

Data Tables

**For the 1995 National Transit
Database Report Year**

CAUTION: Extensive efforts have been made to assure the quality of information contained in this report. It is impossible, however, to achieve complete accuracy and consistency of the reported data. In addition, the reported data do not include all relevant information generally necessary to explain apparent differences in performance (e.g., information related to work rules, topography, climate, and unusual events such as strikes and service start-ups). Users of this report, therefore, should be careful not to draw unwarranted conclusions based solely on the data contained herein.

Chapter 1

Introduction - Understanding and Using this Report

1995 Data Tables

National Transit Database

Chapter 1

Introduction - Understanding and Using this Report

The Data Tables For the 1995 National Transit Database Report Year is one of three publications comprising the 1995 Annual Report. Also referred to as the National Transit Database Reporting System, this program is administered by the Federal Transit Administration (FTA). The report provides detailed summaries of financial and operating data submitted to FTA by the nation's mass transit agencies. This report was produced under a professional services support contract with the guidance of FTA's Office of Program Guidance and Support.

The National Transit Database records reporters in several ways. One way is to record the actual number of individual reporters in each report year. For the 1995 Report Year, the number of individual reporters is 537. Of this number, 55 transit agencies received exemptions from detailed reporting (55 Nine or Fewer Vehicle Exemptions) and 13 were deleted due to incomplete data. Thus, 469 individual reporters are included in the full database. Agencies granted exemptions are included only in Appendix B-Transit Agencies Receiving Reporting Exemptions while agencies deleted are included only in Appendix C-Transit Agencies Deleted from 1995 Annual Publications. Appendix D lists agencies which experienced a mode deletion. Of the transit agencies reporting, 58 percent contract for some or all to their transportation from private or public agencies.

The other two publications comprising the 1995 National Transit Database Annual Report are: *National Transit Summaries and Trends* and *Transit Profiles*. The *Transit Profiles* are contained in three volumes: The Thirty Largest Agencies; Agencies in Urbanized Areas (UZAs) Exceeding 200,000 Population; and Agencies in Urbanized Areas with a Population of Less Than 200,000.

In addition, a comprehensive glossary of National Transit Database terminology has been prepared and complements the 1995 National Transit Database Annual Report publications. The comprehensive glossary provides a uniform and consistent approach

to terminology used for the 1995 Report Year. This glossary is included in the *1995 Reporting Manual* and is available upon request.

Pursuant to 49 USC 5335 (formerly Section 15 of the Federal Transit Act, as amended), the establishment of a uniform system of accounts and records plus a reporting system for the collection and dissemination of public mass transportation financial and operating data by uniform categories is required. All applicants and direct beneficiaries of Federal assistance under 49 USC 5307 (formerly Section 9 of the Federal Transit Act, as amended) are subject to the reporting system and the uniform system of accounts and records. The purpose of the National Transit Database Reporting System is to assist in meeting the need for information on which to base planning for public transportation services and to make public sector investment decisions at all levels of government.

This 1995 Annual Report contains data for individual transit agencies' fiscal year ending during Calendar Year 1995 (i.e., on or between January 1 and December 31, 1995). This is the seventeenth Annual Report published.

Chapter 2 contains an introduction designed to aid in interpreting and using the data presented. The chapter introductions also present important information on changes from previous editions of the Annual Report.

For the 1995 edition, the following changes were implemented:

- New tables including expanded safety data.
- New tables for security data.
- New Appendixes showing modes deleted, waivers granted, questionable data and omissions.

1995 Data Tables

National Transit Database

For the 1995 edition, the organization and presentation of the data are as follows:

- The organization within the tables is sorted by State and within each State alphabetically by agency name.
- Appendix A provides a cross-reference to the fleet size groupings used in previous editions.
- The agency's type of organization is included in the tables.
- The summary totals include totals by fleet size groupings.
- Tables 1-8, 10-13, and 27 (formerly Table 22) show reported data instead of percentages. The values shown may be actual, thousands or millions, dependent on the magnitude of the number and the space available in the table.
- Appendix B provides a list of agencies that received exemptions from reporting.
- Appendix C provides a list of agencies that were deleted due to incomplete data.
- Appendix D provides modes deleted due to data problems.

1.1 How this Report is Organized

The report is organized in two chapters.

Chapter 1 Introduction: Provides general information related to understanding and using this 1995 Annual Report and earlier reports.

Chapter 2 Data Tables: Contain financial and operating data by specific mode for individual transit agencies.

1.2 How the Data Tables are Organized

The Data Tables in Chapter 2 are organized in four major groups:

- transit revenues;
- transit expenses;
- non-financial operating data; and
- performance indicators.

The first three groups of tables (transit revenues, expenses, and non-financial operating data) contain summaries of the data required by the reporting system. The fourth group of tables displays performance indicators composed of selected statistics derived from data in the first three groups. Typically, these indicators are computed as ratios, relating measures of input to measures of output (e.g., operating expenses per vehicle revenue hour). Within each table, the data are organized by State and within each State alphabetically by agency name. The identification number is now followed by the agency's type of organization. The inclusion of the organizational type codes provides a better way of describing transit providers.

The organization codes used are:

- A Public agency or authority that directly operates all transit service [not a State Department of Transportation (DOT)]
- B Public agency or authority that contracts for some or all transit service (not a State DOT)
- C State Department of Transportation
- D Private carrier under contract to one or more public agencies
- E Private carrier not under contract to a public agency and not receiving Urbanized Area Formula Apportionment funds
- F Other

The numbering system for the Data Tables has been consistent from 1992 to 1994. However, with the expansion of data related to safety and the new data related to security, new tables had to be created to accommodate the enhanced data, resulting in tables that are now numbered 1 through 31. It should be noted that the numbering system for the 1983 through

1995 Data Tables

National Transit Database

1990 Report Years is identical as are the ones for report years 1979 through 1982.

1.3 Special Notes on Reporting and this Annual Report

Several general issues pertaining to the reporting system and this Annual Report are summarized below. These discussions are designed to aid in interpreting and using the data published in this report.

Alphabetical and State Organization

The organization for the 1995 edition includes transit agencies organized by State and alphabetically by agency name within each State. This organization enables easier location of specific transit agencies for data analysis.

Calendar Year

The report year was changed beginning in 1983 to a calendar year period (i.e., January 1 to December 31).

Database Adjustment

Summaries of financial and operating data contained in this report are based on the most recent submissions by transit agencies as of the publication date. However, audits or other reviews made at later dates may result in changes which more accurately reflect actual statistics. While a future addendum will not be published to this Annual Report, it should be noted that some changes may be made after publication of the 1995 Annual Report. Those changes will be reflected in the database which FTA maintains.

Modes and Vehicle Type Codes

The following mnemonic codes represented by two alphabet letters are used to describe modes and vehicle types in the tables:

Mode Codes

AG Automated Guideway
CC Cable Car
CR Commuter Rail

DR Demand Response
FB Ferryboat
HR Heavy Rail (formerly Rapid Rail)
IP Inclined Plane
JT Jitney
LR Light Rail (formerly Streetcar)
MB Bus
MO Monorail
PB Publico
TB Trolleybus
TR Aerial Tramway
VP Vanpool
OR Other

Note: Monorail was designated as OR in both the 1991 and 1992 editions.

Vehicle Type Codes

AB Articulated motor buses
AG Automated guideway vehicles
AO Automobiles
BA Buses, Class A (>35 seats)
BB Buses, Class B (25-35 seats)
BC Buses, Class C (<25 seats)
CC Cable cars
DB Double decked buses
FB Ferryboats
HR Heavy rail passenger cars
IP Inclined plane vehicles
LR Light rail vehicles (Streetcars)
MR Monorail vehicles
RL Commuter rail locomotives
RP Commuter rail passenger coaches
RS Commuter rail, self-propelled passenger cars
SB School buses
TB Trolleybuses
TR Aerial tramways
VN Vans
OR Other

Note: For Chapter 2, Table 26 (formerly Table 21), the small letter "p" following the mode code indicates that the mode is provided under a purchase of service agreement.

