13. ABSTRACT (Maximum 200 words)

This report documents work performed under the Federal Transit Administration's Advanced Public Transportation Systems (APTS) Program, a program structured to undertake research and development of innovative applications of advanced navigation, information, and communication technologies that most benefit public transportation.

This report is a compilation of existing and planned deployments of APTS technologies and services. The information was collected during the Summer and Fall of 2000 and was obtained through contacts with persons at each transit agency. A total of 576 agencies were surveyed for this study. Only those agencies with existing or planned APTS systems are included in this report.

PREFACE

This research was conducted by the Office of System and Economic Assessment at the Volpe National Transportation Systems Center, Research and Special Programs Administration, U.S. Department of Transportation under the sponsorship of the Office of Mobility Innovation, Federal Transit Administration, U.S. Department of Transportation and funded by the Intelligent Transportation Systems Joint Program Office, Federal Highway Administration, U.S. Department of Transportation. This report is the third of a series of biennial reports tracking the existing and planned deployments of Advanced Public Transportation Systems (APTS) technologies and services in the United States.

The information contained in this report was collected by personnel at the Volpe National Transportation Systems Center (Volpe Center) and the Oak Ridge National Laboratory and SAIC during the Fall of 2000. The data contained in the report tables are only as accurate as the information provided, either verbally or written, by the agency contacts and have not been verified by the Volpe Center.

The objective was to reach as many transit agencies as could be identified. A total of 572 agencies provided information for this study. Responding agencies with no existing or planned APTS systems are not listed in the report tables.

Appreciation goes to Melissa Laube and Lawrence Labell of the Volpe Center and Ed Newhall, Jim Lannon, John Mermin, and Anna Kravitz of EG&G Services who collected the Volpe information; to Stephen Gordon of Oak Ridge National Laboratory and Juan Noltenius and Andrew Dixon of SAIC for supplying the data for the 78 largest U.S. metropolitan areas; and to Sara Secunda of the Volpe Center who compiled the data and produced the tables. Finally, appreciation goes to all the agencies which supplied information for this report.

SECTION 1. SUMMARY OF APTS DEPLOYMENTS

Summaries of 17 Advanced Public Transportation System (APTS) element deployments are shown in the tables in this Section. (See Appendix A for definitions of these elements.) The summary tables show the number of responding transit agencies with present and planned (*i.e., expected to be operational by the year 2005*) deployments of APTS elements. The number of service types these agencies operate using APTS systems or technologies are also listed where these data were collected. Table 1-3, for example, reveals that 230 transit agencies operate or are planning to operate 316 service types employing Automatic Vehicle Location. Where applicable (and available), the tables also summarize the deployments by the specific technologies installed. Figures 1-1 through 1-8 show graphically the number of APTS systems deployed or planned to be deployed as revealed in the 1995, 1998, and 2000 surveys. (See Appendix B for the actual number in each of the years.) Other Section 1 tables show the percentage increases between survey periods where these same data were obtained. Only eight APTS elements have data from all three years.

The Section 1 table statistics showing the number of deployments are presented in three columns. The first column contains the Oak Ridge National Laboratory/SAIC (Oak Ridge) collected data on the existing or planned APTS deployments in jurisdictions containing 50,000 persons or more within the 78 largest metropolitan areas of the United States. The second column contains the Volpe National Transportation Systems Center (Volpe) collected data on the existing or planned APTS deployments in the remainder of the United States. The third column contains the sum of the Oak Ridge and Volpe data.

Although 17 APTS elements are covered in this report, totals for the entire U.S. can be presented only for Advanced Communications, Automatic Vehicle Location, Vehicle Probes, Automatic Passenger Counters, Vehicle Component Monitoring, Automated Operations Software, Automated Transit Information, Automated Fare Payment, and Traffic Signal Priority. This is due to the fact that the same data was not ultimately collected by both organizations. Since the initial survey form mailed out by Oak Ridge National Laboratory/SAIC received a low return rate, a second, shorter survey form was sent to the non-responding agencies. While this second effort resulted in virtually a 100 percent response, several questions that would have obtained information on the same APTS elements as in the Volpe survey were not asked. These elements included Multi-Modal Traveler Information, Multi-Carrier Fare Integration, Mobility Manager, Transportation Management Centers, and ITS Integration. The Volpe survey also added Surveillance Camera, Silent Alarm, and Covert Microphone questions after the Oak Ridge survey was finalized. Consequently, deployments of several APTS elements are reported only for areas outside the 78 largest U.S. metropolitan areas.

