Data Elements with Changes in Attributes

Below is a list of FARS data elements that have substantial changes for 2013. Changes are denoted in bold typeface (bold/italics for additions, bold/strikethrough for deletions). More detailed information on each data element can be found in the FARS/NASS GES Coding and Validation Manual. NHTSA publishes these manuals for each year of data collection and they can be found at:

Summary of the SAS Naming Changes in 2013

Locator Code	2012 SAS Name	New 2013 SAS Name	Data Element Name
	N/A	Vindecode data set	81 new data elements
		N/A	

The data elements in RED are new to 2013 FARS.

The data elements in BLUE are changed in 2013 FARS.

The Vindecode data file is new in 2013. The data file contains 81 VIN decoded data elements (V200-280). The 24 VIN decoded data elements (V112-136) in the Vehicle, Parkwork and Person data files have been discontinued. For more information about the new Vindecode data elements, see *Appendix F: Changes to the FARS VIN Decoded Data Elements*.

Preface

One of the primary objectives of the National Highway Traffic Safety Administration (NHTSA) is to reduce the staggering human toll and property damage that motor vehicle traffic crashes impose on our society. Crashes each year result in thousands of lives lost, hundreds of thousands of injured victims, and billions of dollars in property damage. Accurate data are required to support the development, implementation, and assessment of highway safety programs aimed at reducing this toll. NHTSA uses data from many sources, including the Fatality Analysis Reporting System (FARS) which began operation in 1975. Providing data about fatal crashes involving all types of vehicles, the FARS is used to identify highway safety problem areas, provide a basis for regulatory and consumer information initiatives, and form the basis for cost and benefit analyses of highway safety initiatives.

FARS is a census of fatal motor vehicle crashes with a set of data files documenting all qualifying fatalities that occurred within the 50 States, the District of Columbia, and Puerto Rico since 1975. To qualify as a FARS case, the crash had to involve a motor vehicle traveling on a trafficway customarily open to the public, and must have resulted in the death of a motorist or a non-motorist within 30 days of the crash.

This multi-year analytical user's manual provides documentation on the historical coding practices of the Fatality Analysis Reporting System from 1975 to 2013. In other words, this manual presents the evolution of FARS coding from inception through present. The manual includes the data elements that are contained in FARS and other useful information that will enable the users to become familiar with the data system. FARS/NASS GES Coding and Validation Manuals provide more detailed definitions for each data element and attribute for a given year. Years 2001 to current are available at:

<http://www-nrd.nhtsa.dot.gov/Cats/listpublications.aspx?Id=J&ShowBy=DocType>

The compilation of FARS data for almost four decades has been a priority for NHTSA. These data store valuable information that have been preserved over time and are available for present and future use. This analytical user's manual should help improve the usefulness and accessibility of the FARS data. With the exception of personal notes, there is no reason to keep older versions of this reference manual. All information in earlier editions has been retained in this newer version.

Thank you for your interest in highway traffic safety.

FARS Operations

The Fatality Analysis Reporting System (FARS), which became operational in 1975, contains data on a census of fatal traffic crashes within the 50 States, the District of Columbia, and Puerto Rico. To be included in FARS, a crash must involve a motor vehicle traveling on a trafficway customarily open to the public, and must result in the death of an occupant of a vehicle or a non-occupant within 30 days (720 hours) of the crash.

FARS is directed by the National Center for Statistics and Analysis (NCSA), which is a component of Vehicle Safety (NVS) in NHTSA. NHTSA has a cooperative agreement with an agency in each State's government to provide information on all qualifying fatal crashes in the State. These agreements are managed by Regional Contracting Officer's Technical Representatives located in the 10 NHTSA Regional Offices. Trained State employees, called "FARS Analysts," are responsible for gathering, translating, and transmitting their State's data to NCSA in a standard format. The number of analysts varies by State.

