of Transportation

Key Transportation Indicators April 2005

Table of Contents

Transportation Services Index

Air Travel Price Index

Domestic Flights: Air Passengers

Domestic Flights: Air Freight

Domestic Revenue Load Factors

Domestic Flight Availability and Distance

Major U.S. Air Carrier On-Time Performance

Domestic Airline Jet Fuel

U.S. Foreign Waterborne Freight

U.S. Surface Trade: U.S.-Canada and U.S.-Mexico

Transportation Services Index Level (monthly data, seasonally adjusted)

TSI is updated monthly. The index numbers for the latest three months are considered to be preliminary. BTS releases the preliminary number for the latest month and replaces the number for the oldest preliminary month with a revised number. All other revisions are held until an annual comprehensive revision of the TSI, which will be released as part of the following June TSI release.

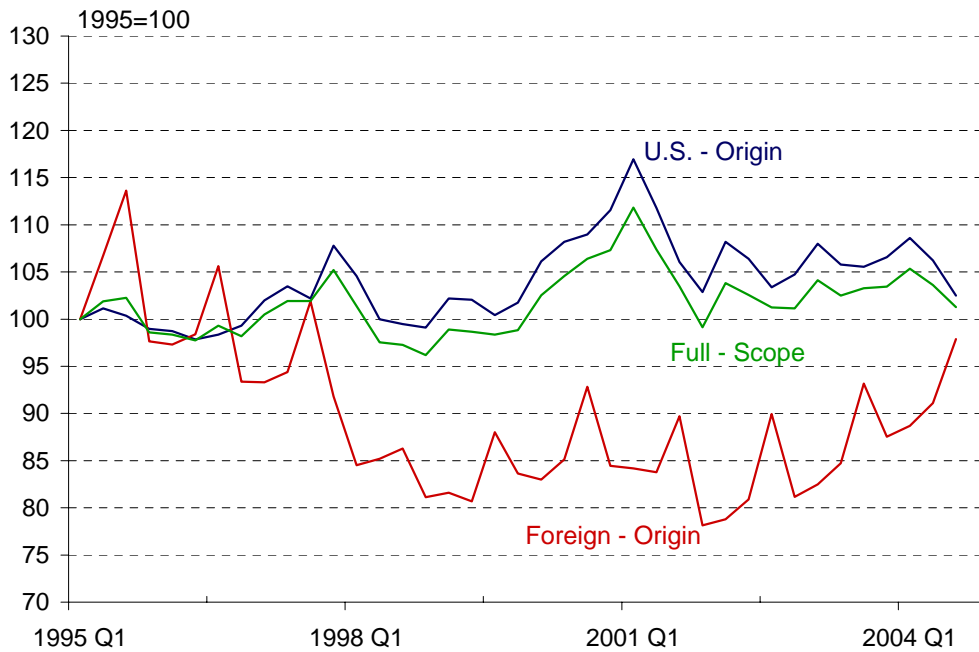

Transportation Services Index	Jan-04	Jan-05
Total Transportation Services Index (1996=100)	121	130
Freight Transportation Services Index (1996=100)	122	131
Passenger Transportation Services Index (1996=100)	118	127

Nov. 2004 to Jan. 2005 data are preliminary.

NOTES: The current value is compared to the value from the same period in the previous year to account for seasonality.

SOURCE: U.S. Department of Transportation, Bureau of Transportation Statistics, Transportation Services Index data, available at: <http://www.bts.gov/xml/tsi/src/index.xml>, as of April 2005.

Air Travel Price Index Level (monthly data, seasonally adjusted)

The U.S.-Origin ATPI measures change in the cost of itineraries originating in the United States, whether the destinations are domestic or international. The Foreign-Origin ATPI measures change in the cost of itineraries with a foreign origin and a U.S. destination. The Full-Scope ATPI combines the domestic and foreign-origin itineraries.

Air Travel Price Index	2003 Quarter 3	2004 Quarter 3
U.S. - Origin Air Travel Price Index (1995=100)	106	102
Foreign - Origin Air Travel Price Index (1995=100)	93	98
Full - Scope Air Travel Price Index (1995=100)	103	101

2004 data are preliminary.

NOTES: The current value is compared to the value from the same period in the previous year to account for seasonality.

