Price Movements

June 2001

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.2 percent in June, before seasonal adjustment, to a level of 178.0 (1982-84=100). For the 12-month period ended in June, the CPI-U increased 3.2 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.1 percent in June, prior to seasonal adjustment. The June level of 174.6 was 3.2 percent higher than the index in June 2000.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.2 percent in June, following a 0.4-percent increase in May. A downturn in the energy index was partially offset by larger increases in the indexes for food and for all items less food and energy. The energy index, which increased 3.1 percent in May, declined 0.9 percent in June. The index for petroleum-based energy declined 2.2 percent, while the index for energy services rose 0.4 percent. The food index, which increased 0.3 percent in May, rose 0.4 percent in June. Excluding food and energy, the CPI-U rose 0.3 percent in June, following a 0.1-percent increase in May. Larger increases in the indexes for airline fares and for

lodging away from home, coupled with an upturn in the index for tobacco and smoking products and a smaller decline in apparel prices, largely accounted for the acceleration in June. (See page 4 for a note on planned changes in the CPI in 2002.)

Consumer prices rose at a seasonally adjusted annual rate (SAAR) of 3.7 percent in the second quarter, after advancing at a 4.0-percent rate in the first 3 months of 2001. This brings the year-to-date annual rate to 3.8 percent, and compares with an increase of 3.4 percent for all of 2000. The larger increase in the overall CPI-U thus far in 2001 reflects the continued sharp advance in energy prices, coupled with slightly larger increases in the indexes for food and for all items less food and energy. Although the energy index has continued to advance sharply, the composition has changed somewhat over the last 2½ years. Petroleum-based energy costs, which turned up sharply in 1999, have decelerated somewhat, increasing at an 8.8-percent SAAR in the first half of 2001. Charges for energy services, however, have accelerated, increasing at a 13.9-percent annual rate thus far this year. The food index rose at a 3.7-percent SAAR in the first 6 months of 2001, following an increase of 2.8 percent in all of 2000. Grocery store food prices rose at a 3.8-

percent SAAR in the first 6 months, with the largest increases among the 6 major grocery store food groups in the indexes for meats, poultry, fish, and eggs and for dairy products—up at annual rates of 6.9 and 6.8 percent, respectively.

The CPI-U excluding food and energy advanced at a 2.6-percent rate in the second quarter of 2001, following an increase at a 3.5-percent rate in the first 3 months of 2001. The advance at a 3.1-percent SAAR for the first half of 2001 compares with a 2.6-percent increase for all of 2000. This acceleration has been concentrated in the services components; the index for services less energy services increased 3.4 percent in all of 2000 and has risen at a 4.3-percent SAAR in the first 6 months of this year. Contributing to this acceleration were larger increases in the indexes for shelter, for medical care services, and for airline fares. The index for commodities less food and energy commodities rose 0.6 percent in all of 2000 and has declined at a 0.1-percent SAAR in the first half of 2001. The rates for selected groups for the last 7½ years are shown below.

The food and beverages index rose 0.4 percent in June. The index for food at home rose 0.5 percent in June, following a 0.3-percent rise in May. Upturns in the indexes for fruits and vegetables and for nonalcoholic beverages, coupled with a larger increase in the index for dairy products, were responsible for the acceleration in grocery store food prices. The index for fruits and vegetables rose 1.4 percent in June after declining 0.9 percent in May. The indexes for fresh fruits and for fresh vegetables each turned up in June, increasing 0.9 and 2.2 percent, respectively. The index for processed fruits and vegetables rose 0.8 percent. The index for nonalcoholic beverages rose 0.5 percent in June, following a slight decline in May. The index for dairy products, which rose 0.8 percent in May, advanced 1.3 percent in June, reflecting price increases for milk, ice cream, and cheese. The index for meats, poultry, fish, and

The index for cereal and bakery products rose 0.2 percent, while the index for other food at home declined 0.3 percent despite another large increase in butter prices. The

other two components of the food and beverages index—food away from home and alcoholic beverages—increased 0.3 and 0.4 percent, respectively.

In June, the housing index rose 0.4 percent for the second consecutive month. Shelter costs advanced 0.5 percent in June, the same as in May. Within shelter, the indexes for rent and owners' equivalent rent each rose 0.4 percent, and the index for lodging away from home increased 1.5 percent. (Prior to seasonal adjustment, the index for lodging away from home rose 3.1 percent.) The index for fuels and utilities rose 0.4 percent in June. The index for fuel oil increased 1.3 percent and the index for electricity rose 3.8 percent, more than offsetting a 5.6-percent drop in the index for natural gas. (Prior to seasonal adjustment, fuel oil prices declined 1.6 percent, charges for electricity rose 9.6 percent, and charges for natural gas declined 6.0 percent.) The index for household furnishings and operations rose 0.3 percent, reflecting price increases for major appliances, for household paper products, and for household operations—domestic services, lawn care services, moving expenses, and repair of household items.

