## **1. ABSTRACT**

Approximately 40% of the Goods that come into the United States come through the Los Angeles and Long Beach ports. The Inland Empire has experienced exponential growth because of its cheap dirt and has resulted in the Inland Empire expanding in the number of warehousing and distribution facilities. A direct result of these warehouses and distribution facilities has been environmental concerns (poorer air quality) and a logistical nightmare (plugged highways). The ability to make good decisions must be based on sound information. Currently, there is no one specific location where a data base for strategic decision makers can go to gather the necessary information of where these warehouses and distribution facilities are located. These warehousing and distribution facilities are located in a minimum of 41 different locations within the Inland Empire. A pilot project funded by the Leonard Transportation Center entitled, "Inland Empire Logistics GIS Mapping Project (Rohm, 2008)" during the 2007 funding cycle revealed that there was no one specific database for warehousing and distribution facilities information. Questions can be asked like: "Where are these facilities located?" "How large are the facilities?" "Can I see all of these facilities from a web portal?" "How do I get current information to help me make critical decision about policy for the logistics and transportation area? Currently, there was no one place to get answers to these questions. Thus, strategic decision makers at the commercial, governmental and military level can only piece the information together from various sources.

This project was built on the Rohm's (2008) pilot project. Using the project's findings of 41 cities with its specific information and the identification of a questionnaire, this project was three fold: 1) A web portal was designed and built which allows for a GIS program to be accessed; 2) A questionnaire was to be answered by various decision makers of warehousing and distribution facilities; and 3) The information collected was coded into a database which can be accessed by the GIS program.

## **2. PROJECT SIGNIFICANCE: A Web Portal for Inland Empire**

The Inland Empire has not only experienced exponential growth over the last several decades, it has also transformed from a regional agrarian to a global logistics, distribution and warehousing hub of global significance. Where grapevines and orange groves once stood, now immense

buildings measured by 100,000's square feet facilities pack the roadways of the Interstate 10, 15, 215 and California 60, and 91 corridors containing parts, products, food stuff and other sundry items coming from, or going to, people throughout the world. As public and private decision makers and strategists begin to explore and find solutions to the myriad of changes generated by this transformation, they find themselves operating many times by guesses, by hearsay or just simply stymied. Whether it is housing patterns, freeway congestion, block arterial routes, track and train traffic or a host of other noxious events there is a distinct lack of underlying supporting GIS dynamic applicable maps. The current analysis tends to be stochastic or temporal in nature. If strategic decision makers in the region are going to truly solve problems and develop efficient, effective solutions then it is of utmost importance that a centralized dynamic database be developed using a web-based GIS driven mapping program. Currently as best researched, except for a few narrow proprietary attempts, no central dynamic web portal is y available.

Simply put, the strategic decision makers in this region need, in fact, require a useful current and easily accessible web portal with a database upon which viable decisions may be formulated.

This grant commenced to develop a web portal with a logistical driven web GIS database.

### **3. WORK COMPLETED**

First, the heart of this project was the development of the code for the GIS Web Portal which was very extensive (see Appendix B with over 450+ pages of codes). Second was trying to obtain the correct and up-to-date information from the surrounding warehouses. Third was the implementation of the web portal. Under the direction of Drs. C.E. Tapie Rohm and Pat McInturff, the three phases of the project were completed.

The first phase of the project was to design and develop a web portal. A special computer server was purchased and set up on campus which had direct access to the internet. A Domain Name was obtained which was under the name of the iCSI was obtained: [icsi.csusb.edu](http://icsi.csusb.edu). The programming of the web portal was commenced. Two special programmers were hired who knew and understood HTML, .aspx, JAVA Scripting, Microsoft Sequel and C## and other serve side programming skills as well as ESRI GIS mapping software. The website was set up and

tested to work out the bugs which took a lot longer than anybody expected. The ARCVIEW GIS program was run through the University's licensed server.

The second phase was based on the Rohm pilot study of 2007. The information from the pilot project indicated that the collection of the information was very human intensive. The elements of questionnaire, which would be important to potential strategic decision makers, was to be obtained through the interview process for the questionnaire. With the collection of the data and then re-verified, this phase encountered a number of problems. When the interviewers were sent into the field to collect the type of information the decision makers needed, most decision makers refused to give the data to the interviewers. Time and time again, the decision makers considered the information asked for as "Trade Secrets." This was extremely frustration. Whereas the pilot study determined that the decision makers wanted to receive the information, however, it was not determined that the decision makers would be uncooperative in voluntary giving the information. At a future time and grant, another way will have to be designed to obtain the necessary information for the database to be really useful to a large number of users.

The third phase of the project was to implement the data base. The database was designed and develop with the information obtained from the pilot study because no new information was obtained because of the concern for trade secrets. The data collected from the interviews was coded for the ARCVIEW GIS database (the campus has a licenses for software and which is renewed each year with ESRI).

#### **4. FINDINGS:**

This final report has the printed information collected from the questionnaires, the data inputs to the ARCVIEW database and code for the web portal.

The web portal can be accessed by those on campus, and hopefully in the near future by those who the Leonard Transportation Center desires to give access to regional logistics GIS mapping architecture.

The web server is to be kept up and run by the Inland Commerce and Security Institute that Drs. Rohm and McInturff are the Executive co-Directors.

While the university has been extremely helpful and supportive, there were a few glitches. After a year of working on ATI compliance, it is still not cleared. The bureaucracy is so extreme and the security concerns so petty, that website cannot be seen by the outside world. The project directors were extremely disappointed by the lack of cooperation by the technical staff in the respective areas and stopped the timely launching of the web portal.

## **5. FUTURE RESEARCH OPPORTUNITIES**

A web portal GIS database is still needed for the Inland Empire. Governmental, business and educational decision makers are still making decisions without being able to visualize the data or even see it or know of its existence. The next logical project to this project would be threefold.

1) Obtain the support of the business executives in the area to come up with generic questions they would like answered. This would be a refinement of the 2007 Rohm pilot study and of the results of the current project. The study would just concentrate on obtain this information and data. 2) Obtain the support of elected and appointed government officials at the local cities, counties and state to release the information in their various databases. The study would concentrate on identifying and then obtaining permission to copy the information for the use of the Leonard Transportation Center as a central repository of the data. 3) Expand the current database on the GIS server at <https://icsi.csusb.edu>. This would require larger disk drives or a data disk farm, more memory (RAM) for the server and some more programming to enlarge the database from the information collected.

A DVD is attached to this project which obtains the entire website with its accompanying codes. For security purposes the login and passwords are not listed in this document.

## Introduction

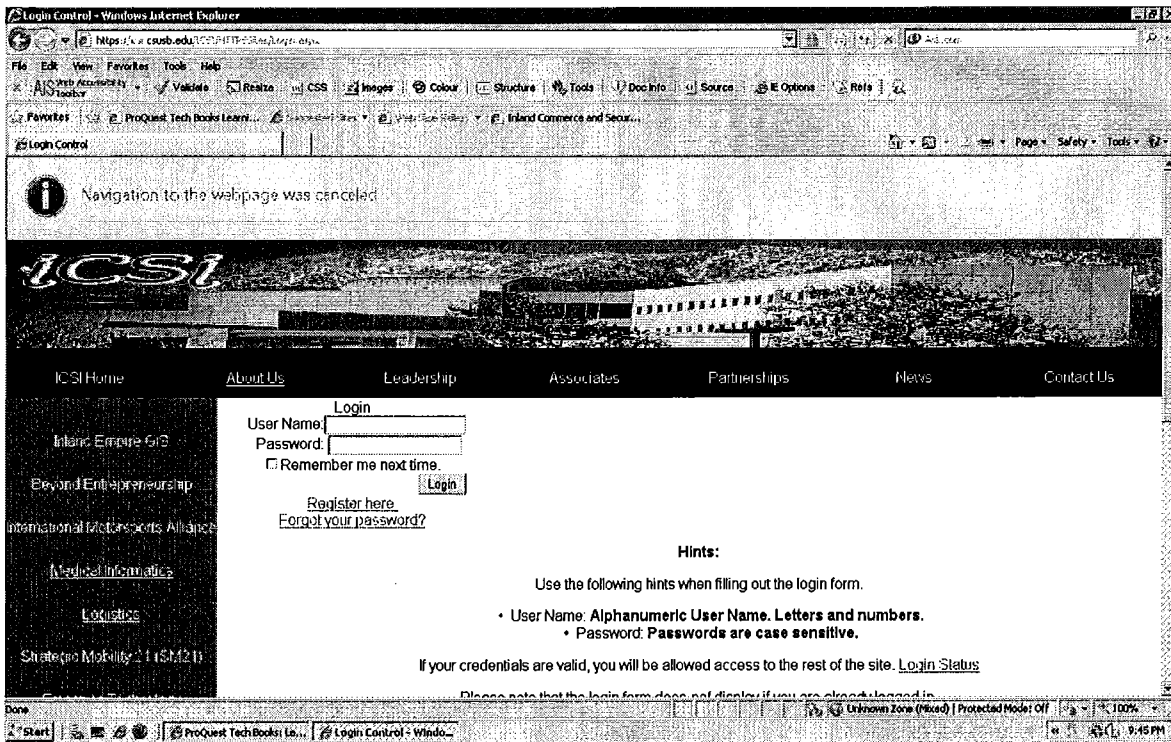

This is the home page of the <http://icsi.csusb.edu> website. Most of the website is straight forward, except for the Inland Empire GIS link. The other links consist of plain text. The Inland Empire GIS link requires a user account to view the contents.