The operational and planned status numbers in Section 1 tables will sum to the agency total in cases where both operational and planned status information was collected. However, the breakdowns by service type and technology or location usually will not sum to the transit agency total because of the number of agencies with multiple technologies installed (e.g., magnetic stripe *and* smart card fare payment, etc.) or with a technology installed on more than one mode. If an agency is operating an APTS technology but is upgrading to a more advanced technology in the same category (e.g., from signpost to Global Positioning System technology), it is counted as operational only. If an agency is operating a technology in more than one mode, it is counted as one agency, but with multiple service types.

Of the 572 agencies surveyed in 2000, the *most widely deployed* APTS elements for which data were collected for the entire U.S. are Automated Transit Information (291 agencies), Advanced Communications (229 agencies), and Automated Operations Software (177 agencies). The *least widely deployed* APTS elements are Vehicle Component Monitoring (46 agencies), Automatic Passenger Counters (33 agencies), Traffic Signal Priority for transit vehicles (30 agencies), and Vehicle Probes (8 agencies). Automated Fare Payment and Automatic Vehicle Location have been deployed by 98 and 88 agencies respectively. The APTS element with *the greatest number of planned deployments* by 2005 is Automatic Vehicle Location (142 agencies). Summaries by APTS element are as follows.

Advanced Communications

Advanced Communications encompasses digital and trunked radio systems. Table 1-1 shows the Year 2000 deployment survey results.

Table 1-1. Advanced Communications			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems	99	130	229
Planned Systems	54	40	94

Trunked and Digital	66	62	128
Other/Unspecified	8	0	8

Figure 1-1 and Table 1-2 show the survey to survey period changes in deployments.

Table 1-2. Percent Change in Advanced Communications			
	1995-1998	1998-2000	1995-2000
Operational	141%	64%	295%
Planned	268%	16%	327%
Total	176%	46%	304%

Advanced Communications ranked 2nd of the 9 APTS elements with available data for the entire U.S. in total number of agencies with operational systems (229) in 2000 and 2nd in the total number of agencies with operational plus planned systems (323) according to responses to the Year 2000 survey. Due to the substantial number of Advanced Communications systems already deployed, the percent increase in agencies with operational systems (64%) and operational plus planned systems (46%) ranked only 5th and 7th, respectively, from 1998 to 2000.

Automatic Vehicle Location

The most common form of Automatic Vehicle Location (AVL) in use by transit agencies is Global Positioning System (GPS) technology, often with differential correction (DGPS). Although there are still a few older systems with signpost, dead reckoning, or Loran-C location technology, most agencies that had installed these technologies have replaced them with GPS technology. Table 1-3 shows the Year 2000 deployment survey results.

Figure 1-2 and Table 1-4 show the survey to survey period changes in deployments.

Table 1-3. Automatic Vehicle Location			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems	63	25	88

Service Type Totals	222	94	316
Technology			
GPS		86	
Sign Post/Odometer		1	
Dead Reckoning		1	
Loran-C		1	
Other/Unknown		5	

Figure 1-2. Automatic Vehicle Location

Table 1-4. Percent Change in Automatic Vehicle Location			
	1995-1998	1998-2000	1995-2000
Operational	177%	44%	300%
Planned	56%	42%	122%
Total	87%	43%	167%

AVL ranked 5th of the 9 APTS elements with full U.S. data in total number of agencies with operational systems (88) in 2000 and 4th in the total number of agencies with operational plus planned systems (230) according to responses to the Year 2000 survey. The percent increase in agencies with operational systems (44%) and operational plus planned systems (43%) ranked 6th and 8th, respectively, from 1998 to 2000.

Vehicle Probes

A Vehicle Probe is an AVL-equipped vehicle that is used to provide information for the calculation of travel times and speeds on highway facilities. Table 1-5 shows the Year 2000 deployment survey results.

Table 1-5. Vehicle Probes			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational	4	4	8
Planned	2	2	4
Agency Totals	6	6	12
Service Types			
FR	6	5	11
DR	1	1	2
Service Type Totals	7	6	13
Location			
Freeway	1	0	1
Arterial	2	0	2
Freeway and Arterial	3	6	9

Very few Vehicle Probe systems have been deployed or are planned. Vehicle Probes ranked last of the 9 APTS elements with available data for the entire U.S. in total number of agencies with operational systems (8) in 2000 and last in the total number of agencies with operational plus planned systems (12) according to responses to the Year 2000 survey. Vehicle Probe data was not collected for the entire U.S. in prior surveys so no comparison is possible.