The transportation component, which advanced 1.2 percent in May, declined 0.2 percent in June, reflecting a downturn in gasoline prices. The index for gasoline fell 2.6 percent in June, following a 6.0-percent rise in May. The index for new vehicles declined 0.1 percent in June and is 0.8-percent lower than its level a year ago. The index for used cars and trucks declined for the third consecutive month—down 0.2 percent in June. The index for public transportation rose 3.8 percent in June, reflecting a 5.0-percent increase in airline fares.

The index for apparel declined for the third consecutive month—down 0.3 percent in June. (Prior to seasonal adjustment, apparel prices fell 2.7 percent, reflecting sea-

sonal price discounting on spring-summer wear.)

Medical care costs rose 0.4 percent in June to a level 4.6 percent higher than a year ago. In June, the index for medical care commodities—prescription drugs, nonprescription drugs, and medical supplies—increased 0.5 percent. The index for medical care services rose 0.4 percent in June. Charges for professional services and for hospital and related services increased 0.3 and 0.4 percent, respectively.

The index for recreation declined for the second consecutive month—down 0.2 percent in June. Price declines were recorded in the indexes for video and audio, for sporting goods, for toys, and for club membership dues and fees for participant sports.

The index for other goods and services increased 0.4 percent in June, following a 0.4-percent decline in May. The index for tobacco and smoking products, which declined 1.3 percent in May, rose 0.5 in June.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.2 percent in June.

Planned Changes in the Consumer Price Index in 2002

Expenditure weight update

As announced in December 1998, the Bureau of Labor Statistics (BLS) will update the consumption expenditure weights in the Consumer Price Index for all Urban Consumers (CPI-U) and in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) to the 1999-2000 period, effective with release of data for January 2002. These new weights will replace the 1993-95 weights, which were first used in the index effective with January 1998 data. Additionally, CPI expenditure weights will be updated at 2-year intervals subsequent to the 2002 updating. Thus, for example, CPI expenditure weights will be updated to the 2001-02 period, effective with release of CPI data for January 2004.

Historically, the introduction of a comprehensive new set of expenditure weights attached to the categories of goods and services in the CPI *market basket* has taken place in the context of the periodic major revisions of the index. Such major revisions have taken place approximately once each decade—in 1940, 1953, 1964, 1978, 1987 and, most recently, in 1998.

The goal in employing current expenditure weights is to have the CPI reflect, as much as possible, the inflation currently experienced by consumers. More specifically, the use of current weights will help to ensure that the relative importance of CPI item categories, such as food away from home, college tuition, and medical care services, more accurately reflects how consumers are allocating their spending.

Publication of overlap CPIs

For the first 6 months of 2002, BLS will continue to calcu-

late and publish selected CPI-U and CPI-W *overlap* indexes on a not seasonally adjusted basis. These indexes will be compiled, using the 1993-95 expenditure pattern that was introduced into the CPI in 1998. Comparison of these index series to the corresponding updated series will enable users of the CPI to observe the effects of the expenditure weight change. The subsequent expenditure updates scheduled in 2004 and every 2 years thereafter also will be accompanied by the publication of overlap indexes for a 6-month period using the previous expenditure pattern.

Publication of CPI for the Phoenix area

Effective with release of the July 2002 Consumer Price Index (CPI), BLS will initiate publication of consumer price data specific to the Phoenix-Mesa, Arizona, Metropolitan Statistical Area. As with the national CPI and other local area CPIs, data will be published for each of two population groups, that for all urban consumers (CPI-U) and that for urban wage earners and clerical workers (CPI-W). The Phoenix-Mesa CPI will be published on a semi-annual basis with a reference base of December 2001 = 100. The same amount of item detail will be available for Phoenix-Mesa as is presently available for all other areas published on a semi-annual basis.

Change to published item structure

Effective with release of the January 2002 CPI, BLS will begin publishing an item index for leased cars and trucks. This index series will be available monthly at the U.S. City Average area level for both the CPI-U and CPI-W with a December 2001 = 100 reference base.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

- M - Every month.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1996=100 base.

⁴ Indexes on a December 1986=100 base.

⁵ In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Pittsburgh, PA;

Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA; Tampa-St. Petersburg-Clearwater, FL.

⁶ Indexes on a November 1996=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1996=100 base.

⁴ Indexes on a December 1986=100 base.

⁵ In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Pittsburgh, PA;

Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA; Tampa-St. Petersburg-Clearwater, FL.

⁶ Indexes on a November 1996=100 base.

- Data not available.