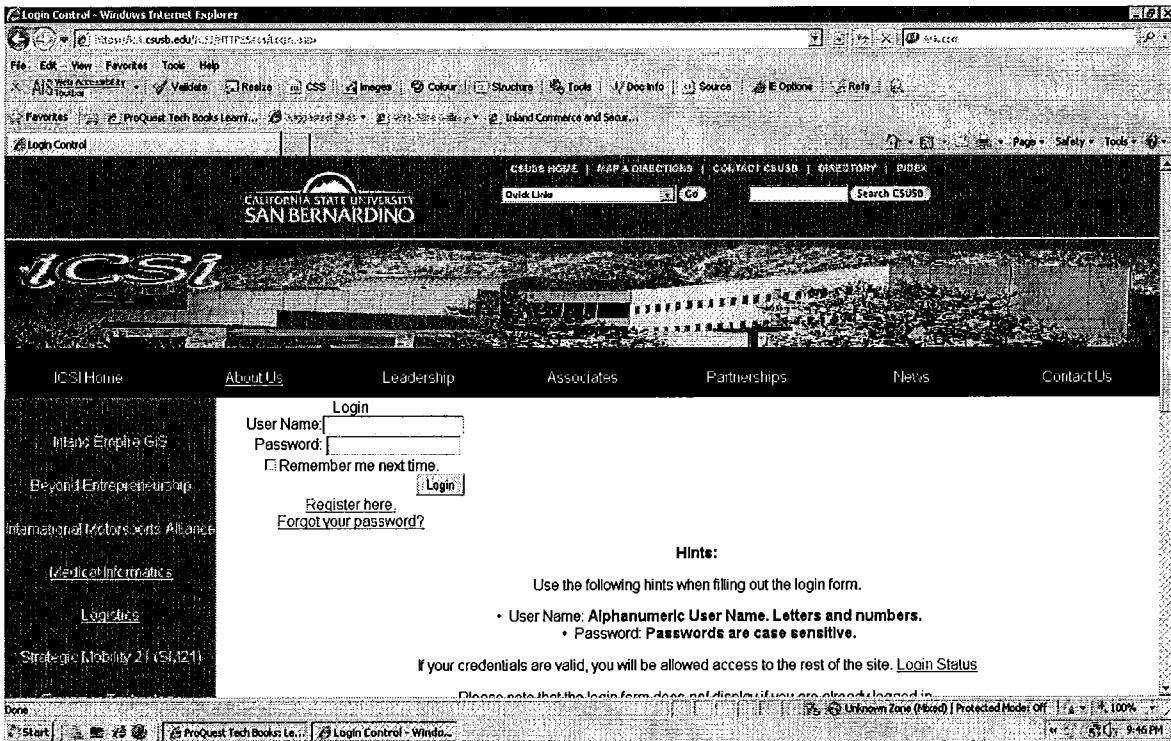

## Login Page

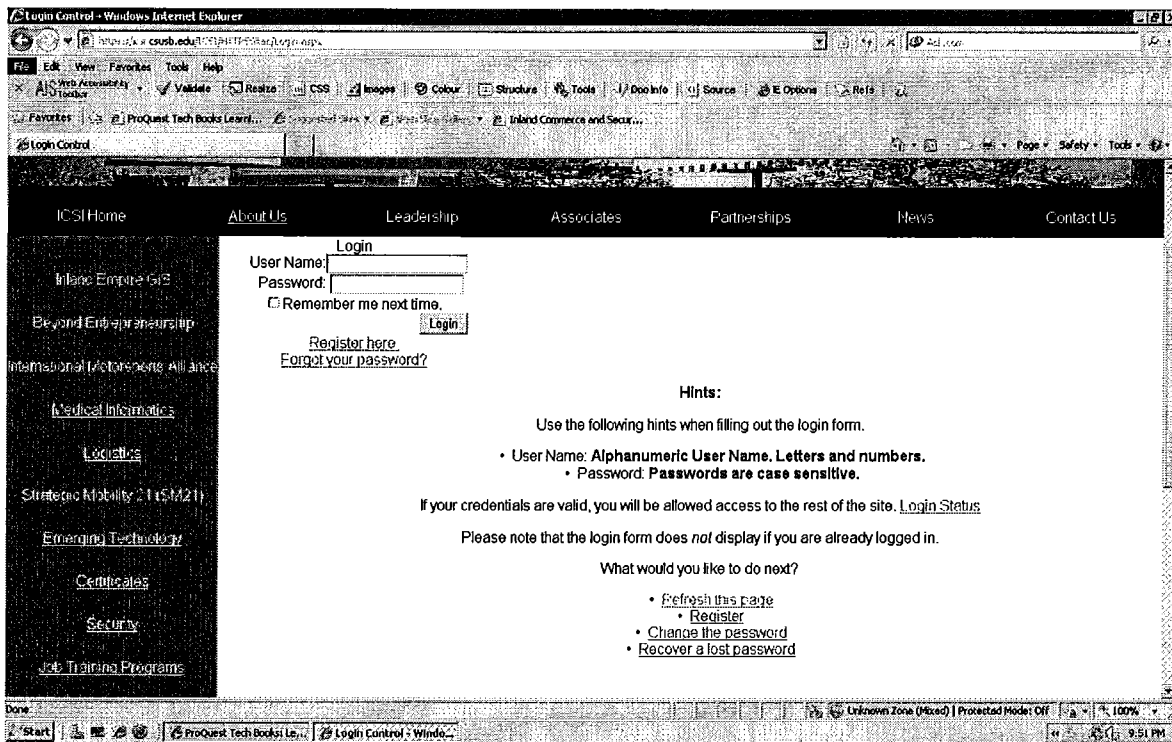

When you click on the Inland Empire GIS link there will be a message that appears asking if you would like to view both the secure and non-secure content that is on the page or just the secure content. You may choose either “Yes” or “No”, the only difference in the pages will be the California State University San Bernardino Banner that appears in the header. All other pages contained within this link will prompt you with the same alert. The differences are the same as previously mentioned.

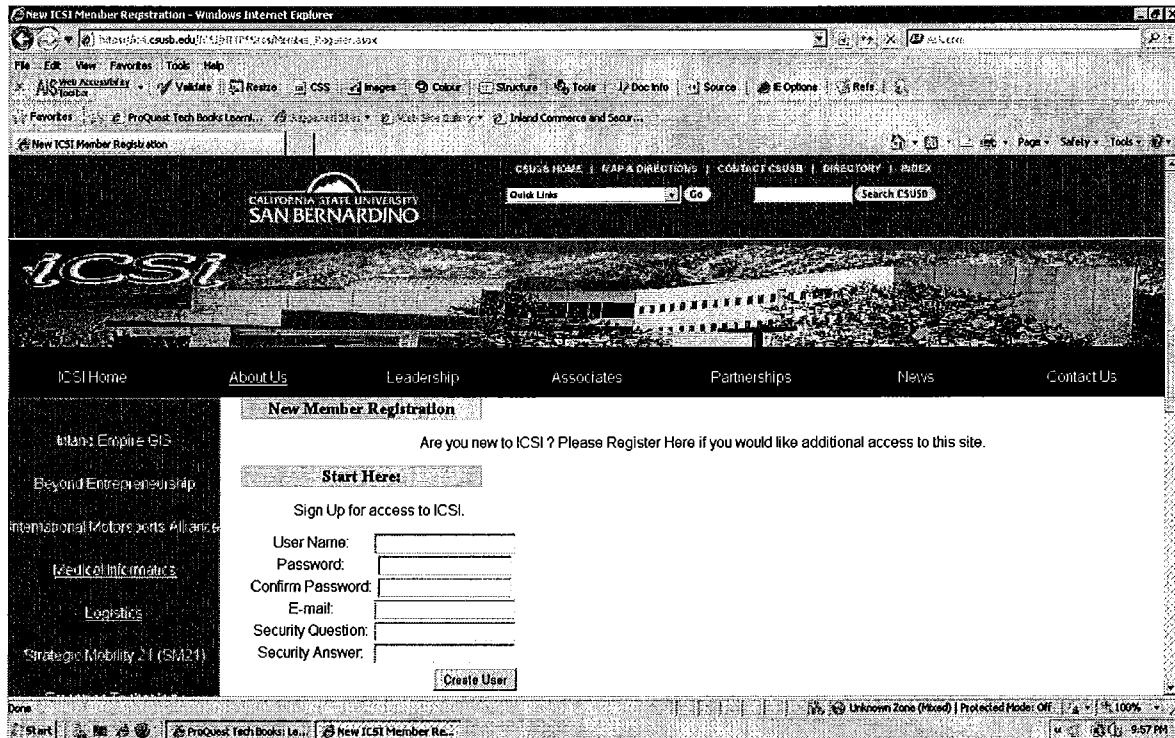

Example if "Yes" is chosen.

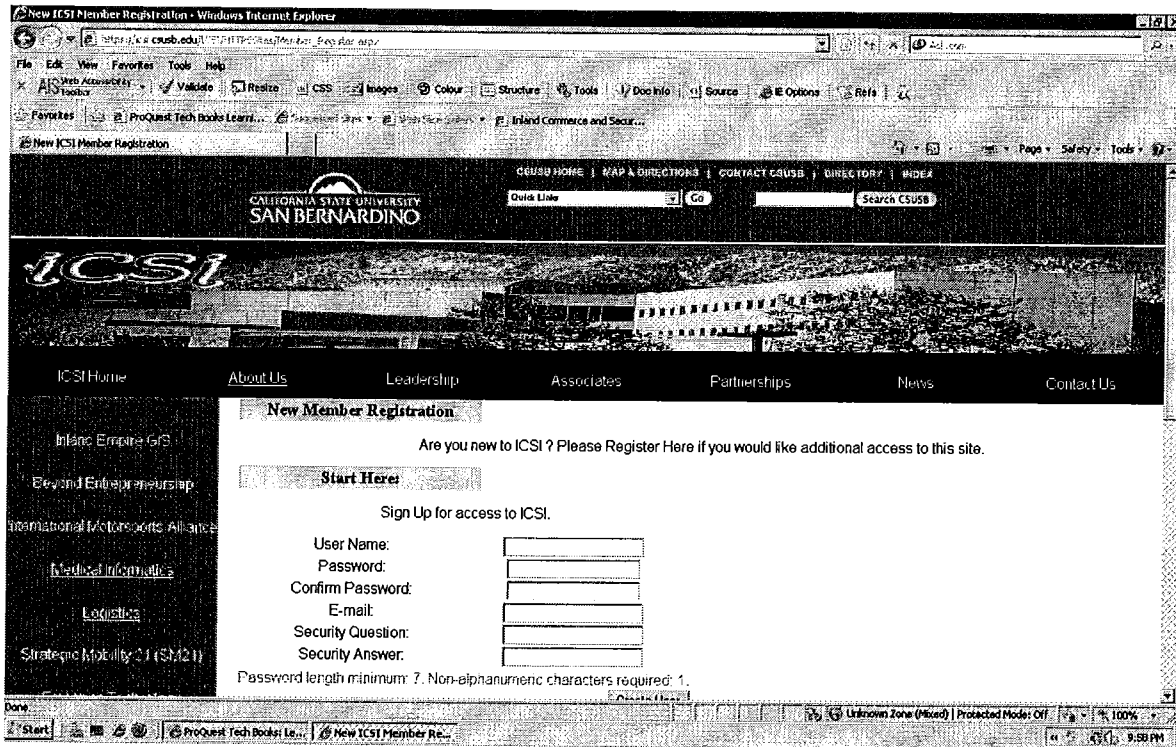

Example if “No” is chosen. Both pages will require a membership in order to view the contents of the link. If you have previously created an account, you can log in here with your User Name and Password and skip to page 15. If you are a first time user, you can click “Register here” or “Register” and continue on after this paragraph. If you forgot your password you click “Forgot your password” or “Recover a lost password” and skip to page 10. If you need to change your password, you can click on “Change the password,” and skip to page 12.

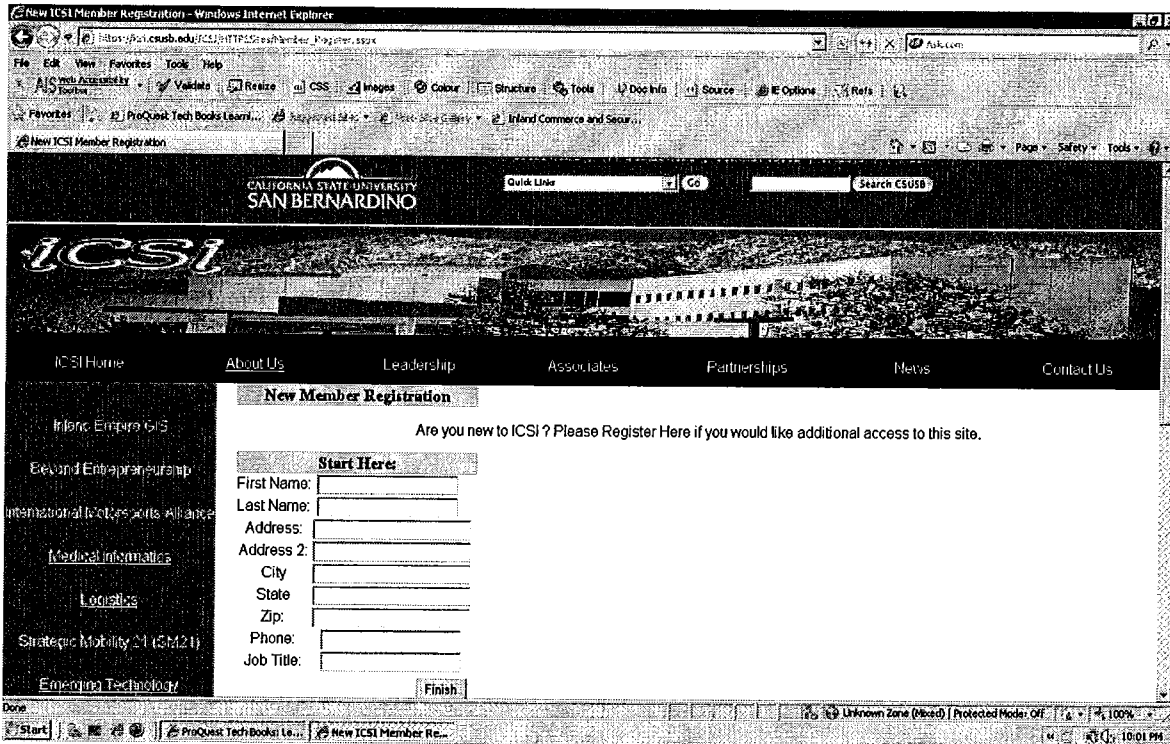

## Register User

When the links “Register here” or “Register” are clicked, you will be taken to this page. You will need to fill out all of the questions, except the Security Question and Security Answer, or else a message like the following will be displayed for each question missing an answer, for example:

Once all the information has been filled out, click on the “Create User” button at the end of the text boxes.

