DOMESTIC AIRLINE FARES CONSUMER REPORT

Fourth Report
Second Quarter 1997 Passenger and Fare Information

January, 1998

U.S. Department of Transportation

Each month the Department of Transportation releases an Air Travel Consumer Report that includes information about various service quality elements, including flight delays, mishandled baggage, and oversales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department decided to release a quarterly fare report. The first such report, for the third quarter of 1996, was released in June 1997. This is the fourth report, and is based on data for the second quarter of 1997.

The initial report provided information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 75 percent of all 48-state passengers and 70 percent of total domestic passengers. The current report includes the same 1,000 city-pair markets, plus 117 new city pairs that were in the top 1,000 markets during the fourth quarter of 1996 and the first quarter of 1997, and an additional 21 markets in this quarter's top 1,000 city pairs.

Tables 1 through 4 contain the same information as previous reports. As with the other reports, a special feature has been included to provide more in-depth analysis of a market that has experienced a significant change in average fares.

For each market, Table 1 lists the number of one way passenger trips per day, the nonstop distance, the average market fare, and identifies the airlines with the largest market share and the lowest average fare; market share and average fares are provided for both airlines. Average fares are average prices paid by all fare paying passengers. It therefore covers first class fares paid to carriers offering such service but it does not cover free tickets, such as those awarded by carriers offering frequent flyer programs.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower-cost competing carriers where available, can provide useful consumer information. Also, fare comparisons between markets allows consumers to further evaluate prices.

In particular, a high average fare in a market is an indication that a broad range of fares is available and that the number of seats sold at low fares are likely both very limited and subject to various travel restrictions. In such markets travelers must make extra efforts to get the lowest price for the service they want. Advice laid out in the fact sheet prepared by the Departments Aviation Consumer Protection Division—*Getting the Best Air Fare*—will help consumers accomplish this. This fact sheet can be obtained by requesting a copy at (202) 366-2220 or via the World Wide Web at: http://www.dot.gov/ost/ogc/subject/consumer/aviation/publication/bestfare.html.

To assist consumers in making average fare comparisons, Table 1 segregates markets by mileage block, since distance is a major factor that affects the level of prices charged. Markets are then sorted within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market, carriers with higher average prices might offer some seats at prices as low as, or even lower than, carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus nonstop service, or service to different area airports. Note that the "lowest fare carrier" is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the "market average" fare will be

lower than the fare for the 'lowest fare carrier" because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower average fares than individual carriers with greater market participation.

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets in the top 1,000+ that involve each city (e.g., 9 for Burbank), the number of passengers traveling to and form each city, the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of more than 33 percent compared with one year ago. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. Each market's average fare and total passenger count are provided, along with the absolute and percent change in both average fares and passengers.

A special report on new entry effects on price and traffic in Providence, Rhode Island follows Table 4.

A key for carrier codes used in the report and footnotes are shown at the end of the report.

This report is also available at (http://www.dot.gov/ost/aviation/). Telephone inquiries should be referred to (202) 366-1032.

Illustrations of new entry effects on price and traffic
(See Charts 1-6 on pages following.)

As we indicated in our initial report, one of our goals is to respond to consumer input. In this regard, there has been considerable interest in markets that experienced large increases or decreases in average fares. In most instances, large changes in average fares are directly attributable to entry or exit by a low-cost carrier. In our previous reports, we included several examples of how low-fare entry and exit effected average fares and passenger levels between specific city-pairs. In this report we concentrate our analysis on recent fare and traffic changes in Providence, Rhode Island markets due to the entry of low-fare carrier Southwest Airlines. Six Providence markets appear in Table 4 with a greater than 30% decrease in average fares over the past year.

The special feature section in previous reports have shown that the introduction of low fares greatly expand the air travel market, enabling many who would otherwise not travel by air to do so. Low fares also provide competitive alternatives for many travelers who would otherwise have to pay higher fares, and often compete down the prices of incumbent carriers who previously charged much higher prices. As seen in the attached charts, this model holds true in Providence across a number of markets.