FARS data are obtained from various States' documents, such as:

- Police Accident Reports (PAR)
- Death Certificates
- State Vehicle Registration Files
- Coroner/Medical Examiner Reports
- State Driver Licensing Files
- Hospital Medical Reports
- State Highway Department Data
- Emergency Medical Service Reports
- Vital Statistics and other State Records

From these documents, the analysts code more than 100 FARS data elements. The specific data elements may be modified slightly each year to conform to changing user needs, vehicle characteristics, and highway safety emphasis areas. The data collected within FARS do not include any personal identifying information, such as names, addresses, or social security numbers. Thus, any data kept in FARS data files and made available to the public fully conform to the Privacy Act.

Each analyst interprets and codes data directly onto an electronic data file. The data are automatically checked when entered for acceptable range values and for consistency, enabling the analyst to make corrections immediately. Several programs continually monitor and improve the completeness and accuracy of the data.

Each analyst uses a coding manual which provides a set of written instructions on how to transfer the information from a police accident/crash report (PAR) to the FARS data. To augment the coding manual, classes are held each year to train the coders, and a system wide FARS meeting is held to reinforce uniform coding practices.

After the data file is created, quality checks are performed on the data. When these are completed, the electronic data are made available to the public. The FARS data are also used to respond to requests from the international and national highway safety communities, state and local governments, the Congress, federal agencies, research organizations, industry, the media, and private citizens. Annual FARS data files are available for 1975 through 2013.

FARS SAS Data Files

FARS data are made available to the public in Statistical Analysis System (SAS) data files as well as Database Files (DBF). Over the years, changes have been made to the type of data collected and the way the data are presented in the data files. Some data files have been discontinued and new ones have been created. For the current data collection year there are 19 data files.

This manual describes the 19 current data files as well as previously discontinued data files. The 19 current data files are: Accident, Vehicle, Person, Parkwork, Cevent, Vevent, Vsoe, Distract, Factor, Drimpair, Nmimpair, Maneuver, Nmprior, Nmcrash, Safetyeq, Violatn, Vision, Damage and Vindecode data files. The following data files: Distract, Factor, Drimpair, Nmimpair, Maneuver, Nmprior, Nmcrash, Safetyeq, Violatn, Vision, and Damage contain data elements in which the analyst could code multiple responses. Hence, the 2013 FARS/NASS GES Coding and Validation Manual will instruct coders to “select all that apply” for these data elements. Discontinued data files are included after the current data files. The Vehnit data file was replaced by the Parkwork data file and its data element history can be found in the Parkwork data file.

The data files are presented with their data elements in the Data Elements Definitions and Codes section. For each of the data elements, a brief definition is provided along with any additional information which could assist analyses. SAS names and values are also provided for the data elements. Discontinued data elements are moved to the end of the data file.

The SAS data files and years of availability are:

- **Accident** - (1975-current): This data file contains information about crash characteristics and environmental conditions at the time of the crash. There is one record per crash.
- **Vehicle** - (1975-current): This data file contains information describing the in-transport motor vehicles and the drivers of in-transport motor vehicle who are involved in the crash. There is one record per in-transport motor vehicle. Parked and working vehicle information is in the Parkwork data file.
- **Person** - (1975-current): This data file contains information describing all persons involved in the crash including motorists (i.e., drivers and passengers of in-transport motor vehicles) and non-motorists (e.g., pedestrians and pedalcyclists). It provides information such as age, sex, and vehicle occupant restraint use and injury severity. There is one record per person.
- **Parkwork** - (2010-current): This data file contains information about parked and working vehicles that were involved in FARS crashes. A parked vehicle is a motor vehicle which is stopped off the roadway. A working vehicle is used to indicate that this is a motor vehicle that was in the act of performing highway construction, maintenance or utility work related to the trafficway when it became an involved in the crash. Data users are strongly advised to consult the annual FARS/NASS GES Coding and Validation Manuals for a detailed description. There is one record per parked/working vehicle.
- **Cevent** – (2010-current): This data file contains information for all of the qualifying events (i.e., both harmful and non-harmful involving in-transport motor vehicles) which occurred in the crash. It details the chronological sequence of events resulting from an unstabilized situation that constitutes a motor vehicle traffic crash. There is one record per event. Included in each record is a description of the event or object contacted (e.g., ran off road-right, crossed center line, guardrail, parked motor vehicle), the vehicles involved, and the vehicles' area of impact.