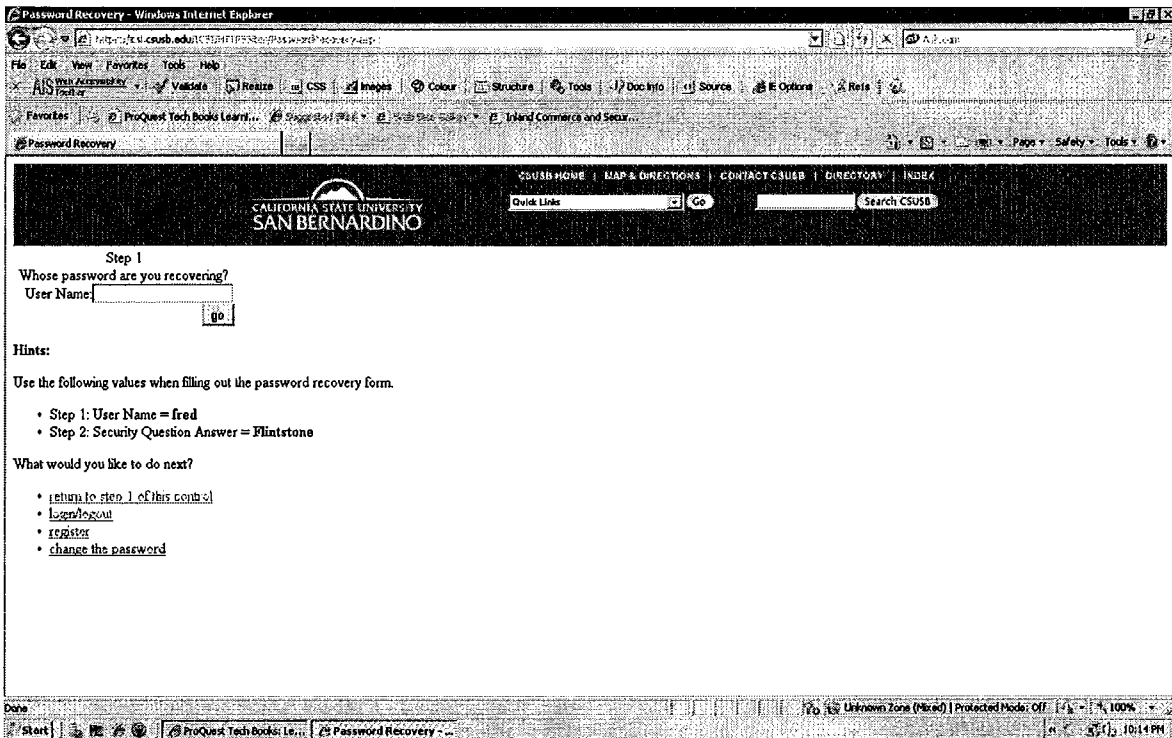

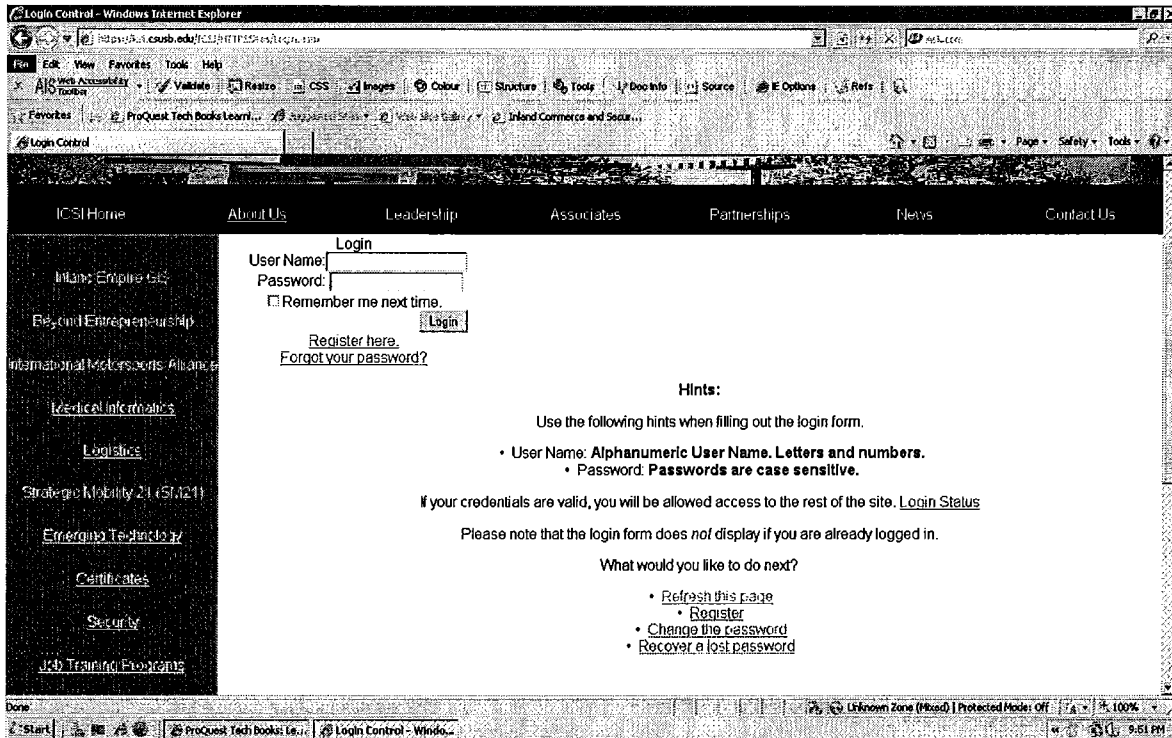

After clicking on “Create User” you are taken to a page asking for some personal information. You are not required to fill out this information; however, it is recommended that you do. When you are ready to continue on to the next page, simply click on the “Finish” button. This is the last page before the Inland Empire GIS page.

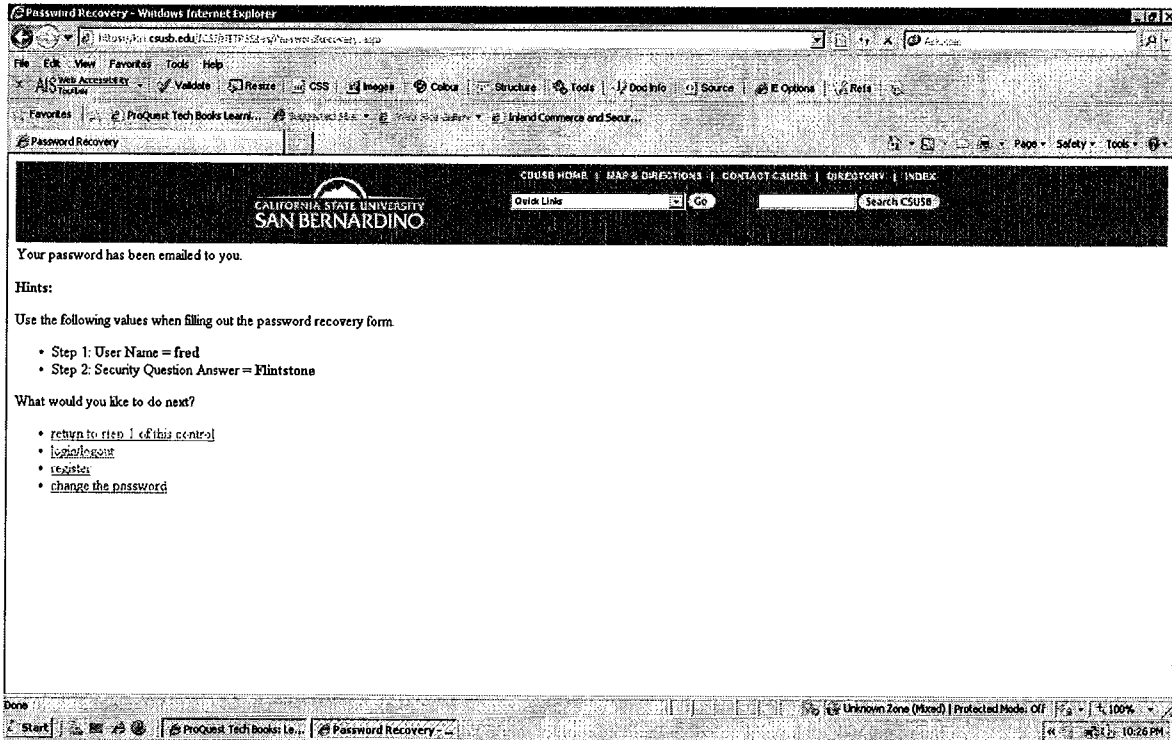

Now we will back up to some of the other links that were on the Login page.

## Recovering a Lost Password

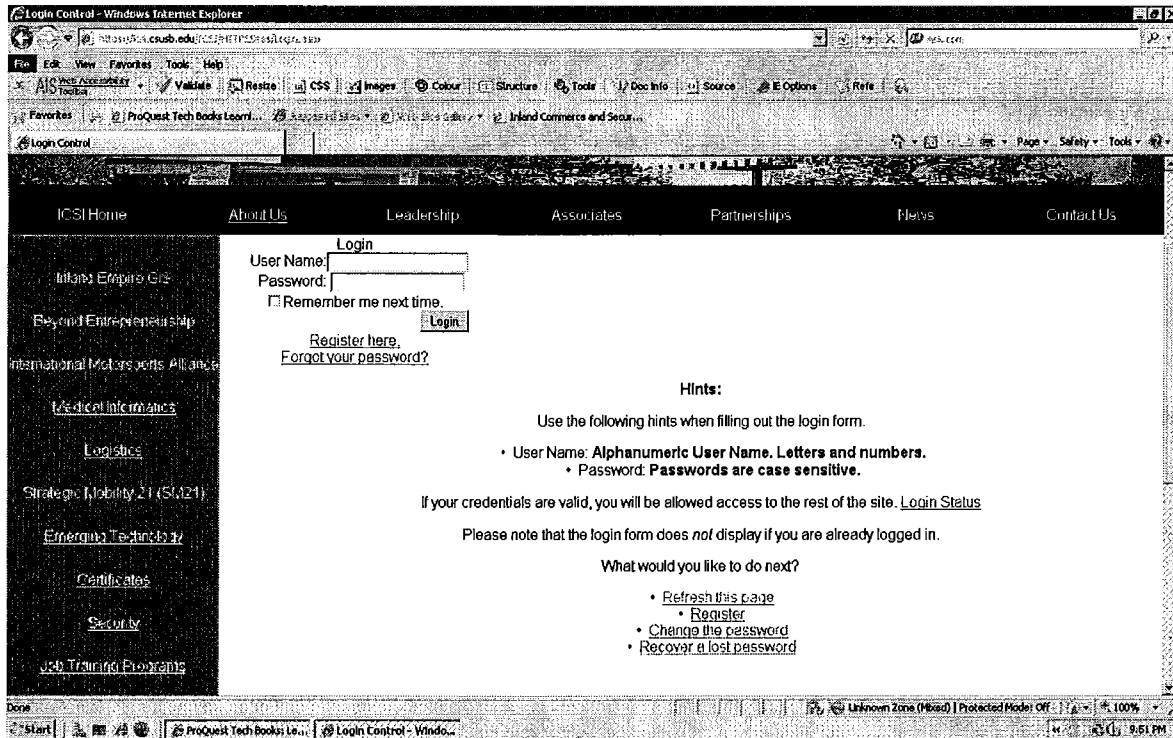

This page is displayed if the user has forgotten their password and is attempting to recover a lost password by clicking on either the “Forgot your password” or “Recover a lost password” links on the Login page. You will need to enter the User Name of the account that you are trying to recover the password for and click on the “Go” button.

