## 1.0 INTRODUCTION AND BACKGROUND

The Bureau of Transportation Statistics (BTS) has a requirement to conduct a series of national surveys to monitor expectations of and satisfaction with the transportation system and to gather event, issue, and mode-specific information. The surveys will serve as an information source for the U.S. Department of Transportation (DOT) modal administrators, who can use them to support congressional requests and as internal DOT performance indicators. Overall, the surveys will support the collection of information on a wide range of transportation-related topics.

This report presents the results of the December Household Survey, the fifth of the monthly household surveys that will be conducted. Each of these monthly surveys will contain a set of core questions that are based on critical information needs within DOT. In addition, supplemental questions will be included each month that correspond to one of DOT's five strategic goals: safety, mobility, economic growth, human and natural environment, and security. Finally, specific questions posed by the various DOT modes will be included on each survey.

The December study collected data between December 6, 2000, and December 12, 2000. Data were collected from households in the U.S. using a random-digit-dialed telephone survey. The final completed sample size is 1,171 cases, and the total number of variables in the internal-use dataset is 170. The data were collected by Battelle, under contract with the BTS.

This codebook provides technical documentation for the December Household Survey. Its primary goal is to document background information, sampling procedures, data collection, data elements and survey variables, response rates, and final weights.

This codebook contains the following information:

- Background on the survey initiative;
- Overview of how sample members were selected for the survey;
- Information regarding the data collection period and the number of completed interviews;
- Information on the number of cases in the file and guidance on the use of weights for analyses;
- Data dictionaries that provides the names of survey variables, their respective values, and their codes;
- An alphabetical index of data elements in each dataset;
- A list of variables in the data file generated from the SAS<sup>®</sup> data set; and
- The sampling plan used for the survey effort.

The codebook includes four appendices, as follows:

1. **Appendix A: Data Dictionaries.** A separate data dictionary is provided for the Interview dataset (questionnaire, weighting, and other survey-related variables) and the Disposition dataset (screening, disposition codes, and other pre-survey variables). They include detailed information on all variable names, possible responses, formatted values, and corresponding SAS<sup>®</sup> formats.
2. **Appendix B: Indices of Data Elements by Alphabetic Order.** A separate index is provided for the Interview dataset and the Disposition dataset. They are output from the SAS<sup>®</sup> Contents Procedure (SAS<sup>®</sup> Proc Contents) that show all variables ordered alphabetically.
3. **Appendix C: Frequency Tables for All Questionnaire Data Elements.** This is formatted output from the SAS<sup>®</sup> Frequencies Procedure (SAS<sup>®</sup> Proc Freq) and the SAS<sup>®</sup> Univariate Procedure (SAS<sup>®</sup> Proc Univariate), as well as the SUDAAN<sup>™</sup> Crosstab and Descript Procedures. Marginal frequency distributions (counts and percentages) are shown for each categorical questionnaire variable (note that the seven continuous variables included on the questionnaire were re-coded into categorical variables for the purposes of these tables). Arithmetic means are also shown for the continuous variables. Standard errors are provided for the percentages and the arithmetic means. All statistics are calculated using the final survey weights.
4. **Appendix D: Final Survey Questionnaire.** This is a hard copy of the final survey questionnaire that was used to collect the data by CATI telephone interviews. Note that respondent zip code information is not included in the data set in conformance with Privacy Act provisions.

## 1.1 NOTES FOR THE USER

A CD-ROM containing the survey data and documentation accompanies this report. The CD-ROM contains the data files, tables of results, and an electronic version of this codebook. Three different types of data files are included on the CD-ROM:

1. The telephone call disposition information,
2. The data collected from completed interviews, and
3. The data collected from partial interviews.

In addition to the different types of information contained in the data files, they are provided in five different formats:

1. SAS Version 6.12 (.SD2 file extension),
2. SAS Transport (.DAT file extension),
3. Microsoft Excel (.XLS file extension),
4. Microsoft Access (.MDB file extension), and
5. ASCII (.TXT file extension).

The name of each file contains eight characters followed by the extension listed above that identifies the file format. The first character of each file name is an “H,” representing “Household Survey.” The second character indicates the type of information included in the file: “D” for telephone call disposition, “I” for completed interviews, and “P” for partial interviews. The next four characters represent the month and year in which the survey was conducted (e.g., 1200). The final two characters, “PU,” indicate that the file is for public use. Consider as an example the file named HI1200PU.SD2. This file contains the December 2000 Household Survey completed interview data in SAS Version 6.12 format for public use.

The tables of results are presented in three different formats:

1. Microsoft Word (.DOC file extension),
2. Hypertext Mark-up Language (.HTM file extension), and
3. Adobe Acrobat (.PDF file extension).

## **2.0 SURVEY METHODOLOGY**

This section describes the overall survey methodology, including the identification of the target population, the selection of the sample, the calculation of the survey weights, and the calculation of the survey response rates.

### **2.1 THE TARGET POPULATION**

The target population for this survey is comprised of the non-institutionalized population, aged eighteen years or older who are currently living in the United States. This is the population about which inferences are to be made.