SOURCE: U.S. Department of Transportation, Bureau of Transportation Statistics, Air Travel Price Index data, available at: <http://www.bts.gov/xml/atpi/src/datadisp.xml?t=1> as of March 2005.

Domestic Flights: Air Passengers

Domestic Air Seat and Passenger Miles (monthly data, not seasonally adjusted)

Revenue passenger-miles are a measure of the volume of air passenger transportation. Unused seat-miles (the difference between available seat-miles and revenue passenger miles) are used as a measure of airline capacity utilization. Another measure is the intensity of use of the equipment.

NOTE: A revenue passenger-mile is equal to one paying passenger carried one mile. Available seat-miles for an individual flight are the number of seats multiplied by the distance traveled. The data include both transborder and foreign flights by large U.S. carriers, but not include any flights by foreign carriers.

Domestic Passenger Aviation	Dec-03	Dec-04
Available seat-miles (billions)	56.73	60.78
Percent change from same month previous year	4.71	7.13
Revenue passenger-miles (billions)	41.44	44.38
Percent change from same month previous year	4.05	7.09
Unused seat-miles (billions)	15.29	16.39
Percent change from same month previous year	6.55	7.23

NOTES: The current value is compared to the value from the same period in the previous year to account for seasonality. The data have been adjusted to have a standard 30-day month by multiplying the data for each month by the ratio: $30/(\text{actual days in month})$.

The dramatic changes in the September 2001 data reflect the impact of the terrorist attacks on Sept. 11, 2001, on aviation, including several days in which commercial air operations were suspended.

The data reported here excludes small-certificated and commuter carriers that began reporting T100 data in 2002 for comparability with previous issue.

SOURCE: U.S. Department of Transportation, Bureau of Transportation Statistics, Air Carrier Traffic Statistics Monthly, as of April 2005.

Domestic Flights: Air Freight

Domestic Air Freight Ton-Miles (monthly data, not seasonally adjusted)

Though still much smaller than air passenger transportation, air freight is an increasingly important revenue source for the air transportation industry. It includes both freight handled by dedicated air cargo handlers and air cargo shipped on combined passenger and air freight carriers (passenger luggage is not considered cargo for this purpose).

Unused ton-miles are the difference between available ton-miles and revenue ton-miles utilized. Changes in the level of spare capacity might be an indicator of the timely availability of air freight services. For example, a shipper with a sudden need for service will be more likely to obtain an appropriate flight when spare capacity is higher. Space limitations also affect the availability of air freight services.

Domestic Freight Aviation	Dec-03	Dec-04
Available ton-miles (billions)	4.29	4.38
Percent change from same month previous year	9.58	2.10
Revenue ton-miles (billions)	1.32	1.52
Percent change from same month previous year	13.27	15.79
Unused ton-miles (billions)	2.98	2.86
Percent change from same month previous year	8.03	-3.96

NOTES: The current value is compared to the value from the same period in the previous year to account for seasonality.

A revenue ton-mile is equal to one ton carried one mile and measures utilization of air-freight services. The data include both transborder and foreign flights by large U.S. carriers, but not include any flights by foreign carriers.

For those planes that carry both freight and passengers, available freight ton-miles are calculated by subtracting available seat-miles times 0.1 from total available ton-miles. The data have been adjusted to have a standard 30-day month by multiplying the data for each month by the ratio: 30/(actual days in month). These indicators are components of freight and overall aircraft load factors displayed in "Aircraft Capacity Utilization—Passengers and Freight."

