider Survey; Traffic Impact; Environmental Impact; Rider Characteristics		18. Distribution Statement No restriction	
19. Security Classif. (of this report) Unclassified	20. Security Classif. (of this page) Unclassified	21. No of Pages 88	22. Price

## **ACKNOWLEDGEMENTS**

The authors wish to acknowledge the efforts of the New Jersey Department of Transportation (NJDOT) including the Project Manager Ms. Priscilla Ukpah and Ms. Camille Crichton-Sumners, former Manager of the Bureau of Research. The authors thank the Research Selection and Implementation Panel members including: former Director of Research at NJ Transit Ms. Janice Pepper, Ms. Rossana Ybasco (NJ Transit), Ms. Fei Yang (NJ Transit), Mr. Patrick Glasson and Director of Research at NJ Transit, Ms. Susan O'Donnell. These individuals offered valuable comments and suggestions on the research project resulting in an improved product.

As research team members, Dr. Xiang Liu of Rutgers Department of Civil and Environmental Engineering, senior research specialist Mark Walzer of the Bloustein Center for Survey Research, as well as senior research specialists Ryan Whytlaw and Andrea Lubin and research project coordinator Stephanie Kose of the Alan M. Voorhees Transportation Center significantly contributed to this study. Dr. Liu led the effort pertaining to traffic impacts of local buses. Mr. Whytlaw and Mr. Walzer assisted with survey scheduling and monitoring as well as with the supervision of the survey. Ms. Lubin assisted with hiring and training of surveyors and setting up the data-entry program. Ms. Kose assisted with surveyor hiring, monitoring of surveyor activities, timesheets, and other project administration activities, such as travel reimbursements.

The contribution of Rutgers students from various programs to this study was immense. Edward J. Bloustein School students Chihuangji Wang (Herbert) and Catrina Meyer assisted with scheduling and monitoring of the survey, GIS analysis, and other important logistical work. Catrina Meyer also helped preparing the literature review. Sarah Diyanidh assisted with survey monitoring and data analysis. Doctoral student Da Fei helped with survey data cleaning and weighting. Approximately 40 graduate and undergraduate students from various programs at Rutgers University undertook the difficult task of conducting onboard surveys. Without the contributions of all of the above, the study could not have been successfully completed.

## **INTRODUCTION**

This research report contains three volumes: Volume I – Methods and Findings, Volume II – Rider Characteristics, and Volume III – Travel Characteristics. The overall research objectives, the data collection methodology, the methods of analysis, and summary results are presented in Volume I. This volume, Volume III, contains detailed tables from the onboard survey of bus riders on 23 NJ TRANSIT routes. The tables included in this volume pertain to the bus riders' travel characteristics. Although some summary statistics on rider characteristics were included in Volume I, the tables in this volume are more detailed and they are organized by bus route.

This report contains only one other section which contains data tables only. The tables are organized by bus route number. For each of the 23 routes, 11 tables are presented. Thus total number of tables in this volume is  $23 \times 11 = 253$ .

## DATA TABLES

### ROUTE 6