### **2.2 SAMPLE SELECTION**

The Genesys System, developed and maintained by the Marketing Systems Group, was used to draw the sample for this survey. This system employs list-assisted random digit dialing. List-assisted refers to the use of commercial lists of directory-listed telephone numbers to increase the likelihood of dialing household residences. This method gives unlisted telephone numbers the same chance to be selected as directory-listed numbers.

Banks of 100 consecutive telephone numbers (e.g., 301-475-8100 to 301-475-8199) were constructed and compared to a database containing the count of directory-listed residential telephone numbers in each bank. The banks that contain zero directory-listed telephone numbers were deleted from the sampling frame. This greatly increases the chance of dialing residential households. Obviously, the deleted banks will contain some residential telephone numbers. However, recent research has shown that less than 2 percent of the residential telephone numbers nationally are located in 100-banks with zero directory-listed numbers.

Prior to sample selection, Genesys imposed an implicit stratification on the telephone prefixes using the Census divisions and metropolitan status. Within each Census division, counties and their associated prefix areas located in metropolitan statistical areas (MSAs) were ordered by the size of the MSA. Counties and their associated prefix areas within a Census division that are located outside of MSAs were first sorted by state. Within each state, the counties and their associated prefix areas were ordered by geographic location. This implicit stratification ensured that the sample of telephone numbers was geographically representative.

After the prefixes were stratified by Census division and metropolitan status, a single stage, equal-probability sample of telephone numbers was drawn. The total number of ten-digit telephone numbers in the universe was 100 times the total number of working banks in the universe. The selection interval was calculated by dividing the total number of ten-digit telephone numbers by the designated sample size. To identify the first sample telephone number, a random number between 0 and 1 was generated and multiplied by the selection interval. The integer part of this product divided by 100 identified the sequential working bank where the first sample number was located. The fractional portion of this product, truncated to two digits, provides the suffix. To identify the second sample number, a new random number

was generated and was multiplied by the selection interval. This product was added to the selection interval and the result was divided by 100. The suffix of the sample number was identified in the same way as the suffix of the first sample number. This process continued until all sample telephone numbers were determined.

Genesys-ID Plus was used to detect non-working numbers before the sample was released. This system actually dials the telephone number. If the telephone number starts to ring, Genesys-ID Plus hangs up immediately. If the system detects non-working intercept signals, the telephone number being dialed is excluded from the sample. Non-residential telephone numbers also were excluded from the sample by comparing them to a database of Yellow Page listings. Battelle purchased 13,205 telephone numbers for the December survey. Of these, 8,000 were identified as working, residential telephone numbers and were divided into 16 replicates of approximately 500 households. Four of the sample replicates were not needed, resulting in 6,011 numbers being released for use by the telephone interviewers.

## **2.3 SURVEY WEIGHTS**

This section discusses the development of the survey weights. The final analysis weight reflects all non-response, multiple telephone line, persons-per-household, and post-stratification adjustments and is the weight that should be used for the analysis of the data. The sampling weight, which represents the inverse of the probability of selection, is the starting point for the calculation of the analysis weight.

The analysis weight was developed using the following steps:

- calculation of the sampling weight,
- adjustment for non-response,
- adjustment for multiple telephone numbers,
- adjustment for selecting a random, adult household member, and
- post-stratification adjustment to the target population.

The product of all of the above quantities represents the final analysis weight. Extreme values of the final analysis weight were then reduced using standard weight trimming procedures.

### **2.3.1 Calculation of the Sampling Weight**

The first step in weighting the sample was to calculate the sampling weight for each sampled telephone number. The sampling weight  $W_S$  for each telephone number was calculated as the inverse of its probability of selection or:

$$W_S = \frac{N}{n}$$

where  $N$  is the total number of telephone numbers in the population and  $n$  is the total number of telephone numbers in the sample. For this survey, the total number of telephone numbers in the sampling frame was 246,870,500.

### 2.3.2 Adjustment for Non-Response

The next step was to adjust for non-response. Sampled telephone numbers were classified as responding or non-responding households according to Census region and metropolitan status (inside or outside an MSA). The non-response adjustment factor for all telephone numbers in each Census region ( $c$ ) by metropolitan status ( $s$ ) combination, was calculated as follows:

$$ADJ_{NR} = \frac{1}{\text{CASRO response rates}}$$

where the denominator is the CASRO response rate for Census region  $c$  and metropolitan status  $s$ . The nonresponse adjustment factor for a specific cell (defined by metropolitan status and Census region) is given by the ratio of the estimated number of telephone households to the number of completed surveys. Determining the estimated number of telephone households is complicated by the unresolved telephone numbers; that is, it is unknown whether these are residential, business, or nonworking telephone numbers. For those telephone numbers that are resolved, we compute the ratio of residential telephone numbers to total numbers dialed. This ratio is applied to the unresolved telephone numbers to estimate the number of residential telephone numbers. The estimated number of telephone households is the sum of the responding households, nonresponding households, and the estimate of telephone households among unresolved numbers. The non-response adjusted weight ( $W_{NR}$ ) is the product of the sampling weight ( $W_S$ ) and the non-response adjustment factor ( $ADJ_{NR}$ ) within each Census region/metropolitan status combination.

