Accident at ". ${ }^{\text {m }}$ Feliance, Wash., on August 30, 1947, caused by failure properly to control the speed of the folloring train moving vithin yerci limits.

REPORT OF THE CCITMISSIOI

PATTERSON, Commissioner:
On August 30, 1947, there was a rear-end coilision between two freight trains on the Chicago, Kilvaukee, St. Paul and Pacific Railroad at Ner Reliance, Jash., which resulted in the death of one employee, and the injury of one employee.

## 1

Under authority of section 17 (2) of the Interstate Commerce Act the above-entitled proceeding was referred by the Commission to Commissioner Pattownon fow ronsideration and disposition.

## Location of Accident and Metrod of Operation

This accicient ocourred on that part of the Coact Division extenaing between Tacona and Zniton, Vash.,
 point of accicent trains are opearted by timetable and train orders. There is no block system in use. The accident occurred rithin yard limits on the main track at New Reliance, 39.5 miles vest of Tacoma, at a point 1.06 miles west of the east acvance yarc-linjt simn, 326 feet west of the east yarc-limit sign and 3,510 feot east.of.the station. From the east there are, in succession, a tangent 1,089 feet in lerath, an $8^{\circ}$ curve to the ricint 1,125 feet, a tancent 201 feet anc a $6^{\circ}$ curve to the left 1,185 . ffet to the point of accident and 463 feet westward. Tine grude for rest-bound trains varies between 0.10 percent ard 1.70 percont ascending throughcut a distence of 2.06 miles inmeaiately east of the point of accident, $r^{2}+\cdots e$ it is l. 66 percent ascending.

This carrien's operating ruies aead in part as follows:

> DEATNITICNS.

## * * *

Fixed Sienal.--A sifnal of fixed Iocation indicating a condition affecting the movement of a train or encine.

Note. --The dciinition of a "Eixod Sicnal" covers such siçnels as $* *$ vesc linit signs, * * *

*     *         * 

Restricted Speed.--Proceed nrevared to stop short of train, obstructinn, or anytining that may roquire the spoci of a train to be reduced.
93. * * *

Víthin yard limits the man track may be usce without protecting against seconc anc inferior class, extra treins and engines.

Within jara limits secona and inicrior class, extra trains and engines must move at resuricted spoed.

## Description ondaccident

Extra 54 West, a rrest-bound froight train, consisted of engine 54, 100 carg and a crboose. Becausc the tonnapo of this train was in excess of the ratod tonnage for the engine on the ascending grade wostrard from Eatonville Junction, the last opon office, 7.9 miles east of New Reliance, the engine and the ilirst 42 cars departed from Eatonvilie Junction at 2:23 a, m., and on arruval at Now Reliance the cars were left on the main track betwoen the siding avitches. The encinc roturned to Eatonville Junction, thon doparted westrard from that point akout $3: 45 \mathrm{a}$. m . with the rear portion of the train, and stopped about 4:52 a.m. on the main irack at liev Reliance, tith the ceboose standing 326 feot west of the east yard-limit sign. About 11 minutes later, while the front portion of the train was being coupled to the rear portion, the caboose was struck by Extra 56 Nest.

Extra 56 Wesí, a west-bound freigitt train, consisting of engine 56, 82 cars and a caboose, stopped on the asconding grade at a point about 4.5 miles east of Datonville Junction. Then the front portion of the train, consisting of the engine and 42 cars, proceeded westrard, $\bar{c} e p a r t e d$ from Eatonville Junction at $4: 13$ a. m., and vas moving at an estinated speed of 15 miles per hour when it collided with Extra 54 West.

The caboose of Extra 54 Vest and the five cars immediately ahead of the cabocse ware derailed san badly damaced. The engine of Ertra 58 West wes not derciled, and it stopped with the front end 124 feet west of the point of collision. The front end of the encire vas somemht aanaged.

The flacman of Extro 54 Vest vas killed, and the conductor of this train was injurec.

The reather was clear ani : 5 was dork at the time of the accident, which ocourred about $4: 43 \mathrm{a} . \mathrm{m}$.

## Discussion

Because the tomage of the ceas of Extro 54 Yest and Extra 50 West was in excess $0 \vec{i}$ tho rated tonage por the engines on the ascendine crade in the territory invalved, each train vas being operated in two portions. The front and rear porticns of Extra 54 West re veine coupled on tile main track within yard limits ot recr ence of this train was struck by the front portion of Extra 56 West, which consisted of tho engine and 42 cars, at a point 326 feet west of the east yard-Iimit sieg.

When the collision occuried, the concuctor and the flagman or Extra 54 West rere in the caboose. The marker lamps on the caboose were lirhted and displayed red to the rear. The conauctor said that then he first saw the reflection of the headlight of Extra 56 West the engine of that train ras about 200 feet distant, and he called a warning to the flagman, but the coliision occurred before they could jump from the caboose. The flagman was killed̈.

The enginemen of Extra 56 West said that as the engine was aburocinine the east yard-limit sign the speed was about 15 miles per hour, and the headi ght was lighted brightly. T.ae enginemen were maintaining a lookout ahead from their usual positions, the front brakeman was seated behind the fireman and the swing brakeman was on the deck of the encine. The concuctor and the flagman were on the rear porizion of the train, which was stanaing about 12 miles esst of New Reliance. Because of an embaniment on the insice or the curve to the loft on which the accident occurred, the viev of the track ahead from the left side of the engine tas restricted to a distance of about 600 feet. The enginemen first saw the lighted marker lamps or the preceding train about 100 feet distant, then the engineer roved the brake valve to emergency position, but this actica was not taken soon enough to prevent the collision. The brakes of this train had been tested and had functioned properly en route.

The accicient occuried rithin yard limits, and, under the rules, Extra 56 West was required to be operated in such manner that it could be stopoed short of a train or an obstruction.

## Couse

It is $\overline{\text { Iound }}$ thet this accident was caused by failure properly to control the speed of the following train moving within yard limits.

Dated at Washington, D. C., this seventh day of October, 1947 .

3y the Commission, Commissioner Patterson.