- **Vevent** – (2010-current): This data file contains the sequence of events for each in-transport motor vehicle involved in the crash. This data file has the same data elements as the Cevent data file. In addition, this data file has a data element that records the sequential event number for each vehicle (VEVENTNUM). There is one record for each event for each in-transport motor vehicle.
- **Vsoe** – (2010-current): This data file contains the sequence of events for each in-transport motor vehicle involved in the crash. This data file has a subset of the data elements contained in the Vevent data file (It is a simplified Vevent data file). There is one record for each event for each in-transport motor vehicle.
- **Damage** - (2012-current): This data file contains information about all of the areas on this vehicle that were damaged in the crash. There is one record per damaged area.
- **Distract** - (2010-current): This data file contains information about driver distractions. There is at least one record per in-transport motor vehicle. Each distraction is a separate record.
- **Drimpair** - (2010-current): This data file contains information about physical impairments of drivers of motor vehicles. There is one record per impairment and there is at least one record for each driver of an in-transport motor vehicle.
- **Factor** - (2010-current): This data file contains information about vehicle circumstances which may have contributed to the crash. There is at least one record per in-transport motor vehicle. Each factor is a separate record.
- **Maneuver** - (2010-current): This data file contains information about actions taken by the driver to avoid something or someone in the road. There is at least one record per in-transport motor vehicle. Each maneuver is a separate record.
- **Violatn** - (2010-current): This data file contains information about violations which were charged to drivers. There is at least one record per in-transport motor vehicle. Each violation is a separate record.
- **Vision** - (2010-current): This data file contains information about circumstances which may have obscured the driver's vision. There is at least one record per in-transport motor vehicle. Each obstruction is a separate record.
- **Nmcrash** - (2010-current): This data file contains information about any improper actions of people who are not occupants of motor vehicles (e.g., pedestrians and bicyclists) or contributing circumstances noted on the PAR. There is one record per action and there is at least one record for each person who is not an occupant of a motor vehicle.
- **Nmimpair** - (2010-current): This data file contains information about physical impairments of people who are not occupants of motor vehicles. There is one record per impairment and there is at least one record for each person who is not an occupant of a motor vehicle.
- **Nmprior** - (2010-current): This data file contains information about what people who are not occupants of motor vehicles (e.g., pedestrians and bicyclists) are doing prior to the crash. There is one record per action and there is at least one record for each person who is not an occupant of a motor vehicle.
- **Safetyeq** - (2010-current): This data file contains information about safety equipment used by people who are not occupants of motor vehicles. There is one record per equipment item, and there is at least one record for each person who is not an occupant of a motor vehicle.

- **Vindecode** - (2013-current): This data file contains vehicle descriptors for all vehicles, mainly passenger vehicles, trucks and motorcycles, based on the vehicle's VIN which is decoded using the VINtelligence program. There is one record per vehicle.

Discontinued Data Files

- **Vehnit** - (2005-2009): This data file contains information about parked and working vehicles that were involved in FARS crashes. Prior to the Vehnit creation, the vehicles Not-In-Transport were not included in the FARS data. This data file had the same list of data elements and SAS structure as the Vehicle data file where the UNITYTYPE of the vehicle is 2, 3, or 4. The vehicle data file will have the vehicles in-transport where the UNITYTYPE of the vehicle is 1. Beginning in 2010, FARS discontinued the Vehnit data file and introduced the Parkwork data file. There is one record per parked/working vehicle. This data file was replaced in 2010 with the Parkwork data file. See the Parkwork data file in the Data Element Definitions and Codes section for the element history of this data file.

Data Element Definitions and Codes

This section represents the majority of the manual. It provides detailed information on the data elements, including definitions, SAS names, attribute codes and attribute labels. Over the years, changes have been made to the type of data collected. Some data elements have been dropped, new ones added, and coding of individual data elements has changed. Coding changes and the years for which individual data items are available are shown for each data element. The FARS/NASS GES Coding and Validation Manual contains a detailed description of each data element including coding instructions and attribute definitions. The Coding Manual is published for each year of data collection. Years 2001 to current are available at:

<http://www-nrd.nhtsa.dot.gov/Cats/listpublications.aspx?Id=J&ShowBy=DocType>

The data elements are listed here under the primary data file in which the data are stored. Some data elements are provided in more than one data file to facilitate common analyses. For example, Month of Crash (MONTH) is a crash-level data element but for convenience it is also provided in the Vehicle, Parkwork and Person files.