### 2.3.3 Adjustment for Multiple Telephone Numbers

Some households have multiple telephone lines for voice communication. Thus, these households have multiple chances of being selected into the sample and adjustments must be made to their survey weights. The adjustment for multiple telephone lines was:

$$ADJ_{MT} = \frac{1}{\text{MIN}(\# \text{ telephone lines}, 3)}$$

For respondents that did not provide this information, it was assumed that the household contained only one telephone line. The non-response adjusted weight ( $W_{NR}$ ) is then multiplied by the adjustment factor for multiple telephone lines ( $ADJ_{MT}$ ) to create a weight that is adjusted for non-response and for multiple probabilities of selection ( $W_{NRMT}$ ).

### 2.3.4 Adjustment for Selecting a Random, Adult Household Member

The probability of selecting an individual respondent depends upon the number of eligible respondents in the household. Therefore, it is important to account for the total number of eligible household members when constructing the sampling weights. The adjustment for selecting a random, adult household member was:

$$ADJ_{RA} = \text{the number of eligible household members}$$

For respondents that did not provide this information, a value for  $ADJ_{RA}$  was imputed according to the distribution of the number of people in a household (from responding households) within the age, gender, and education cross-classification cell matching that of the respondent for which the value is being imputed. The weight that is adjusted for non-response and for multiple probabilities of selection ( $W_{NRMT}$ ) is then multiplied by  $ADJ_{RA}$ , resulting in  $W_{NRMTRA}$ , a weight that is adjusted for non-response, for multiple probabilities of selection, and for selecting a random, adult household member.

### 2.3.5 Post-Stratification Adjustment to Target Population

Adjusting weighted survey counts so that they agree with Census population counts can compensate for different response rates by demographic subgroups, increase the precision of survey estimates, and reduce the bias present in the estimates resulting from the inclusion of only telephone households. The final adjustment to the survey weights was a post-stratification adjustment that would allow the weights to sum to the target population (i.e., U.S. non-institutionalized persons 18 years of age or older) by age, gender, and education. The method of adjustment that was used is called Iterative Proportional Fitting (IPF) or Raking<sup>a</sup>. The outcome of that procedure is a multiplier ( $M$ ) that scales  $W_{NRMTRA}$  within each age/gender/education cell so that weighted marginal sums for age, gender, and education agree with the corresponding census distributions for these characteristics. However, some respondents did not supply the demographic information necessary to categorize their age, gender, and/or education. Thus, they were excluded from the Raking procedure and assigned a value of 1 for  $M$ . The multiplier  $M$  was then applied to  $W_{NRMTRA}$  to create  $W_{NRMTRAPS}$ . However,  $W_{NRMTRAPS}$  is overstated because a portion of the sample was not included in the calculation of the post-stratification adjustment. Therefore, a deflation factor was applied to the value of  $W_{NRMTRAPS}$  for the respondents who were included in the calculation. This deflation factor denotes the proportion of the target population represented by respondents with non-missing demographic information. The scaled value of  $W_{NRMTRAPS}$  is the final analysis weight ( $W_{final}$ ).

---

<sup>a</sup> SAS<sup>®</sup> Institute, Inc. (1990), *SAS/IML<sup>®</sup> Software Usage and Reference, Version 6*, First Edition, pp 355-358, Cary, North Carolina: SAS<sup>®</sup> Institute, Inc.

### 2.3.6. Trimming Final Analysis Weights

Extreme values of  $W_{final}$  were trimmed to avoid over inflation of the sampling variance. In short, the trimming procedure limits the relative contribution of the variance associated with the  $k^{th}$  unit to the overall variance of the weighted estimate by comparing the square of each weight to a threshold value determined as a multiple of the sum of the squared weights. Letting  $w_1, w_2, \dots, w_n$  denote the final analysis weights for the  $n$  completed interviews, the threshold value was calculated using the following formula:

$$\left( 10 * \sum_{j=1}^n w_j^2 / n \right)^{\frac{1}{2}}$$

Each household having a final analysis weight that exceeded the determined threshold value was assigned a trimmed weight equal to the threshold. Final weights below the threshold value remained unchanged.

Next, the age/gender/education cell used in the post-stratification was identified for each household with a trimmed weight. To maintain the overall weighted sum within the cell, the trimmed portions of the original weights were re-assigned to the cases whose weights were unchanged in the trimming process. For cases having trimmed weights but missing age, gender, and/or education information, the trimmed portions of the original weights were assigned to all remaining cases whose weights were unchanged in the trimming process.

The entire procedure was then repeated on the new set of weights: a new threshold value was re-calculated and the new extreme values were re-adjusted. The process was repeated until no new extreme values were found. Overall, eight observations had weights that were trimmed.