NOTE: Index applies to a month as a whole, not to any specific date.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

Technical Note

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) A CPI for All Urban Consumers (CPI-U) that covers approximately 87 percent of the total population, and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) that covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, retirees, and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for physicians' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest metropolitan areas and every other month in other areas. Prices of most goods and services are obtained by personal visits or telephone calls from the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes also are published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 26 local areas. Area indexes do not measure differences in the level of prices among cities; they measure only the average change in prices for each area since the base period.

The index measures price change from a designated reference date—1982-84, which equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change also can be expressed in dollars as follows: the price of a base-period market basket of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65.

For further details see *BLS Handbook of Methods*, chapter 17, "The Consumer Price Index," Bulletin 2490, April 1997.

Calculating Index Changes

Movements of the indexes from one month to another usually are expressed as percent changes, rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The example below illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

<i>Index point change</i>	
CPI	115.7
Less previous index	111.2
Equals index point change	4.5
<i>Percent change</i>	
Index point difference	4.5
Divided by the previous index	111.2
Equals	0.040
Results multiplied by 100	0.040x100
Equals percent change	4.0

Energy Prices

Prices are usually available for the U.S. city average, 13 large metropolitan areas, the 4 census regions, 3 size classifications, and 10 areas reflecting the 4 census regions cross-classified by the 3 population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA appears. This designation also appears if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in

the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the CPI. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI not only are for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas, and for 500 kilowatt hours of electricity (shown in table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Because heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of con-

sumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised CPI.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. (See table P1.) Prices are collected, in most cases, for quantities greater than 1 gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity or quick payment.

Gasoline and automotive diesel fuel. Gasoline and diesel prices, shown in table P3, are collected at the pump from a sample of full service, mini-service, and self-service gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

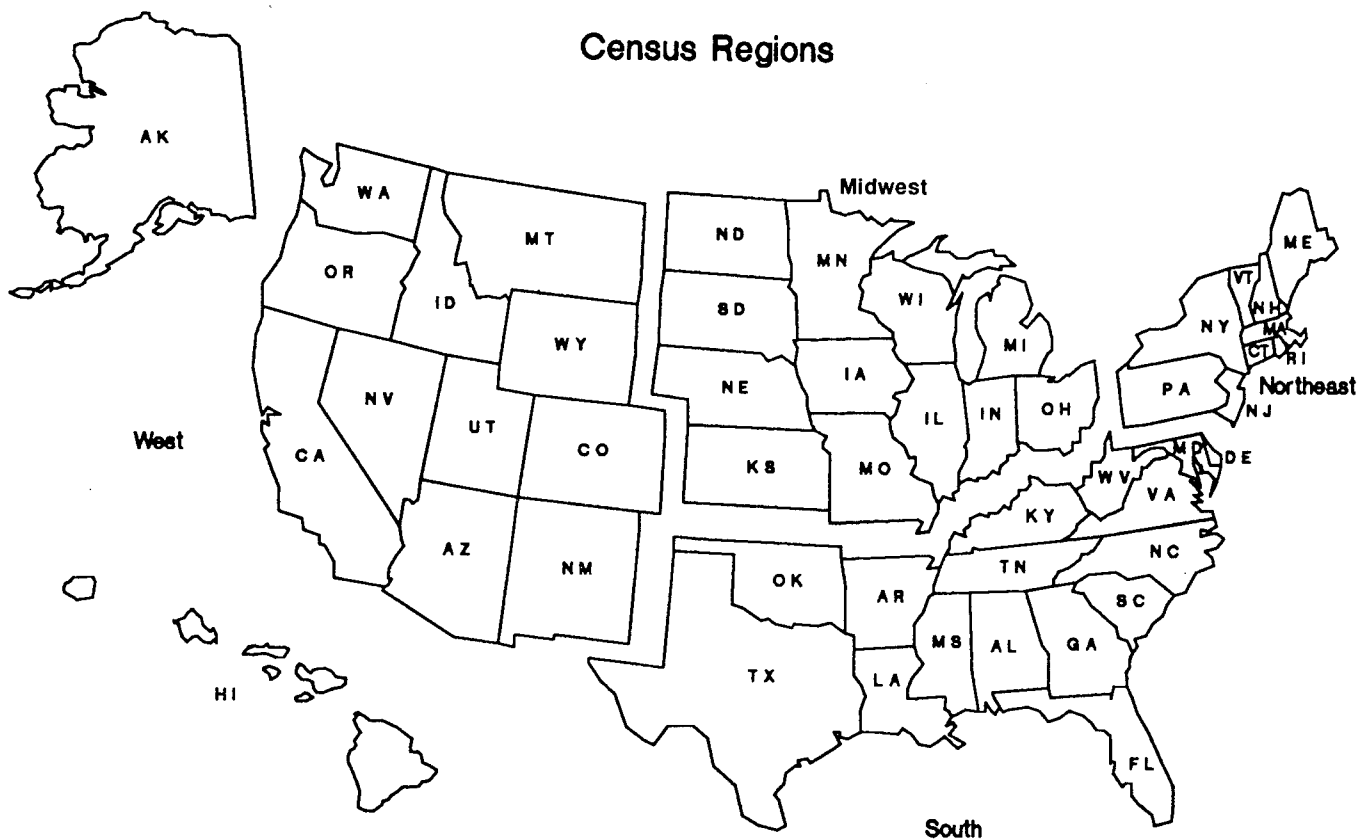

1 therm = 100,000 BTUs (U.S. Department of Energy)

