

DOMESTIC AIRLINE FARES CONSUMER REPORT

Third Report
First Quarter 1997 Passenger and Fare Information

September, 1997

U.S. Department of Transportation

FARE INFORMATION FOR CONSUMERS

Each month the Department of Transportation releases an Air Travel Consumer Report that includes information about various service quality elements, including flight delays, mishandled baggage, and oversales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department decided to release a quarterly fare report. The first such report, for the third quarter of 1996, was released this past June. This is our third report, and is based on data for the first quarter of 1997.

The initial report provided information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 75 percent of all 48-state passengers and 70 percent of total domestic passengers. The current report includes the same 1,000 city-pair markets, plus 61 new city pairs that were in the top 1,000 markets during the fourth quarter, and an additional 56 new city pairs that were in the top 1,000 markets during the first quarter.

Tables 1 through 4 contain the same information as our first two reports. As with the second report we have added at the end of the report as a special feature a further analysis of the markets that experienced significant increases or decreases in average fares.

For each market, in addition to the average one way fare, Table 1 shows the number of one way passenger trips per day, the nonstop distance, identifies the airline with the largest market share and its average fare, and identifies the carrier with the lowest average fare. Average fares are average prices paid by all fare paying passengers. It therefore covers first class fares paid to carriers offering such service but it does not cover free tickets, such as those awarded by carriers offering frequent flyer programs.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower-cost competing carriers where available, can provide useful consumer information. Also, how fares in particular markets compare with fares in other markets provides another source for a consumer to evaluate prices.

In particular, a high average fare in a market is an indication that a broad range of fares is available and that the number of seats sold at low fares are likely both very limited and subject to various travel restrictions. In such markets travelers must make extra efforts to get the lowest price for the service they want. Advice laid out in the fact sheet prepared by the Department's Aviation Consumer Protection Division—*Getting the Best Air Fare*—will help consumers accomplish this. This fact sheet can be obtained by requesting a copy at (202) 366-2220 or via the World Wide Web at: <http://www.dot.gov/ost/ogc/subject/consumer/aviation/publication/bestfare.html>.

To assist consumers in making average fare comparisons, Table 1 segregates the price information by mileage block, since distance is a major factor that affects the level of prices charged, and then sorts the markets within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market, carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus nonstop service, or service to different area airports. Note that the “lowest fare carrier” is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the “market average” fare will be lower than the fare for the “lowest fare carrier” because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower average fares than individual carriers with greater market participation.

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets that involve each city (e.g., 9 for Burbank), the number of passengers traveling to and from each city, and the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of more than 33 percent compared with one year ago. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. The information provided is average fares and the amount and percent change, and total passengers and the amount and percent change.

A special report on new entry effects of price and traffic in markets that experienced significant increases or decreases in average fares follows Table 4.

A key for carrier codes used in the report, as well as footnotes, are shown at the end of the report.

This report is also available at (<http://www.dot.gov/ost/aviation/>). Telephone inquiries should be referred to (202) 366-1032.

SPECIAL FEATURE

Illustrations of new entry effects on price and traffic (See Charts on pages 1-4 following.)

As we indicated in our initial report, one of our goals is to respond to consumer input. In this regard, there has been considerable interest in markets that experienced large increases or decreases in average fares. In most instances, large changes in average fares are directly attributable to entry or exit by a low-cost carrier. In our second report, we included several examples of how new entry resulted in large decreases in average fares. In this report we are providing additional details on how low fare exit affects average fares.

The charts in the second report show that the fares that many low-cost carriers charge can greatly expand the air travel market, enabling many who would otherwise not travel by air to do so. They also provide competitive alternatives for many travelers who would otherwise have to pay higher fares, and often compete down the prices of incumbent carriers who previously charged much higher prices.

The charts in this report suggest that the low fares and market expansion resulting from low cost entry quickly disappear when the low-cost airlines exit a market.

The charts on pages 1 through 4 (Charts A1-D2) illustrate the effects on traffic, average fares, and competitors in four city-pair markets—Detroit-Philadelphia, where Spirit Airlines exited; Kansas City-Minneapolis, where Vanguard Airlines exited; and Atlanta-Pittsburgh, and Atlanta-Detroit, where ValuJet exited. In each chart, the data show the number of passengers broken down by the fare paid in \$25 fare increments. As with the charts in our second report, these charts show data for periods before and after low-cost new entry. In addition, the charts in this report show data after the exit of the low-cost airline, for the most current period. In some cases the departure of the low-cost carriers is so recent that the full effects of its exit may not yet be reflected in the data.