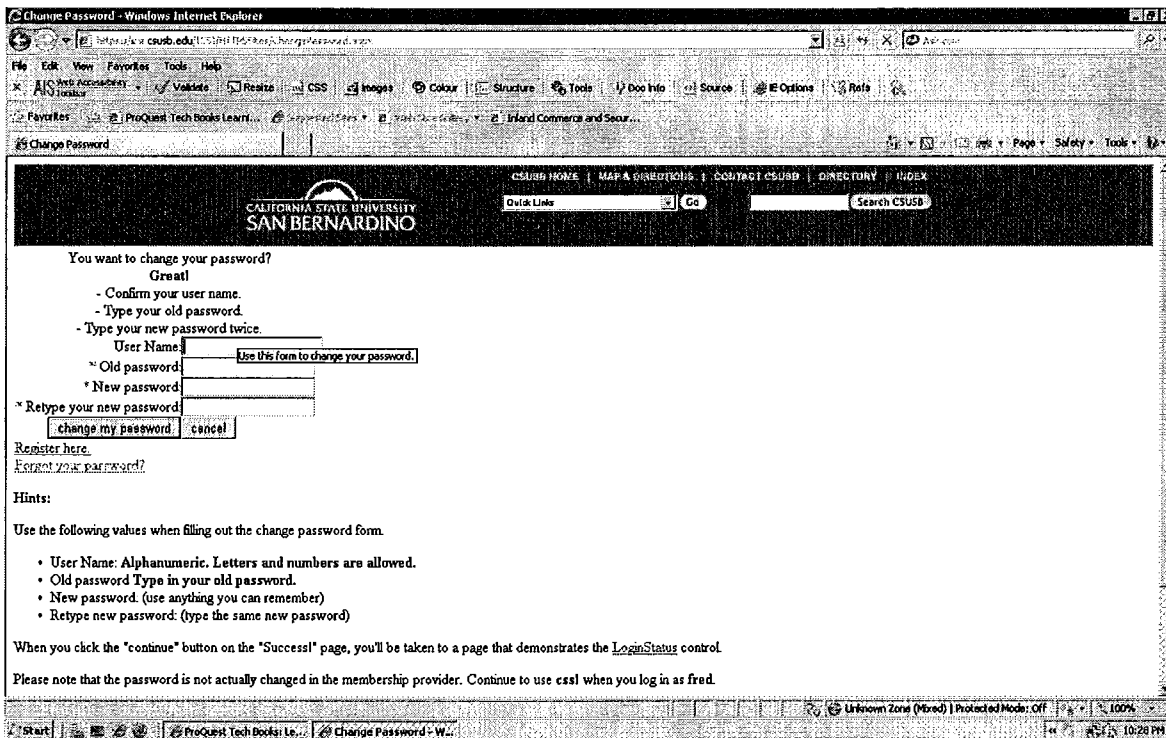

The password for the user account that you entered will now be emailed to the email address associated with the user name.

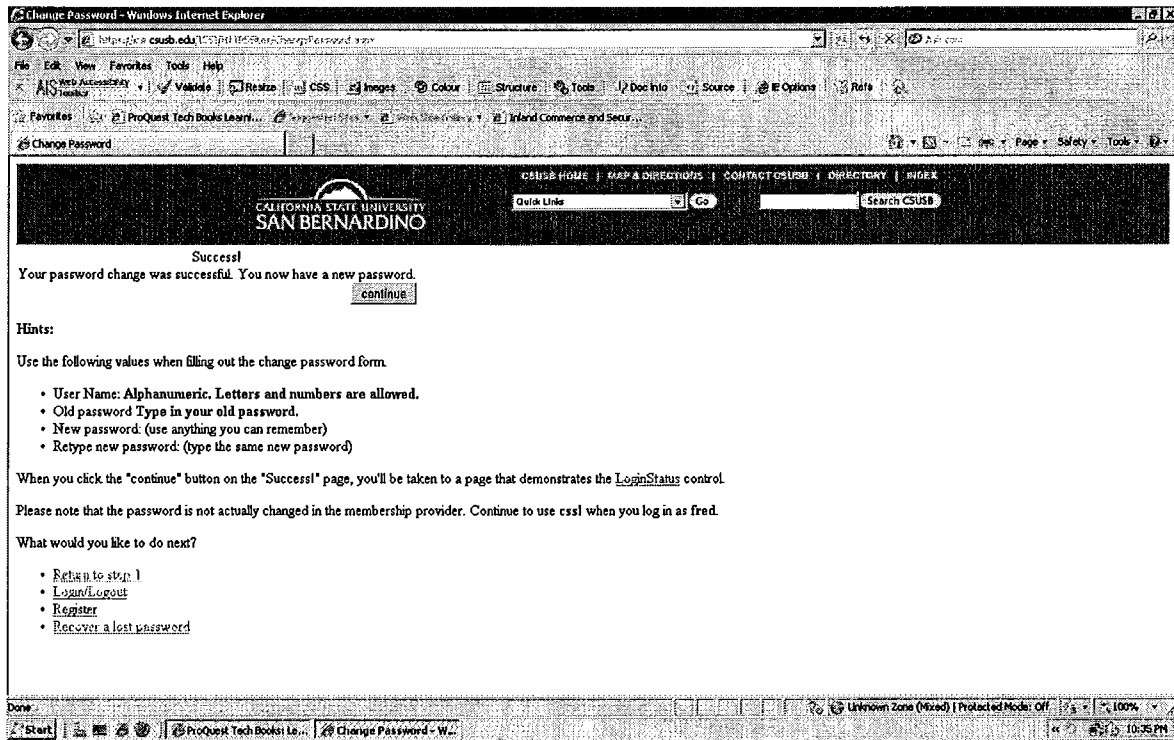

## Change Password

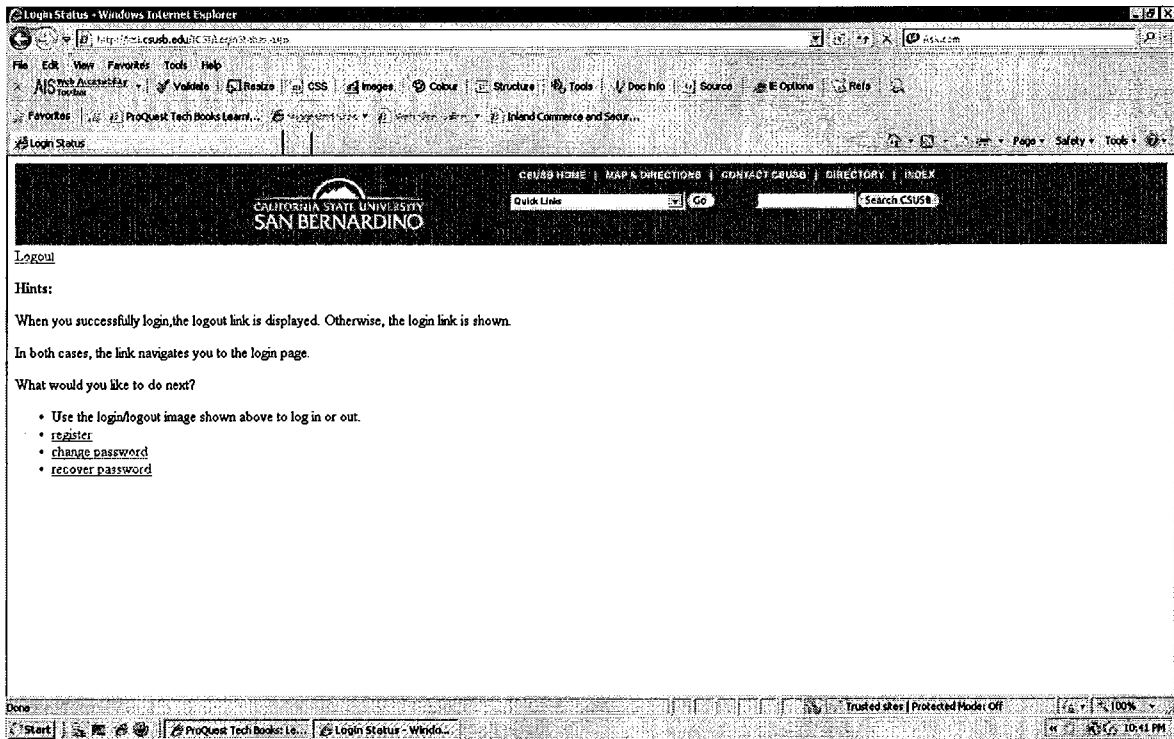

If instead you wish to change the password for a user account, you can click on the link titled “change the password.” If this link is clicked, the following page will be displayed.

After all the information has been correctly filled out, you will be taken to a page stating that your new password to the account has been set to what was entered in the New password textbox in the previous screen.

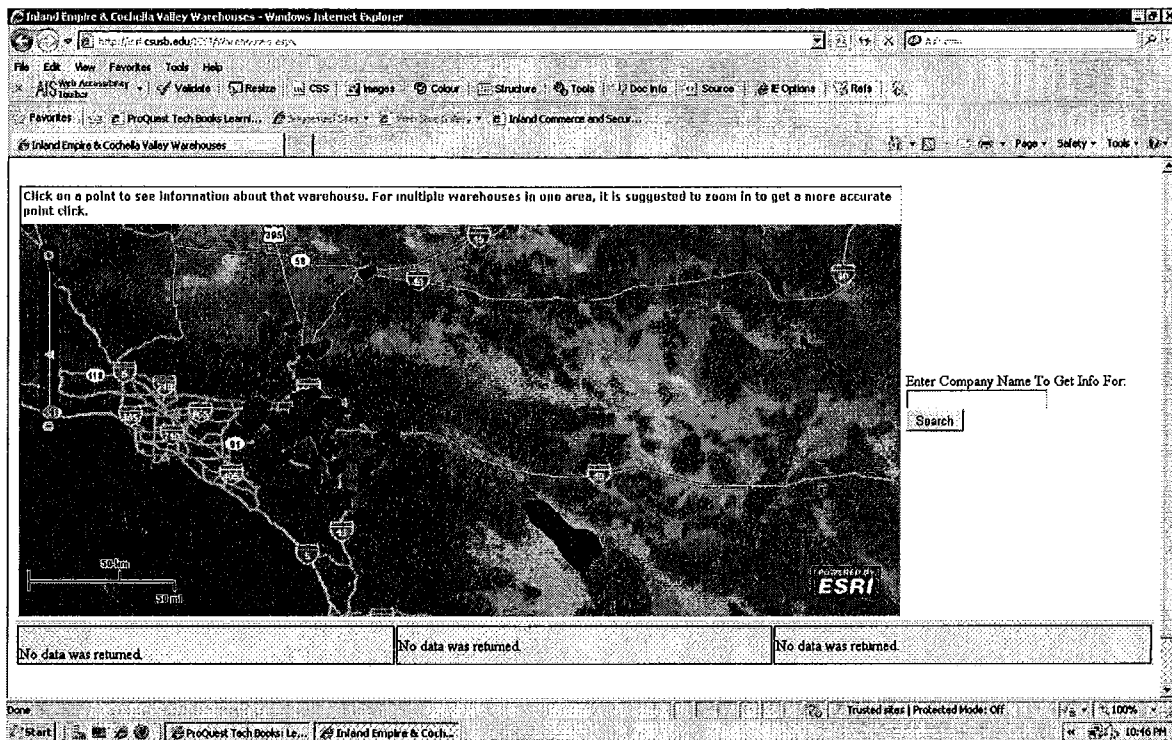

You can click on the continue button to see your Login Status.

