SUMMARY OF DATASET

The government plays an important role in the U.S. transportation system, as a provider of transportation infrastructure and as an administrator and regulator of the system. The government spends many funds on building, rehabilitating, maintaining, operating, and administering the infrastructure system. Government revenue generated from several sources, including user fees, taxes from transportation and non-transportation-related activities, borrowing, and grants from federal, state, and local governments primarily supports these activities.

Government Transportation Financial Statistics (GTFS) provides a set of maps, charts, and tables with information on transportation-related revenue and expenditures for all levels of the United States of America government (i.e., federal, state, and local) by modes of transportation.

The report is limited to civilian transportation, including the

U.S. Army Corps of Engineers (USACE) activities like construction and maintenance of channels, harbors, locks, and dams and transportation-related activities of the U.S. Coast Guard (USCG). This Government Transportation Financial Statistics 2001 report includes: federal revenues and expenditures by mode for agencies and program through Fiscal Year (FY) 1985-2000, with data tables including estimates for FY 2001; The federal grants to state and local governments by mode for FY 1985-2000; The federal budget authority and obligations by mode and year program for FY 1985-2000, with data tables including estimates for FY 2001; The state and local government revenues and expenditures by mode for FY 1985-1999. The principal source for federal financial data is the Annual Budget of the United States Government published by the Office of Management and Budget (OMB). The primary source for state and local government financial data is the U.S. Bureau of the Census.