Automatic Passenger Counters

Automatic Passenger Counters (APC) are devices that count passengers as they enter and exit the transit vehicle or system. The most prevalent counting mechanism is infrared beams, but a few agencies use treadle mats. Table 1-6 shows the Year 2000 deployment survey results.

Figure 1-3 and Table 1-7 show the survey to survey period changes in deployments.

Table 1-6. Automatic Passenger Counters			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status

Table 1-7. Percent Change in Automatic Passenger Counters			
	1995-1998	1998-2000	1995-2000
Operational	118%	38%	200%
Planned	43%	147%	252%
Total	69%	98%	234%

APCs ranked 7th of the 9 APTS elements with entire U.S. data in total number of agencies with operational systems (33) in 2000 and 7th in the total number of agencies with operational plus planned systems (107) according to responses to the Year 2000 survey. The percent increase in agencies with operational systems (38%) and operational plus planned systems (98%) ranked 8th and 3rd, respectively, from 1998 to 2000.

Vehicle Component Monitoring

Vehicle Component Monitoring is the remote collection, in real time, of vehicle conditions such as engine temperature, oil pressure, tire pressure, etc. Table 1-8 shows the Year 2000 deployment survey results.

Table 1-8. Vehicle Component Monitoring			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems	28	18	46

FB	2	1	3
Service Type Totals	116	47	163

Figure 1-4 and Table 1-9 show the survey to survey period changes in deployments.

Table 1-9. Percent Change in Vehicle Component Monitoring			
	1995-1998	1998-2000	1995-2000
Operational	160%	254%	820%
Planned	29%	119%	183%
Total	52%	159%	293%

Vehicle Component Monitoring ranked 6th of the 9 APTS elements with entire U.S. data in the total number of agencies with operational systems (46) in 2000 and in the total number of agencies with operational plus planned systems (114) according to responses to the Year 2000 survey. The percent increase in agencies with operational systems (254%) and operational plus planned systems (159%) ranked 1st in both status categories between 1998 to 2000.

Automated Operations Software

Automated Operations Software encompasses computer programs that collect, process, and/or analyze operational data in ways that will assist transit agencies in providing improved or more efficient service or in reducing service cost. This includes computer assisted scheduling and dispatching of demand responsive service which was reported separately in previous deployment reports. Table 1-10 shows the Year 2000 deployment survey results.

Table 1-10. Automated Operations Software			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status

FB	2	2	4
Service Type Totals	216	228	444

Figure 1-5 and Table 1-11 show the survey to survey deployment changes.

Table 1-11. Percent Change in Automated Operations Software			
	1995-1998	1998-2000	1995-2000
Operational	35%	43%	92%
Planned	6%	83%	94%
Total	23%	58%	93%

The number of transit agencies with operational Automated Operations Software (177) ranked 3rd of the 9 APTS elements with entire U.S. data in 2000 and 3rd in the total number of agencies with operational plus planned systems (309) according to responses to the Year 2000 survey. The percent increase in agencies with operational systems (43%) and operational plus planned systems (58%) ranked 7th and 5th, respectively, from 1998 to 2000.

Automated Transit Information

The Year 2000 surveys collected information on Automated Transit Information by 14 distribution methods or media. These have been collapsed into pre-trip, wayside, and in-vehicle systems for presentation purposes. Table 1-12 shows the Year 2000 deployment survey results.

Table 1-12. Automated Transit Information			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems	173	118	291
Planned Systems	16	32	48
Agency Totals	189	150	339
Service Types			
FR		128	
DR		80	
HR		1	
CR		1	
FB		5	
Service Type Totals		215	
Location			
Pre-Trip	187	147	334
Wayside	117	50	167
In-Vehicle	96	28	124

Figure 1-6 and Table 1-13 show the survey to survey period changes in deployments.

Table 1-13. Percent Change in Automated Transit Information			
	1995-1998	1998-2000	1995-2000
Operational	85%	227%	506%
Planned	67%	-36%	7%
Total	76%	107%	265%

Automated Transit Information ranks 1st of the 9 APTS elements with entire U.S. data in 2000 in terms of the number of agencies with operational systems (291) and in the total number of agencies with operational plus planned systems (339) according to responses to the Year 2000 survey. The percent increase in agencies with operational systems (227%) and operational plus planned systems (107%) ranked 2nd in both status categories from 1998 to 2000. The number of agencies planning to deploy Automated Transit Information systems is the lowest (48), except for Vehicle Probes, of any APTS element, presumably because so many agencies already provide it. It is anticipated that further analysis of the survey responses will show that World Wide Web pages account for a large portion of the automated information available.