1995 Data Tables

National Transit Database

Multi-Area Reports

Some transit agencies, particularly commuter rail agencies, provide data for transportation services serving more than one urbanized area (UZA). For reporting purposes, a transit agency serving more than one UZA and filing a single report for its agency has been assigned to the UZA that received the majority of transportation service.

Purchased Transportation

Many transit agencies contract for transportation services. These contracted services may be provided by public agencies and/or private carriers. Contracted transportation services or purchased transportation are split in two categories: (1) expenses for contract carriers where data are included in the purchasing agency's report (object class 508.01); and, (2) expenses for those contract carriers that file their own report (object class 508.02). Contract carriers using 100 or more vehicles to provide annual maximum service are required to file a separate report. Note that these are contract costs. In most cases, these do not represent the total costs of operating the purchased service. The contractor may recover some costs depending on the terms of the contractual relationship through additional payments or accruals and/or fare revenues that are retained. Other contract-related costs such as administrative expenses are also incurred by a transit agency on behalf of the contractor included in their report. These other contract-related costs incurred by a transit agency are required to be reported in either object class 508.01 or 508.02. Enhancements to collecting additional data on the costs incurred by a transit agency, besides the direct contract costs, were instituted in 1991 and have continued since then. For the 1995 Report Year, [XX] reports were received from private providers operating in excess of 100 vehicles.

This 1995 Annual Report contains many tables where purchased and directly operated services are identified. Purchased transportation costs reported in object classes 508.01 and 508.02 are extracted from total operating costs and are presented in separate columns or rows in several tables to reflect more accurately a transit agency's total operating expenses for directly operated services. Note that contract carriers using 100 or more revenue vehicles in maximum service to provide contract services are

listed in the Annual Report as directly operated services since a separate report is submitted for these services. This reporting results in operating data being reported twice: first, for these purchased transportation services as an expense for the transit agency contracting with the provider; second, for the individual contract operator which provides purchased transportation services under the contractual relationship.

To identify contract service providers, mode specific operating data are identified as being part of a purchased service arrangement by a small letter "p" added to the mode code. Table 26 (formerly Table 21) is the only table with the small letter "p". Unless specified by the small letter "p" or in the table headers, data are for directly operated public transportation providers and contract operations that file a separate report. For the 1995 Report Year, there were 101 transit agencies that acquired 100 percent of their service from purchased transportation providers, and 34 filed as directly operated with more than 100 vehicles.

Beginning with the 1984 Report Year, reporters were allowed to allocate their expenses in any object class, including purchased transportation expenses, to any functional category. This enabled reporters to distribute purchased transportation expenses by the functions of vehicle operations, vehicle maintenance, non-vehicle maintenance, and general administration. Previously, reporters were required to submit all purchased transportation expenses under general administration.

In addition, beginning with the 1991 Report Year, expenses allocated to object classes 508.01 and 508.02 for purchased transportation are reported under either the Vehicle Operations function (010) or the General Administration function (160). Previously, reporters could distribute purchased transportation expenses by functions (vehicle operations, vehicle maintenance, non-vehicle maintenance, and general administration). This change may affect time-series analyses performed on expenses by function.

Deleted and Questionable Data Items

For data whose validity and reliability are questionable, the value of the data is included in the tables followed by a Q for questionable data. The data

1995 Data Tables

National Transit Database

affected are those where the transit agency failed to respond satisfactorily to questions raised during the validation process and/or did not collect the data in accordance with FTA's definitions and requirements. In addition, the Annual Report identifies data items as Partial/Delete (P/D) where only part of the data was removed, Zero/Delete (0/D) where all the data were removed, and Waived (W) where FTA granted a data waiver.

A data item(s) was not entered in the National Transit Database, was partially deleted, or was considered questionable by FTA when one or more of the circumstances listed on the following page existed.

1. The transit agency did not submit the required declarations.
2. Title 49 USC 5307 (formerly Section 9 of the Federal Transit Act, as amended) data declaration by the independent auditor stated that the data were not collected in accordance with FTA's definitions and requirements.
3. Issue(s) associated with the reporter's documentation and/or declaration(s) were not fully resolved.
4. Required data were omitted.
5. The transit agency did not provide the complete cost of services either directly operated and/or purchased.
6. The transit agency reported the same data for 1994 and 1995.
7. The transit agency did not provide sufficient information prior to the closure of the database to validate reported data.
8. The reported data were deleted and/or are considered questionable following validation and analysis.
9. Required documentation for Non-Rail Fixed Guideway Directional Route Miles was not provided.
10. A reporting waiver was requested and granted by FTA.

Transit Agency Names and Identification Codes

Due to space limitations, transit agency names are abbreviated using 25 characters or less. The UZA served has been included in cases where it is not an integral part of the transit agency name. Also, transit agency acronyms have been used to conserve space.

A four-digit identification number has been assigned to each transit agency. The first digit of this number corresponds to the FTA Region in which the transit agency is located (FTA Regions 1-10). (Note: identification numbers beginning with a zero indicate FTA Region 10.)

Vehicles Operated in Maximum Service

The criterion used for vehicles operated in maximum service for both directly operated and purchased transportation service is the size of the fleet for grouping transit agencies in each of the tables throughout the report. Vehicles operated in maximum service data are reported by mode and type of service on the Transit System Service Form (406). Maximum service is the revenue vehicle count taken during a reporting transit agency's maximum season of the year, on the week and day that this maximum occurs. It is not taken on a day when a special event or an extreme set of circumstances would cause the resulting tally to represent a one-time event rather than a recurring maximum service requirement. This fleet size measure provides a more meaningful measure of a transit agency's operating characteristics because it does not include spare and stored vehicles. Data for vehicles operated in maximum service are used in the service supplied and service consumed data tables.

Vehicles for Directly Operated and Purchased Transportation Services and Vehicles for a Specific Mode

As explained above, vehicles operated in maximum service for both directly operated and purchased transportation services data were used to create fleet size categories in prior Annual Reports. However, in directly operated service only tables, the specific vehicle counts provided are only from those directly operated by the transit agency, as reported on the Transit System Service Form (406) for directly operated services and purchased transportation

1995 Data Tables

National Transit Database

services. Therefore, a transit agency may be grouped in a larger fleet size category than the number of vehicles shown in a specific table. For example, a transit agency that both directly operates 450 non-rail vehicles and purchases services involving 75 non-rail vehicles for a total of 525 vehicles, as reported on separate Transit System Service Form(s) (406) for directly operated services and for purchased transportation services, is grouped in the 500-999 vehicles operated in maximum service category. However, this transit agency would show only 450 vehicles in the vehicles operated in maximum service column in a directly operated services only table since only 450 vehicles are directly operated, as reported on this transit agency's Transit System Service Form(s) (406) for directly operated services. Footnotes have been added in Chapter 2 to indicate when the vehicles operated in maximum service data are taken only from directly operated services.

Multi-modal transit agencies are included in categories for the number of vehicles operated in maximum service for the combined fleet size for all modes.

Vehicles Available for Maximum Service

Table 3.16 of the 1985 through 1989 Annual Reports includes a column for vehicles available for maximum service. Beginning with the 1990 Annual Report, these data are found in Table 26 (formerly Table 21). These data are reported on the Transit System Service Form (406). They represent the total active service fleet and include spares, out of service vehicles, and vehicles in or awaiting maintenance. They do not include vehicles being held for sale, emergency contingency use, etc. If the total active fleet for a given mode varies during the year, the reported figure represents the same time period as that used to report vehicles operated in maximum service. Thus, the difference between vehicles available for maximum service can be used to compute a transit agency's spare ratio. The vehicles available for maximum service data in Table 26 (formerly Table 21) replace the trains operated in average weekday maximum service data in previous reports (i.e., 1984 and earlier reports).

