Appendix H: Data from the DIRECT Natural Use Study

This appendix contains the “raw” “quantitative” data from the Before and After Questionnaires, which are presented in Appendix F, and the “qualitative” comments that subjects made on the questionnaire, during an interview, and in the in-vehicle notebook. A summary of this data is contained in Appendix G. The data presented is as follows:

Before Questionnaire Data Crosstabulations by Method.	H2
After Questionnaire Data Crosstabulations by Method	H113
Subject Comments on the Questionnaires.	H203
Subject Comments During Interviews.	H212
Subject Comments in a Notebook	H227

The quantitative data here is presented as crosstabulations by method, i.e., a table for each question or subquestion with response categories as rows and methods as columns. Of course, the five methods are the control group and the four information delivery system groups: AHAR, LPHAR, Phone, RDS/SCA. The summed/total response is also given. Each cell within the table has two values; the first/top value (##) represents the number of subjects who selected that category as their response and the second/bottom value (##.#) represents the percentage of subjects within the given method (column) who selected that category. A blank in any cell indicates that no subject in that column selected that response. Moreover, if no subject answered in a given response category (row), then that category is not included in the table. Similarly, if no subject in a given method (column) answered in a given question, then that method is not included in the table. Note some questions in the After questionnaire were not asked of the control group.

Note that for questions asking subjects to “check one”, the data represents the number of the item selected. However, for questions asking subjects to “check all that apply”, each response category has its own variable and the response is “0” if the subject did not select that response and “1” if they did.

A few other comments on the data here must be made. First, the “gender” and “age” data were obtained from the subject recruitment process, not the Before or After Questionnaire. Second, the age, education, and income responses have been categorized, and presented here as “CAT” variables, to simplify the analysis. Third, a number of questions asked subjects to “pick the top 5 (or 3)” from a list of potential responses and then to rank their choices from 1 to 5 (or 3). A number of subjects did not rank their selections; the value for the 5 (or 3) choices these subjects made were set to the mean response, i.e., 3 (or 2). Forth, data for questions that asked a subject to either check “did not use” or fill in “changed — times”, is of the form “did not use” and a number for the times they changed if they “did use”. Note that the number may be “0”, i.e., the subject used the system but did not change their behavior because of it.

Subject Comments on the Questionnaires

Subject comments are listed by test group and period.