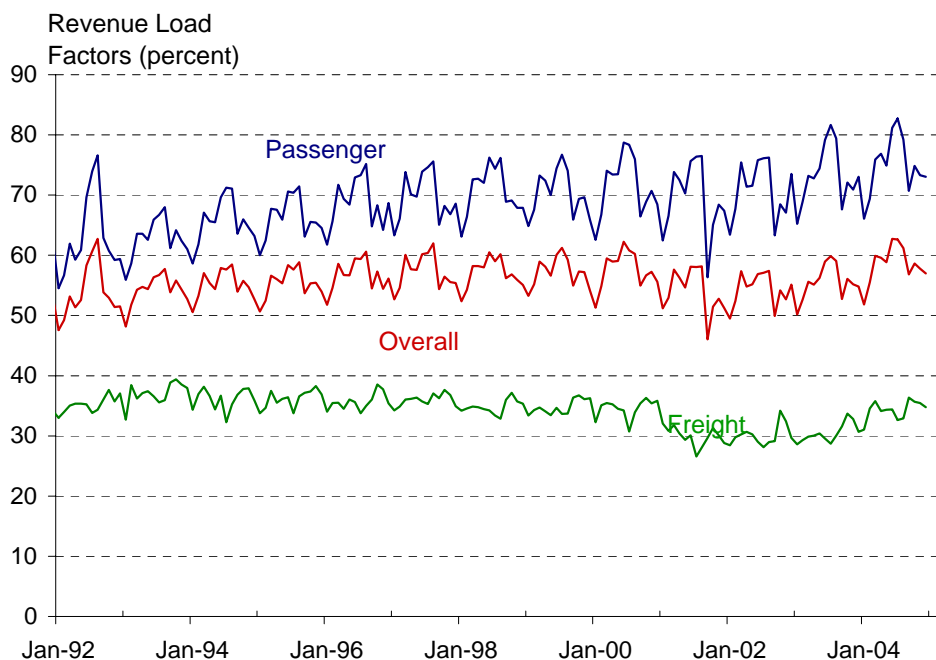

The dramatic changes in the September 2001 data reflect the impact of the terrorist attacks on Sept. 11, 2001, on aviation, including several days in which commercial air operations were suspended.

The data reported here excludes small-certificated and commuter carriers that began reporting T100 data in 2002 for comparability with previous issue.

SOURCE: U.S. Department of Transportation, Bureau of Transportation Statistics, Air Carrier Traffic Statistics Monthly, as of April 2005.

Domestic Revenue Load Factors

Domestic Aircraft Revenue Load Factors (monthly data, not seasonally adjusted)

Aircraft load factors are used to measure aircraft in-flight capacity utilization.

Domestic Revenue Load Factors (percent)	Dec-03	Dec-04
Passenger revenue load factors	73.05	73.03
Change from same month previous year	-0.46	-0.03
Overall aircraft revenue load factors	54.80	57.00
Change from same month previous year	-0.32	2.21
Freight revenue load factors	30.67	34.79
Change from same month previous year	1.00	4.11

NOTES: The current value is compared to the value from the same period in the previous year to account for seasonality.

Load factor is related to the potential capacity of a system relative to its actual performance. In order to combine passenger and freight to calculate overall aircraft load factors, a common metric is needed: ton-miles. Thus, it is assumed that a passenger plus baggage weighs 200 pounds. The data include both transborder and foreign flights by large U.S. carriers, but do not include any flights by foreign carriers.

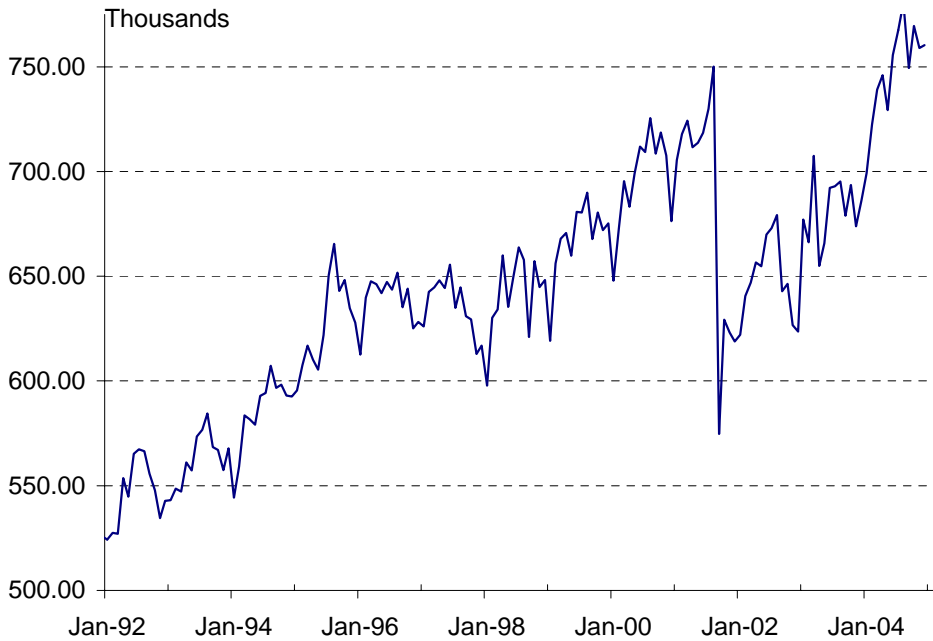

The dramatic changes in the September 2001 data reflect the impact of the terrorist attacks on Sept. 11, 2001, on aviation, including several days in which commercial air operations were suspended.