The 1995 Annual Report continues to include Total Active Fleet data from the Revenue Vehicle Inventory Form (408), in Table 27 (formerly Table 22) as was done in the 1984 and subsequent Annual Reports.

Unlike the vehicles available for maximum service data described above, the total active fleet data in Table 27 (formerly Table 22) represent only those vehicles owned by the reporting transit agency at the end of their fiscal year and are reported by vehicle type, not mode.

1.4 Completeness and Accuracy of the Data

The data submitted to FTA by transit agencies are subjected to extensive analysis and validation, both manual and automated. The process entails detailed examination of each transit agency's report, identification of errors or questionable entries, and direct resolution of these problems in conjunction with the reporting transit agency.

FTA's role in this process is to identify and resolve questions of data completeness and accuracy and give final approval to an agency's data as a prerequisite to entry into the National Transit Database and Annual Report. FTA can reject a transit agency's report if the report is not in full compliance with reporting requirements. Alternatively, FTA may elect to not enter any data items whose reliability is in question.

FTA cannot change any reported data. All data changes must be made by the reporting transit agency.

In general, the quality of the database improves each year as FTA simplifies and clarifies definitions of data items and reporting procedures, promotes the use of diskette reporting, places more emphasis on reporter training, and designs more sophisticated validation checks. Despite these extensive efforts, it should be noted that data validation encompasses primarily a review of the consistency and reasonableness of the reported data. Because of the limitations of these procedures, as well as the amount of data being validated, it is likely that some erroneous data have found their way into this report. In general, errors of significant magnitude have been detected and corrected, but some minor errors remain. These errors generally derive, not from the reporting or data processing procedures per se, but from difficulties experienced by transit agencies in obtaining accurate information and from misinterpretation of certain data definitions.

1995 Data Tables

National Transit Database

Caution: Because of these limitations and the fact that not all relevant information is reported (weather conditions, topography, contractual work rules, etc.), users of this report should not draw unwarranted conclusions from the examination of the data contained in this report. Although comparative evaluations are appealing, analyses of the reported data are not sufficient to account completely for apparent differences in performance. Such evaluations should encompass a more detailed examination of the underlying factors to determine the extent to which apparent differences are due to unique aspects of the transit agency's operating environment, specific management practices, or unusual events during the period covered.

1.5 Further Information on the Reporting System

The following FTA documents provide a detailed description of the reporting system:

- *National Transit Database, Uniform System of Accounts (USOA)*, January 1995.

This manual and the glossary contain the definitions used for the uniform system of accounts and records.

- *1995 Reporting Manual and 1995 Sample Forms*.

This manual provides all of the reporting instructions and sample forms used by transit agencies filing 1995 reports.

- *FTA Circular 2710.1A, Sampling Procedures for Obtaining Fixed Route Bus Operating Data Required Under the Section 15 Reporting System*, July 18, 1988.
- *FTA Circular 2710.2A, Sampling Procedures for Obtaining Demand Responsive Bus Operating Data Required Under the Section 15 Reporting System*, July 22, 1988.

These two circulars suggest optional sampling procedures for collecting unlinked passenger trip and passenger mile data required for

reports. Complete instructions and worksheets are provided for those transit agencies wishing to use these procedures.

- *Data User's Guide to the FTA Section 15 Reporting System*, Transportation Systems Center, June 1, 1989.

The User's Guide is available through the McTrans Center [telephone (904) 392-0378].

Other documents are available upon request to:

Federal Transit Administration
National Transit Database
P.O. Box 61126
Washington, DC 20039-1126
(301) 588-9676

1.6 Industry-Government Cooperation

The Reporting System evolved from the transit industry-initiated Project FARE (Uniform Financial Accounting and Reporting Elements). Over the years, a cooperative working arrangement has developed between the transit industry and the Federal government on data collection and the reporting system. Private and public sectors have recognized the importance of and need for timely and accurate data from which to assess the continued progress of the nation's mass transportation agencies.

In January 1983, the FTA Reporting System Advisory Committee was established to make recommendations on improving the quality and usefulness of the data collected under the program. Many of the past improvements to the Annual Report are the results of the Advisory Committee's recommendations. The Advisory Committee's charter expired on September 30, 1986. FTA continues to work closely with individuals and organizations in the transit industry to improve the reporting system and the Annual Report publications.

To help promote this cooperative effort, FTA urges all interested parties, including transit operators, State and local governments, planning organizations, trade unions, research organizations, and others to review and critique this edition of the *Data Tables For the 1995 National Transit Database Report Year*. Com-

1995 Data Tables

National Transit Database

ments and suggestions should be forwarded to the address provided in Section 1.5.

1.7 Availability of Machine-Readable Data

The data contained in the individual transit agency statistics tables (i.e., Chapter 3 for report years 1983 through 1989 and Chapter 2 for report years 1990 through 1995) in the Annual Report are available on floppy diskettes for use on microcomputers. These diskettes (double sided) are organized by report table and are compatible for use on an IBM-PC using Lotus 1-2-3 software. They contain the actual data reported by transit agencies in cases of questionable data, not the "Q" found in the 1984 through 1987 Annual Reports. In the 1988 and 1989 diskettes, the value of the data is included followed by a "Q" for questionable data. In addition, diskette sets organized by fleet size are available for report year 1981 only. These sets are available in either an Apple II DIF format or a single-sided IBM-PC DIF format. For further information on diskette availability and costs, please contact:

McTrans Center
512 Weil Hall
University of Florida

Chapter 2

Data Tables for Individual Transit Agency Statistics

1995 Data Tables

National Transit Database

Chapter 2

Data Tables for Individual Transit Agency Statistics

This chapter contains tables summarizing financial and operating characteristics of 469 individual transit agencies. An additional 55 transit agencies requested and received reporting exemptions (55 Nine or Fewer Vehicle Exemptions) and 13 were deleted due to incomplete data. All of the reporting exemptions were for very small (nine or fewer vehicle) agencies. Therefore, while there were 537 report submissions, detailed data are provided for 469 transit agencies.

Prior to the 1990 Annual Report, data contained in this chapter can be found in Chapter 3 Individual Transit System Statistics of the *National Urban Mass Transportation Statistics Section 15 Annual Report* for a particular year. Since 1990, data previously provided in Chapter 2 have been expanded and analyzed in the *National Transit Summaries and Trends*. Also, data are available in summary and graphic formats by individualized agency in the *Transit Profiles*. Further, more detailed data on the individual agencies, including required-level data prior to 1992, as well as voluntary-level data, are available from the public-use tape (See Chapter 1, Section 1.7).

Within each table, the data are organized by State and within each State alphabetically by agency name. The identification number is now followed by the agency's type of organization. The inclusion of the organizational type code provides a better way of describing transit providers. The organization codes used are:

Code Organization Type

- A Public agency or authority that directly operates all transit service [not a State Department of Transportation (DOT)]
- B Public agency or authority that contracts for some or all transit service (not a State DOT)
- C State Department of Transportation

- D Private carrier under contract to one or more public agencies
- E Private carrier not under contract to a public agency and not receiving FTA Urbanized Area Formula funds
- F Other

In cases where the transit agency name or acronym does not identify the primary operating location of the reporter, the name of the urbanized area (UZA) has been added in front of the transit agency name to the extent possible. To identify contract service providers, mode specific operating data are identified as being part of a purchased service arrangement by a small letter "p" added to the mode code only in Table 26 (formerly Table 21).