Multimodal Traveler Information

Multimodal Traveler Information is transit information presented to the public via a distribution medium which also includes information concerning other transit agencies' services or other transportation modes. Table 1-14 shows the Year 2000 deployment survey results.

Table 1-14. Multimodal Traveler Information			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems		16	
Planned Systems		25	
Agency Totals		41	

Only 16 operational and 41 operational plus planned Multimodal Traveler Information systems were reported in the areas outside of the 78 largest U.S. metropolitan areas in the 2000 survey.

Automated Fare Payment

Automated Fare Payment is any system other than a registering farebox that automatically accepts a magnetic stripe card or a smart card for payment of the transit fare. Magnetic stripe cards include credit and debit cards. Table 1-15 shows the Year 2000 deployment survey results.

Table 1-15. Automated Fare Payment

Figure 1-7 and Table 1-16 show the survey to survey period changes in deployments.

Table 1-16. Percent Change in Automated Fare Payment			
	1995-1998	1998-2000	1995-2000
Operational	91%	133%	345%
Planned	58%	13%	79%
Total	69%	59%	169%

Automated Fare Payment ranked 4th of the 9 APTS elements with entire U.S. data in total number of agencies with operational systems (98) in 2000 and 5th in the total number of agencies with operational plus planned systems (175) according to responses to the Year 2000 survey. The percent increase in agencies with operational systems (133%) and operational plus planned systems (59%) ranked 3rd and 4th, respectively, from 1998 to 2000. Magnetic stripe systems outnumber smart card systems by about three to two.

Multi-Carrier Fare Integration

Multi-Carrier Fare Integration consists of two or more transit agencies on which the same electronic payment media can be used to pay fares. Table 1-17 shows the Year 2000 deployment survey results.

Table 1-17. Multi-Carrier Fare Integration			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems		21	
Planned Systems		2	
Agency Totals		23	

Only 21 operational and 23 operational plus planned Multi-Carrier Fare Integration systems were reported in the areas outside of the 78 largest U.S. metropolitan areas in the 2000 survey.

Mobility Manager

Transit agencies that handle the travel requests or the dispatching of vehicles for multiple agencies (e.g., social service agencies, Health and Human Service agencies, transit agencies, etc.) are considered Mobility Managers. Table 1-18 shows the Year 2000 deployment survey results.

Table 1-18. Mobility Manager			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems		75	
Planned Systems		13	
Agency Totals		88	
Service Types			
FR		8	
DR		80	
Service Type Totals		88	

Only 75 operational and 88 operational plus planned Mobility Manager systems were reported in the areas outside of the 78 largest U.S. metropolitan areas in the 2000 survey.

Transportation Management Centers

A Transportation Management Center is a facility that houses personnel that control both transit vehicles and highway vehicles or equipment (e.g., transit vehicles, incident management vehicles, traffic signals, variable message signs, etc.). Table 1-19 shows the Year 2000 deployment survey results.

Table 1-19. Transportation Management Center			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems		8	
Planned Systems		3	
Agency Totals		11	
Service Types			
FR		9	
DR		1	
HR		1	
Service Type Totals		11	

Only 8 operational and 11 operational plus planned Transportation Management Centers were reported in the areas outside of the 78 largest U.S. metropolitan areas in the 2000 survey.

Traffic Signal Priority

Traffic Signal Priority systems are those that provide an advanced or extended green signal phase for approaching transit vehicles. Table 1-20 shows the Year 2000 deployment survey results.

Table 1-20. Traffic Signal Priority			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems	18	12	30
Planned Systems	40	18	58
Agency Totals	58	30	88
Service Types			
FR	52	30	82
DR	4	0	4
LR	8	0	8
FB	1	0	1
Service Type Totals	65	30	95

Figure 1-8 and Table 1-21 show the survey to survey period changes in deployments.