<p>CONTROL GROUP, PERIOD 1</p> <p><u>Before</u></p> <p>I'm looking forward to the study and appreciate being able to use a car.</p> <p>After:</p> <p>The traffic situation is generally the worst in September. With school starting, vacations ending, and construction. In general I get most of my traffic information from the radio. If they report a problem I'll usually consider alternate routes but wait to personally see how bad the back-up is before deciding (unless radio tells me it's really bad and I have a reasonable alternative). I think changeable message signs are a waste of money. Can't possibly give enough information to make decision. Leave it to private radio stations and the free enterprise system to find best solution. Government should focus on road repairs, improvements, increase number of lanes and build new roads. Don't do construction on more than 1 major route at a time. We need more freeways and lanes in Detroit.</p> <p>During the survey, I tended to pay more attention than usual. Since there was a lot of construction, I tended to take an alternate route.</p> <p>I think this is a very positive program and has potential to help a lot of people.</p> <p>I think it is a worthy program for information on future commutes. I'm glad somebody is taking time to evaluate the matter so it may be less stressful in the future.</p>
<p>CONTROL GROUP, PERIOD 2</p> <p>After</p> <p>Radio AM 950 traffic reports every 10 minutes is extremely helpful- we listen constantly in the morning and periodically in the afternoon going home. We can be late going home so the trip is not as stressful as the trip to work where every minute counts. When we hear about problems on I-75 south in the morning before departure, we take an alternate route. Sometimes the 950 radio traffic report is incorrect-it needs to be more accurate. The changeable signs on I-75 do not all work. We noticed there is a new system on I-75 S. That directs you to 1630 AM radio (when lights are flashing). Maybe this will help. The expressway needs more lanes since many people work or live north of Detroit.</p> <p>A car and a radio is what I have always used. I hope that I have helped. I would like to have used some new types of methods for traffic ideas. I liked the auto. and may even buy one. If I or we can serve your tests in the future please let us know. Thank you. sorry for poor writing in the note book some was done, same time.</p>
<p>CONTROL GROUP, PERIOD 3</p> <p>After</p> <p>To me, biggest concern with traffic congestion is accidents, breakdowns and gawkers. With the new camera systems and monitoring devices being installed along the highways, not only should traffic information be relayed to drivers, but traffic bottlenecks should be aggressively be cleared. A strike force with a flat bed truck and spare gas should be dispatched to all vehicles stopped on the road. These disabled vehicles should be removed from lanes of traffic, and immediately taken to the nearest exit out of sight of the other motorists. Of course accidents require more care, but they should be moved out of sight as soon as possible. In the Detroit area, there are no good alternate routes. When everyone heads for the alt routes they get backed up too. Don't tell how bad it is, help us get where we were going.</p> <p>I have enjoyed the use of the vehicle and the opportunity to participate in this program. I hope alternatives will be found to ease traffic congestion.</p> <p>I enjoyed the DIRECT project and look forward to participating in the future.</p>
<p>CONTROL GROUP, PERIOD 4</p> <p>After:</p> <p>I would like to see traffic information become instantaneous for use on expressways and major through fares.</p> <p>I like the proposed system. Hope it will work as planned.</p> <p>I was disappointed with the build up of this survey. I was not contacted once during the time I had the car by anyone in the project. I thought that the radio display in the car would have had the traffic information activated for my use I felt that my knowledge and experience as a driver was not really utilized. With just my opinion on the surveys and whatever information that was gathered from the car, I'm unsure what gains could possibly be made to help others in their commuting downtown. Until taking part in this program I did not or I should say, was not conscious of how bad the traffic from home to work on I-75 was. It was a real struggle almost every time I took that route. The program made me aware of how much I dislike the route and how nerve racking the route is at certain times in the morning.</p>
<p>CONTROL GROUP, PERIOD 5</p> <p>After</p>

Quite disappointed that I fell into the "control" group- would have enjoyed the opportunity to experience new technology possibilities.

CONTROL GROUP, PERIOD 6

Before:

Good program. I'm looking forward to participating in the study.

After

The message signs above the roads seem to be improving in amount of time they are operational and in the accuracy of information, but not enough to be reliable or very useful, in my opinion.

1. We need quick and more radio reports; ? More changeable signs: 3. More freeway lanes: 4. More car and bus pool lanes: 5. Better transit system- city and suburbs.

1) somewhat disappointed being in control group 2) traffic on radio better than no information but frequently not on the mark 3) I like the Chevrolet Lumina - would consider buying one. It's a good solid car 4) best of luck analyzing this data. Results could be quite random 5) thanks for the opportunity to participate 6) I can get to work faster than filling out this survey!

I tend to make route change decisions when it appears traffic is really backed up. Sometimes traffic reports cause others to take alternative routes so backup lessens.

I was in the control group.

CONTROL GROUP, PERIOD 7

After

A system needs to be developed which will allow me to check the route I want to take anytime I want.

I've noticed additional traffic information signs being installed on I-75 south bound around 11 mile Road. This, to me is the wrong approach. You need to get to the sign to receive the information about upcoming road conditions, then everyone reacts from that point. The available alternate routes will be more congested as fewer options available to a larger number of people. The signs are somewhat distracting as well. When you read them you're not watching the road, and neither are other drivers around you.

Revamp the mass transportation system using high speed trains for point to point transport. Improve the local public transportation systems in the point destinations locations to make local transportation convenient and friendly. Then, get out of the Interstate expressway business.

AHAR GROUP, PERIOD 1

After

It would be nice to have more control over the system so that I could access information at any/all times.

I only wish the system worked! Received no broadcasts! The car was great. Thank you!