## 2.4 RESPONSE RATES

The procedures for response rate calculation are based on the guidelines established by the Council of American Survey Research Organizations (CASRO) in defining a response rate. The final response rate for the survey was obtained using the following formula:

$$\text{Response Rate} = \frac{\text{Completed HH Interviews}}{\left( \text{HHs In Scope} + \left[ \text{Scope Undetermined} * \frac{\text{HHs In Scope}}{\text{HHs In \& Out of Scope}} \right] \right)}$$

Table 1 presents the distribution of household telephone numbers by disposition categories. The number of household cases in each category was then used in the above formula to calculate an overall response rate of approximately 26 percent.

**Table 1. Distribution of Household Cases by Disposition Code**

<b>Household Level</b>	<b>Results</b>
# Telephone Numbers Released	6,011
# Out of Scope Numbers (ineligible)	1,295
# No Contact (Scope Undetermined)	1,095
# HH In scope	3,621
# Completes	1,171
# Partial Completes	44
# Language Problem	183
# Not Screened	240
# Refusal	1,514
# Parental Refusal	0
# Respondent Identified, Case not Finalized	324
# Unavailable During Study Period	145
HH Response Rate	26.4 %

### **3.0 SUMMARY OF SURVEY PROCEDURES**

This section describes the procedures undertaken to conduct the survey, including the data collection schedule, specific interview procedures, quality control procedures and reporting, and data cleaning.

#### **3.1 DATA COLLECTION SCHEDULE**

This survey was targeted to collect 1,000 completed interviews in a one-week timeframe. Data collection began on December 6, 2000, and continued until December 12, 2000. Calls were placed between 9:00 a.m. and 9:00 p.m. local time in all regions of the country. A total of 1,171 completed interviews were obtained. Approximately 93 interviewers were trained for the study.

#### **3.2 INTERVIEW PROCEDURES**

##### **3.2.1 Pretest**

Prior to the start of actual data collection, a pretest was conducted to test the usability of the survey instrument. Particular focus was placed on testing questions that were new to the December survey. Qualified data collection and data preparation staff performed this pretest by first reviewing the questionnaire and then using it in simulated data collection situations. They looked for vague or confusing instructions; inconsistent questions or answer categories; incomplete or redundant sections; and poor pace, tone, flow, and format of questions. They also tested the interview length and determined that the survey questionnaire could be administered in approximately 15 minutes.

##### **3.2.2 Interviewer Training**

Two types of training were performed for the December survey. First of all, returning interviewers completed a four-hour refresher course that covered the new survey questions and the changes made to the call scheduler. Secondly, each of the new telephone interviewers received 16 hours of training to cover the required data collection procedures. This training was held on two consecutive days. Recruiting and training qualified, diversified interviewers was a critical component to ensuring overall data quality and success for this project. Interviewers played a major role in encouraging the respondents to cooperate. The purposes of the training activities were to:

- Standardize the quality of the data collection techniques and procedures from the outset,
- Increase the accuracy, quality, and relevance of data collected, and
- Provide explicit, nonjudgmental procedures for the data collection staff to follow.

The training sessions were structured to ensure that each interviewer acquired sufficient background knowledge of the study, fully comprehended all techniques, and successfully developed the skills required of an interviewer. Interviewers were not allowed to perform any data collection for the study until they demonstrated to the study manager that they were able to perform their duties at the highest level of competency. A formal certification process was held at the conclusion of the training. Topics included in the training were: study overview, basic telephone interviewing techniques, respondent selection, refusal avoidance/conversion, question-by-question specifications, role-playing exercises, and administrative procedures.

### **3.2.3 Scheduling Calls and Tracking Cases**

All survey data were collected using Blaise, Battelle's computer-assisted telephone interviewing (CATI) program. Blaise also was used to schedule calls and track cases.

The Blaise system was programmed to release telephone numbers for calling based on standard and project-specific scheduling algorithms. Calls were scheduled based on optimal calling patterns, and dispersed over different times of the day. Calls also were prioritized based upon their case status. For example, a telephone number for a household where a respondent had already agreed to participate was given a higher priority in the scheduler than a number where no contact had been made.

Follow-up efforts were limited to 15 attempts to determine whether a telephone number was residential, an additional five attempts to identify an eligible respondent, and a final five attempts to secure a completed interview or refusal. Therefore, the maximum number of call attempts to any household was 25. Once contact was made with a household, follow-up attempts followed a loose call-back schedule established at the initial contact. That is, good times and days to call back were requested at the initial contact, but follow-up calls also were attempted before these appointment times, unless otherwise told not to do so by the household. This allowed for making the maximum number of attempts within the study period.

The December survey included refusal conversion interviews during December 10-12, 2000, to increase response rates. Ten highly experienced refusal conversion specialists attempted to complete the interview with 1,008 households that had previously refused to participate. From those attempts, 80 households completed the survey.