All data elements are numeric except the following, which are character:

- C13 Trafficway Identifier (TWAY_ID, TWAY_ID2) [30]
- C27 Rail Grade Crossing Identifier (RAIL) [7]
- V13 Vehicle Identification Number (VIN, PVIN) [12]
- V16 & V16B Motor Carrier ID (MCARR_ID) [11], (MCARR_I2) [9]
- V101-V112 VIN Characters 1-12 (VIN_1, VIN_2, VIN_3, VIN_4, VIN_5, VIN_6, VIN_7, VIN_8, VIN_9, VIN_10, VIN_11, VIN_12, PVIN_1, PVIN_2, PVIN_3, PVIN_4, PVIN_5, PVIN_6, PVIN_7, PVIN_8, PVIN_9, PVIN_10, PVIN_11, PVIN_12) [1]
- V200-V280 VIN decoded data elements in the Vindecode data file [255]

All of the data files contain the following two (2) crash-level data elements:

C1/V1/D1/PC1/P1/NM1 State Number

Definition: This data element identifies the state in which the crash occurred. The codes are from the General Services Administration's (GSA) publication of worldwide Geographic Location Codes (GLC).

Additional Information: GSA state data elements except for 43, Puerto Rico. The State in which the vehicle is registered, REG_STAT, is found in the Vehicle data file; the coding is the same.

SAS Name: STATE

C2/V2/D2/PC2/P2/NM2 **Consecutive Number**

Definition: This data element is the unique case number assigned to each crash. It appears on each data file and is used to merge information from the data files together.

Additional Information: This data element is a combination of the GSA State code and an assigned consecutive number. It is assigned by the data entry system to each crash and is the unique identifier for the crash within the year. It is used as the key, when any two of these files from the same year are merged.

This data element is stored as a numeric data element of six characters; the first two characters are the State code, and the next four characters are case number, with leading zeros if necessary.

SAS Name: **ST_CASE**

Attribute Codes**1975-Later**

xxxxxx

Two Characters for State Code followed by Four Characters for Case Number

All of the vehicle level data files contain the preceding accident level data elements as well as VEH_NO:

V3/D3/PC3/P3/NM4 Vehicle Number

Definition: This data element is the consecutive number assigned to each vehicle in the case. This data element appears on each vehicle level data file and is used in conjunction with the ST_CASE data element to merge information from vehicle level data files.

Additional Information: All vehicles will have a positive integer value. The value 0 is only used for non-motorists (pedestrians, cyclists, etc.) in the Person File. There are no corresponding Vehicle records for non-motorists. ST_CASE and VEH_NO may be used to merge the complete Person File to the Accident File, but including the Vehicle File in the merge will eliminate non-motorists from the merged data.

Non-Occupants have VEH_NO = 00, in this case see STR_VEH (N_MOT_NO prior to 2011) under Non-Motorist Striking Vehicle Number in the Person data file.

SAS Name: **VEH_NO**

Attribute Codes

1975- 2008	2009- Later	
00-99	000-999	Assigned Number of Motor Vehicle

All of the person level data files contain the preceding accident level and vehicle level data elements as well as PER_NO:

P4/NM3 Person Number

Definition: This data element is the consecutive number assigned to each person in the case (i.e., each occupant, pedestrian, or non-motorists involved in the crash). This data element appears on each person level data file and is used in conjunction with the ST_CASE data element (and sometimes the VEH_NO data element) to merge information from person level data files.

Additional Information: Each occupant of the vehicle is numbered and each non-occupant is numbered, in the case of a non-occupant the vehicle number is zero. The numbers for occupants are consecutive, for each vehicle, beginning with 001. Numbers are never skipped. Drivers do not have to be coded 001. Non-Occupants are identified by vehicle number 0 and are numbered consecutively starting with 01 for each non-motorist. To get drivers see data element PER_TYP, under Person Type.

