

ECONOMIC COMMISSION FOR EUROPE
INLAND TRANSPORT COMMITTEE
Working Party on Inland Water Transport
Geneva

**INVENTORY OF MAIN
STANDARDS AND PARAMETERS OF
THE WATERWAY NETWORK
("BLUE BOOK")**

As amended by Addenda 1 and 2

UNITED NATIONS
New York and Geneva, 1998

NOTE

The present publication, prepared by the Transport Division of the ECE secretariat, reproduces document TRANS/SC.3/1997/2 adopted by the Working on Inland Water Transport at its forty-first session on 17 October 1997 and endorsed by the Inland Transport Committee at its sixtieth session on 16 January 1998, including Addendums 1 and 2.

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries.

INVENTORY OF MAIN STANDARDS AND PARAMETERS OF THE E WATERWAY NETWORK ("BLUE BOOK")

INTRODUCTION

At its fortieth session, the UN/ECE Working Party on Inland Water Transport (SC.3) agreed to proceed with the drafting of the so-called "blue book" which would contain technical characteristics of European inland waterways and ports of international importance (E waterways and ports) identified in the European Agreement on Main Inland Waterways of International Importance (AGN) (TRANS/SC.3/140, para. 19).

The objective of this publication is to establish an inventory of existing and envisaged standards and parameters of E waterways and ports in Europe and to show, on an internationally comparable basis, the current inland navigation infrastructure parameters in Europe as compared to the minimum standards and parameters prescribed in the AGN Agreement.

The Working Party agreed that the "blue book" should be updated every five years so that it could serve as a basic instrument for monitoring the progress made in the implementation of the AGN.

INLAND WATERWAYS OF INTERNATIONAL IMPORTANCE

The European Agreement on Main Inland Waterways of International Importance in its annex III stipulates the requirements for the classification of E waterways. In total 27,711 km of European inland waterways have been earmarked by Governments as E waterways. The above length excludes the double counting of sections on which two or more E waterways overlap. The breakdown by classes of inland waterways of international importance may be summarized in the table below.

Classification of E waterways

	Missing links	Less than class IV	Class IV	Class Va	Class Vb	Class VIa	Class VIb	Class VIc	Class VII	Total
Length (km)	1,489	4,286	3,969	3,270	5,051	667	5,766	1,592	1,621	27,711
%	5.37	15.47	14.32	11.80	18.23	2.41	20.81	5.74	5.85	100

In accordance with the AGN Agreement only waterways meeting the basic minimum requirements of class IV (minimum dimensions of vessels 85.0 m x 9.50 m) can be considered as E waterways. The Agreement recommends that the new E waterways to be built (for the completion of missing links) should meet at least the requirements of class Vb, while the waterways to be modernized should meet the requirements of at least class Va.

BOTTLENECKS AND MISSING LINKS IN THE NETWORK OF MAIN INLAND WATERWAYS OF INTERNATIONAL IMPORTANCE

In the course of its work on the draft AGN the Working Party SC.3 endorsed the following definitions of "bottlenecks" and "missing links" in the inland navigation network, elaborated by the ad hoc Group of Experts on Inland Waterway Infrastructure:

"Those sections of the European waterway network of international importance that have parameter values being substantially lower than target requirements are called bottlenecks.

There are two kinds of bottlenecks:

"Basic bottlenecks" are the sections of E waterways whose parameters at the present time are not in conformity with the requirements applicable to inland waterways of international importance in accordance with the new classification of European inland waterways (class IV);

"Strategic bottlenecks" are other sections satisfying the basic requirements of the class IV but which, nevertheless, ought to be modernized in order to improve the structure of the network or to increase the economic capacity of inland navigation traffic.

"Missing links" are such parts of the future network of inland waterways of international importance which do not exist at present.

The basic condition for the completion of bottlenecks and elimination of missing links is the positive result of economic evaluation" (TRANS/SC.3/133, paragraph 18).