Several transit agencies provide data for transportation services in more than one UZA. For reporting purposes, each transit agency has been assigned to a single UZA, generally to that UZA receiving the majority of transportation services. (For 49 USC 5307 [formerly Section 9 of the Federal Transit Act, as amended] apportionment purposes, relevant data are desegregated into the various component UZAs).

In cases of a missing entry for a particular data item, the transit agency is included in the appropriate table(s), but with a blank space in the appropriate field(s).

The data in this chapter have a broad range of applications. They are, however, subject to the limitations discussed in Chapter 1 relating to the need to perform a more detailed examination of underlying factors and consistency of the data. The statistics in Chapter 2 permit interested transit agencies to compare their performance more selectively, e.g., by selecting those agencies defined as being within the same peer group by virtue of climate, topography, demographic characteristics of the population served, or factors other than industry averages.

1995 Data Tables

National Transit Database

Caution: There may be a tendency by some analysts to overstate the significance of comparisons based strictly on data contained in this report. Performance measures obtained using this data should be viewed strictly as tentative indicators of potential areas of improvement. If a specific indicator appears to imply below-average performance relative to industry peers, more detailed analysis is imperative in order to reveal the factors underlying the below-average value. These factors may either be improved by alteration or be beyond the control of management.

Chapter 2 presents a detailed description at one point in time of the performance of the 469 individual transit agencies. Since this is the seventeenth annual report and most of these agencies have reported in prior report years, the data can also be used for time-series analyses. Such analyses can contribute to conclusions on the current and evolving conditions and problems of specific transit agencies as well as the transit industry as a whole. Time-series analyses, however, must consider two important changes to Chapter 2: beginning with the 1983 report, annual reports were published based on transit agencies' fiscal years ending during the calendar year rather than a July 1 to June 30 period (see Section 1.3 in Chapter 1 for additional details), and, beginning with the 1990 Annual Report, individual Transit Agency Statistics are reported in Chapter 2.

The tables in Chapter 2 are organized in four major groupings:

- transit revenues;
- transit expenses;
- non-financial operating data; and
- performance indicators.

2.1 Special Notes on the Desegregate Data Tables

Several issues pertaining to the reporting system and the 1995 Annual Report are summarized in Section 1.3 of the introduction (Chapter 1). Users of Chapter 2 tables should refer to this section for a better understanding of the data, particularly the discussions of purchased transportation, public and private transit agency identification, vehicles operated in annual maximum service, and questionable data items. To avoid confusion, especially when performing comparative analyses using previously published reports, users should refer to these sections as well as the discussions of individual tables in Sections 2.3 through 2.5 of Chapter 2.

2.2 Reporting Changes

Through the National Transit Database, the FTA has implemented a number of reporting changes since 1990. The primary objective of the reporting changes has been to reduce reporting burden while improving data quality. As these changes have been implemented, a number of reporters, while remaining almost constant in the absolute, have moved toward more directly operated reporters and non-traditional forms of transit such as Demand Response. The following chart summarizes these changes and should be referred to when undertaking analysis involving two or more report years.

1995 Data Tables

National Transit Database

Reporting Changes Summary 1991 to 1995

1991 Report Year

- Received 515 report submissions consisting of 495 included in the 1991 Section 15 Database and 20 reporting exemptions
- Permitted four reporting levels utilizing 23 reporting forms
- Raised threshold for a separate Section 15 report by purchased transportation provider from 50 to 100 vehicles
- Waived requirement for an independent Section 9 Data Certification for transit agencies whose report covers fewer than 100 vehicles
- Commenced reporting on Uses of Capital Funds by type of project
- Established a new threshold for passenger mile sampling waivers for transit agencies in any size urbanized area directly operating less than 100 vehicles (previously 50)
- Requested more refined data on purchased transportation costs incurred by the contracting agency

1992 Report Year

- Received 503 report submissions consisting of 481 included in the 1992 Section 15 Database and 22 reporting exemptions
- Created one reporting level consisting of 17 reporting forms
- Implemented diskette reporting
- Commenced reporting modal data regarding Uses of Capital Funds
- Provided for the reporting of returned fare revenues from a purchased transportation agreement
- Allowed reporting of revenue accrued through a purchased transportation agreement
- Required agencies to report on a fully allocated cost basis
- Established full and complete reporting for private conventional and subscription bus services
- Increased the reporting exemption threshold to 5 vehicles
- Eliminated employee equivalents

1993 Report Year

- Received 523 report submissions consisting of 495 included in the 1993 National Transit Database and 28 reporting exemptions
- Retained one reporting level consisting of 15 reporting forms
- Expanded diskette reporting (Lotus interface, Declaration files)
- Eliminated Revenue Reporting Form (201)
- Consolidated Transit Agency Service Forms (406 and 407) (Rail and Non-Rail) into one form
- Added person count to employee data
- Expanded the mandatory sampling interval from 3 to 5 years for reporters in urbanized areas with less than 200,000 population

1994 Report Year

- Maintained one reporting level consisting of 15 reporting forms
- Received 528 report submissions consisting of 493 included in the 1994 National Transit Database, 31 reporting exemptions, and 4 deletions
- Enhanced diskette reporting (Customized Declarations, Date Transfers, Key Indicators)
- Increased threshold for required reporting of Operator's Wages Form (321) and Fringe Benefits Form (331) from 25 to 100 or more directly operated revenue vehicles
- Added employee injuries and fatalities to the Transit Safety Form (405)

1995 Report Year

- Maintained one reporting level consisting of 15 reporting forms
- Received 537 report submissions consisting of 468 full reports included in the 1995 National Transit Database, 55 reporting exemptions and 14 deletions
- Enhanced diskette reporting ("Smart" forms, data import, error and status reports, etc.)
- Glossary of Transit Terms updated and incorporated into the *1995 Reporting Manual*
- Expanded Safety Data and added Security reporting requirements to the Transit Safety Form (405) which became Transit Safety and Security Form (405)
- Reported Capital Funding Form by type of service (directly operated and purchased transportation)
- Reported Operating Expense Form (301) by type of service (directly operated and purchased transportation)
- Reported Non-Financial Operating Data by mode and type of service (directly operated and purchased transportation (optional)) for Revenue Vehicle Maintenance and Energy Form (402), Transit Agency Employee Form (404), and Transit Safety and Security Form (405)

1995 Data Tables

National Transit Database

2.3 Transit Revenues

Tables 1-9 contain information on the types of operating funds applied for individual transit agencies. Operating funds applied are required to be reported by transit agency totals, not by individual modes. Table totals are provided for national totals, fleet size, and size of urbanized area; however, these totals will vary depending on the number of transit agencies reported.

Also for these tables, the number of vehicles operated in annual maximum service includes those vehicles used for both directly operated services and for purchased transportation services included under the same transit agency's identification number as reported on the Transit System Service Form (406).

Transit revenue applied data are presented in the following tables:

Table 1: Transit Operating Funds Applied.

Data were compiled from the Operating Funding Form (203). Data are reported system wide. For 1993, the Revenue Summary Form (201) was eliminated. The Operating Funding Form (203) partially incorporates the revenue data by describing the funding sources for operating expenditures using revenue object classes 401 through 440. However, the funds reported on this form do not have to be revenue earned during the reporting period; the funds may include revenue earned in prior reporting periods.

A change instituted in 1991 has been retained in this edition. Object class 402 (Special Transit Fares) was included with object class 401 (Passenger Fares).