PER_NO can be used in merges, e.g., when merging the FARS person data file with the multiple cause of death file.

SAS Name: PER_NO

Attribute Codes

1975- 2008	2009- Later	
01-99	001-999	Assigned Person Number

The CEVENT, VEVENT and VSOE data files contain the preceding crash level data elements as well as EVENTNUM:

C17 Event Number

Definition: This data element is the consecutive number assigned to each harmful and non-harmful event in a crash, in chronological order.

Additional Information:

SAS Name: **EVENTNUM**

Attribute Codes

2010-Later

001-999 Event Number

The VEVENT and VSOE data files contain the preceding crash level data elements, VEH_NO and EVENTNUM as well as VEVENTNUM:

C17 Vehicle Event Number

Definition: This data element is the consecutive number assigned to each harmful and non-harmful event for this vehicle, in chronological order.

Additional Information:

SAS Name: **VEVENTNUM**

Attribute Codes

2010-Later

001-999 Vehicle Event Number

The ACCIDENT Data File

The Accident data file includes crash data. It contains the data elements ST_CASE and STATE, which are described in the beginning of the Data Element Definitions and Codes section. ST_CASE is the case identifier for each record. The Accident data file also contains the data elements on the following pages.

C3 **Number of Forms Submitted for Persons Not in Motor Vehicles**

Definition: This data element counts the number of Person Forms (Not a Motor Vehicle Occupant) that are applicable to this case (i.e., non-occupants).

Additional Information: This represents the number of forms created for persons *not* in motor vehicles. It is the count of all persons where "Person Type" is in (4, 5, 6, 7, 8, 10 or 19).
 Note: Persons where "Person Type" = 3 (Occupant of a Motor Vehicle Not In-Transport) are *not* included in this data element but are counted in C3A below.

C3A **Number of Persons Not in Motor Vehicles in Transport (MVIT)**

Definition: This data element counts the number of non-motorists in the crash. A non-motorist is defined as a pedestrian, a cyclist, an occupant of a motor vehicle not in-transport, a person riding a horse, an occupant of an animal drawn conveyance, person associated with non-motorist conveyance (e.g., baby carriage, skate board, wheelchair), or an other non-motorist (e.g., person outside a trafficway, person in a house).

Additional Information: This data element is derived from the Person data file and is the count of all persons where "Person Type" is in (3, 4, 5, 6, 7, 8, 10 or 19).

C4 Number of Vehicle Forms Submitted- ALL

Definition: This data element counts the number of contact motor vehicles that the officer reported on the PAR as a unit involved in the crash.

Additional Information: This counts all of the vehicles in the crash. This includes the vehicles in-transport which are in the Vehicle data file and the vehicles not in-transport which are in the Parkwork data file (previously Vehnit). This data element only appears in the Accident data file. Note: The Parkwork data file replaced the Vehnit data file in 2010. The Vehnit data file does not exist prior to 2005.

C4A Number of Motor Vehicles in Transport (MVIT)

Definition: This data element counts the number of vehicles in-transport involved in the crash. Legally parked vehicles are not included.

Additional Information: This data element is the count of all vehicles in the Vehicle data file and is the count where "Unit Type" = 1.

It is unlikely that the number of vehicles involved in the crash is greater than the Number of Vehicle Forms plus two.

1975-1981: In the event of a hit-and-run crash, if the vehicle information was not known, then no vehicle form was filled out. Likewise, if no information was known on the person level, usually the driver of the unknown vehicle, then a Person Level form was not filled out. The result is that the number of unknowns is much smaller for this time period than 1982 and later.

Example: From 1975 to 1980, there were 30 to 40 drivers coded with unknown sex, approximately 0.05 percent of all drivers involved in fatal crashes. In 1981 the number of drivers with unknown sex rose to over 300, approximately 0.5 percent of all drivers involved in fatal crashes.

1982-Later: In the case of a hit-and-run crash, a Vehicle-Driver form and a Person Level form for the driver are filled out. When the information about the vehicle-driver or person is not known -- which is often the case with hit-and-runs -- the values are coded as unknown.