In accordance with the above definition the following list of bottlenecks and missing links, by countries, has been established.

Austria

Missing link: Danube-Oder-Elbe Connection (E 20).

Basic bottlenecks: none.

Strategic bottlenecks: Danube (E 80) from 2,038.0 to 2,008.0 km and from 1,921.0 to 1,873.0 km - low fairway depth (in some locations down to 2.20 m).

Belarus

Missing link: none.

Basic bottlenecks: none.

Strategic bottlenecks: Mukhovets (E 40) from Brest to Kobrin - low maximum draught (1.6 m).

Dneprovsko-Bugskiy Canal (E 40) from Kobrin to Pererub - low maximum draught (1.6 m).

Pina (E 40) from Pererub to Pinsk - low maximum draught (1.6 m).

Pripyat (E 40) from Stakhovo to the mouth - low maximum draught (1.3 m).

Belgium

Missing link: Meuse-Rhine link. ^{*/}

Maldegem - Zeebrugge (E 07).

Basic bottlenecks: Canal du Centre (E 01) from Nimy to Seneffe - upgrading from class I to class IV is under way.

Kanaal Bocholt - Herentals (E 01-01), Bocholt - Dessel section.

Zuid - Willemavaart (E 01-01), section Bocholt - Belgium/Netherlands border.

Gent - Oostende Canal (E 02), Brugge - Beernem section.

Harelbeke lock - Menin lock - Deûlémont - Quesnoy (E 02) - upgrading from classes II and I to class IV is under way.

Plassendale - Nieuwpoort Canal (E 02-02-01).

Charleroi - Bruxelles Canal (E 04), Lembeek - Bruxelles section (upgrading the height under bridges and improvement of the waterway is required).

Bossuit - Kortrijk Canal (E 05-01), Zwevegem - Kortrijk section.

Dender (E 05-04), Aalst - Dendermonde section. ^{**/}

Strategic bottlenecks: Meuse (E 01) from Pont d'Ougrée to Liège - upgrading from class Vb to class VIb is envisaged.

Lys Mitoyenne - Lys (Menin - Deinze section) and Lys Derivation Canal up to Schipdonk (E 02) - upgrading from class IV to class Vb is envisaged within the Seine - Escaut Link project.

Rupelmonde - Bruxelles (E 04) - upgrading from class Va to class VIb is envisaged.

Albertkanaal (E 05), Wijnegem passage and section Kanne - Liège - upgrading from class Vb to class VIb is envisaged.

Croatia

Missing link: Danube - Sava Canal (E 80-10) from Vucovar to Samac.

Basic bottlenecks: Sava (E 80-12) from Serbia and Montenegro/Croatian State border to Sisak - upgrading from class III to class Vb is required.

Strategic bottlenecks: none.

^{*/} This link is not mentioned in the AGN Agreement and its inclusion into this Inventory has been suggested by the Government of Belgium.

^{**/} The Government of Belgium informed the secretariat that according to the Flemish Region E 05-04 should be limited to the Bovenzeeschelde - Aalst section and should not include the rest of the Dender and the Blaton - Ath Canal as provided for in the AGN Agreement.

Czech Republic

Missing link: Danube - Oder - Elbe Connection (E 20 and E 30).

Basic bottlenecks: none.

Strategic bottlenecks: Elbe (E 20) from State border to Usti nad Labem - low fairway depth at dry seasons (0.9-2.0 m), from Usti nad Labem to Melnik - narrow width of lock gates (11 m), from Melnik to Pardubice - low height under bridges (3.7 m).

Vltava (E 20-06) - low fairway depth (1.2-1.8 m), low height under bridges (4.5 m) and narrow width of lock gates.

Finland

Missing links: none.

Basic bottlenecks: none.

Strategic bottlenecks: Saimaa Canal (E 60-11) from Vyborg to Kuopio/Joensuu - upgrading to class Va is envisaged.