### **3.2.4 Household Screening**

Once contact was made with individuals at a dialed telephone number, interviewers screened for eligibility by verifying that the number belonged to a residence (not a business or institution). An adult household member was then asked to identify the individual 18 years or older in the household who will have the next birthday. The method preserved the randomness of the selection without requiring the time and effort to acquire a household roster and potentially cause a break-off. If the respondent was available, the interviewer immediately attempted to complete the interview. If the selected respondent was not available, the interviewer asked for a good time to call back. In order to preserve respondent anonymity in the latter case, the interviewer asked for and recorded only the potential respondent's first name or initial.

### **3.2.5 Interviewing**

No incentives were offered to respondents for completing the interview, and the survey was conducted only in English. If the selected household member refused the interview, the interviewer recorded the reason for refusal. The average length of the completed interview was approximately 17 minutes. Additionally, about 3-5 minutes were needed to recruit/screen potential respondents.

Once contact was made with the eligible respondent, the interviewer briefly explained the purpose of the survey and asked for the respondent's cooperation. The respondent was assured that the survey responses were being provided anonymously; that the respondent would not be asked for his/her full name, address, or other identifying information. Verbal consent to participate in the survey was asked of all respondents.

If the respondent agreed to participate, and assuming it was a convenient time, the interview would begin. If the time was not convenient, the interviewer would schedule a time to call back. The interviews were completed in one telephone call. If a respondent started, but refused to complete an interview in one phone call, the session was broken off and the interview was coded as a refusal. The data for these respondents are reported in the "HP1200PU.SD2" dataset. No attempts were made to weight these data.

## **3.3 QUALITY CONTROL PROCEDURES AND REPORTING**

Interviewer performance was evaluated on the basis of production reports and regular on-line monitoring. Interviewer conduct during interviews was evaluated primarily by supervisory monitoring of actual calls, supplemented by review of interviewer notes maintained in the CATI system (all calls and notes recorded about those calls are maintained by the CATI system).

Battelle's telephone centers used for this survey each contain supervisor stations equipped with monitoring systems for the purpose of monitoring and validating interviewers' work. These systems allow supervisors to listen to both the interviewer and the respondent while the interview is in progress. Monitoring is an important element in the quality control process. In addition to the actual recorded answers, supervisors rated interviewers on interviewing elements including following the prescribed interviewing routine exactly, reading each question verbatim, probing without leading, and not missing or falsifying any responses. Interviewers also were rated on style; that is, ability to hold the subject's attention without being too cold or too empathetic.

Another aspect of quality control was to look forward to subsequent monthly household surveys. A "suggestion box" was created for the interviewers to provide comments on four main issues: (1) questions they found difficult to read, (2) questions that respondents found difficult to understand, (3) frequent comments or questions from respondents, and (4) things the interviewers found awkward with the Blaise CATI system.

### **3.4 SUMMARY OF DATA CLEANING**

One of the most important advantages of computer-assisted surveys is that errors can be identified and averted during the interview by building logic, range, and consistency checks into the program. Battelle's CATI system permits interviewers to back up and correct erroneous answers to previous questions without violating instrument logic.

Data cleaning programs were written that enforced questionnaire logic strictly. An interview could not be certified as "clean" until all appropriate questions had either been answered or assigned an acceptable non-response value, and until the data record for each interview was consistent with the instrument program logic.

A program was written to reformat the cleaned instrument responses. Analysis files were then prepared in SAS® and additional edits performed. The additional edits included checks on the number of missing values, assignment of additional non-response values, and some constructed variables. Weights were also applied to the data files.

#### **3.4.1 Disposition Data**

Table 1 in Section 2.4 illustrates the various possible outcomes for each sampled telephone number. These dispositions (e.g., complete, partial complete, refusal, no contact, etc.) are presented for each sampled telephone number in the disposition data files (i.e., HD1200PU.xxx), along with other tracking and screening information such as the start and end times of the interview, the number of call attempts, and demographic information. This information can be used to determine the optimum number of call attempts necessary to achieve the highest response rate with the most efficient use of resources. It can also be used for characterizing the differences, if any, among responding and non-responding households.

#### **3.4.2 Treatment of Missing Values**

As with any survey, the BTS Household Survey, by design, contains questions that are not asked of certain respondents based on their response(s) to other questions. In addition, there will always be some respondents who do not know the answer to or chose not to answer some items in the survey. Each of these responses can have a different meaning to the data user. While each of these response categories is important in characterizing the results of the survey, they are often removed from certain analyses, particularly those involving percentages. Therefore, the categories were given standard codes for easy identification. Table 2 below presents the response categories and how they are represented in each data file.

Battelle has not attempted to impute any data to account for missing values in specific questions, except during the weighting process described in Section 2.3.4. Those values were imputed only for the purpose of weighting the data and are not included in the final data files.

**Table 2. Summary of Codes for Missing Value Response Categories by Type of Data File**

**APPENDIX D:**  
**FINAL SURVEY QUESTIONNAIRE**

# **December Omnibus Household Survey Questionnaire**

**FIELD – December 6, 2000**

NOTES: All questions are numbered with a letter and number indicating their section origins (see key below). Questions are numbered to uniquely identify rotating and mode-specific questions in the Omnibus Survey question bank and questions are ordered based on the “flow” of the interview, so the numbering may not appear sequential.