The column headed "Directly Generated Funds: Other Revenues" combines various revenue object classes, including 403 (School Bus Service Funds), 404 (Freight Tariffs), 405 (Charter Service Funds), and 406 (Auxiliary Transportation Funds). These revenues should be distinguished from the Other Subsidies in column 12, which is from revenue object class 440 (Subsidy from

Other Sectors of Operations). These subsidies may include those received from utility rates and from bridge and tunnel tolls. The Other-Federal Public Funds column indicates operating funding from such sources as the Planning Program, 49 USC 5303 (formerly Section 8 of the Federal Transit Act, as amended), Research, Development, Demonstration and Training, 49 USC 5312 (formerly Section 10 of the Federal Transit Act, as amended), and the Non-urbanized Area Formula Program, 49 USC 5311 (formerly Section 18 of the Federal Transit Act, as amended).

Other changes instituted, beginning with the 1993 *Data Tables*, affected the Public Funds subcategories for State and Local Funds. First, for State, General Revenue was inserted in place of Grants and Reimburse. However, object class 411 was used for both. Second, the Dedicated and Other column with State funds was retitled from Fare Assistance in 1992. Despite the retitling, both contained object class 412, State Special fare Assistance. Third, changes in column headers were made to reflect the reporting change from Local Funds-General Revenue to Grants and Reimburse and it continued to report object class 409 (Local Cash Grants and Reimbursements). Fourth, the Local Funds-Dedicated Other was a retitling from Fare Assistance; it, too, continued to report object class 410 (Local Special Fare Assistance).

For 1995, data reported as "Dedicated to Transit" and "Other Subsidies" have been combined into "Dedicated & Other" within the "Directly Generated Funds" section for presentation clarity and consistency with "Public Funds" columns.

Tables 2 and 3: State Taxes Dedicated at their Source for Transit Operating Funds Applied and Local Taxes Dedicated at their Source for Transit Operating Funds Applied.

Tables 2 and 3, having identical formats, were compiled from the Operating Funding Form (203) and present State and local taxes, respectively, that have been applied to transit operations. Operating funding from dedicated taxes are deseg-

1995 Data Tables National Transit Database

regated by type of tax (income, sales, property, gasoline, or other). The Other Taxes column includes any other special State or local taxes dedicated at their source to transit operating funding such as motor vehicle excise tax and gross receipts tax.

Table 4: Directly Generated (Transit Agency) Taxes Dedicated at their Source for Transit Operating Funds Applied.

Beginning in 1992, an addition to the Data Tables data for Table 4 was compiled from the Operating Funding Form (203). This table provides a breakdown by Income Taxes, Sales Taxes, Property Taxes, Gasoline Taxes, and Other Taxes as a percent of total dedicated taxes of directly generated funds that were applied to transit operations.

Table 5: Transit Capital Funds Applied.

Data were compiled from the Capital Funding Form (103). Federal sources of assistance are classified either as funds provided under 49 USC 5309 (formerly Section 3 of the Federal Transit Act, as amended), or 49 USC 5307 (formerly Section 9 of the Federal Transit Act, as amended), or from other sources. State and local sources are divided into General Revenue and Dedicated. Dedicated sources restrict funds to transportation-related expenditures, while transit must compete with other public programs for general revenues. Dedicated sources of funds are desegregated into Taxes (income, sales, etc.) and Other (bridges, tunnels, State and local bonds, investment income, etc.).

For the 1991 Report Year, a column was included for Transit Agency Funds dedicated at their source. Transit Agency Funds do not include fare revenues. Transit Agency Funds was changed to Directly Generated Funds beginning in 1992.

Tables 6 and 7: State Taxes Dedicated at their Source for Transit Capital Funds Applied and Local Taxes Dedicated at their Source for Transit Capital Funds Applied.

Tables 6 and 7 were also compiled from the Capital Funding Form (103). These two tables further desegregate the State and local tax revenue applied for public transit capital that was shown in Table 5.

Table 8: Directly Generated (Transit Agency) Taxes Dedicated at their Source for Transit Capital Funds Applied.

Table 8 was added to the Data Tables beginning in 1992. Data were compiled from the Capital Funding Form (103). The collection of this data on Form (103) was also a new reporting requirement for that report year.

Table 8, Directly Generated (Transit Agency) Taxes Dedicated at their Source for Transit Capital Funds Applied, provides a breakdown by Income Taxes, Sales Taxes, Property Taxes, Gasoline Taxes, and Other Taxes as a percent of total dedicated taxes of directly generated funds that were applied for transit capital.

Table 9: Capital Funds Applied by Type of Expenditure.

Data are compiled from the Capital Funding Form (103). Added in 1991, Table 9 provides a breakdown of the capital funds applied (in thousands of dollars) and how they were used. For 1995, data reporting requirements regarding uses of Capital Funds by mode were retained since being instituted in 1992. Data are provided by mode for three primary uses: rolling stock, facilities, and other. Aggregate totals for each mode reported by a transit agency are also provided.

Potential Data Applications

Tables 1-9 summarize the magnitude and source of transit funds applied for individual transit agencies. The data in these tables permit analyses of the extent to which specific agencies recover operating expenses from fares and the extent to which they rely on various sources of directly generated, local, State, and/or Federal assistance to apply to their operation.

1995 Data Tables

National Transit Database

Transit agencies can use these data to compare the types of funds applied and the percentage distributions of their sources to those of other agencies. In general, the data permits cross-sectional and time-series analyses, but more specifically allows analysts to examine individual agencies and to custom define peer groups. For example, peer groups could be formed based on mode, fleet size, annual operating expenses, or other factors not contained in this report, such as climate and collective bargaining agreements. Comparisons can then be made to the individual transit agencies in the group averages.

2.4 Transit Expenses

Tables 10-13 contain information on the types and amounts of expenses incurred by individual transit agencies. Transit expenses are reported (1) by Function and (2) by Object Class.

In Tables 10, 11, and 13, the number of vehicles operated in annual maximum service include those vehicles used for both directly operated services and for purchased transportation services included under the same transit agency's identification number as reported on the Transit System Service Form (406).

Expenses by Function

Functional classes divide operating expenses into four major categories:

- (VO) Vehicle Operations;
- (VM) Vehicle Maintenance;
- (NM) Non-Vehicle Maintenance; and
- (GA) General Administration.

Analysis of expenses by function must be qualified by the degree to which transit agencies uniformly allocate expenses among the various functional categories. This analysis should include careful consideration of reporting limitations as well as detailed accounting practices at the specific transit agencies being examined.

Functional breakdowns were provided by transit agencies reporting at voluntary levels A, B, or C through 1991. One basic level of reporting was adopted for the 1992 Report Year with optional reporting of more detailed data on selected forms. Even though the Data Tables did not show detailed expenses provided with voluntary-level reporting, the public-use tape did provide them. The public-use tape now contains the basic report submissions and any optional data reported.

A further modification was made for the 1992 Report Year and has been continued. Allocation of joint expenses was discontinued. The discontinuation provides a more accurate allocation of costs by mode. However, prior year comparisons by mode may fluctuate depending on the amount of joint expense reporting in periods prior to 1992.

Expenses By Object Class

Object classes divide operating expenses into such categories as labor, fringe benefits, services, or materials and supplies.

Whereas revenue data were summarized for all modes operated by a transit agency, the expense data are desegregated by mode. For each of the various functional categories, multi-modal transit agencies must fully allocate expenses to the appropriate modes beginning with the 1992 Report Year.

Reconciling Expenses

The operating expenses summarized in these tables exclude Reconciling Items (e.g., interest expenses, leases and rentals, and depreciation). Reconciling items are reported only as agency totals and are not desegregated by mode or functional class. Reconciling items are required to provide an overall total which is consistent with locally published reports. These expenses are reported separately because local accounting practices for handling such items (particularly depreciation and amortization) differ widely. Generally, analysts using these data exclude reconciling items from operating expenses. Although this actually understates true operating costs, it resolves the problems inherent in inconsistent treatment of reconciling items.