France

Missing links: Rhône - Rhine Canal (E 10). ***/

Seine - Moselle Link (E 80).

Seine - Escaut Link (E 05).

Saône - Moselle Link (E 10-02).

Basic bottlenecks: none.

Strategic bottlenecks: Dunkerque - Escaut link and Escaut (E 01) up to Condé - low height under bridges (4.44 m).

Deûle and Deûle Canal (E 02) from Quesnoy/Deûle to Lille - upgrading to class Va is under way, from Lille to Bauvin - low height under bridges (5.06 m).

Rhine (E 10) from Iffezheim to Niffer - length of convoys is limited by 183 m, upgrading to class VIb (186.5 m) is under way.

Oise (E 80) from Conflans to Creil - low height under bridges (5.18 m), from Creil to Compiègne low draught and height under bridges (2.50 m and 5.76 m, respectively).

Moselle (E 80) from Toul to Apach - upgrading of maximum draught from 2.50 m to 2.80m is under way.

***/ The secretariat has been informed by the Government of France that the project concerning the Rhône - Rhine Canal (E 10) had been abandoned.

Germany

Missing links: Link between the Mittellandkanal and the Elbe - Havel - Kanal ("Magdeburg Waterway Crossroad") (E 70). The project is under way.

Basic bottlenecks: Saale (E 20-04) from Halle to Elbe upgrading to class IV is under way.

Mittellandkanal (E 70) - sections which have not yet been modernized are being upgraded to class Vb.

Elbe - Havel - Kanal (E 70) - upgrading to class Vb is under way.

Untere - Havel - Wasserstraße (E 70) from Plaue to Spree - upgrading to class Vb is under way.

Berlin region waterways (various sections) upgrading to class IV and higher classes is under way.

Havel - Oder - Wasserstraße (E 70) - upgrading to class Va is under way.

Strategic bottlenecks: Rhine (E 10) - low fairway depth at dry seasons: downstream from Duisburg - 2.5 m, from Köln to Koblenz and from St. Goar to Mainz - 2.1 m.

Datteln - Hamm - Kanal (E 10-01) to the West of Hamm Harbour - upgrading to class Vb is under way.

Rhine - Herne - Kanal (E 10-03) - upgrading to class Vb is under way on sections which have not yet been modernized.

Weser (E 14) from 360.7 km to Minden - low fairway depth (2.5 m).

Dortmund - Ems - Kanal (E 13) from 108.3 km to 21.5 km - upgrading to class Vb is under way.

Elbe (E 20) from Lauenburg to State border - low fairway depth (1.3 m).

Mosel (E 80) - construction of second lock chambers is under way.

Main (E 80) upstream from Würzburg - low fairway depth (2.5 m).

Danube (E 80) from Straubing to Vilshofen - low fairway depth (1.55 m).

Other strategic bottlenecks, the elimination of which is anticipated to become economically viable only in the framework of a replacement programme supported by a particular investment scheme:

Weser (E 14) - upgrading of Minden and Dörverden Locks.

Dortmund - Ems - Kanal (E 13) to the North of the Mittellandkanal - a number of locks have a width of only 10.00 m.

Datteln - Hamm - Kanal (E 10-01) - to the East of the Hamm Harbour.

Canals branching off from the Mittellandkanal (E 70-02, 70-04 and 70-06) - low fairway depth and height under bridges (2.00 m and 4.00 m, respectively), insufficient dimensions of locks.

Oder - Spree - Kanal (E 71) - upgrading from class III to class IV is required especially with regard to locks.

Various sections of the Berlin region waterway network.

Hungary

Missing links: none.

Basic bottlenecks: none.

Strategic bottlenecks: Danube (E 80) joint Slovak - Hungarian section from Palkovicevo (1,810.0 km) to 1,708.2 km - low maximum draught at dry seasons (1.70 m) and height under bridges (7.75 m), upgrading to 2.50 m and 9.10 m, respectively is required, the section from 1,708.0 km to Budapest (1,652.0 km) - low maximum draught (1.50 - 1.70 m).