Professional survey interviewers administer this questionnaire using computer-assisted telephone interviewing (CATI). CATI interviewers have the option of entering a code for responses of “Don’t Know” or “Refused” for all questions. These are “blind” answer options but may be made explicit to the interviewer by having them appear on the screen.

Section A: General Travel Core Questions.....*Asked every month*

Section B: Customer Satisfaction Core Questions.....*Asked every month*

Section C: Rotating Customer Satisfaction Questions ... *Rotate three times per year by goal area*

***This Month*** ➔ **Month 1**..... **Safety**  
Month 2..... Mobility/Economic Growth and Trade  
Month 3..... Human and Natural Environment  
Month 4..... National Security

Section D: Demographic Core Questions.....*Asked every month*

Section M: Modal Questions *Change every month*

Formatting Conventions for This Document:

- **Text in boldface type** indicates that the CATI interviewer will read the text aloud to the respondent.
- *Text in italics* indicates instructions or options such as skips and fills that will be carried out by the CATI computer system.
- Reviewer notes appear inside boxes.

We would like to begin by asking you a few questions about how you travel and the transportation systems you use. (GTA1A – GTA1L)

A1. During the past 30 days, have you used any of the following types of transportation for either personal or business travel?

	<u>Yes</u>	<u>No</u>
a. Public Transportation, for example local public bus, subway or commuter rail .....	1	2
b. Driving alone in a private vehicle, such as a car, SUV, pickup truck, van or motorcycle .....	1	2
c. Traveling in an organized carpool or vanpool .....	1	2
d. Traveling with others in a private vehicle .....	1	2
e. City to city bus, such as Greyhound or Charter .....	1	2
f. City to city train, such as AMTRAK .....	1	2
g. Taxi, limousine, or shuttle service.....	1	2
h. Commercial airplane.....	1	2
i. Private or charter airplane .....	1	2
j. Commercial boat, ship, or ferry .....	1	2
k. Recreational boat .....	1	2
l. Bicycle.....	1	2

*Immediately following each “yes” response above, ask the following:*

A1a. READ IF NECESSARY → (During the past 30 days)

On how many days did you use this type of transportation? (GTA1AT – GTA1LT)

- 1) 1-2
- 2) 3-5
- 3) 6-10
- 4) more than 10 days

D1. How many licensed vehicles are available for regular use by members of your household? (DCD1)

ENTER NUMBER OF LICENSED VEHICLES \_\_\_\_\_

A2. Have you been involved in any accidents during the past 3 months? [Please include your experience on all means of travel as either a driver or passenger]. (GTA2)

- ☐ Yes
- ☐ No (Skip to C15)

- A2a. How many?** (*Record number of accidents.*) **(GTA2A)**
- A2b. In how many of these accidents were you injured?** (*Record number of accidents.*) **(GTA2B)**
- A2c. In the most recent accident [in this accident], did you require medical treatment from a hospital, clinic, or physician?** **(GTA2C)**
- ☐ Yes  
☐ No (Skip to A2e)
- A2d. And what would you estimate as the total cost paid to the hospital, clinic, or physician for the treatment of your injuries?** (*Record dollar amount.*) **(GTA2D)**
- A2e. In your most recent accident [in this accident] was damage done to your personal vehicle?** **(GTA2E)**
- ☐ Yes  
☐ No (Skip to C15)
- A2f. And what would you estimate as the total cost of repair to your personal vehicle?** (*Record dollar amount.*) **(GTA2F)**

Now we would like to ask about your views on a variety of transportation issues.

C15. Tell me whether you are not concerned, concerned or feel neutral about the following risks to your personal safety. Consider all the types of transportation.  
(RMC15A – RMC15G)

	<u>Not Concerned</u>	<u>Neutral</u>	<u>Concerned</u>
a. The risk of being in <u>any</u> kind of transportation accident. Include all types of transportation.	1	3	5
b. Safety risks associated with unskilled or impaired pilots, drivers, or other transportation operators.	1	3	5
c. Safety risks due to mechanical equipment failure. Include all types of transportation.	1	3	5
d. Safety risks due to the dangerous behavior of others (such as aggression, road rage, air rage, and drunk driving).	1	3	5
e. Safety risks due to the poor condition of roads, runways, or rail lines.	1	3	5
f. Safety risks from hazardous chemicals released in a transportation accident.	1	3	5
g. Safety risks from large fuel or natural gas pipelines in your community.	1	3	5

- C16. I just asked about your concern with various transportation issues. Now, please tell me whether you are dissatisfied, satisfied, or feel neutral about what the Federal government is doing to address the following transportation safety issues: (RMC16A – RMC16E)

	<u>Dissatisfied</u>	<u>Neutral</u>	<u>Satisfied</u>
a. Establishing effective passenger vehicle safety standards	1	3	5
b. Establishing effective safety standards for large trucks	1	3	5
c. Ensuring the safe take-off and landing of aircraft through the air traffic control system.	1	3	5
d. Assuring the safety of large fuel and natural gas pipelines in your community	1	3	5
e. Ensuring the safe transportation of hazardous chemicals.	1	3	5

