

DOMESTIC AIRLINE FARES CONSUMER REPORT

First Report
Third Quarter 1996 Passenger and Fare Information

June, 1997

U.S. Department of Transportation

FARE INFORMATION FOR CONSUMERS

Each month the Department of Transportation releases an Air Travel Consumer Report that includes information about various service quality elements, including flight delays, mishandled baggage, and oversales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department has decided to release a quarterly fare report.

The initial report provides information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 75 percent of all 48-state passengers and 70 percent of total domestic passengers.

For each market, in addition to the average one way fare, Table 1 shows the number of one way passenger trips per day, the nonstop distance, identifies the airline with the largest market share and its average fare, and identifies the carrier with the lowest average fare. Average fares are average prices paid by all fare paying passengers.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower priced competing carriers where available, can provide useful consumer information. Also, how fares in particular markets compare with fares in other markets provides another source for a consumer to evaluate prices.

To assist consumers in making such comparisons, Table 1 segregates the price information by mileage block, since distance is a major factor that affects the level of prices charged, and then sorts the markets within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus nonstop service, or service to different area airports. Note that the "lowest fare carrier" is the lowest average fare for a carrier that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the "market average" fare will be lower than the fare for the "lowest fare carrier" because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower fares than carriers with greater market participation.

Additional fare information for these top 1,000 city-pair markets is provided at the end of this report.

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets that involve each city (9 for Burbank), the number of passengers traveling to and from each city, and the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of more than 33 percent compared with one year ago. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. The information provided is average prices and the amount and percent change, and total passengers and the amount and percent change.

The pricing information in this report is based on data reported to the Department quarterly by certificated airlines. We will, therefore, release this pricing report four times a year. Based on consumer input we will consider modifying the information in the report to provide the fullest consumer benefit.

A key for carrier codes used in the report, as well as footnotes, are shown at the end of the report.

This report is also available at (<http://www.dot.gov/ost/aviation/>). Telephone inquiries should be referred to (202)-366-1032.

TZ	American Trans Air
UA	United Airlines
US	US Airways
W7	Western Pacific Airlines
W9	Eastwind Airlines
WN	Southwest Airlines
WV	Mid South
YV	Mesa Airlines
YX	Midwest Express Airlines
ZW	Air Wisconsin Airlines
3M	Gulfstream Int'l

Data Source:

Origin and Destination Survey of Airline Passengers submitted by certificated airlines. A 10 percent sample of passenger tickets. Information in this report extracted from DB1A, using directional components of domestic itineraries (fares passengers only).

1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent or more of total traffic.

2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.

3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.