Lithuania

Missing links: none.

Basic bottlenecks: Nemunas (E 41) from Jurbarkas to Kaunas - upgrading from class IV to class Vb is required.

Luxembourg

Missing links: none.

Basic bottlenecks: none.

Strategic bottlenecks: none.

Moldova

Missing links: none.

Basic bottlenecks: Prut (E 80-07) from the mouth to Branest - upgrading to class Va is required.

Nistru (E 90-03) from Ukraine/Moldova State border to Bender - upgrading from class III to class Va is required.

Strategic bottlenecks: none.

Netherlands

Missing links: Link between the Twentekanaal and the Mittellandkanal (E 70).

Basic bottlenecks: none.

Strategic bottlenecks: Maas (E 01) from Maastricht to Moerdijk - upgrading to class Vb is envisaged.

Prinses Margriet Canal (E 15) - upgrading to class Va is envisaged.

Van Starkenborgh Canal (E 15) - upgrading to class Va is envisaged.

IJssel (E 70) from Arnhem to Zutphen - upgrading to class Vb is envisaged.

Poland

Missing links: Danube - Oder - Elbe Connection (E 30).

Basic bottlenecks: Oder (E 30) from Widuchowa to Kozle - upgrading from classes II and III to class Vb is required.

Glivice Canal (E 30-01) - upgrading from class III to class Vb is required.

Wisla (E 40) from Biala Gora to Wloclawek and from Plock to Warszawa - upgrading from classes I and II to class Vb is required.

Zeran Canal (E 40) from Zeran to Zegrze Lake - upgrading from class III to class Vb is required.

Bug (E 40) from Zegrze Lake to Brest - upgrading to class Vb is required.

Warta - Notec - Bydgoski Canal (E 70) from Kostrzyn to Bydgoszcz - upgrading from class II to class Vb is required.

Wisla (E 70) from Bydgoszcz to Biala Gora - upgrading from class II to class Vb is required.

Szkarpara (E 70) from Gdanska Glova to Elblag - upgrading from class III to class Vb is required.

Strategic bottlenecks: Oder (E 30) from Szczecin to Widuchowa - upgrading from class IV to class Vb is expected.

Romania

Missing links: Danube - Bucuresti Canal (E 80-05).

Basic bottlenecks: Bega (E 80-01-02) from State border to Timisoara - upgrading to class Vb is required.

Olt (E 80-03) up to Slatina - upgrading to class Vb is required.

Strategic bottlenecks: none.

Russian Federation

Missing links: none.

Basic bottlenecks: none.

Strategic bottlenecks: Don (E 90) from Kalach to Azov - low water depth (3.60 m) at sill of the Kochetov lock (162.0 km). The construction of a second parallel lock is required with a greater depth at sill.

Slovakia

Missing links: Danube - Oder - Elbe Connection (E 20).

Vah - Oder Link (E 81).

Basic bottlenecks: Vah (E 81) from Hlohovec (101.9 km) to Zilina (250.0 km) - canalization of the river and its upgrading from class III to class Va is envisaged by the year 2010.

Strategic bottlenecks: Danube (E 80) from Devin (1,880.0 km) to Bratislava (1,862.0 km, the upper limit of the pool of Gabčíkovo) - upgrading from class VIb to class VIc.

Danube (E 80) - low height under bridges: at Bratislava (1,868.14 km) - 7.06 m and at Gabčíkovo locks (1,820.49 km) - 8.90 m. Upgrading is required up to 9.10 m.

Danube (E 80) from Šap (1,810.0 km) to the mouth of the River Ipel (1,708.2 km) - insufficient depth and width at low water flow.

Vah (E 81) from Kralova (63.1 km) to Hlohovec (101.9 km) - construction of Sered-Hlohovec hydraulic complex and reconstruction of canals and locks is required in order to upgrade this section of the river to class VIa.