The data reported here excludes small-certificated and commuter carriers that began reporting T100 data in 2002 for comparability with previous issues.

SOURCE: U.S. Department of Transportation, Bureau of Transportation Statistics, Air Carrier Traffic Statistics Monthly, April 2005.

Domestic Flight Availability and Distance

Domestic Revenue Aircraft Departures (monthly data, not seasonally adjusted)

Average Domestic Flight Stage Length (monthly data, not seasonally adjusted)

Frequency of aircraft departures, the number of connections required for a single trip, and the match between available flights and travelers' desired origin and destination points are all important determinants of scheduling convenience. Because data on connections are currently not available in a suitable format, flight stage length is used here to supplement the information on departures.

Flight stage length is the distance between take-off airport and landing airport. If the mix of origin and destination points are held constant, then an increase in flight stage length implies fewer connections are required for a trip and, therefore, higher quality of air passenger services.

The key relation is that departures and flight stage length will tend to move in opposite directions when changes are due to changes in the number of connections. For example, a trip from city A to city B with a connection in city C will have two departures, but generally a shorter average flight stage length, than the direct flight from A to B with a single departure.

Domestic Flight Availability	Dec-03	Dec-04
Revenue aircraft departures (thousands)	686	760
Percent change from same month previous year	10.04	10.80
Flight stage length (miles)	694	685
Percent change from same month previous year	-0.96	-1.31

NOTES: The current value is compared to the value from the same period in the previous year to account for seasonality.

The data have been adjusted to have a standard 30-day month by multiplying the data for each month by the ratio: 30/(actual days in month).

The data include both transborder and foreign flights by large U.S. carriers, but not include any flights by foreign carriers.

The dramatic changes in the September 2001 data reflect the impact of the terrorist attacks on Sept. 11, 2001, on aviation, including several days in which commercial air operations were suspended.

The data reported here excludes small-certificated and commuter carriers that began reporting T100 data in 2002 for comparability with previous issues.

Major U.S. Air Carriers On-time Performance

Major U.S. Air Carriers On-Time Performance (monthly data, not seasonally adjusted)

Flights Not Arriving On-Time (monthly data, not seasonally adjusted)

The number of flights not departing or arriving on time, cancellations, and diversions are measures of service quality. These indicators are strongly seasonal and are affected by weather and heavy demand in winter and summer months, respectively.

On-Time Performance	Feb-04	Feb-05
Number of scheduled flights	552,976	544,760
Percent change from same month previous year	10.55	-1.49
Percent of flights not arriving on time	22.50	22.36
Change from same month previous year	-0.96	-0.14
Percent of flights not departing on time	17.97	18.83
Change from same month previous year	-1.25	0.86
Percent of cancelled flights*	1.71	1.74
Change from same month previous year	-2.28	0.03
Percent of diverted flights**	0.13	0.16
Change from same month previous year	-0.10	0.02

* Also counted in flights not arriving or departing on time.

** Also counted in flights not arriving on time.

NOTES: The current value is compared to the value from the same period in the previous year to account for seasonality. Data for American Eagle was included starting in January 2000. Percent changes from January 1999 to January 2000 were calculated based on data excluding American Eagle. Aloha Airlines, which reported on-time statistics for October 2000 through November 2001, has been excluded to retain comparability. Hawaiian Airlines started voluntary reporting the data in November 2003, also has been excluded.

The data cover the 10 largest U.S. air carriers. A scheduled operation consists of any nonstop segment of a flight. The term "late" is defined as 15 minutes after the scheduled departure or arrival time. A cancelled flight is one that was not operated but was listed in a carrier's computer reservation system within seven calendar days of the scheduled departure. A diverted flight is one that left from the scheduled departure airport but flew to a destination point other than the scheduled destination point.