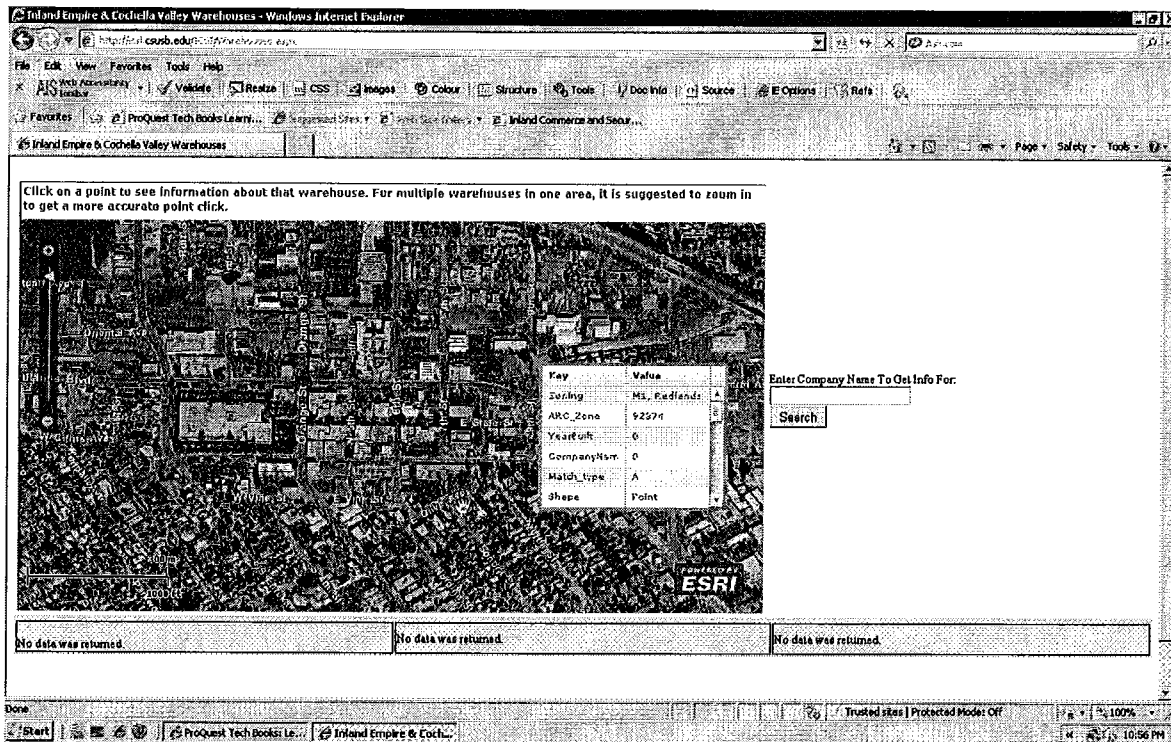

## GIS Mapping Application

If you would like to view the GIS web mapping application at this time, you can click on either the image or the link that says “GIS Applications Warehouses”. You will be taken to the following page.

To use the mapping application, you can zoom in/out as much as you would like to get a better imagery picture of any of the warehouses. If any one of the points is clicked on, information for that particular warehouse is displayed in a pop up window with a scroll bar to display all of the information. The following screen is an example.

This is an example of the map zoomed in on a particular warehouse and the information being shown when a warehouse point is clicked. Another option on this page is to query warehouse data by entering the name of the company in the search engine on the side. The following screen is an example.

The screenshot shows a web browser window titled "Inland Empire & Cochella Valley Warehouses - Windows Internet Explorer". The address bar shows "http://land.cash.edu:8080/warehouse.asp". The browser's menu bar includes File, Edit, View, Favorites, Tools, and Help. The toolbar contains icons for Back, Forward, Stop, Refresh, Home, Print, and various tool options like CSS, Images, Colour, Structure, Tools, Doc Info, Source, E-Options, and Refs. The main content area features a map of the Inland Empire region with a search box on the right that contains "Upland Technology" and a "Search" button. Below the map, a table displays the following information:

Company Name: Upland Technology Center Address: 2056 W 11th St City: Upland Zip Code: 91766 Parcel Number 1: 1007-301-02, 03 Parcel Number 2:	Use: Multi-Tenant Industrial Building Rail Served: N Truck Wall column 1: 0, 0	Sq Ft: 181400 Year Built: 1980 Zoning: M1, County Acres: 9
--	---	---

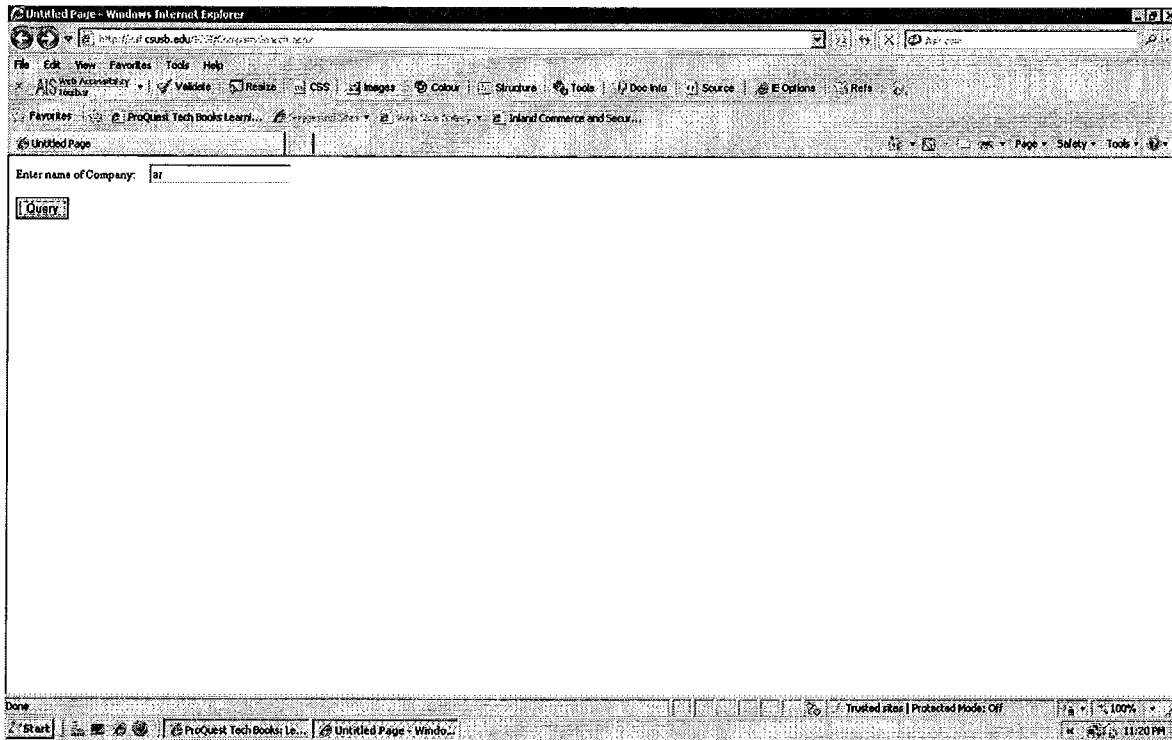

The browser's status bar at the bottom shows "Done", "Trusted sites | Protected Mode: Off", and the system clock "11:04 PM".

The information displayed is for a company named Upland Technology Center.

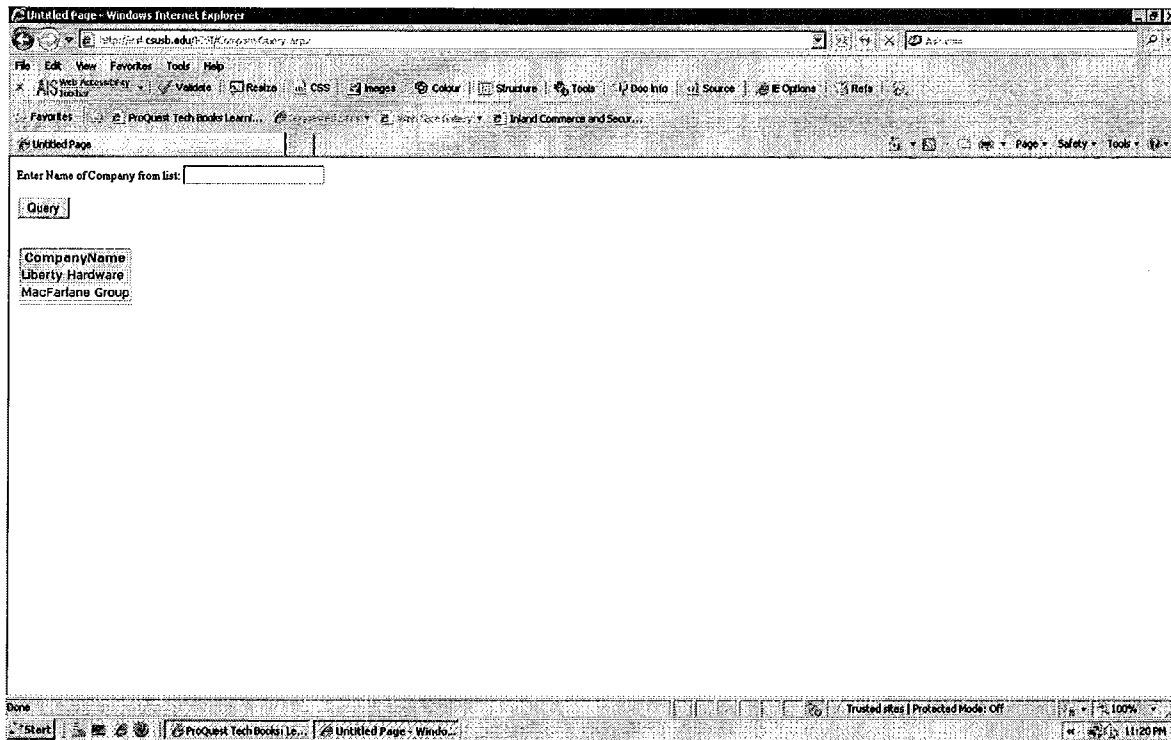

### Database Questionnaire

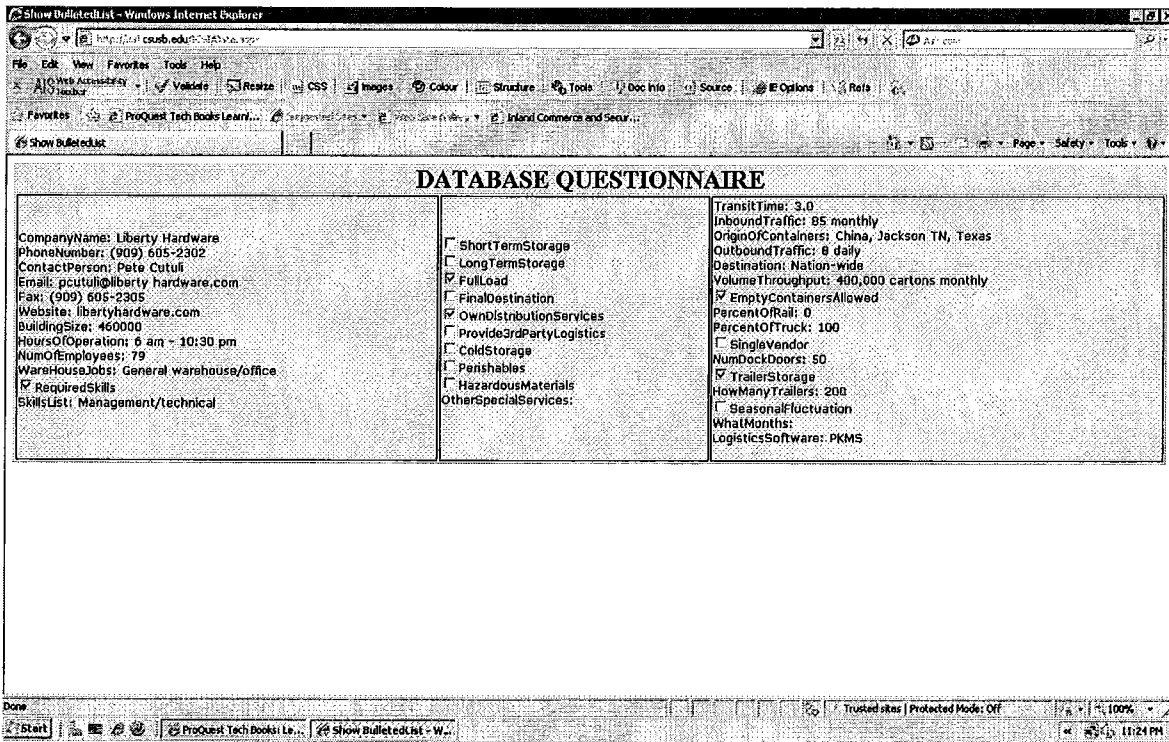

From the Warehouse page you can also view information about warehouses that do not have addresses in the database system and therefore are not included in the mapping application. To view this data simply click on the link titled “Database Questionnaire.”

When the link is clicked, you will be taken to a page where you can search for a company name by entering any amount of the name of company/companies. Once the search criteria is entered into the textbox, click on the “Query” button.