Vah (E 81) from Komarno (0.0 km) to Selice (42.0 km) - low maximum draught (1.6 m). Navigable conditions will improve after the construction of the lower hydraulic works of the Gabčíkovo-Nagymaros complex.

Switzerland

Missing links: none.

Basic bottlenecks: none.

Strategic bottlenecks: none

Ukraine

Missing links: none.

Basic bottlenecks: Dnestr (E 90-03) from Belgorod-Dnestrovsky to Ukraine/Moldova border - upgrading from class III to class Vb is required.

Serbia and Montenegro

Missing links: none

Basic bottlenecks: Begej (E 80-01-02) from its mouth to Serbia and Montenegro/Romanian border - upgrading from class III to class Vb is required.

Strategic bottlenecks: Danube (E 80) at Novi Sad (1,255.0 km) - low height under a road bridge (6.07 m).

Sava (E 80-12) from its mouth to the State border - upgrading to class Vb is required.

COASTAL ROUTES

Coastal routes mentioned in annex I to AGN are intended to ensure the continuity of the E waterways' network throughout Europe and, in principle, do not impose any restrictions on vessels using them. However, in the event that these coastal shipping vessels are supposed to regularly use inland waterways (mixed river-sea navigation) their dimensions should, where possible and economically viable, meet the requirements for self-propelled units suitable for navigation on inland waterways of classes Va and VIb as indicated in annex III of the Agreement.

EXPLANATIONS OF TABLES 1, 2 AND 3

The three tables reproduced below reflect data on existing and target parameters of inland waterways, locks and ports of international importance as at 1 January 1997.

Table 1: Navigational Characteristics of Main Inland Waterways of International Importance

Data for each section of E waterways are given in two lines: the upper line represents target values to be achieved as a result of envisaged modernization of existing waterway or construction of a new water link, while the lower one shows existing parameters. Maximum admissible length and width of vessels/ convoys are separated by a slash.

The draught (d) and the minimum height under bridges (H) indicated in Table 1 are given in relation to the Low Navigable Water Level (LNWL) for the draught and the Highest Navigable Water Level (HNWL) for the height under bridges. The LNWL corresponds to a long-term mean water level reached or exceeded on all but 20 ice-free days per year (approximately between 5% and 6% of the ice-free period). The HNWL corresponds to a level existing for not less than 1% of the navigation period, established on the basis of observations over a substantial number of years (30 to 40 years), excluding periods when there was ice.

The above data may, therefore, differ from those calculated in accordance with annex III of the AGN Agreement which stipulated that on waterways with fluctuating water levels, the value of the recommended draught should correspond to the draught reached or exceeded for 240 days on average per year (or for 60% of the navigation period) and the value of the recommended height under bridges (5.25, 7.00 or 9.10 m) should be ensured over the highest navigation level, where possible and economically reasonable.

The suitability of a particular waterway for combined transport is marked as follows:

A - Waterways suitable for combined transport. This means that inland navigation vessels with a width of 11.40 or 11.45 m and a length of approximately 110 m are able to operate on such waterways carrying three or more layers of containers, 50% of containers being empty. Otherwise a permissible length of pushed convoys of 185 m

should be possible, in which case they could operate with two layers of containers, 50% of containers being empty;

B - Waterways suitable for combined transport but restrictions apply. This is mainly interpreted by Governments as inland waterways allowing the transport of at least two layers of containers, 50% or less of them being empty, sometimes with the use of ballasting;

C - Waterways not suitable for combined transport. These are the waterways where the transport of even two layers of containers is impossible.

Table 2: Parameters of locks of inland waterways of international importance

The table contains detailed data on some 600 locks, ship lifts and inclined planes situated on E waterways. This also includes data on locks which are under construction or planned.

Table 3: Technical characteristics of inland navigation ports of international importance

This table provides data on 370 European inland navigation ports of international importance. E ports are classified in the table in accordance with their annual cargo-handling capacity (0.5-3 million tons, 3-10 million tons and more than 10 million tons). The annual cargo-handling capacity should be interpreted as the potential of a particular port with regard to its existing equipment.