AHAR GROUP, PERIOD 2

Before

I hope your project has support to allow implementation of an improved information system for motorists.

After

Overall, I would like to encourage your efforts to improve the traffic information system. There is a real need for commuters. My only disappointment was that because the system in my test vehicle did not work, I couldn't contribute more.

I would enjoy participating in the DIRECT project an additional time. The system didn't work properly the designated time period that I used it I would get traffic information 2-3 times a week. The information was either dated the day before or the problem wasn't there when I approached the site- I am really interested in the outcome of this project

I imagine that I've been "stuck on stupid" because I really wanted the system to work. I've been stuck in traffic and been late to work more in the past 8 weeks than ever before. A "die-hard dummy" waiting for something good to happen with the system. I really and truly wanted the test to work. Thanks for the opportunity.

I only received a message about once a week and it was usually a "test message". Several times I knew there was traffic delays (by listening to the radio) but got on I-75 anyway so I could hear a message- never got one. Even the test messages were garbled or incomplete the first four of five times until I was near a transmission tower- then I was able to listen to the message in its entirety

Enjoyed the car, DIRECT didn't work I should have written more notes- maybe next time.

AHAR GROUP, PERIOD 3

After

Thank you for allowing me to participate in the DIRECT project. It is a necessary addition to our traffic information system. However, you have to improve the clarity of the radio messages since I found them not as clear as WWJ or WJR. Also, the frequency and keeping the messages up to date is very important. The DIRECT traffic messages have too much static.

I use AM 950 which has traffic on the "8". It is usually reliable but doesn't always give information soon enough (I am

sometimes too far on route to change directtons). DIRECT was useful but I didn't get the information until it was around 12 mile which was too late to change routes.
If the system extended farther out on I-75. information to use alternate routes would become much more effective.
The DIRECT traffic system was loud/noisy but was not clear. It only announced 1-2 times about traffic conditions. Most of the time it didn't provide any information.
Although I was not satisfied with the DIRECT system. it may be because I only heard "test" messages. If the messages are reliable in the future I think the DIRECT system could be very useful to the average commuter'

AHAR GROUP, PERIOD 4

After

For the time I participated in the DIRECT project, it did not provide me with any useful information.
Value of the DIRECT program was diminished by: 1) clarity of the transmission (sometimes fractured, other times static) 2) timeliness of messages (at times left on for hours, or in one instance days after occurrence.) Overall, incremental value over radio reports was not evident.
Smce there were only 3 times traffic information was relayed through DIRECT, it was difficult to accurately access the system.

AHAR GROUP, PERIOD 5

After

Has potential-great idea if it worked reliably/accurately. Did not activate until halfway through my commute-too late to avoid delays. Inaccurate information relayed-often no messages.
DIRECT was very difficult to hear clearly. Quite often the signal would cut in and out. Some information was old and was repeated on multiple days. information was not specific as to location and time delays of construction. Some congestion was missed altogether. The accident notification was good as to location and expected length of delay. Commercial radio was more specific as to where the congestton started at a specific time of day. DIRECT information was too general for construction information. System needs significant improvement.
This particular system is good in concept but has problems that need to be worked out. I left notes throughout the questions. My notes and comments will also be attached. The system is easy to use since it comes on automatically and broadcasts over the radio. Please read my attached notes. Thank you for allowing me to participate.
Sometimes no messages for days, sometimes messages 2 days old, sometimes in traffic before receiving message. Radio cuts out-no message or partial message-depends where you are in relation to zone. Some messages 2 days old. Some messages extremely loud. Must lower radio volume to where music is barely audible.
I was very disappointed in DIRECT. Commercial radio always had more timely, complete information before DIRECT.
When the DIRECT system did work. it was useless, repetitive messages or indecipherable and/or incomplete. I would never purchase this system!
I never received a report before 7:00.