Next you will be taken to a screen with a list of company names that match the criteria. The next step is to choose one of the company names that you would like view the data from and enter it into the textbox exactly as it appears in the list. Once a company is chosen, click on the “Query” button.

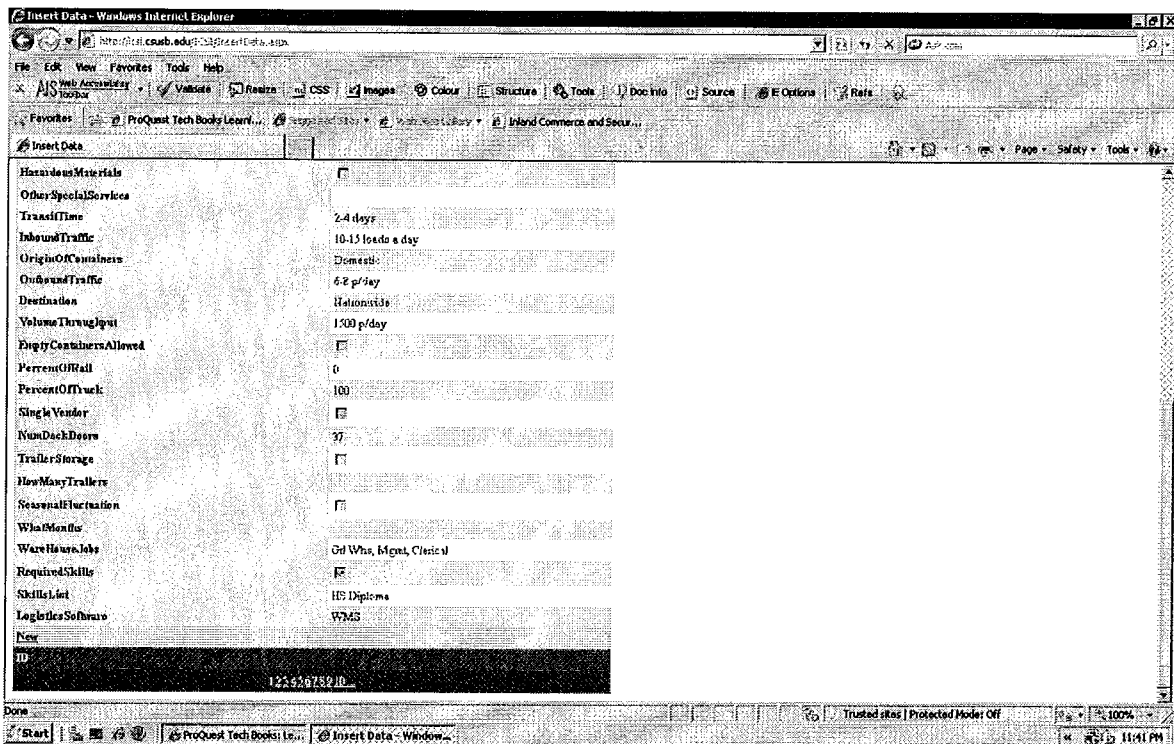

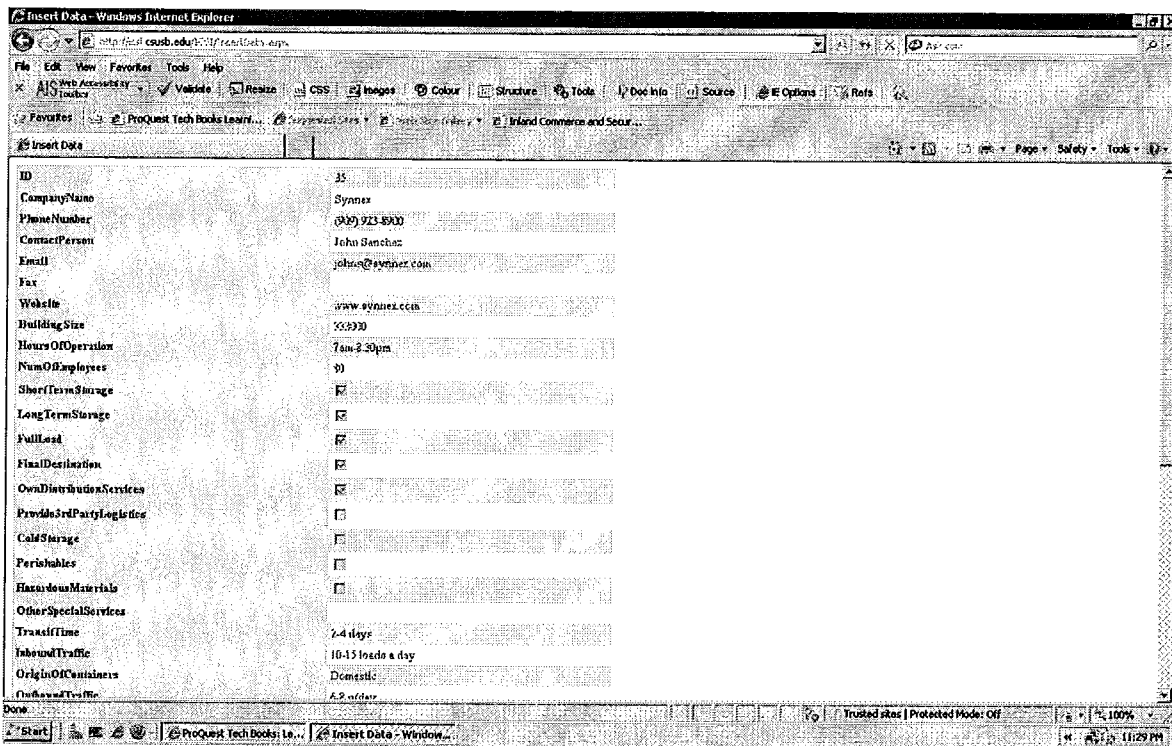

This screen shows all of the information for the company name that was searched for.

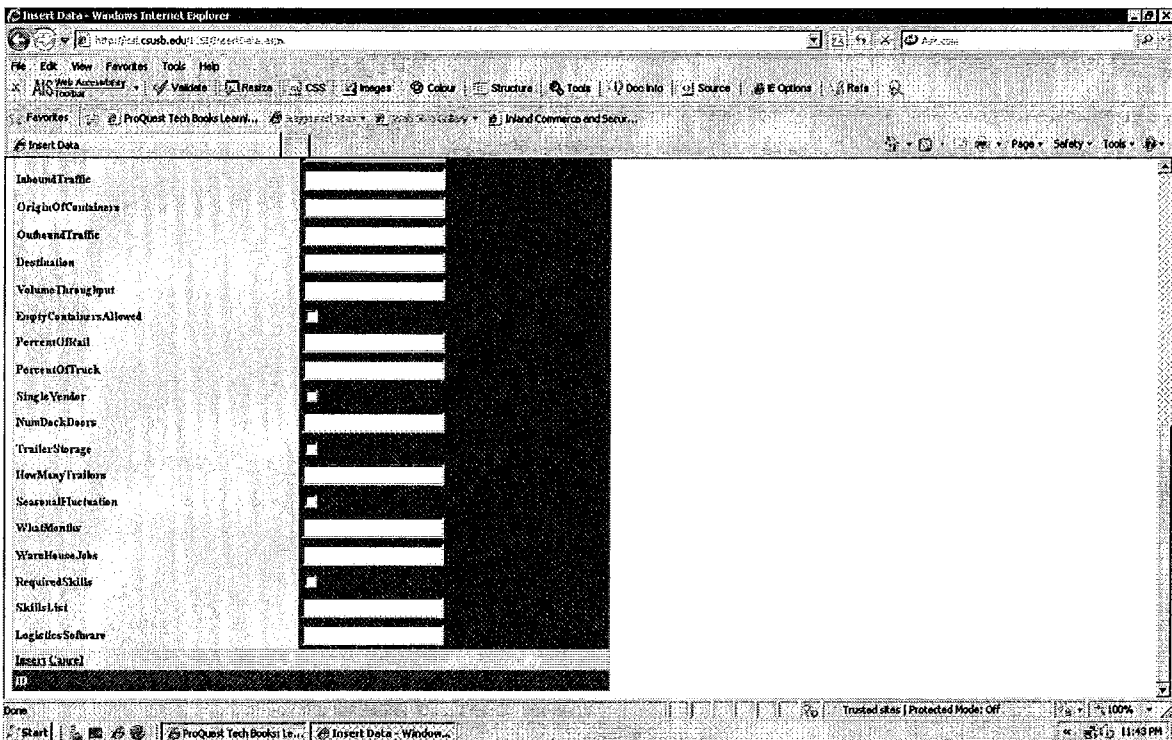

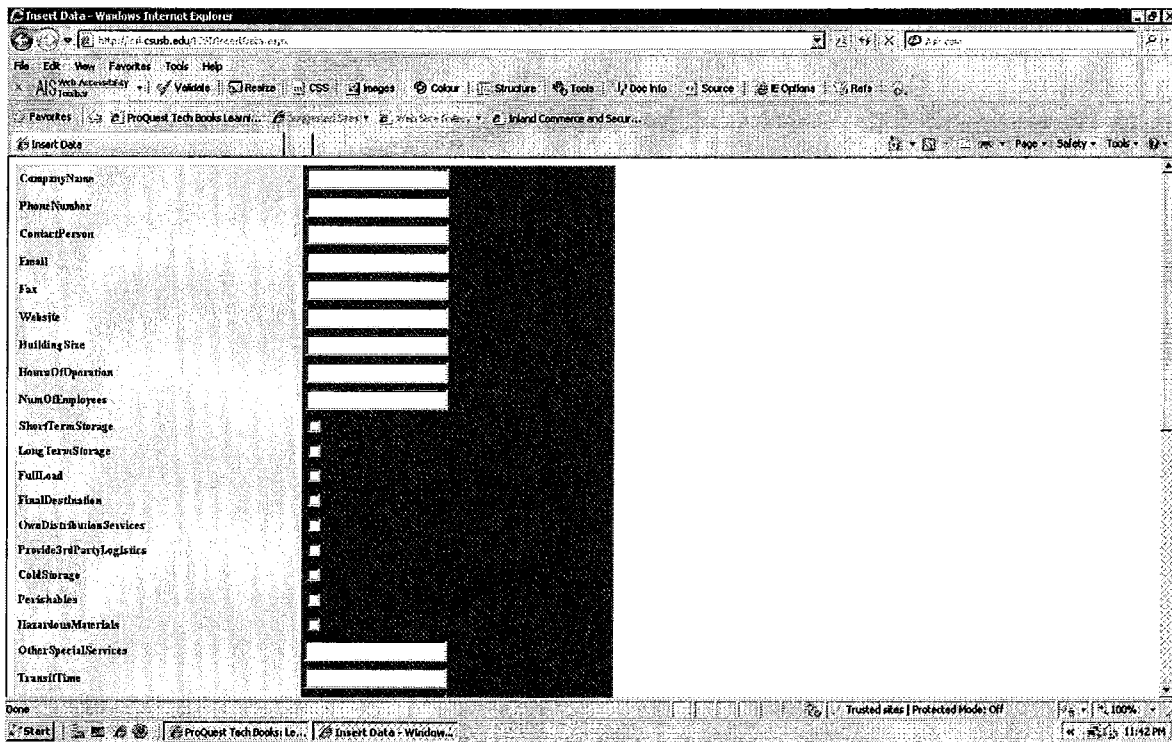

## Insert Warehouse Data

If you would like to insert new warehouse data into the database, click on the link titled “Insert Database Info.” It will take you to the next screen.