Example: Between 1982 and 1994, the number of drivers coded with unknown sex fluctuated between 700 and 1,000, approximately 1.5 percent of all drivers involved in fatal crashes. Reviewing the 768 persons in the 1994 Annual Report file, all were drivers and 90 percent of them were involved in hit-and-run crashes.

This data element also appears in the Vehicle and Person data files and in the Parkwork data file as PVE_FORMS.

C5 Number of Forms Submitted for Persons in Motor Vehicles

Definition: This data element counts the number of Person Level (Motor Vehicle Occupant) Forms that are applicable to this case (i.e., occupants).

Additional Information: This represents the number of forms created for persons in motor vehicles. It is the count of all persons where "Person Type" is in (1, 2, 3 or 9).

Before 2003, the policy was not to submit a Person Level form for occupants of van-based buses. Since 2003, a person level form has been submitted for all occupants of van-based vehicles, including van-based buses.

1975-1981: In the event of a hit-and-run crash, if the vehicle information was not known, then no vehicle form was filled out. Likewise, if no information was known on the person level, usually the driver of the unknown vehicle, then a Person Level form was not filled out. The result is that the number of unknowns is much smaller for this time period than 1982 and later.

Example: From 1975 to 1980, there were 30 to 40 drivers coded with unknown sex, approximately 0.05 percent of all drivers involved in fatal crashes. In 1981 the number of drivers with unknown sex rose to over 300, approximately 0.5 percent of all drivers involved in fatal crashes.

1982-Later: In the case of a hit-and-run crash, a Vehicle-Driver form and a Person Level form for the driver are filled out. When the information about the vehicle-driver or person is not known -- which is often the case with hit-and-runs -- the values are coded as unknown.

Example: Between 1982 and 1994, the number of drivers coded with unknown sex fluctuated between 700 and 1,000, approximately 1.5 percent of all drivers involved in fatal crashes. Reviewing the 768 persons in the 1994 Annual Report file, all were drivers and 90 percent of them were involved in hit-and-run crashes.

C18 First Harmful Event

Definition: This data element describes the first injury or damage producing event of the crash.

Additional Information: "First Harmful Event" applies to the crash. "Most Harmful Event" (M_HARM) applies to the vehicle. Harmful events are judgment calls of the FARS analysts based on the data within the PAR.

From 2004 to 2009, the data elements "First Harmful Event," "Most Harmful Event," and the "Sequence of Events" have the same attributes. The harmful event attributes were modified to be consistent with the sequence of events data elements. Starting in 2009, these data elements still have the same attributes except non-harmful event attributes were added to the Sequence of Events data element.

Starting in 2010, this data element is derived from "Sequence of Events" in the Cevent data file. It is the first event attribute that is not between codes 60 and 71 (non-harmful events).

This data element also appears in the Vehicle and Person data files and in the Parkwork data file as PHARM_EV.

C19 Manner of Collision

Definition: This data element describes the orientation of two motor vehicles in-transport when they are involved in the “First Harmful Event” of a collision crash. If the “First Harmful Event” is not a collision between two motor vehicles in-transport it is classified as such.

Additional Information: In the original data files, from 1975 to 1977 sideswipe was coded as 5 but has since been changed to 7. These years are not consistent with the documentation of the time.

This data element also appears in the Vehicle and Person data files and in the Parkwork data file as PMAN_COLL.

C23 Work Zone

Definition: This data element identifies a motor vehicle traffic crash in which the first harmful event occurs within the boundaries of a work zone or on an approach to or exit from a work zone, resulting from an activity, behavior, or control related to the movement of the traffic units through the work zone.

Additional Information: This data element identifies a "Work Zone Accident" as defined in ANSI D16.1, 7th Edition. If the crash qualifies as a "Work Zone Accident" then the type of work activity is identified. Use of the codes does not imply that the crash was caused by the construction, maintenance, or work activity.

The data element name was "Construction/Maintenance Zone" from 1975 to 2008. The data element name has been changed to "Work Zone" since 2009.

C31 Related Factors- Crash Level

Definition: This data element records factors related to the crash expressed by the investigating officer.