Footnotes to Table 1

- 1/ The draught (d) and the minimum height under bridges (H) indicated in Table 1 are given in relation to the Low Navigable Water Level (LNWL) for the draught and the Highest Navigable Water Level (HNWL) for the height under bridges. The LNWL corresponds to a long-term mean water level reached or exceeded on all but 20 ice-free days per year (approximately between 5 and 6 per cent of the ice-free period). The HNWL corresponds to a level existing for not less than 1 per cent of the navigation period, established on the basis of observations over a substantial number of years (30 to 40 years), excluding periods when there was ice.
- 2/ Provisionally restricted to 2.20 m because of silting.
- 3/ The construction of a 1,350 tons canal is about to be completed.
- 4/ All bridges are movable.
- 5/ When bridge is not open air draught is 11.50 m for mean high water (MHW) at normal Amsterdam Peil (Dutch reference water level = mean sea tide level) (NAP) + 0.96 m.
- 6/ Limitation of 1.50 m is only effective on a section of one kilometre (at the old Hermalle-sous-Argentaux dam) and will be eliminated in the nearest future.
- 7/ Depending on the tide water level prevailing.
- 8/ Sea-going vessels measuring 175.00 m x 25.00 m x 8.80 m are admitted.
- 9/ For fixed low water level for rivers (OLW) NAP - 0.20 m.
- 10/ When bridge is not open air draught is 12.00 m for MHW NAP + 0.96 m.
- 11/ For OLW NAP + 0.15 m.
- 12/ For sea-going vessels measuring 256.00 m x 34.00 m x 12.25 m.
- 13/ For fixed low water level (OLR) at Lobith NAP + 7.95.
- 14/ For water level at high river discharge at Lobith NAP + 15.58 m (Marke II). For mean water level at Lobith NAP + 10.10 m.
- 15/ Fairway depth, below GLW 92 (between Emmerich and Duisburg: 2.80 m below GLW).
- 16/ When going downstream; reduced to 22.90 m in low water conditions.
- 17/ Fairway depth, below high water level (GLW) 92.
- 18/ Fairway depth, below GLW 92 (between St. Goar and Mainz: 1.90 m below GLW).
- 19/ Bridge at Avignon - 6.30 m, Bridge at Tarascon - 7.40 m, bridge at Arle - 7.88 m.

- 20/ Fos - Port of Marseille section is not operable because of closure of the Rove tunnel. Alternative route is via the sea.
- 21/ The under-bridge headroom requirement for this class cannot be met.
- 22/ Restrictions apply with regard to two-way traffic.
- 23/ Single units and convoys of up to 90 m in length and 9.60 m in width, may draw up to 2.80 m.
- 24/ From 113.0 km to 124.0 km - 5.50 m.
- 25/ This project is not expected to be realized in the near future.
- 26/ These figures correspond to a level of 1.75 m on the scale at Rheinfelden.
- 27/ The Mittlere Brücke has 4.80 m headroom for each arch over a width of 17.00 m at the highest navigable flood level.
- 28/ No dimension established for inland navigation vessels; sea-going ships measuring 325.0 m x 42.00 m x 13.10 m are admitted.
- 29/ The depth required for this category cannot be guaranteed (depending on the water level prevailing).
- 30/ At the fixed water level in channel (KP).
- 31/ /above mean water level.
- 32/ Fairway depth, below GLW 89.
- 33/ Depending on the water level prevailing.
- 34/ The total length of the Lüneburg Shiplift is 100 m; single units of up to 100 m in length are accepted.
- 35/ The permissible length-of-convoy requirement for this class cannot be met.
- 36/ According to the information of the Government of Poland.
- 37/ Class to be agreed by the Governments of Poland and Germany.
- 38/ According to the information received from the Government of Germany.
- 39/ Estimated depth of the channel exceeded during 20 ice-free days a year on average.
- 40/ Non-navigable waterway. A weir in Kozlowice, downstream of Brest, has no navigational locks and constitutes a main obstacle.
- 41/ During the locking procedure the pusher is to enter the chamber alongside the barges.
- 42/ Limitation draught on the section from Gorodetski Lock to Nizhniy Novgorod (length, 56 km).
- 43/ At a project water level.