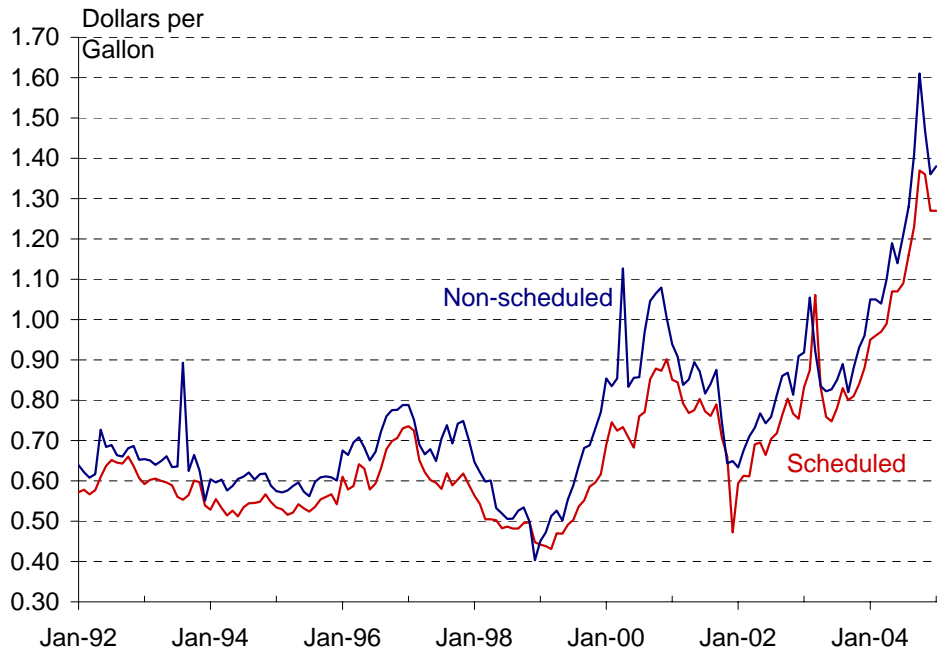

The dramatic changes in the September 2001 data reflect the impact of the terrorist attacks on September 11, 2001, on aviation, including several days in which commercial air operations were suspended.

Certain flights originating at O'Hare airport and operated by American Airlines (181 flights in April) and United Airlines (256 flights in April) between April 24, 2002 and May 8, 2002 are not included in the calculations due to the participation of these carriers in a pilot test program for enhanced baggage screening. A list of affected flights is available from BTS.

SOURCE: U.S. Department of Transportation, Bureau of Transportation Statistics, Airline Service Quality Performance data, as of April 2005.

Domestic Airline Jet Fuel

Jet Fuel Prices by Type of Service (monthly data, not seasonally adjusted)

Jet fuel prices reported to the Bureau of Transportation Statistics differ from producer prices. Reports to BTS show the cost per gallon of fuel used by an airline during the month rather than the price charged by a producer on a single day. Fuel costs for scheduled airline services reflect contractual and storage advantages available to large buyers, while fuel costs for nonscheduled airline services reflect economic conditions for smaller buyers. Jet fuel prices also reflect seasonality due to both the seasonality of aviation and because jet fuel has similar refining requirements to heating oil.

	Current Dollars per Gallon	Jan-04	Jan-05
For nonscheduled airlines		1.05	1.38
Percent change from same month previous year		14.32	31.43
For scheduled airlines		0.95	1.27
Percent change from same month previous year		14.19	33.68