Table 1-21. Percent Change in Traffic Signal Priority			
	1995-1998	1998-2000	1995-2000
Operational	78%	88%	233%
Planned	122%	45%	222%
Total	107%	57%	226%

Traffic Signal Priority ranked 8th of the 9 APTS elements with entire U.S. data in total number of agencies with operational systems (30) in 2000 and 8th in the total number of agencies with operational plus planned systems (88) according to responses to the Year 2000 survey. The percent increase in agencies with operational systems (88%) and operational plus planned systems (57%) ranked 4th and 6th, respectively, from 1998 to 2000.

ITS Integration

ITS Integration is a situation in which agencies share infrastructure (e.g., computer systems, communication lines), coordinate operations (e.g., common control strategy), or share information in real time via electronic means. Table 1-22 shows the Year 2000 deployment survey results.

Table 1-22. ITS Integration			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems		59	
Planned Systems		25	
Agency Totals		84	

Fifty-nine operational and 84 operational plus planned deployments of Integrated ITS systems were reported in the areas outside of the 78 largest U.S. metropolitan areas in the 2000 survey.

Surveillance Cameras

Surveillance Cameras have been placed on transit vehicles for the recording or real-time observation of on-board activities. Table 1-23 shows the Year 2000 deployment survey results.

Table 1-23. Surveillance Cameras			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems		47	
Planned Systems		19	
Agency Totals		66	
Service Types			
FR		45	
DR		22	
Service Type Totals		67	

Forty-seven operational and 66 operational plus planned deployments of Surveillance Cameras on transit vehicles were reported in the areas outside of the 78 largest U.S. metropolitan areas in the 2000 survey.

Silent Alarms

A Silent Alarm is a concealed button near the vehicle operator's position that can be pressed to alert the dispatch center that an on-board emergency situation exists which prevents the operator from using the radio. Table 1-24 shows the Year 2000 deployment survey results.

Table 1-24. Silent Alarms			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems		41	
Planned Systems		11	
Agency Totals		52	
Service Types			
FR		39	
DR		25	
Service Type Totals		64	

Forty-one operational and 52 operational plus planned deployments of Silent Alarms were reported in the areas outside of the 78 largest U.S. metropolitan areas in the 2000 survey.

Covert Microphones

Covert Microphones are microphones that are hidden from public view that allow dispatchers to listen to what is happening on-board a transit vehicle after the vehicle operator has pressed the Silent Alarm. Table 1-25 shows the Year 2000 deployment survey results.

Table 1-25. Covert Microphones			
	78 Largest Metropolitan Areas	Remainder of the United States	United States Total
Transit Agency Status			
Operational Systems		8	
Planned Systems		9	
Agency Totals		17	
Service Types			
FR		8	
DR		12	
Service Type Totals		20	

Eight operational and 17 operational plus planned deployments of Covert Microphones were reported in the areas outside of the 78 largest U.S. metropolitan areas in the 2000 survey.

SECTION 2. APTS DEPLOYMENT BY TRANSIT AGENCY IN THE UNITED STATES' 78 LARGEST METROPOLITAN AREAS

Table 2 presents the information collected by Oak Ridge National Laboratory/SAIC for transit agencies residing in jurisdictions of 50,000 persons or more within the 78 largest metropolitan areas in the U.S. A total of 221 transit agencies were surveyed. All of these agencies which have installed, or are planning to install, any of the APTS elements are listed in the Table. As indicated in the Legend, entries enclosed by brackets signify elements either in the implementation or planning stage and are expected to be operational by the year 2005. All other entries indicate operational elements.

The agencies are arranged alphabetically, first by state and then by agency name. Table 2 also lists the number of vehicles operated by each agency (directly or by contract) in each service type. However, the APTS element is not necessarily installed on every vehicle in the service type for which it is operational or planned.

As mentioned in the Introduction, after the long survey form failed to achieve an adequate response, a shorter form was used. This short form eliminated several pieces of information obtained via the long form. Since partial information would not convey the correct level of deployment for all transit agencies in the 78 largest metropolitan areas, the APTS categories for which information was not obtained in *both* the long and short survey forms are not included in Table 2. Further, the short form did not solicit the service type for the APTS elements of Advanced Communications or Advanced Transit Information. In these instances, the APTS deployment status is listed for the agency as a whole and not by service types. Table 2 also covers fewer APTS elements than Table 3 for reasons discussed in the Introduction.