Southwest Airlines began offering service out of Providence's T.F. Green Airport on October 27, 1996.[1] The effect on average fares and passengers out of Providence was immediately evident. When our first report was published, based on third quarter 1996 data, five Providence city-pairs were in the top 1,000 markets, with 128,510 passengers travelling in those markets. By the fourth quarter of 1996, the number of top 1,000 markets out of Providence had doubled. On Table 2 of this report, 14 Providence city-pairs are in the top 1,000 markets. **Chart 1** illustrates the drop in average fares in the fourteen Providence markets that are part of the 2nd quarter 1997 top 1,000 markets, and the growth in passenger traffic that accompanied that drop. Changes in both passenger and fare levels occurred dramatically in the fourth quarter of 1996, when Southwest introduced service. Average fares have since been maintained at their new lower levels.

Charts 2 and 3 track changes in average fares and passengers per day, respectively, in the 14 Providence markets that are currently in the top 1,000 U.S. city-pairs. In order to isolate the true effect of Southwest's service on market fares and passengers, the city- pairs were broken down into two groups: those served by Southwest[2], and those not served by Southwest.[3] Average fares dropped 47% between the 2nd quarters of 1996 and 1997 in markets served by Southwest. Over the same period, average fares dropped by 14% in markets not served by Southwest.

As shown in **Chart 3**, the 47% fare decrease in Southwest markets was accompanied by a 260% growth in passenger traffic. Non-Southwest markets also fared well, growing at a rate of 43%.

Lower fares and passenger growth in non-Southwest markets may be partially explained by consumer treatment of Baltimore as a substitute market for Washington, D.C.   In addition to bringing lower fares to the markets they serve directly, low-fare competitors also influence prices in close-by, or substitute destinations. **Chart 4** illustrates the effect of Southwest's Providence-Baltimore service on the Providence-Washington, D.C. market.[4] In spite of the fact that other direct low-fare competition was already present in this market, average fares between Providence and Washington dropped after Southwest began charging lower fares to Baltimore.

---

[1] Delta Express began serving Providence-Orlando at approximately the same time, and to some extent has contributed to fare effects in that market along with Southwest.

[2] Providence to-Baltimore, Chicago, Cleveland, Fort Lauderdale, Houston, Los Angeles, Nashville, Orlando, Phoenix, and Tampa.

[3] Providence to-Atlanta, Fort Myers, Washington DC, and West Palm Beach.

[4] Although not examined, DOT would expect that some service to Boston would also have been affected by Southwest's Providence service.

In Table 4, Providence-Baltimore enjoyed the largest decrease in average fare, 2nd quarter 1997 over 2nd quarter 1996. **Chart 5** illustrates the 71% average fare decrease, as well as the resulting 884% increase in passenger traffic. In addition to low fares, Southwest's strong influence on this market has perhaps been due to the large amount of capacity dedicated to the market. According to the Official Airline Guide, Southwest offers eight daily nonstop flights out of Providence to Baltimore (and an additional one six days a week), more than any other carrier.   Three of the five cities served nonstop by Southwest out of Providence- Baltimore, Nashville, and Chicago- experienced a greater than 30% decrease in average fares, as can be seen in Table 4.

Southwest service out of Providence also demonstrates that low fares provide incentive enough for many consumers to make some tradeoff in service levels. For example,   Phoenix-Providence was the market with the fourth largest drop in average fares in Table 4. **Chart 6** shows an immediate and dramatic change in average fare and traffic levels during the fourth quarter of 1996, when Southwest first started service in the market. Southwest was able to attract customers to this market in spite of only providing flights that require either two or three stops along the way (direct), while various competitors offered single-connection flights of shorter duration. Three of the five cities (in the top 1,000) served on a connecting or multiple-stop direct basis out of Providence by Southwest- Phoenix, Houston, and Los Angeles- experienced a greater than 30% decrease in average fares, as can be seen in Table 4.

Data Source:

Origin and Destination Survey of Airline Passengers submitted by certificated airlines. A ten percent sample of passenger tickets. Information in this report extracted from DB1A, using directional components of domestic iteneraries (fared passengers only).

1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent of more of total traffic.

2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.

3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.

4/ Pan American Airways has recently changed its official code from OP to PA. The code used in the tables of this report is the code under which the data was reported.