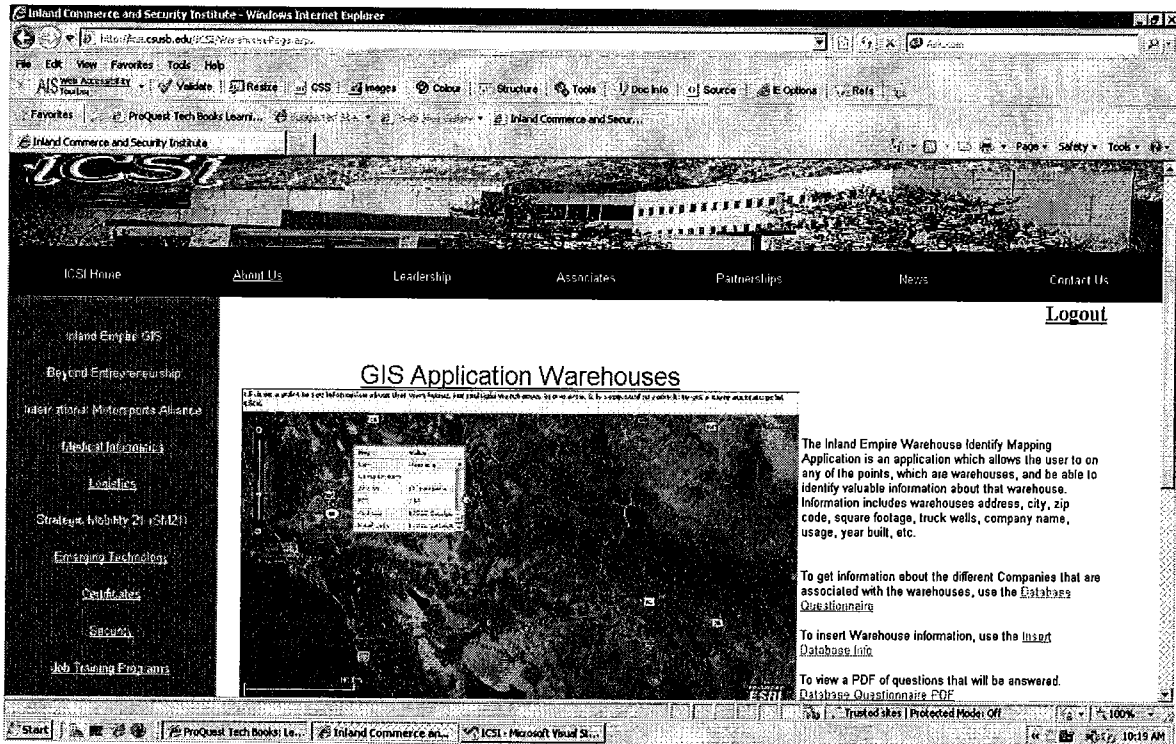

The data shown here is the last entry in the database. To insert new data, at the bottom of the screen click on the “New” link.

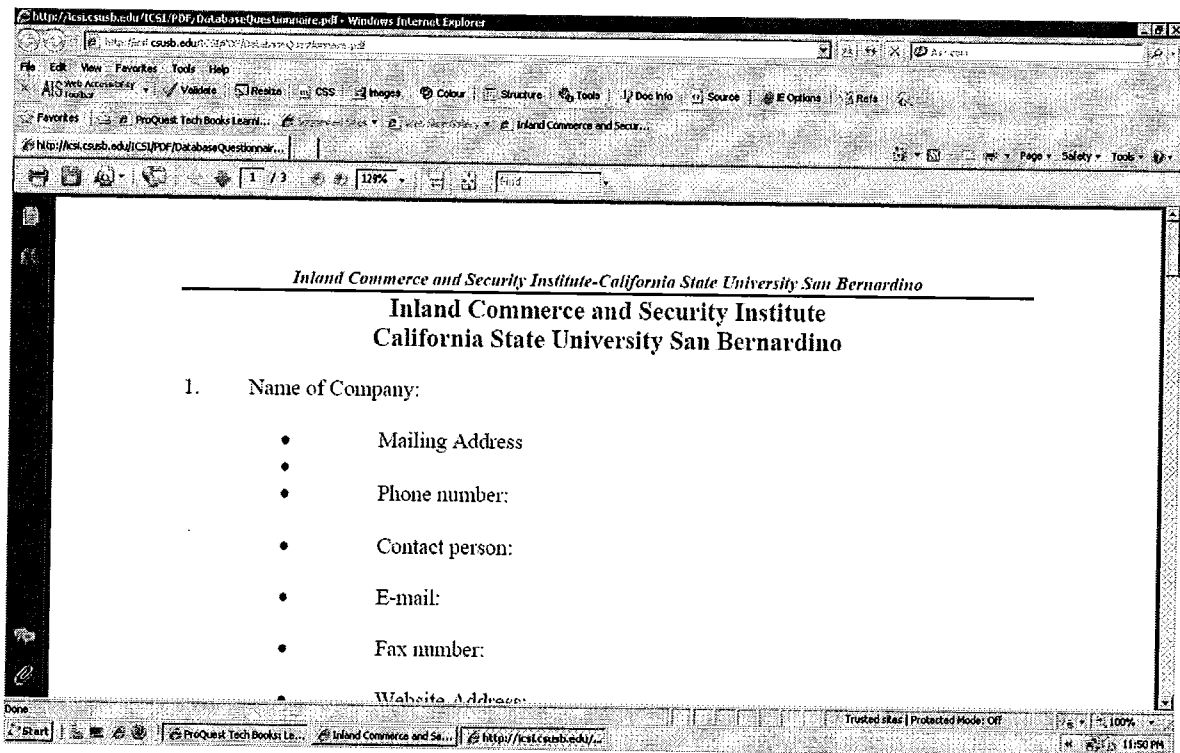

**Once all of the textboxes and checkboxes have been entered and checked, you can either click on the “Insert” or “Cancel” buttons. Both will lead you back to the previous screen with the data still being the last entered information.**

### Database Questionnaire PDF

To view a PDF form stating all of the questions that will be answered by the Database Questionnaire, click on the link titled “Database Questionnaire PDF.”

When the link is clicked, a new window will open with a PDF of what the Database Questionnaire will consist of.

80 internationally  
81 recognized educator, consultant, author, entrepreneur and businessman. He has written 14  
82 books, published  
83 25 issues of journals, published 60 articles in professional, referred journals and presented over  
84 100  
85 professional papers. He is in demand as a motivational and keynote speaker and has presented  
86 over a 1,000  
87 lectures and seminars. He has been CEO, a CFO and CIO for a number of organizations. He  
88 has consulted  
89 for such large firms as IBM, Westinghouse, Mead, Gannett to numerous medium and  
90 small/entrepreneurial

91 businesses. He has been a consultant to governmental agencies like the US Federal Department  
92 of Defense,  
93 the US Department of Federal Highways, the State of California-Department of Justice, the  
94 Islamic Nation of  
95 Pakistan, the Republic of Tanzania (East Africa), Kuwait and the like. He has lectured in the  
96 countries of  
97 Egypt, Turkey, England, Ireland, Scotland, Sweden, Ecuador, Taiwan, and the People's Republic  
98 of China. He  
99 has sat on advisory boards for such corporations a WordPerfect, Expertillegents, Hearthstone  
100 Institute and  
101 the like. He is a professor of information management, computer information systems and  
102 technology and a  
103 founding Executive co-Director of the Inland Commerce and Security Institute and former  
104 Executive co  
105 Director of the Empire Center for Entrepreneurship (which became ranked fourth nationally for  
106 graduate  
107 programs under his leadership at California State University San Bernardino in  
108 2006).

109 <P><font size="-1" face="Arial, Helvetica, sans-serif">He has been the Editor-in-Chief of the  
110 Journal of  
111 International Technology and Information Management (formerly the Journal of International  
112 Information  
113 Management-JIIM ) and the Communications of the IIMA. He is on the Editorial Review  
114 Boards of the  
115 International Journal of Mobile Communications and Industry and Management.</font></P>

116 <P><font size="-1" face="Arial, Helvetica, sans-serif">Dr. Rohm has taught for the past 30 year  
117 at various  
118 educational institutions. He is currently a professor of Information and Decision Sciences at  
119 California  
120 State University San Bernardino. He has taught as a professor at institutions like the University  
121 of Dar  
122 Es Salaam (East Africa), the University of California-Riverside, Whittier College, Claremont  
123 Graduate  
124 University, La Verne University, University of Southern California, College of Osteopathic  
125 Medicine of the  
126 Pacific (now Western University of Heath Sciences), Ohio University, and Brigham Young  
127 University. He is a  
128 former Fulbright Scholar to the Nation of Tanzania in East Africa.</font></P>

129 <P><font size="-1" face="Arial, Helvetica, sans-serif">He is the father of eight children with 13  
130 grand  
131 children and has been married to the former Karen Bird for the past thirty eight  
132 years.</font></P>

10 <style type="text/css">
11
12 p.MsoNormal
13     {margin-top:0in;
14     margin-right:0in;
15     margin-bottom:10.0pt;
16     margin-left:0in;
17     line-height:115%;
18     font-size:11.0pt;
19     font-family:"Calibri","sans-serif";
20     }
21 </style>
22
23
24 </asp:Content>
25 <asp:Content ID="Content2" ContentPlaceHolderID="ContentPlaceHolder1" Runat="Server">
26
27 <div id="bodyText">
28     <center><H1>Logistics</H1></center>
29         <br>
30 </br>
31         <br>
32 </br>
33         <br>
34 </br>
35 <P><font size="-1" face="Arial, Helvetica, sans-serif">The United States import much of their
36 merchandise,
37 and through the Inland Empire pass about 60% of the freight to the rest of the nation without
38 counting the
39 freight that stay and is further processed or delivered in the area. Therefore, the Inland Empire
40 has become
41 the logistics center of Southern California, due to the proximity of the Ports of Los Angeles and
42 Long
43 Beach, the Inland Empire due to the availability of low cost land and great infrastructure to move
44 freight;
```

45 therefore it has become a logistics center. Therefore, our initial efforts focused in this important  
46 sector  
47 that had been a vast generator of jobs for Southern California. Based in this important industry  
48 we are  
49 developing a GIS database to identify distribution centers and to gather information about such  
50 businesses  
51 in the Inland Empire; this information would be useful for many other industry fields and  
52 organizations  
53 such as government, transportation, education, and the logistics industry as well.</font></P>

54 <br>

55 </br>

56 <br>

57 </br>

58 <P><font size="-1" face="Arial, Helvetica, sans-serif">One of the primary goals that we see out  
59 of this  
60 project was for emergency preparedness; we had seen all those distribution centers as a major  
61 source of  
62 supplies in an emergency contingency. Hence, those distribution centers could become the  
63 source of  
64 sustainment for Southern California in case of a major event either of natural origin or  
65 deliberated human  
66 action.</font></P>

67 <br>

68 </br>

69 <br>

70 </br>

71 <P><font size="-1" face="Arial, Helvetica, sans-serif">Moreover this GIS project would be a  
72 source of much  
73 more information for the logistics industry, and for government as well, and based on this  
74 information other  
75 programs can be delineated like: better movement of freight through the region, traffic  
76 improvement, and  
77 logistics process improvements in the region. Therefore, by improving those processes we are  
78 aiming to  
79 comply with our mission statement: "Forging success with a global vision." Furthermore, we  
80 know that by  
81 improving the movement of freight in the Inland Empire could eventually result in important  
82 advantages to  
83 the overall overseas movement of freight and the transportation industry.</font></P>

84 </div>

453 are working on developing innovative job training processes to fit the needs
454 of