Charts A1, B1, C1, and D1 at the tops of pages 1 through 4 all provide traffic by fare increment for the total market for periods before, during and after low-cost carrier entry. The data shown to the right of each chart show the total passengers, average fares, and total revenue for each period reflected in the chart. These charts show how the entry of low-cost carrier service changes the structure of fares in the market and increases traffic volume.

In each instance after low-cost carrier entry, traffic volumes at low fare levels increased substantially, the level of the lowest fares in the market were reduced substantially, and most passengers who had previously paid higher fares before low-cost carrier entry paid lower fares after such entry.

Conversely, when the low-cost carriers exited, the traffic volumes dramatically shrank to the pre-low fare carrier level and average fares increased. In fact, in three of the four examples, average fares rose to levels substantially greater than before new entry.

Charts A2, B2, C2, and D2 all provide traffic by fare increment for the total market before and after new entry only. This is the same information as graphed in charts A1, B1, C1, and D1, respectively, but is shown without the during-new-entry information so that the difference in price distribution can be more easily seen. The number of low fare passengers during the period when low-cost carriers operated was so great that it compressed the traffic for other periods to the point that changes were not readily apparent.

To illustrate, Chart A1 for Detroit-Philadelphia shows that after Spirit entered the number of passengers who paid fares between \$51 and \$75 surged to about 80,000 passengers whereas the number of passengers who paid between \$351 and \$375 precipitously declined. Before Spirit's entry only 4,500 passengers paid fares in the \$51 to \$75 range while 13,000 paid fares in the \$351-\$375 range. For the first quarter of 1997, after Spirit exited, only 1,200 passengers paid fares in the \$51-\$75 range while almost 17,000 passengers paid fares between \$375 and \$400, which resulted in an almost threefold increase in average fare. The message for consumers in this instance is that while some low fares continue to be available, they are quite limited. Price conscious consumers should carefully follow the advice laid out in the *Getting the Best Air Fare* fact sheet to give themselves the best chance of securing one of the limited number of low fare seats made available.

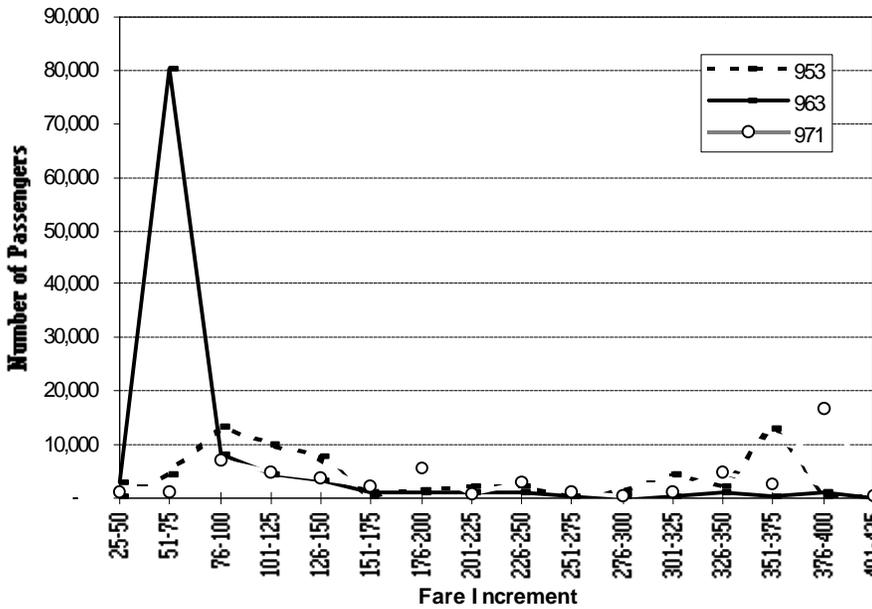

Chart A2 more clearly shows the after-Spirit consequence of fewer low fare sales and, at the same time, an increase in fares for non-discretionary travelers who pay more for unrestricted fares.

Chart B1, for the Kansas City-Minneapolis market is interesting because Vanguard has entered the market a second time. The market experience for its initial entry and exit is similar to that in the Detroit-Philadelphia market for Spirit, where entry produced a very large traffic gain and reduction in average fare, followed by traffic declines and an increase in average fare upon the low-cost carrier's exit. Upon Vanguard's reentry into the Kansas City-Minneapolis market, still more passengers traveled at still lower fares than when Vanguard first entered the market.