1995 Data Tables

National Transit Database

Transit expense data for individual transit agencies are summarized in the following tables.

Table 10: Transit Operating Expenses by Mode and Function.

Data were compiled from the Operating Expenses Summary Form (301), and if the transit agency is multi-modal, Operating Expenses Form (301) for each reported mode.

Since purchased transportation expenses may distort the financial data associated with service directly operated by a transit agency, object classes 508.01 (purchased transportation included in report) and 508.02 (purchased transportation files separate report) have been subtracted and presented in separate columns.

Since 1991, transit agencies were asked to include Other expenses related to purchased transportation in object classes 508.01 and 508.02. A contracting agency reporting as a separate entity could report any other operating costs incurred related to the contract. As an example, contract administration costs, customer or information services, advertising and other services or supplies, etc., incurred in support of the contract may be reported. For those purchased transportation transit operating agencies with more than 100 vehicles in annual maximum service, expense data are reported from the perspective of directly operated. As a result, expense data are reported twice. Expense data are reported by both the contracting agency (buyer) as a purchased transportation expense (508.02) and by the contract provider (seller) by function.

Table 11: Transit Operating Expenses by Mode and Object Class.

Data were compiled from the same forms used for Table 10. Object class categories correspond to those reported on the Operating Expenses Form (301).

- 501.01 -- operators' salaries and wages;
- 501.02 -- other salaries and wages;
- 502 -- fringe benefits;

- 503 -- services;
- 504.01 -- fuel and lubricants;
- 504.02 -- tires and tubes;
- 504.99 -- other materials and supplies;
- 505 -- utilities;
- 506 -- casualty and liability costs;
- 508.01 -- purchased transportation (included in report);
- 508.02 -- purchased transportation (files separate report).

In addition, 507-taxes, 509-miscellaneous expense, and 510-expense transfers are included as Other. Double counting of operating expenses exists in this table for a limited number of transit agencies. This is due to both the contracting agency (buyer) and the purchased transportation provider (seller) exceeding 100 vehicles in annual maximum service reporting operating expense data. In this situation, the contracting agency reports a 508.02 expenditure and the provider reports by object class.

Table 12: Transit Operating Expenses by Function and Object Class.

This table is included because 17 percent of the reporting transit agencies operate only bus services. For the 1995 Report Year, 80 transit agencies operated only bus service. Of these, [XX] received a reporting exemption. Data are cross-classified by major functional and object classes. Purchased transportation providers (sellers) of bus services are included in this table when they operate more than 100 vehicles in annual maximum service while under contract. Again, this results in double counting of expenses as the contracting agency (buyer) reports a purchased transportation expense and the purchased transportation provider (seller) operating 100 or more vehicles in annual maximum service reports operating expenses by function and object class.

Object classes are the same as those in Table 11. The function codes used in the table represent the four major functional categories:

- (VO) Vehicle Operations;

1995 Data Tables

National Transit Database

- (VM) Vehicle Maintenance;
- (NM) Non-Vehicle Maintenance; and
- (GA) General Administration.

The total number of buses operated in annual maximum service include those buses used for both directly operated services and for purchased transportation services. The totals are included under the same transit agency's identification number as reported on the Transit System Service Form (406) by type of service for the bus mode.

Table 13: Employer Paid Fringe Benefits.

Data were derived from Fringe Benefits Form (331). The information presented represents agency totals, because fringe benefits payments are not reported by mode. Beginning in 1992, data are only reported by transit agency fringe benefit expenses agencywide; employee fringe benefit expenses were no longer reported. This form is not required for transit agencies with 100 or fewer vehicles operated in annual maximum service.

Potential Data Applications

The expense tables summarize the costs of operating individual transit agencies. Data are desegregated by mode, function, and object classes. These data can be used to compare costs among various transit agencies and to determine potential areas for improvement. As discussed in Chapter 1, such analysis should incorporate careful examination of all causal factors underlying these differences. This examination can require information beyond that which is obtainable from this reporting system.

2.5 Non-Financial Operating Data

Tables 14-27 (formerly Table 22) contain non-financial operating data for individual transit agencies. Except for Table 26 (formerly Table 21), all the

tables include only data for directly operated services.

Transit Maintenance, Safety, and Security

Table 14 summarizes numbers of roadcalls and other maintenance-related statistics such as facilities. Safety and Security data for individual transit agencies are reported from Table 20 through Table 25. Use of data from these tables for analyses generally requires additional data, such as vehicle miles and age of fleet.

In addition, the interpretation of what constitutes a roadcall or safety incident has not been uniform, therefore, these data may not be entirely consistent among transit agencies. Roadcall figures should be viewed as gross indicators. Analysis of roadcalls as measures of maintenance performance should be undertaken with caution and requires detailed examination of how roadcalls were defined and the individual agencies' policies for taking vehicles out of service. Application of data over time is also relevant to determine trends and to conduct further analysis.

Instructions concerning the reporting of roadcalls for mechanical failures are further clarified as a revenue service interruption caused by failure of some mechanical element of the revenue vehicle. Mechanical failures include breakdowns of air equipment, brakes, body parts, doors, cooling systems, heating systems, electrical units, fuel system, engine, steering and front axle, rear axle and suspension, and torque converters. Many transit agencies expand their reporting of roadcalls to report other system failures when revenue vehicles become inoperable with problems, such as air conditioning, wheel chair lifts, fare boxes, etc. As a result, this leads to an apparent problem in uniform reporting.

Transit facilities are reported based on the number of vehicles assigned to the facility. In addition, two classifications of facilities are defined for general purpose use and heavy maintenance work. A general purpose facility is the most commonly reported facility since it provides running repairs, servicing,

1995 Data Tables

National Transit Database

and vehicle storage as well as component repair and overhaul. A heavy maintenance facility is generally reported by large agencies that have a facility wholly dedicated to component repair and overhaul.

The number of vehicles assigned to a facility will vary depending on the number of modes operated by the agency and by the size (capacity) of the facility. Also, unique geographical features and/or constraints that may make it more economical to operate more than one facility to support a small fleet of vehicles may result in the number of facilities reported for the transit fleet appearing to be more than would normally be required. In general, the number of facilities will remain fairly constant over time and will not exceed more than one until the number of vehicles exceeds 125 to 175 units.

Another related factor in the determination of facilities is a reporting requirement to allocate the facility among modes if it is being used by more than one. Many transit agencies are operating both bus and demand response systems and are required to allocate the facility between the two. For example, if a transit agency reports 100 total vehicles of which 70 are buses and 30 are demand response, it would allocate the facility as .7 for bus and .3 for demand response. When relatively small transit agencies of less than 125 vehicles report multiple facilities, one needs to consider some of the factors mentioned above and whether or not a proper allocation was performed.

Transit Safety and Security data are compiled from the Transit Safety and Security Form (405). Data for transit safety are available for directly operated service only. Reporting requirements for safety data were expanded in 1995 with the addition of fatalities and injuries for patrons, employees and others for each safety item, such as collisions and non-collisions (derailments, personal casualties and fires). Additionally, new items for personal casualties were added.

Security data are compiled from the Transit Safety and Security Form (405). Only agencies serving urbanized areas (UZAs) over 200,000 population report transit security data. The reporting of security data commenced for the 1995 Report Year. A num-

ber of transit agencies had problems obtaining the required data for 1995 and were granted waivers for security data. Many of the waived agencies are located in densely populated urbanized areas, with a substantial amount of security data to report. Consequently, the national figures for security are understated in 1995. Data is reported by mode and is summarized from the FBI Uniform Crime Reporting (UCR) Program. The definitions used in this form, are from the FBI *Uniform Crime Reporting Handbook*, 1984. Data for transit security are divided into two parts: Offenses (Reports) and Offenses (Arrests). The first category (Reports) includes serious crimes against persons, such as homicide, forcible rape, robbery and aggravated assault. These offenses are reported based on records of calls for service, complaints and/or investigations. Part I also includes crimes against property, such as larceny/theft, motor vehicle theft, burglary and arson.