AHAR GROUP. PERIOD 6

Atter

The system worked well at first, but then repeated the same message the last few weeks. Include constructton delays.
Hopefully in the future, our traffic systems will be put to good use to help everyone find, or be prepared to use a safe and easy alternate route. My only concern for the present time is that our law agencies (state police, local police, and county shenffs) take hack our highways and make them safer for those who care. The highways remind me of the old west, with the irresponsible drivers (bad guys) ruling the highways.
This is a very difficult, variable and diverse topic to attempt to satisfy all conditions with one solution. Multiple options at different lists would probably serve more people best. If information was specific, yet consistent and reliable, it would still be very helpful
Radio system could develop into good system if more attention paid to sending messages more often and at more locations. I would want to hear about a traffic problem on I-75 when I was at VanDyke and I-696 so I could take a alternate route.
I want to thank you for the use of the car. However, I found the program a great waste of time. Nobody seems to monitor the system and make sure it is accurate. I heard the same accident report for 3 weeks, and when I did get a report it was too late, I was already stuck and had heard it on the radio.

AHAR GROUP, PERIOD 7

After:

The DIRECT program did not benefit me on this trial basis. I was already at work when whoever was updating the system got in. I only heard 5 test messages. Some messages were replays from the day before.
The DIRECT mformation is just not right for me. I need the information when I start the car. The interruptions by a static CB type broadcast with Inaudible information is not an improvement over the ability to channel surf between 760 and 950 am radio stations.
The test on Monday carried over day to day repeating itself, it was annoying, other times, it started to bleep in and cut out.

The radio stations were always ahead of this report with the exception of one time.
The roads are not utilized fully - only for 3 hours twice daily during work week are the roads over utilized (30 hours out of 168/week) which is less than 20% or 1/5 of time - need Co spread the road usage outside these 30 hours. Not to devise systems to accommodate usage within the 30 hours!
I can not endorse any of the other choices because the premise of DIRECT helping is incorrect.

LPHAR GROUP, PERIOD 1

After:

With the system I used, I found that having the blinking signals only in the areas near downtown, I was often caught-up in the delay before I received the message. The system was helpful when informing about construction delays and how long they would last.

I liked the idea of the system I just want more information.

I like the concept of DIRECT, it just needs to be more accurate and consistent and also it should be put on all major expressway and roads in metro roads. Pertaining to the personality test. I am laid back and outgoing in my personal life and more structured at my work (therefore left a lot blank because both answers applied). Thank you. nick. (note on page 21 said "because of the inconsistency with it working, There were times I didn't even bother using it, expecting it not to work. And it doesn't cover my route on 94 or other expressways").

System would be more appealing if it gave frequent reports on traffic condition, i.e. how well traffic is flowing, avg. Speed, congestion areas. Broadcasts received mainly dealt with construction. but did not always indicate if traffic was affected.

LPHAR GROUP, PERIOD 2

Before:

I think DIRECT is a good idea. I-75 is a highly traveled expressway. We need to determine alternate routes. Hopefully the DIRECT project will do that.

Traffic information is mostly unreliable because it is too hit or miss. The helicopter or plane is usually on other side of town when something happens on my route.

After

I rely highly on traffic system news. It gives me a chance to calculate the amount of time it would take to come home. If I know where the delay is at and how long it will take, I can determine if I should use an alternate route. I appreciate MDOT allowing me a chance to test the traffic system. If in the future, you need to use me again in this project. I would love to participate.

In the past 8 weeks there was only one message on my DIRECT system. I truly was disappointed in DIRECT.

It was very unfortunate that for the DIRECT project, 1610 AM radio signal message only seemed to work on Mondays and Tuesdays, Wednesdays and Thursdays was static and by Friday silence. Cannot judge effectiveness of messages because didn't get any.

I was very dissatisfied with the radio system. In 8 weeks, only 1 time was information on traffic provided.

As it currently exists, DIRECT is a waste of time and money. In the two instances that actual messages were broadcast the information provided was old and inaccurate.

LPHAR GROUP, PERIOD 3

After.

There were no traffic incidents of any length during this period unfortunately. Thus I never received any data from the system.