- C2. Please rate your perception of the safety of the following means of travel. Rank each one on a scale of 1 to 5, where 1 indicates you think it is Very Unsafe and 5 indicates you think it is Very Safe. (RMC2A – RMC2K)

	<u>Very Unsafe</u>				<u>Very Safe</u>
a. Driving or riding on the nation's highways	1	2	3	4	5
b. Traveling on a city to city train	1	2	3	4	5
c. Traveling on a commuter train or subway	1	2	3	4	5
d. Flying on a commercial airplane	1	2	3	4	5
e. Flying on a private airplane	1	2	3	4	5
f. Riding on a city to city or charter bus	1	2	3	4	5
g. Riding on a local bus or paratransit vehicle	1	2	3	4	5
h. Traveling on a privately owned or rented recreational boat	1	2	3	4	5
i. Traveling on a commercial boat, ship, or ferry	1	2	3	4	5
j. Riding a bicycle in or near traffic	1	2	3	4	5
k. As a pedestrian in or near traffic	1	2	3	4	5

M3. Please tell me if you disagree, agree or feel neutral about the following statements:  
(OMM3AH – OMM3DH)

	<u>Disagree</u>	<u>Neutral</u>	<u>Agree</u>
a. Most truck drivers on the highways drive safely	1	3	5
b. I feel very concerned about my safety when traveling in an automobile near large trucks	1	3	5
c. When I am driving, I make a special effort to avoid driving near large trucks	1	3	5
d. It takes a large truck longer to come to a complete stop than the average car	1	3	5

Now I'm going to ask you about experiences you may have had contacting the U.S. Department of Transportation.

B4a. Since December 1999, have you requested a product or service from an agency of the U.S. Department of Transportation? (CSB4A)

- ☐ Yes
- ☐ No (Skip to M4)

B4b1. How long ago was your most recent request? (CSB4B1)

- 1) Since the beginning of November of this year
- 2) During September and October of this year
- 3) During June through August of this year
- 4) Between December 1999 and May 2000

B4b2. **Which of the following agencies did you contact?**  
READ ALL CHOICES AND CODE ALL THAT APPLY (CSB4B201 – CSB4B213)

- 1) **The National Highway Traffic Safety Administration,**
- 2) **U.S. Coast Guard,**
- 3) **Federal Aviation Administration,**
- 4) **Maritime Administration,**
- 5) **Federal Highway Administration,**
- 6) **Federal Railroad Administration,**
- 7) **Federal Transit Administration,**
- 8) **Federal Motor Carrier Safety Administration,**
- 9) **Research and Special Programs Administration,**
- 10) **Bureau of Transportation Statistics,**
- 11) **St. Lawrence Seaway Development Corporation,**
- 12) **Office of the Secretary of Transportation, or**
- 13) **some other agency - skip to M4**

*Ask B4b3 if more than one selected above. List names of those selected for interviewer to choose.*

B4b3. **Which of those agencies did you most recently contact?**  
*List of agencies selected in B4b2 (CSB4B3)*

B5. **How did you contact [fill in agency name from B4b2 or B4b3]? (Code the reason given by the respondent.) (CSB5)**

- 1) Telephone
- 2) Internet/world wide web
- 3) (regular) mail
- 4) In person
- 5) Other – specify \_\_\_\_\_  
(CSB5O)

B6. **Please rate your overall satisfaction with the level of service you received. Would you say you were... (CSB6)**

- 1) **Very dissatisfied,**
- 2) **Somewhat dissatisfied,**
- 3) **Neither dissatisfied nor satisfied,**
- 4) **Somewhat satisfied, or**
- 5) **Very satisfied?**

**The next questions ask about drinking and driving.**

**M4. Since the beginning of November of this year, have you seen or heard of any special effort by local police to reduce the incidence of drinking and driving in your community? (OMM4A)**

- ☐ Yes
- ☐ No

**M5. Since the beginning of November, have you seen or heard any public service messages that warn about the dangers of drinking and driving? (OMM5A)**

- ☐ Yes
- ☐ No

**C19. On October 1, 2000, the federal government reduced the standard nationwide for blood-alcohol level from .10 to .08. How beneficial do you think this change will be in reducing alcohol-related traffic accidents? Would you say...(RMC19)**

- 1) Not at all beneficial,
- 2) Somewhat beneficial, or
- 3) Very beneficial?