The second category (Arrests) consists of less serious crimes and is counted based on arrests made. For each arrest, data are presented by mode for directly operated service only.

Transit Way Mileage

Directional route miles are reported on the Transit Way Mileage Form (403) and presented in Tables 16-18. The term Directional Route Mile is defined as the mileage in each direction over routes that public transportation vehicles travel while in revenue service. Directional route miles are a measure of the facility or roadway, not the amount or frequency of service carried on the facility, i.e., number of routes or vehicle revenue miles. They are determined by direction of service, but not by the number of traffic lanes or rail tracks existing in a given right-of-way. If vehicles travel in only one direction within a right-of-way, each mile is counted once. If vehicles travel in both directions, each mile is counted twice. A mile of single track over which commuter rail service operates in both directions represents two directional route miles. A mile of exclusive busway on which a transit agency operates six different routes in only a single direction represents one directional mile, regardless of the number of routes.

1995 Data Tables

National Transit Database

Tables 16-19 contain data for Directly Operated service only, as their titles indicate. Other annual publications (*Transit Profiles, National Transit Summaries and Trends*) report directional route miles for both directly operated and purchased transportation modes.

Service Supplied and Service Consumed Data

Service supplied data include vehicle miles, vehicle revenue miles, vehicle hours, and vehicle revenue hours. Beginning in 1984, transit agencies were asked to indicate both their scheduled and actual vehicle revenue miles of service. The purpose of adding scheduled vehicle revenue miles of service is to allow a reporter to indicate whether it may have more or less service than had been originally scheduled or planned. The difference between vehicle miles and vehicle revenue miles represents deadheading. Definitions of the above data terms can be found in the *Federal Transit Administration Uniform System of Accounts (USOA)* and in the *Glossary of Transit Terms for the National Transit Database in the 1995 Reporting Manual*.

Service Consumed data refer to ridership information (measures of use of the service supplied) and include unlinked passenger trips and passenger miles. Because passenger mile data are not normally collected by transit agencies as a routine part of their operations, these data are among the most difficult to collect. In most instances, they are collected using sampling techniques. While FTA has negotiated several such techniques, transit agencies were allowed to use self-certifying sampling techniques beginning with the 1990 Report Year. Regardless of the sampling technique used, it must satisfy precision and confidence requirements of 10 percent and 95 percent, respectively.

Service supplied and service consumed data are reported on the Transit System Service Form (406); data are reported in terms of average weekday, average Saturday, and average Sunday.

The non-financial operating data are provided in the following tables. For multi-modal agencies, data are desegregated by individual modes.

Table 14: Revenue Vehicle Maintenance Performance.

Data were compiled from the Revenue Vehicle Maintenance Performance and Energy Consumption Form (402). The number of vehicles operated in annual maximum service are for those vehicles used for directly operated services only as reported on the Transit System Service Form (406). For an explanation of maintenance, see the earlier section on transit maintenance and safety.

Table 15: Energy Consumption.

Data for this table were compiled from the Revenue Vehicle Maintenance Performance and Energy Consumption Form (402). The table has been expanded beginning in 1993 to individually report more alternative fuel types.

Tables 16-18: Transit Way Mileage.

Data were compiled from the Transit Way Mileage Form (403), directly operated service only. For an explanation of directional route miles, see the above section on transit way mileage.

Tables 16-18 display Transit Way Mileage in three separate groups: Non-Rail, Ferryboats, and Rail. This separation provides for easier comparison of like modes and reduces the number of unnecessary blank entries. Table 18 reports mode code MO which is monorail.

Unique to the reporting of directional route miles for ferryboat and trolleybus modes is a determination by law. For these two modes only, all directional route mileage is classified as exclusive for purposes of reporting.

Table 19: Transit Agency Employee Work Hours and Person Count.

Data were compiled from the Transit System Employee Form (404). Fractional entries result from the fact that data in Table 19 are expressed as Employee Equivalents for the year to the nearest

1995 Data Tables

National Transit Database

tenth. Data are collected on this form for both employee work hours and a person count at fiscal year end. When working on capital projects, an employee's labor is considered a capital expense; otherwise, it is an operating expense.

The total section of Table 19 is displayed in thousands, as indicated in the section header. Since no decimals displayed are in this table, totals of less than 500 are rounded to 0.

Modifications to the Transit System Employee Form (404) were introduced in 1993. Since certain data items were being collected for the first time, transit agencies were not required to report part-time employees as part of their fiscal year end person count. However, all employee work hours incurred during the year were required to be reported. Therefore, one needs to be aware that when applying average full-time employee counts to employee work hours, one may calculate a high level of annual employee work hours per full-time employee. This will be especially true if part-time employees are utilized and not reported and/or service adjustments were made during the year and a smaller number of full-time employees were included in the person count at fiscal year end.

In some instances, the operator may show no employee work hours but some actual person counts or no person counts but some work hours. These occurrences are due to work hours being collected for directly operated service only person counts for full-time employees only. Also, the work hours cover the entire report year; whereas, the person counts are based on those employed on the last day of the report year.

While many transit modes are labor intensive, others are not. Due to the unique characteristics of their operations, some modes such as vanpool do not always provide complete employee-related data. Another reporting anomaly sometimes occurs: some transit agencies providing directly operated service utilized contractual services for a portion of the service provision. In these situations, labor is either not reported for an activity such as vehicle maintenance or only

reported for the labor that is engaged in activities associated with the contract services. As a result, labor is understated and when reported within a directly operated report can create misleading information. Examples of how this occurs include: transit agencies acquiring operating labor through a purchased transportation arrangement; maintenance services performed by another municipal entity like the Public Works Department; specific management services performed by a management services company; etc. When zero and/or low values are reported within a directly operated report, caution should be exercised in the use of employee-related data.

Transit Safety

Data were compiled from the Transit Safety and Security Form (405). Data for transit safety are available for directly operated service only. Reporting requirements for safety data were expanded in 1995 with the addition of fatalities and injuries for patrons, employees and others for each safety item, such as collisions and non-collisions (derailments, personal casualties and fires). Additionally, new items for personal casualties were added. It should be mentioned that new data requirements frequently result in some data anomalies due to reporting misunderstandings and incorrect applications by transit agencies. The data can also be impacted by agencies requesting data waivers.

In order to accommodate the enhanced safety data, three new tables were created, replacing the former Table 20, Transit Safety: Details by Transit Agency Directly Operated Service. In each table, the number of vehicles operated in annual maximum service is those vehicles used for directly operated services only as reported on the Transit Agency Service Form (406).

Table 20: Transit Safety Number of Incidents - Collisions, Non-Collisions and Transit Property Damage (Directly Operated Service).

This table includes data related to incidents and total transit property damage. An incident is defined as an unforeseen occurrence which results in collision, derailment, personal casualty, non-arson fire, or

1995 Data Tables

National Transit Database

property damage in excess of \$1,000, associated with transit agency revenue vehicles, maintenance areas and rights-of-way. Incidents are divided into two main categories: collisions and non-collisions. For collisions, the total number of incidents involving collisions with other vehicles, objects and people is presented in addition to the total number of collisions at grade crossings and attempted/successful suicides.

For non-collisions, incidents related to derailments, personal casualties and non-arson fires are included.

Table 21: Transit Safety Number of Fatalities - Collisions and Non-Collisions (Directly Operated Service).