The system was useless. It rarely offered information other than a test message. The concept is good, convenient and could be valuable. but it needs considerable improvement. The test in its current state, is not reflective of the potential of the system. Personally, I wouldn't recommend the expense of a pilot until the system actually works! This must've been a waste of considerable tax payer dollars-too bad!

I commute with 3 others so my route is prescribed. Also the times. A Carpool lane should be implemented to relieve congestion.

1) need mass transit 2) need Carpool lane and subsidy for those who participate 3) DIRECT was very unreliable - very few broadcasts were available 4) Luminas very nice vehicles- thanks for allowing me to participate.

LPHAR GROUP, PERIOD 4

After

Would have preferred messages be updated more frequently. Need construction information.

My options for route selection is most open when I leave, not when I am on the route. Consequently any available information was too late to use. The information was often old and not useful. I.e. at 5:30 I get message - it is 4:30 and we expect a delay for about 45 minutes, should I expect delays at 5:30? The interruption device was more convenient, yet still problematic because I often prefer silence on my routes.(i.e. no radio or tape) traffic was less of a problem than I realized, good day 18 minute commute, bad day 22 minute commute.

Most of the time the DIRECT messages were test messages. When there was a message, it was good (contamed information about the Incident, location. time occurred and how long delay was expected). It would've helped to mention how traffic in general was (ex: I would not know if heavier than usual traffic was due to weather, earlier incident, etc.). You can improve the broadcasts on 1610 AM significantly. First, at least update the information. All too often the same traffic message was broadcast for days. In addition update the information more frequently and with more reliable data. Help save trees and the cost of printing by photo copying this document on both sides of each sheet! This current format is very wasteful.

LPHAR GROUP, PERIOD 5

After:

At some times the mformation on recordings was 3-4 days old and totally irrelevant.

I found the DIRECT project very helpful in commuting

LPHAR GROUP, PERIOD 6

After

Provide more warnings (i.e.: traffic backups) signage indicating phone number to call for trouble.

One shortcoming of DIRECT is that one must "drive into" an incident before being able to hear about it on the broadcast- this limits alternative routes. Also there was no construction information (I-75) given during the entire period. Sometimes the previous days broadcast wasn't canceled leading to some confusion.

I had problems determining whether the system was working.

I only heard the systems broadcast once during the entire time I tested it, and that was just a test broadcast (for facility number4 on 9/15/97). Every other time I tuned in, there was nothing but static. I thought the radio was broken, until I heard the test broadcast. I would not want the system I tested.

Public radio could handle it if we had decent roads. and major construction was not a way of life. I-75 and I-94 are both a disgrace.

I thought the radio information system worked well but the light system did not work at all.

LPHAR GROUP, PERIOD 7

After

Trucks should not be allowed on road during rush hours. Time the dam lights on major surface streets.

This will be great once it gets going. Don't forget the weekends and nights also.

Would have used if more information was available. The concept of it being a button away is great. Only received test messages. Would have loved the real information. If more than test I would have loved it!

PHONE GROUP, PERIOD 1

After

DIRECT project was great. I see room for many improvements. I got tired of hearing nothing to report which was not always presented in that matter. Found it not as useful as I had hoped- especially the test area. Towards end- I liked hearing about traffic not test area in mornings. Ex- big beaver slow down means more than 20 miles away- a lot can happen before you get to test area.

Only I time in 8 weeks was the information provided that I needed 99.9% of the time there wasn't even a msg. When I pressed 75 it simply started again to say "welcome to DIRECT" also the instructions for accessing 911 were incorrect and didn't work When I manually dialed 9 11 I could no longer reach DIRECT and had to call MDOT to get the DIRECT number and reprogram the phone. I had a flat tire during the study and while MDOT was very helpful, provisions for fixing the tire were non existent and had to be devised on an "ad hoc" basis. People were accessible by phone and returned my calls promptly when they were out and Michelle follow up with calls regularly so the study gets high marks for that. I must honestly say that for the times I commuted, the DIRECT information provided was virtually useless!