1 kwh = 3,412 BTUs (Edison Electric Institute)

1 gallon #2 fuel oil = 140,000 BTUs (U.S. Department of Energy)

Food and Beverage Prices

Actual weighted average prices for food and beverages are calculated each month at the national level and for the four census geographic regions, as shown in table P4. As a result of changes in price collection methodology and sample

sizes, average prices for individual cities cannot, in general, be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted that the average prices for food in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available, due to temporary disruptions in supplies. Where no average prices are available, the designation NA appears. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price is not published, and NA appears for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. Detailed specifications are available from BLS information offices or from the Washington office, upon request.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted, as well as unadjusted, changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes usually are preferred, because they eliminate the effect of changes—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales—that normally occur at the same time and in about the same magnitude every year.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-12-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data—for example, data from 1996 through 2000 were replaced at the end of 2000. The seasonal movement of All items and 54 other aggregations is derived by combining the seasonal movement of 73 selected components. Each year, the seasonal status of every series is re-evaluated, based upon certain statistical criteria. If any of the 73 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years; but the seasonally adjusted indexes will be used before that period. (Note: Thirty-eight of the

seventy-three components are seasonally adjusted for 2001.)

Seasonally adjusted data, including the All items index levels, are subject to revision for up to 5 years after their original release. For this reason, BLS advises against the use of these data in escalation agreements.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called Intervention Analysis Seasonal Adjustment for some CPI series. Intervention Analysis Seasonal Adjustment allows for better estimates of seasonally adjusted data. Extreme values or sharp movements that might distort the seasonal pattern are estimated and removed from the data, prior to calculation of seasonal factors. Beginning with the calculation of seasonal factors for 1996, X-12-ARIMA software was used for Intervention Analysis Seasonal Adjustment.

For the fuel oil, natural gas, motor fuels, and educational books and supplies indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For the nonalcoholic beverages index, the procedure was used to offset the effects of a large increase in coffee prices due to adverse weather. The procedure was used to account for unusual butter fat supply reductions affecting the fats and oils series. For the water and sewerage maintenance index, the procedure was used to account for a data collection anomaly.

Chicago-Gary-Kenosha, IL-IN-WI
 Los Angeles-Riverside-Orange County, CA

Data for an additional 11 metropolitan areas are published every other month [on an odd (January, March, etc.) or even (February, April, etc.) month schedule] for the following areas:

Atlanta, GA	-even
Boston-Brockton-Nashua, MA-NH-ME-CT	-odd

How to Obtain Consumer Price Index Information

Consumer Price Index (CPI) information is available from the Bureau of Labor Statistics (BLS) electronically, through publication subscriptions, and via telephone and fax through automated recordings. Information specialists also are available in the national and information offices, to provide help and to respond to questions.

Electronic access to CPI data

BLS on the Internet. Through the Internet, BLS provides free, continuous access to published CPI data and press releases. The most recent month's CPI is made available immediately at the time of release. Additionally, a database called LABSTAT, containing current and historical data for the CPI, is accessible. Data and press releases from other BLS surveys also are available. The BLS site is accessible via the World Wide Web (WWW), Gopher, and File Transfer Protocol (FTP), as described below. Send e-mail to labstat.helpdesk@bls.gov for help in using any of these systems.

World Wide Web. BLS maintains a Web site at <http://stats.bls.gov> on the Internet. This BLS homepage provides

access to LABSTAT, as well as links to program-specific homepages. The CPI homepage <http://stats.bls.gov/cpihome.htm> provides other CPI information, as well as indexes. This includes a brief explanation of methodology, frequently asked questions and answers, contacts for further information, and explanations of how the CPI handles special items, like medical care and housing. In addition, CPI press releases and historical data for metropolitan areas can be accessed by linking to information office homepages from the main BLS Web site listed above.

FTP and Gopher. These tools provide access to CPI LABSTAT data, as well as documentation and press release files organized in hierarchical directories. Connect to stats.bls.gov using FTP or Gopher. Log on as *anonymous*, and use your complete Internet e-mail address as the password.