This table presents fatalities related to collisions and non-collisions. A fatality is defined as a death confirmed within 30 days after an incident which occurs under the collision, derailment, personal casualty, or non-arson fire categories. In this table, for each category of collisions and non-collisions, the number of fatalities involving patrons and non-patrons (employees and others) is presented.

Table 22: Transit Safety Number of Injuries - Collisions and Non-Collisions (Directly Operated Service).

This table presents injuries related to collisions and non-collisions as in the previous table. Injury is defined as any physical damage or harm to a person requiring medical treatment, or any physical damage or harm to a person reported at the time and place of occurrence. For each category of collisions and non-collisions, the number of injuries involving patrons and non-patrons (employees and others) is presented.

Transit Security

Data were compiled from the Transit Safety and Security Form (405). Only agencies serving urbanized areas (UZAs) in excess of 200,000 populations report transit security data. The reporting of security data commenced for the 1995 Report Year. A number of transit agencies had problems obtaining the required data for 1995 and were granted waivers for security data. Many of the waived agencies are located in densely populated urbanized areas, with a substantial amount of security data to report. Conse-

quently, the national figures for security are understated for the 1995 Report Year.

Data is reported by mode and is summarized from the FBI Uniform Crime Reporting (UCR) Program. The definitions below are taken from the FBI *Uniform Crime Reporting Handbook*, 1984. Data for transit security are divided into two parts: Part I- Offenses (Reports) and Part II- Offenses (Arrests). The first category (Reports) includes serious crimes against persons, such as homicide, forcible rape, robbery and aggravated assault. These offenses are reported based on records of calls for service, complaints and/or investigations. Part I also includes crimes against property, such as larceny/theft, motor vehicle theft, burglary and arson.

The second category (Arrests) is less serious crimes and is counted based on arrests made. For each crime, data are presented by mode for directly operated service only.

In order to accommodate the enhanced safety data, three new tables were created. In each table, the number of vehicles operated in annual maximum service is those vehicles used for directly operated services only as reported on the Transit Agency Service Form (406).

Table 23: Transit Security Part I- Offenses (Reports) Violent Crime (Directly Operated Service).

This table presents data for violent crime (crimes against persons). For each reported crime, the total (in vehicle plus in station plus other transit property) for patrons, employees and others is included. The data are presented by mode for directly operated service for transit agencies serving UZAs in excess of 200,000 population.

Table 24: Transit Security: Part I Offenses (Reports) Property Crime (Directly Operated Service).

This table presents data for property crime. As in Table 23, for each reported crime, the total number of reports for patrons, employees and others is included. The data are presented by mode for directly operated service for transit agencies serving UZAs in excess of 200,000 population.

1995 Data Tables

National Transit Database

Table 25: Transit Security: Offenses (Arrests) and Transit Property Damage (Directly Operated Service).

This table presents data for less serious crimes and whose counts were based on arrests made. These data are presented by mode for directly operated service only. In addition, the total transit property damage (repair or replacement of transit agencies' vehicles or facilities to a state equivalent to that which existed prior to the incident) is included.

Table 26 (formerly Table 21): Transit Operating Statistics: Service Supplied and Service Consumed.

This table summarizes transit service supplied and consumed data. Data were compiled from the Transit System Service Form (406) for directly operated and purchased transportation service.

The vehicles available for annual maximum service represent the total active service fleet and include spares, out of service vehicles, and vehicles in or awaiting maintenance. They do not include vehicles being held for sale, emergency contingency use, etc. If the total active fleet for a given mode varies during the year, the reported figure represents the same time period as that used to report vehicles operated in annual maximum service. Thus, the difference between vehicles available for annual maximum service and vehicles operated in annual maximum service can be used to compute a transit agency's spare ratio. See Section 1.3 of Chapter 1 for further details on the vehicle data.

Data for the column "Annual Scheduled Vehicle Revenue Miles," for modes Demand Response (DR), Jitney (JT), Publico (PB), and Vanpool (VP) have been zeroed. These modes by definition do not have any scheduled service.

Table 27 (formerly Table 22): Age Distribution of Active Revenue Vehicle Inventory.

Data were compiled from the Revenue Vehicle Inventory Form (408) for directly operated services only. Data are shown by vehicle type and age of vehicles in the total active fleets. The vehicle

type codes are listed in Section 1.3 of Chapter 1. The age of a vehicle refers to the number of years since its date of manufacture.

The National Transit Database reporting system is based on a transit agency's fiscal year. Over 60 percent of all transit agencies reporting complete their respective fiscal year before the end of a calendar year. As a result, a revenue vehicle manufactured, delivered, tested, and accepted by a transit agency after the end of the fiscal year but within the calendar or manufacturer year will not be reported until the next report year.

Potential Data Applications

The data presented in Tables 14-27 (formerly Table 22) can be used to help answer questions regarding service provided by individual transit agencies relative to the investment required. For example, how many employees, how much fuel, and how many vehicles were required to provide that service; how safe was that service; and, how much use was made of the service by transit patrons.

2.6 Performance Indicators

Tables 28-31 (formerly Tables 23-26) contain selected performance indicators for individual transit agencies. These indicators are not reported directly, but are computed from other reported data. Because of the growth in reporters, the expansion of purchased transportation, and the inclusion of several non-traditional modes such as demand response, performance indicators are not reported directly. Usually, these relate measures of service outputs to measures of resource inputs (e.g., vehicle revenue miles per vehicles operated in annual maximum service or passenger miles per vehicle revenue hour). Performance measures are computed separately for each mode and therefore should utilize only data items reported on a modal basis (revenues and reconciling expenses are excluded).

Many performance indicators can be computed from these data and other sources. Again, analysts should note the limitations relating to interpretation and use of any performance indicators, relating primarily to

1995 Data Tables

National Transit Database

the need to examine underlying or causal factors in greater detail. Added to these limitations are data waivers and/or exemptions granted to reporters due to reporting burden, initial report submission, unique circumstances, and other factors. The combinations of these limitations may compound interpretation and use of individual performance indicators for a particular mode and type of service.

There is great potential for distortion if only one or two performance indicators are viewed in isolation. For example, the single measure Operating Expense per Unlinked Passenger Trip might be very misleading for a transit agency with a disproportionately high number of transfers (caused, for example, by geographical or routing constraints). Other performance indicators, such as fuel consumption per revenue mile data, may be distorted due to multiple fuel types reported for a particular mode. This is because miles are not reported by fuel type in the National Transit Database reporting system. As a result, separate fuel consumption data has been divided by vehicle revenue miles for a mode regardless of how many miles were supplied by each fuel type. To avoid potential data misrepresentation, performance indicators for miles per gallon and miles per kilowatt have been removed. Overall, care should be taken to examine a balanced set of indicators for use in evaluation.

In addition, users of these performance indicators data are advised that similar performance indicators derived from other 1995 publications may contain different values when comparisons between reports are made. This is applicable to operating expenses which were modified for the elimination of joint expenses for multi-mode providers.

Tables 28-31(formerly Tables 23-26): Transit Performance Indicators.

The data were derived using the Operating Expenses Form (301) modal, the Revenue Vehicle Maintenance and Energy Form (402), the Transit Way Mileage Form (403), the Transit System Employee Form (404), the Transit Safety Form (405), and the Transit System Service Form (406).

Tables 28-31(formerly Tables 23-26) are comprised of directly operated service only.

Tables 28-31 highlight the following data:

- Table 28 (formerly Table 23): Maximum Number of Vehicles Operated, Vehicle Revenue Miles, and Vehicle Revenue Hours.
- Table 29 (formerly Table 24): Operating Expense
- Table 30 (formerly Table 25): Passenger Miles, Unlinked Passenger Trips, and Vehicle Miles
- Table 31 (formerly Table 26): Employees