The system when working could be a valuable tool. It seemed to be more off than on. Messages were not dated and often repeated over several days- which left you to doubt their accuracy. If updated frequently- could prove to be a great asset to everyday travel Would definitely partake in future studies.

PHONE GROUP, PERIOD 2

Before.

If cars tailgated less dunng rush hour, traffic would flow smoother.

After

The use of the car was great- thank you! The DIRECT system rarely had information. I only received information on about 3 occasions. If the systems had daily information it would have been useful.

The traffic system I had is a good idea, but it was very inconsistent. It often missed incidents that the radio did not. The best feature on the system is that it offered more specific data such as when it happened and expected length of delay.

It would have been helpful if the system was explained more when we got it with examples of typical types of messages. For 8 weeks my car phone kept repeating "welcome to DIRECT" after I entered 75 for the route. I only got other messages about

5% of the time and only a few were real traffic messages. I figured that this was normal for DIRECT. I still don't know. It would be nice to get a real message every day. It was frustrating when I'm sitting in heavy traffic and my phone says "welcome to DIRECT" which meant there were no traffic messages to report. I think people should call from their cars to tell DIRECT when they are in stop and go traffic and then tell DIRECT when traffic frees up. You should use these people as a resource.

1)figure out a way on I-75 service drive so that if traffic backs up, the lights can be timed to let the service drive almost act like the expressway. This would give you a viable alternative route. Additionally, television cameras stationed every one mile, would rotate on a television screen to show exactly the situation. A split screen showing 6 parts of x-way at any given time. The television screens could be placed in office buildings downtown. or televised on local TV. The key is multiple split screens. P.S. you need to fix the car phone, it does not work well in this car. The cellular phone rarely worked (gave traffic reports). When the reports were available, they were helpful. If the system gave daily reports. it would be convenient to use.

PHONE GROUP, PERIOD 3

After

The car is great but the system does not work.

The project supplied very little information.

I enjoyed driving your vehicle. The DIRECT phone did not give me many messages. The few I did get were helpful. I would like to participate in your research again. Thank you.

Would love to be able to have my husband buy this- when it is more operational....could I receive results?

Car phone did not provide accurate information, although it did operate.

PHONE GROUP, PERIOD 4

Before.

Willing to help in any way that may improve traffic/commute.

After:

DIRECT program is a good communication media for the downtown commuter. Unfortunately for me the system did not work very well during the 6-8 weeks that I had it. I cannot give a fair evaluation of the system because it did not operate properly. I would like to give a fair evaluation with the opportunity again to use this system.

The DIRECT traffic mformation system I tested did not seem to work all the time. There seemed to be less than normal road problems dunnig the test period on my route.

The cellular phone system is a great idea and has a lot of potential-it simply needs to be updated more frequently.

PHONE GROUP, PERIOD 5

After

Traffic mformation is not timely or available on demand.

The DIRECT system has potential-but it didn't work most of the time. Why does MDOT contract to do construction. on all freeways at the same time? Why are roads barriered off for months and months with no one ever to be seen working?

It didn't work much of the time. It didn't give the information that I needed.

I found the DIRECT system very easy to use: however the information was not available to me until after I had already chose my route, and by then it was to late to make an alternate route decision.

I would want to see market price of competltors, 2) would be willing to pay more if it really met my needs-(directional data, as well.)

DIRECT could be a useful system if the system was much more reliable.

My main complaints about the DIRECT system: 1) too specific: would only identify problems on I-75. I would like

mformation on other roads that I take also. 2) is only available at limited times. 3) did not always have the traffic problem information that I needed.

PHONE GROUP, PERIOD 6

After

I do not believe that the government should be involved in traffic information. Projects such as DIRECT. It is just another way to waste tax dollars. The DIRECT project drove me to the above opinion. I only received one traffic message during the eight weeks. I got that message after several tries to get through to the DIRECT line. The message was wrong because it said there was a backup at a certain point on N.B.-75. I had just passed that point and there was not a backup. For me to pay for this service the following conditions must be met 1) information updated every 5 minutes 2) information must be reliable 3) the system must operate between 6 am and 7 pm 4) I must have the information available to me before I back out of the driveway at home or pull out of the parking lot at work.