**Now I am going to ask you some questions about seat belts.**

*Ask M30 only if the answer to A1b was "yes".*

**M30. Assume that you do not use your seat belt at all while driving over the next six months. How likely do you think you will be to receive a ticket for not wearing a seat belt? (OMM30A)**

- 1) Very likely
- 2) Somewhat likely
- 3) Somewhat unlikely
- 4) Very unlikely

**M31. In the past 30 days, have you seen or heard of any special effort by police to ticket drivers in your community for seat belt violations? (OMM31A)**

- ☐ Yes
- ☐ No

M32. In the past 30 days, have you seen or heard of any special effort by police to ticket drivers in your community if children in their vehicles are not wearing seat belts or are not in car seats? (OMM32A)

- ☐ Yes  
☐ No

M33. In the past 30 days, have you seen or heard any messages that encourage people to wear their seat belts? This could be public service announcements on TV, messages on the radio, signs on the road, news stories, or something else. (OMM33A)

- ☐ Yes  
☐ No

M34. Please tell me whether you strongly agree, somewhat agree, somewhat disagree, or strongly disagree with the following statements:

	Strongly <u>Agree</u>	Somewhat <u>Agree</u>	Somewhat <u>Disagree</u>	Strongly <u>Disagree</u>
a) It is important for police to enforce the seat belt laws. .... 1		2	3	4
(OMM34AA)				
b) Police in my community are writing more seat belt tickets now than they were a few months ago. 1		2	3	4
(OMM34BA)				

This next question asks about railroad crossings.

M10. What should a motorist do when approaching a railroad crossing that has no gates or lights? I will read you four choices. (OMM10F)

- 1) proceed through the crossing,
- 2) approach the crossing, look to see if a train is approaching, and be prepared to stop,
- 3) stop and look for the train, then proceed if it is safe to do so, or
- 4) slow down because of a bumpy crossing?

M14. Please tell me which of the following items are never allowed, allowed with some restrictions, or always allowed in carry-on or checked luggage on commercial airlines? (OMM14AI – OMM14JI)

	<u>Never Allowed</u>	<u>Allowed With Some Restrictions</u>	<u>Always Allowed</u>
a. Motor oil	1	2	3
b. Gas-powered stoves or tools	1	2	3
c. Pepper spray	1	2	3
d. Flares and fireworks	1	2	3
e. Loaded pistols	1	2	3
f. Batteries	1	2	3
g. Magnets	1	2	3
h. Aerosol hair spray	1	2	3
i. Personal use oxygen generators	1	2	3
j. Cigarette lighters	1	2	3

This final section asks a set of questions that will be used for classification purposes. No personal identifying information about you or your household will ever be reported.

B3. Do you currently have a disability or health problem that makes it difficult for you to travel outside the home? (CSB3)

- ☐ Yes  
☐ No (Skip to D2)

M2. Please indicate if you have difficulties traveling by any of the following means because of your disability or health problem. (OMM2I1 – OMM2I7)

CODE ALL THAT APPLY

- 1) by car as a driver
- 2) by car as a passenger
- 3) by public transportation
- 4) by bicycle
- 5) by walking
- 6) by airplane
- 7) other reason

D2. **Are you a licensed commercial transportation operator? (DCD2)**

- ☐ Yes
- ☐ No

D3. **Do you own or operate a business from your home? (DCD3)**

- ☐ Yes
- ☐ No

D4. **Please stop me when I reach the category that best describes your age. (DCD4)**

- 1) **18 to 24**
- 2) **25 to 34**
- 3) **35 to 44**
- 4) **45 to 54**
- 5) **55 to 64**
- 6) **65 or older**

D5. **RECORD GENDER. ASK IF NECESSARY: Are you male or female? (DCD5)**

- 1) Male
- 2) Female

D6. **What is the last grade of school you completed? CODE ONLY ONE (DCD6)**

- 1) Less than high school
- 2) High school graduate/GED
- 3) Some college
- 4) Community college graduate (AA: Associate of Arts Degree)
- 5) College graduate (BA or BS: Bachelor of Arts or Sciences Degree)
- 6) Post-graduate degree (Masters, Ph.D., Lawyer, Medical Doctor)
- 7) Technical school/professional business school

D7. **Are you of Hispanic origin? THIS INCLUDES BEING OF SPANISH ORIGIN (DCD7)**

- ☐ Yes
- ☐ No, not Spanish/Hispanic/Latino

D8. **What is your race? CODE ALL THAT APPLY (DCD81 – DCD86)**

- 1) White
- 2) Black or African-American
- 3) American Indian (Native American) or Alaska native
- 4) Asian (e.g., Asian Indian, Chinese, Filipino, Japanese, Korean, Vietnamese)
- 5) Native Hawaiian or other Pacific Islander (e.g., Samoan, Guamanian, or Chamorro)
- 6) Other/specify \_\_\_\_\_ **(DCD80TH)**

D9. **Do you have any other telephone lines in your house that someone would answer? This does not include dedicated computer, fax lines or cellular phones. (DCD9)**

- ☐ Yes
- ☐ No (Skip to D12)

D9a. **How many other telephone lines are there? (DCD9A)**

Other phone lines \_\_\_\_\_

D9b. **What is the primary use of this (these) phone line(s)? (DCD9B)**

- 1) Household use only
- 2) Business and home use
- 3) Business use only

D12. **How many people 18 years or older live in your household? (DCD12)**

Number of people \_\_\_\_\_

D10. **Finally, in order to classify your household for statistical purposes, what is your zip code? (DCD10)**

Zip code \_\_\_\_\_

---

---

**Thank you for taking the time to complete this survey.**