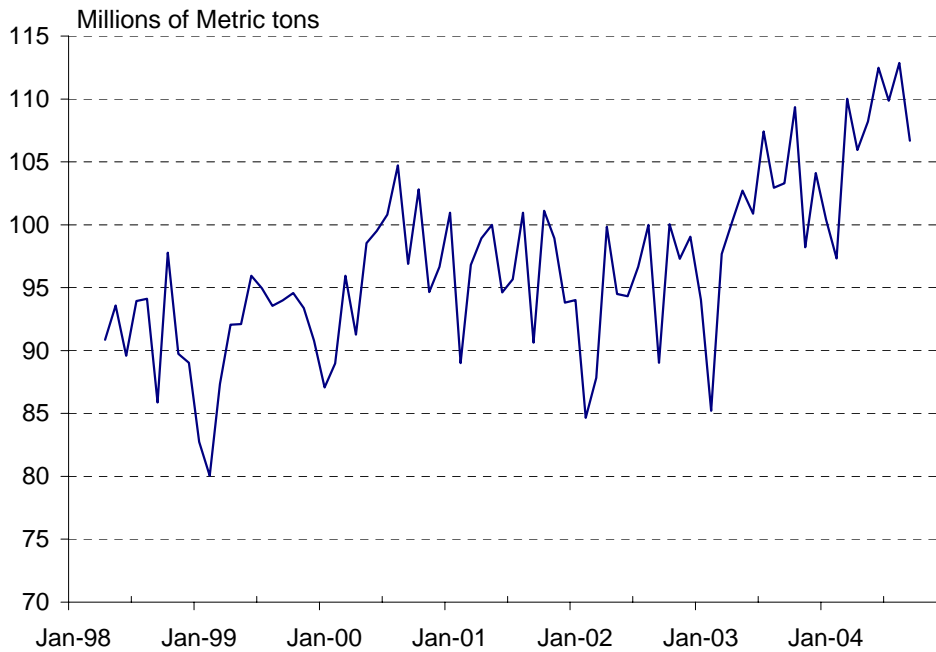

NOTES: The current value is compared to the value from the same period in the previous year to account for seasonality.

Data for September 2004 to January 2005 are preliminary due to late reports by carriers.

SOURCE: Bureau of Transportation Statistics, Office of Airline Information, available at: <http://www.bts.gov/oai> as of March 2005.

U.S. Foreign Waterborne Freight

Tonnage of U.S. Waterborne Imports and Exports (monthly data, not seasonally adjusted)

Import and export tonnage helps identify the volume of cargo flowing through U.S. ports and the resulting vessel traffic on U.S. coastal waters. It also helps identify needs for intermodal truck and rail traffic.

Most U.S. coastal ports handle both foreign and domestic cargoes.

U.S. International Freight	Sep-03	Sep-04
Total waterborne metric tons (thousands)	103,295	106,675
Percent change from same month previous year	16.03	3.27

2004 data are preliminary.

NOTES: The current value is compared to the value from the same period in the previous year to account for seasonality.

A metric ton is equal to 2,204.6 pounds.

SOURCE: U.S. Department of Transportation, Maritime Administration, Office of Statistical and Economic Analysis, U.S. Foreign Waterborne Transportation Statistics data, available at: <http://www.marad.dot.gov/statistics/usfwts/index.html>, as of February 2005.

U.S. Surface Trade: U.S-Canada and U.S-Mexico

Value of U.S.-Canada Trade (monthly data, not seasonally adjusted)

Value of U.S.-Mexico Trade (monthly data, not seasonally adjusted)

Surface freight is useful in monitoring the value and modal patterns of trade with Canada and Mexico, our North American Free Trade Agreement (NAFTA) partners. Canada is our largest trading partner, while Mexico now ranks second. Surface modes include not only truck, rail, and pipeline (shown here), but also government mail and other miscellaneous modes.

U.S. - Canada Trade	Jan-04	Jan-05
Truck (millions of dollars)	18,605	21,627
Percent change from same month previous year	-0.15	16.24
Rail (millions of dollars)	5,232	5,951
Percent change from same month previous year	6.96	13.75
Pipeline (millions of dollars)	3,239	4,235
Percent change from same month previous year	20.91	30.76

U.S. - Mexico Trade	Jan-04	Jan-05
Truck (millions of dollars)	13,617	14,982
Percent change from same month previous year	5.77	10.02
Rail (millions of dollars)	2,343	2,381
Percent change from same month previous year	6.85	1.65
Pipeline (millions of dollars)	8	10
Percent change from same month previous year	-88.04	24.77

NOTE: The current value is compared to the value from the same period in the previous year to account for seasonality.

SOURCE: Data obtained from the U.S. Department of Transportation Bureau of Transportation Statistics, Transborder Surface Freight Dataset, available at: <http://www.bts.gov/ntda/tbscd/prod.html>, as of March 2005.