It didn't work at all. I stopped trying to use it after the 3rd week or so.

First, thank you very much for the use of the car, I really appreciated it. My opinion is the DIRECT test was a complete waste of time and tax payer money. Whomever was responsible to update the DIRECT system with traffic messages should be fired. In the 8 week test, there were at most 6 messages. Numerous times there were traffic problems with DIRECT not

being updated. In talking to another DIRECT participant. with a different system, the same opinion was voiced "the test was a joke". Why spend all the money on this study when we, the participants, cannot even get the basic information? More often than not, the DIRECT system was not available or information on DIRECT was not updated.

PHONE GROUP, PERIOD 7

After:

In general, I was disappointed - 95% of the time, I was given no information - it either repeatedly asked for a route or I received the "server is not being updated at this time" message; when there was something reported, it was sometimes left on for several days

It did not work when needed.

Unsure of the test that I participated in. Every day I checked the DIRECT phone system for traffic information and only three times was any information truly traffic related and timely. However, thanks for allowing me to participate and I hope this information helps.

Usually the information comes too late - I'm already stuck in traffic before I hear news about an accident blocking some lanes.

I would have preferred a system that would let me phone in for WWJ-style reports that were constantly updated. With the current system, we were lucky to ever have a message on the server to listen to: it was never updated until the following day.

RDS/SCA GROUP, PERIOD 1

Before:

Hope to provide useful information to make driving easier for everyone.

After:

I was not happy with the traffic information provided by the DIRECT project.

The DIRECT project is a good idea. The implementation as I experienced it is not good. I only received 1 report of an accident on my commute to work. The construction messages were great! I just didn't get enough information from it.

Usually more on the radio. And most times I couldn't tell if it was working. I suggest a message every day whether there is anything to report or not.

DIRECT system seemed to be unreliable and very distracting. Often times the radio was more current.

I would like to thank the University and the DIRECT program for giving me the chance to be involved with this program. I think if the few bugs are worked out this would be an excellent item to have in a car. I do believe that there should be a way to only hear the traffic problem once or twice. As soon as I enable DIRECT if another problem occurred it wouldn't be heard. Also, all the changeable message signs should say something even if there isn't a traffic problem. It would keep drivers alert to driving. If a sign could say have a good day, or a nice weekend, the weather for the day anything would be better than a black sign. The car was great. When can I have another?

I am very sorry my system never worked. I made it known but the problem remained. Thanks for selecting me.

RDS/SCA GROUP, PERIOD 2

After:

To be useful for me, it would have to provide information at least North to the Palace.

This 8 week experience was basically a "non-experience". The communication system functioned so sporadically that it could not be relied upon. Additionally, it interfered with normal am radio reception. Therefore on truly inclement weather days, I did not drive the vehicle because I feared being without accessible information. The electronic system should have been tested better and validated before the project began.

Unfortunately the reports were only received 3 times during the past 8 weeks. (other than test). I think the system could work if the infrastructure was there. It seems to me that the project has a long way to go before it would be good enough to go commercial.

The system was easy to use, it turned itself on. That is the only thing, that seemed to appeal to me. The information was sometimes inaccurate, the system sometimes unreliable. The announcements were annoying with repetitive test and information announcements. I rely on the radio stations that I listen to help keep me stress free and the unannounced messages distracted me. My suggestions: 1) get rid of the little jingle before the announcements. "boy" were they annoying. 2) don't repeat the messages as often. three times is enough per 1/2 hour. Especially if it's just a test message! 3) the messages took too long to cut in. The radio would cut in and a few seconds later the announcement would come. 4) it would be an easier and nicer system if it was a radio station that you could tune too. A radio station that had constant updates. That, I would pay for.