```

455 the industry based in information from the industry and customized for every  
456 company that we approach. We offer a variety of training methods that combine  
457 the use of technology to provide mastering of the training material in a  
458 shorter  
459 time. We also provide simulated situations to better prepare the employees,  
460 by  
461 conducting those exercises in a controlled environment in order to avoid  
462 financial losses for the business and which can better prepare incumbent and  
463 future employees for eventualities that may occur on the job; therefore,  
464 having  
465 better trained employees would result on smother operations for companies  
466 over  
467 the long run with greater economic returns by having improved productivity  
468 and  
469 avoiding major economic losses or even loss of  
470 business.<o:p></o:p></SPAN></P>

```

454 style="FONT-FAMILY: 'Times-Roman','serif'; COLOR: black; FONT-SIZE: 11.5pt;  
155 mso-bidi-font-family: Times-Roman">The  
456 United States import much of their merchandise, and through the Inland Empire  
457 pass about 60% of the freight to the rest of the nation without counting the  
458 freight that stay and is further processed or delivered in the area.  
459 Therefore,  
460 the Inland Empire has become the logistics center of Southern California, due  
461 to  
462 the proximity of the Ports of Los Angeles and Long Beach, the Inland Empire  
463 due  
464 to the availability of low cost land and great infrastructure to move  
465 freight;  
466 therefore it has become a logistics center. Therefore, our initial efforts  
467 focused in this important sector that had been a vast generator of jobs for  
468 Southern California. Based in this important industry we are developing a GIS  
469 database to identify distribution centers and to gather information about  
470 such  
471 businesses in the Inland Empire; this information would be useful for many  
472 other  
473 industry fields and organizations such as government, transportation,  
474 education,  
475 and the logistics industry as well.<o:p></o:p></SPAN></P>  
476 <P  
477 style="TEXT-ALIGN: justify; LINE-HEIGHT: normal; MARGIN-BOTTOM: 0pt; mso-  
478 layout-grid-align: none"  
479 class=MsoNormal><SPAN  
480 style="FONT-FAMILY: 'Times-Roman','serif'; COLOR: black; FONT-SIZE: 11.5pt;  
481 mso-bidi-font-family: Times-Roman"><o:p>&nbsp;</o:p></SPAN></P>  
182 <P  
483 style="TEXT-ALIGN: justify; LINE-HEIGHT: normal; MARGIN-BOTTOM: 0pt; mso-  
484 layout-grid-align: none"  
485 class=MsoNormal><SPAN  
486 style="FONT-FAMILY: 'Times-Roman','serif'; COLOR: black; FONT-SIZE: 11.5pt;  
487 mso-bidi-font-family: Times-Roman">One  
488 of the primary goals that we see out of this project was for emergency  
489 preparedness; we had seen all those distribution centers as a major source of  
490 supplies in an emergency contingency. Hence, those distribution centers could  
491 become the source of sustainment for Southern California in case of a major  
492 event either of natural origin or deliberated human action.  
493 <o:p></o:p></SPAN></P>  
494 <P  
495 style="TEXT-ALIGN: justify; LINE-HEIGHT: normal; MARGIN-BOTTOM: 0pt; mso-  
496 layout-grid-align: none"  
497 class=MsoNormal><SPAN

454 Driving Simulating is an example of the innovative training programs that

```

455 involves the use of technology; we are working on developing a curriculum  
456 that  
457 includes a virtual truck driving program on which students can experience on  
458 a  
459 computer simulator situations that they may face on the road such as foggy  
460 and  
461 other dangerous driving conditions, like black ice, snow, rain and heavy  
462 traffic, etc. We believe that by lecturing students and then putting them in  
463 a  
464 simulated environment, we could create better and safe drivers, which can  
465 react  
466 to difficult driving situations that could be too dangerous to recreate in  
467 real  
468 life, or that can result in fatal errors if those drivers are not prepared to  
469 deal with such situation. This program is unique and we believe can create  
470 safer  
471 and more professional drivers.<o:p></o:p></SPAN></P>

## Description of MSSC CPT Certification System Tools

**NOTE:** The following describes the current tools that MSSC has developed to implement its certification system for production workers--up to the full —MSSC-Certified Production Technician (CPT) certification. The courses, assessments and certificates detailed below are all based upon the four critical work functions (—Modules) for production, as defined by MSSC's industry-led, nationally validated skill standards:

**Safety.** NOTE: The Safety course and assessment includes cross-functional employability skills (e.g. communications, teamwork, customer awareness, workplace conduct, training ability). MSSC thus strongly recommends that individuals take the safety course and assessment first.

**Quality Practices & Measurement.**

**Manufacturing Processes and Production**

**Maintenance Awareness**

To obtain product price sheets, including volume discounts, please contact Neil Reddy, General Manager, at [reddyn@msscusa.org](mailto:reddyn@msscusa.org) or at 703-739-9000, ext. 221

### Courses

Description: MSSC delivers its curriculum through three types of courses to meet various individual and training needs. These courses are designed (a) to help individuals enhance their core knowledge and skills for production work from entry-level to mid-technical level and (b) to be successful in passing the MSSC Assessments needed for certification.

These courses are built upon MSSC's baseline —Integrated Course, which is the most comprehensive and efficient course for covering all the materials in Glencoe McGraw-Hill/MSSC textbooks and manuals, MSSC's computer-based simulation training, the topic areas addressed in the MSSC Assessments, and other knowledge and skills needed for production workers to be successful in an advanced, high-performance manufacturing environment.

Some courses are delivered in a —blended environment, with about half of the material provided in an instructor-led setting, and the remainder provided through on-line computer-based simulation training provided by MSSC. MSSC also offers fully online versions of these courses in an abbreviated —Fast Track mode designed especially for experienced incumbent

workers. Typically, trainees require ninth-grade math skills, 10<sup>th</sup> grade English skills, and basic computer skills to be successful in passing MSSC courses. MSSC.4.16.08 2

The MSSC issues a password and user name to each registered student. To qualify for the high school (HS) rate, high school students will need to provide a state student high school ID number. The three types of courses offered by MSSC as follows:

1. **Integrated Course:** 140 hours, continuous, intensive study covering all four modules, with all 4 assessments preferably given at the end of the course. Recommended primarily for dislocated workers, summer semester students or others who have time for continuous study, such as continuous study throughout one semester or academic year.

2. **Modular Courses:** 35-40 hours, 3-credit equivalent, one course for each of the four MSSC modules with an assessment given at the end of each course. Recommended primarily for students and others studying in the framework of academic semesters or school years.

3. **"Fast Track" Courses:** 15-18 hours for each of the four MSSC modules with an assessment given at the end of each course. Recommended primarily for experienced incumbent workers with limited available time for study. Not available to HS students.

**NOTE: Education and training institutions require adequate broad band to deliver MSSC's computer-based simulation training courses. IT departments at those institutions should check with MSSC prior to ordering courses. If they have insufficient band-width, MSSC will need to charge a set-up fee, up to \$1,000, for an initial "hybrid" IT installation, with a \$400 annual maintenance fee thereafter.**

### **Instructor Certification Training**

Description: MSSC provides an intensive, 3-day course to certify teachers and instructors on ways to teach MSSC courses in different learning environments. An —Instructors Package (a \$1500 value) is provided to each individual enrolled in this 3-day course. This Instructor's Package includes all materials needed by an instructor or teacher: power point presentations, facilitator notes, visuals, play maps, unit completion times, optional delivery methods, math problems and answers, and instructions on assisting students with the MSSC online course material.

MSSC offers Instructor Certification Training in Indiana on a regularly scheduled basis. Trainees coming from out of state will need to cover travel and subsistence costs. If six or more trainees are available at a given time at a location outside of the IN training center, MSSC will send a Master Trainer to that location at MSSC expense.

Individuals that receive the Instructor Certification should have prior experience in industrial education or training. MSSC strongly encourages instructors to secure the full —MSSC-Certified Production Technician (CPT) certification prior to enrolling in this training. At minimum, they should receive a full —MSSC-Certified Production Technician (CPT) certification within 12 months after receiving their Instructor Certification or they may be dropped from the roster of MSSC-certified Instructors.

To assist those individuals to secure their full —MSSC-Certified Production Technician (CPT) certification as soon as possible, MSSC will provide access to its online materials for 180 days following Instructor Certification Training to help instructors become fully familiar with MSSC's computer-based simulation training and to pass the four assessments needed to secure a full CPT certification. MSSC.4.16.08 3

**NOTE:** The —Instructor's Packagell is also available separately. MSSC requires that an institution must have either MSSC-certified instructors or experienced instructors able to use the —Instructor's Packagell before ordering an MSSC course. However, MSSC **strongly** recommends that teachers and instructors take MSSC Instructor Certification Training in order to effectively instruct various types of individuals in any of the three MSSC courses and different delivery systems, including computer-based simulation training.

### **Textbooks**

Description: Glencoe McGraw-Hill and MSSC have collaborated on producing a well-illustrated, 444-page textbook--*High-Performance Manufacturing: Portable Production Skills*--to help individuals understand the principles of advanced, high-performance manufacturing, gain the required skills and knowledge, and, in combination with MSSC online training, help succeed on MSSC Assessments.

We strongly encourage the use of the Glencoe McGraw-Hill MSSC Text Book by every student or trainee. Instructors may also wish to take advantage of the *Manufacturing Applications* manual and *Instructor Resource CD*. All orders must be submitted directly to Glencoe McGraw-Hill.

**To order call: 800-334-7344 (8 a.m. - 6 p.m. Eastern)**

High-Performance Manufacturing: Portable Production Skills—**ISBN: 0-07-861487-2**

Manufacturing Applications—**ISBN 0-07-861183-0**

Instructor Resource CD—**ISBN: 0-07-861185-7**

### **Assessment Center Certification Training**

Description: MSSC offers its assessments only at MSSC-certified Assessment Centers, at other locations served by trained proctors from MSSC-certified Assessment Centers, or other designated test sites. MSSC provides training for proctors, on-site coordinators and IT staff to ensure that the center offers a secure environment administered by individuals with a sound knowledge of MSSC's on-line assessment process. Proctor/on-site coordinator training typically requires a half day, with IT training taking place separately. Once an organization successfully completes training, MSSC issues an Assessment Center Certification, suitable for framing and display in the center.

If proctors from an MSSC-Certified Assessment Center proctor assessments at a remote location (e.g., company training site, high school district) other than the Assessment Center itself, individual assessment centers may ask a fee of their own to cover the proctor's time and out-of-pocket costs. It is the Proctor's responsibility to coordinate with the remote site to ensure that they have the requisite secure environment and IT capability to deliver the MSSC on-line Assessments.

Centers and test sites may be technical colleges, community colleges, high schools, company training centers, universities, manufacturing extension partnerships, public —One-Stop centers, and any other reputable non-profit or for-profit organizations with the staff, facilities and computers capable of delivering MSSC's on-line assessments. Assessment center certification is valid for three years. MSSC.4.16.08 4

### **Assessment Registration**

Description: Each individual wishing to take an MSSC assessment must pay a one-time registration fee. MSSC serves as the repository of individual assessment and credentialing records, issues MSSC credentials, and includes individuals who receive credentials in the e-mailing list for —MSSC Community Updates.¶

### **Assessments**

Description: MSSC offers assessments for each of its four modules. Delivered on line, each assessment contains about 75 multiple-choice and 20-30 computer simulation questions and takes about 75-90 minutes to complete. MSSC provides test scores as soon as the individual completes an assessment showing whether an individual met the —cut¶ scores for passing. This immediate feedback includes a diagnostic report for the individual showing how he or she scored on the 10-12 key work activities within that module. This information is intended for self-improvement and is provided to all test-takers whether they pass or not. An individual may take an assessment as many times as desired, but with a minimum of thirty days between assessments.

**Note:** MSSC Assessments are rigorous, with substantial training and/or experience required to meet the cut scores. For this reason, MSSC strongly encourages most individuals to take MSSC Courses (described above) prior to taking Assessments. It should be noted, however, that the MSSC has no formal training or experiential requirements for individuals for MSSC assessments or certificates.

### **Certificates**

Description: MSSC credentials certify that individuals that meet the —cut¶ score for individual modular assessments. MSSC issues a diploma-style —MSSC Production Technician Certificatell credential to individuals who pass a module – with the name of that module following the word —Certificate.¶ An individual passing all four modules receives a full —MSSC Production Technician Certification¶ credential. MSSC includes with these certificates an —MSSC Assessment¶ document, suitable for sharing with an employer, which lists the skill and knowledge areas covered by MSSC Assessments. MSSC Certificates are valid for five years. An individual has two and a half years to complete all four assessments to be eligible for full —MSSC Certified Production Technician (CPT)¶ credential.

There is no charge for MSSC credentials, the costs of which are covered by the one-time registration fee described above. Note: MSSC will charge \$10 per copy for reproduction, handling and mailing of each replacement or additional copy requested by credentialed test-takers.

### **Diagnostic Tool for Employers**

Description: MSSC offers a —Diagnostic Tool for Employers¶ enabling a company to benchmark its production workforce against national averages on the Key Work Activities within each of the four standards-based MSSC Assessments. Due to legal requirements to protect the scores of individual workers, MSSC prepares this report on the basis of 10 or more workers per modular assessment. This tool is an authoritative, independent reference point for a company to determine the strengths and weaknesses of its workforce in the core competencies of production and to set training priorities.