- 44/ On the Sarapul-Chaikovsky section (68 km in length). On other sections the maximum navigable draught is 3.50 m.
- 45/ Vessels of a greater length may be allowed if their width is approved. The length of pushed convoys of 83.0 m is allowed only up to 126.0 km; from this point up to 210.0 km the length of up to 60.0 m is allowed.
- 46/ The draught of 3.80 m is ensured on 162 km of the river (from its mouth to 135.0 km and on 27 km between the Pocinho weir and Spanish port Vega Terron). On the rest of the river the draught of 2.00 m is ensured.
- 47/ This figure is reduced to 6.60 m under the bridge of Ferradosa at 151.0 km.
- 48/ Maximum length of the Joensuu lock is 160.0 m.
- 49/ Vessels with a beam not exceeding 9.00 m may draw up to 2.20 m.
- 50/ Single units of 86.0 m x 9.50 m and convoys of 147.0 m x 9.00 m may obtain special permission for navigation.
- 51/ As an alternative to the waterway via the Szkarawa River.
- 52/ Improvement of the Untere Havel Wasserstraße is under way to the south of Wustermark.
- 53/ No restriction when bridges are open.
- 54/ Under-bridge headroom at the Koblenz rail bridge is reduced to less than 6.00 m on about 50 days per year.
- 55/ Data concerning target values for this section have been submitted by the Slovak Government. They are expected to be reviewed in the course of joint Hungarian/Slovak consultations.
- 56/ Except for road bridge Auheim at 59.56 km, where an under-bridge headroom of 4.39 m applies.
- 57/ Vessels exceeding 90 m in length are subject to additional requirements regarding the carriage of equipment.
- 58/ Except for Kettenbrücke and Löwenbrücke Bridges at Bamberg, where an under-bridge headroom of 5.41 m applies.
- 59/ A special permit is required when the draught exceeds 2.50 m.
- 60/ At the minimum regulated navigable water level (ENR) existing for 96% of the ice-free period, established on the basis of the flows observed over a period of 40 years (fairway depth).
- 61/ The single-unit permissible length and width requirement for this class cannot be met.
- 62/ Only vessels with a beam of up to 11.40 m may navigate downstream.
- 63/ Road bridge at Pfatter.

- 64/ Railway bridge at Deggendorf.
- 65/ Luitpolbrücke at Passau.
- 66/ Maximum draught according to Police Regulations; 2.70 m fairway depth at LNWL.
- 67/ Road/railway bridge at Linz.
- 68/ Maximum draught according to Police Regulations; 3.00 m fairway depth at LNWL.
- 69/ Maximum draught according to Police Regulations; 2.20 m fairway depth at LNWL at several bars.
- 70/ Road bridge at Stein/Mautern.
- 71/ Bridge at Bratislava (1868.1 km). At a water level of + 619 cm according to the Bratislava/Devin hydrometric station.
- 72/ These maximum dimensions of pushed convoys are only allowed if they are capable of reaching a speed of at least 8 km/h on this section of the Danube.
- 73/ Bridge over the lock at Gabcikovo. Target parameters will be reached after completion of the dredging in the old arm of the Danube downstream of the mouth of the derivation canal and in the derivation canal of the Gabcikovo hydroelectric complex.
- 74/ 1.40 m - according to the Hungarian Government and 1.70 m - according to information received from the Government of Slovakia.
- 75/ VIa - according to the Hungarian Government and VIc according to the Government of Slovakia which believes that, although at present this section of the river has insufficient depth and width of the channel at low water flow, the navigation conditions will improve after the construction of the lower hydraulic works of the Gabcikovo - Nagymaros complex.
- 76/ VIb - according to the Hungarian Government and VIc according to information received from the Government of Slovakia which believes that, although at present this section of the river has insufficient depth and width of the channel at low water flow, the navigation conditions will improve after the construction of the lower hydraulic works of the Gabcikovo - Nagymaros complex.
- 77/ 1.50 m - according to the Hungarian Government and 1.70 m - according to information received from the Government of Slovakia.
- 78/ Bridge at Budapest - Lánchid (1647.0 km).
- 79/ Bridge at Bajá (1480 km).
- 80/ Data received from the Government of Serbia and Montenegro. The higher values of draught and air draught of up to 5 m and 13.50 m, respectively, are ensured on request and against payment of costs.