I don't think the system worked as intended. Reports were daily at first (although no help). Then they just stopped. The service only helped out commute once.

RDS/SCA GROUP, PERIOD 3

After

The DIRECT program was very easy to use and would have been very beneficial if: -all incidents were reported timely -

updates only occur after 1st report heard vs. Giving same message over/over -updates were consistently given; I never got any update on reported incidents -some incidents never were reported.
I hope a system that works can be found.
The radio system used as part of DIRECT was a waste of time and effort. Quality of messages were terrible, information when provided was useless. Simply put was a waste of taxpayers' money and my time and effort.
The delivery mechanism tested I believe is very effective and appropriate. The quality and completeness of the information was, however, lacking.

RDS/SCA GROUP, PERIOD 4

After:

The DIRECT signal only made it to 7-mile and I-75. If the signal made it to 12-mile and I-75 then it may have helped in my decision make of alternate routes. Once I finally heard what was on the radio it was to late to change routes.
The DIRECT system signal was very weak on the I-75 route. Could not pick up the information north of 8 mile road. Very static. During 8 weeks the commute was much lighter than usual with no construction. Great concept. I would be willing to use system on a regular basis.
I think the project has the right idea-however the radio messages were not very reliable. I always listened to WJR to confirm the DIRECT messages and many times I did not change my route - because I wanted to confirm that the DIRECT system gave accurate information. A majority of the time the messages were very inaccurate. I would like to say that I was glad to participate in the study. Hopefully my comments will be helpful to the project. Thank you and good luck. Thanks for the use of the car too!!!
I liked the system very much except for the static received during most of my route. I liked being able to turn it on/off whenever I wanted (on demand feature) I also liked only having to hear my route and not all of metro Detroit. It would be nice to program a specific route when needed when driving route changes.

RDS/SCA GROUP, PERIOD 5

Before.

I am looking forward to the study-hope I can help improve the system.

After:

I appreciate the opportunity to use this device.
I was very pleased to participate and would be willing to do so again in the future. Please call if you need help.
Could not clearly understand transmission until south of 10 mile. No news that wasn't available on WWJ. DIRECT did give expected duration-good feature.

RDS/SCA GROUP, PERIOD 6

Before

I am very Interested in in-vehicle Information systems and global positioning.
Any information that will make my commute less stressful is welcome. I'm excited to learn more about devices specific to my commute

After

1) it was frustrating to encounter an accident that wasn't reported via DIRECT 2) my system had technical problems (bad reception), this hampered my ability to receive good information 3) it was nice to turn on the radio as I was leaving and plan my route with confidence. Thanks!
Dunn the 6 weeks I drove the DIRECT car, there were no significant traffic messages. One day the freeway was closed and the system never interrupted with a message. When messages came through they were extremely static to the point of annoying. You had to strain to hear the report. I do feel however, that the system has the potential to meet the traffic needs of the consumer WWJ and WJR should not provide better information than DIRECT can (could). Thanks for giving me the opportunity to participate. Anything to decrease driving stress is appreciated.
Part of my problem with DIRECT was the radio equipment failed 3 times during the 8 weeks.
The DIRECT system was extremely unreliable. Usually. traffic was extremely heavy and there would not be any traffic information broadcast over the DIRECT device. Some days only pure static would be broadcast. Test messages were unreliable as well. I was extremely dissatisfied with the DIRECT equipment and would never consider purchasing it. Thank you for the opportunity to test it.
I don't think the system was working very well, the radio frequency cut out. The information was OK, but I found the quality of the system to be very irritating.

RDS/SCA GROUP, PERIOD 7

Before:

Our system currently needs help. There is too much traffic on our small roads

After

The DIRECT system needs to be maintained and manned a lot more than what it has been. There needs to be more communication to the DIRECT project about road closures, freeway repairs, and traffic tie-ups. Somehow, I hope this

project was a benefit for you and everything worked out fine. If I can ever help in another project, please feel free to call me.
Thank you very much.
System is not ready.