SECTION 3. APTS DEPLOYMENT BY TRANSIT AGENCY OUTSIDE OF THE 78 LARGEST METROPOLITAN AREAS IN THE UNITED STATES

Table 3 presents the information collected by the Volpe National Transportation Systems Center for all known transit agencies not covered by the Oak Ridge National Laboratory/SAIC survey effort. A total of 351 transit agencies were surveyed by the Volpe Center. All of these agencies which have installed, or are planning to install, any of the APTS elements are listed in the Table. As indicated in the Legend, entries enclosed by brackets signify elements either in the implementation or planning stage and are expected to be operational by the year 2005. All other entries indicate operational elements.

The agencies are arranged alphabetically, first by state and then by agency name. Table 3 also lists the number of vehicles operated by each agency (directly or by contract) in each service type. However, the APTS element is not necessarily installed on every vehicle in the service type for which it is operational or planned.

Table 3 includes APTS elements that are not covered in Table 2 for reasons previously mentioned.

APPENDIX A - DEFINITIONS OF TERMS USED

Advanced Communications - digital radio (sound converted into binary information and transmitted across airwaves) and/or trunked radio (a computer selection of an available frequency, as opposed to manual selection or use of pre-set frequency).

Automated Fare Payment - payment schemes by which riders pay for individual trips by non-paper media (e.g., magnetic stripe card or smart card) purchased in advance or pay for their trips by credit or debit cards.

Automated Operations Software - software that displays automatic vehicle location-equipped vehicle positions, vehicle data, operator data, and communications information on dispatcher monitors; automated control software for light, heavy, or commuter rail systems; automated scheduling software for demand response service. (This category does not include basic run-cutting and scheduling packages for fixed route services which, off-line, develop set schedules for buses and drivers.)

Automated Transit Information - systems that either provide route, schedule, stop, transfer, fare, trip planning, and/or real-time schedule adherence or arrival information to the public directly, without human intervention.

Automatic Passenger Counter - an automated means of counting boarding and alighting passengers (e.g., treadle mats or infrared beams placed by the door).

Automatic Vehicle Location - position determination via an automatic technology or combination of technologies, such as Global Positioning System (triangulation of satellite signals), Signposts (beacons at known locations transmit signals picked up by vehicle), Ground-Based Radio (triangulation of radio tower signals), or Dead-Reckoning (vehicle's odometer and compass used to measure new position from previous known position), and typically includes real-time reporting of that location to a dispatcher.

Covert Microphone - a hidden microphone on the vehicle that can be opened by the dispatcher to listen to what is happening on the vehicle during emergency situations.

ITS Integration - the sharing of information on traffic and incidents, the sharing of infrastructure (buildings, computer systems, communications), or coordinated operations with another agency (TMCs, joint development of common control strategy).

Mobility Manager - coordination of travel requests and vehicle dispatching for multiple agencies (e.g., social service agencies, HHS, transit agencies, etc.) Riders or agencies are billed by the Mobility Manager.

Multi-Modal Traveler Information - information made available to the public from a single source covering multiple modes (i.e., transit and traffic or different transit modes operated by several transit providers).

Multi-Carrier Fare Integration - any fare structure or payment mechanism which covers more than one provider. This includes cards, tokens, transfers, or other payment media (other than cash) that is accepted by at least two providers (including toll agencies).

Silent Alarm - an emergency signal activated by the vehicle operator pushing a concealed button that alerts the dispatch center that an emergency situation exists on-board the vehicle.

Surveillance Camera - video camera located inside the vehicle to record actions taking place on the vehicle.

Traffic Signal Priority - a means of giving transit vehicles priority at traffic signals by advancing the green signal phase or extending the green phase in order to minimize the delay. The priority may be actuated manually (e.g., by the driver pressing a switch on the vehicle) or automatically (e.g., linked to an AVL system).

Transportation Management Center - a facility housing the operations management centers for at least two transportation modes. This might include highway congestion mitigation (e.g., assist in incident management) and transit dispatching.

Vehicle Component Monitoring - continuous automatic remote measurement of vehicle component status (i.e., engine oil pressure, engine temperature, electrical system, tire pressure, etc.).

Vehicle Probe - AVL equipped transit bus data provided to highway agencies for calculation of roadway travel times, travel speeds, and flow conditions.

APPENDIX B - 1995-2000 DEPLOYMENT DATA

Advanced Communications

Survey Year	1995	1998	2000
Operational	58	140	229
Planned	22	81	94
Total	80	221	323

Automatic Vehicle Location

Survey Year	1995	1998	2000
Operational	22	61	88
Planned	64	100	142
Total	86	161	230

Automatic Passenger Counters

Survey Year	1995	1998	2000
Operational	11	24	33
Planned	21	30	74
Total	32	54	107