- 81/ Data received from the Government of Romania.
 - 82/ Minimum height at normal water level varies from 8.54 m to 9.31 m; at the highest navigable water level (HNWL) it varies from 5.15 m to 6.89 m.
 - 83/ On the section from the Kochetovsky hydroelectric complex to Azov (165 km in length). On other sections the maximum navigable draught is 3.50 m.
 - 84/ No direct link Po - Adriatic Sea is possible because of sand banks at the estuary of the Po River.
 - 85/ Periodically, at a low water level, the maximum draught is limited to 3.00 m.
 - 86/ Only permitted when proceeding downstream.
 - 87/ Non-navigable waterway. A weir in Kozlowice, downstream of Brest, has no navigational locks and constitutes a main obstacle.
 - 88/ The lowest height is under the Westminster Bridge.
-

Footnotes to table 2

- 1/ These hydraulic works are about to be replaced by the Strépy-Thieu shiplift with two chambers of 112.0 x 12.00 x 3.35 m.
 - 2/ Datum: Gleichwertiger Wasserstand "GLW" i.e. a long-term mean water level exceeded on all but 20 ice-free days per year.
 - 3/ Datum: normal canal water level.
 - 4/ Datum: hydrostatic water level.
 - 5/ Depending on the tide water level prevailing.
 - 6/ Lock gate width is 11.00 m. These hydraulic works are about to be replaced by locks of 110.0 x 12.00 x 2.50 m.
 - 7/ Lock gate width is 11.00 m.
 - 8/ On account of the particular shape and outline of the locks' chambers, single units of not more than 80.0 m in length and 8.25 m in width are admitted.
 - 9/ These locks are located one after the other allowing the passage of convoys of up to 190.0 m in length.
 - 10/ This is the width of gates. The width of chambers is 16.00 m.
 - 11/ Limitation draught at the Gorodetski Lock. At other lock a draught of 4.00 m is ensured.
 - 12/ From Dubna to the Moskva Northern Port depth at sills is 4.00 m.
 - 13/ Datum: Low regulated navigable water level (LRN) i.e. a mean water level exceeded on 94 per cent of ice-free days per year.
 - 14/ 190.0 m after the compilation of the reconstruction.
 - 15/ Limitation draught at the Kochetovski Lock.
 - 16/ Maximum dimensions of convoys admitted are 180.0 x 22.90 m and 186.5 x 22.90 m, respectively.
-

Footnotes to Table 3

- 1/ Necessary development is envisaged.
 - 2/ After the construction of a new link Gent-Zeebrugge (E 07).
 - 3/ These ports are not mentioned in the AGN Agreement.
 - 4/ Distances to ports on the River Elbe are measured: in Germany - from the Czech/German State border; in the Czech Republic - from the junction of the rivers Elbe and Vltava at Melnik.
 - 5/ Distance from Moskva Southern Port.
 - 6/ New port to be built.
-

INLAND WATERWAYS ON INTERNATIONAL IMPORTANCE

in conformity with Annex I of the European Agreement
on Main Inland Waterways of International Importance (AGN) of 19 January 1996.