Additional Information: There are also vehicle-level related factors in the Vehicle data file (VEH_SC1 and VEH_SC2), driver-level related factors, also in the Vehicle data file (DR_SF1, DR_SF2, DR_SF3 and DR_SF4), and person-level related factors in the Person data file (P_SF1, P_SF2, and P_SF3).

The FARS analyst may have used any of the three data elements to code a related factor. One must test all three data elements to ensure that the selected related factor is included.

Note: Starting in 1982, many of the "Related Factors-Crash Level" attributes, values 01-29, are coded as "Related Factors-Driver Level" attributes, values 61-87, in the Vehicle data file.

C100 Drunk Driver

Definition: This data element records the number of drunk drivers involved in the fatal crash and is derived from data elements in the Vehicle and Person data files.

Additional Information: Data from the Vehicle and Person data files are analyzed and if there is sufficient information to conclude that a driver was drunk, i.e., if the blood alcohol concentration (BAC) is positive, or if the police reported alcohol involvement, then the driver is counted as a drunk driver. A driver being charged with an alcohol violation by itself does not have the driver counted as a drunk driver. Note that alcohol data is often missing. For that reason this data element may undercount the actual number of drunk drivers. For detailed analysis of alcohol involvement, the alcohol data files should be used.

A crash is alcohol-involved if a driver, pedestrian, or pedal cyclist involved in the crash has (1) police-reported alcohol involvement, or (2) a positive alcohol test result.

From 1975 to 1993 the maximum number of drunk drivers was 6. Virtually all crashes have no more than two drunk drivers.

Two useful partitions of this data element are:

- (1) no drunk drivers, one or more drunk drivers involved, and
- (2) no drunk drivers, one drunk driver, multiple drunk drivers

In the early years of FARS, especially 1975 and 1976, the alcohol data must be used with care. In these two years no drunk drivers were identified for North Dakota. In 1975/76 Alabama, Mississippi, New Mexico, North Carolina, Texas, and West Virginia have a reported drunk driver rate for fatal crashes of less than 5 percent. In 1979 the data from these States reports a drunk-driver rate for fatal crashes between 18.5 percent and 43 percent.

Note: The DRUNK_DR data element on the Crash level was incorrectly derived on all person types from 1999 through 2007. Since then, it was derived based on all person types rather than based on Drivers only. Furthermore, the data element name (DRUNK_DR) implies that the individual was drunk, however, it actually captures those individuals whom the police reported alcohol involvement OR who tested positive for alcohol (i.e. their blood alcohol concentration was .01 g/dL or greater). Beginning with the 2008 Final FARS data file, DRUNK_DR has been derived for Drivers only.

SAS Name: DRUNK_DR

Attribute Codes**1975-Later**

SAS Name: **FATALS**

Attribute Codes**1975-Later**

Discontinued ACCIDENT Data Elements

Federal Highway (discontinued)

Definition: This data element was discontinued after 1993.

Additional Information: The data element is in the data file, but was not initialized prior to 1978, i.e., no data exists for this data element. This may be due to the extensive revisions by the Federal Highway Administration (FHWA) in 1977, which caused extensive modifications to this field for all data before 1978.

Hit and Run (discontinued)

Definition: This data element identifies whether this vehicle was a contact vehicle in the crash that did not stop to render aid (this can include drivers who flee the scene on foot). Hit and run is coded when a motor vehicle in-transport, or its driver, departs from the scene; vehicles not in-transport are excluded. It does not matter whether the hit-and-run vehicle was striking or struck.

Additional Information: From 1975 to 1981 if no information was known about the Hit-and-Run vehicle and/or driver, the vehicle form and/or driver form were not filled out and were not counted as unknown. Starting in 1982 both a vehicle and a driver form were filled out and the data were identified as unknown. This is why, for example, there were approximately only 20 to 40 drivers with unknown sex listed in the FARS data file from 1975 to 1981 and 700 to 1,000 drivers with unknown sex from 1982 on.

In 2009, this data element was no longer collected at the Accident level and is now collected at the Vehicle level.

Definition: This data element was discontinued after 1986.

Additional Information: The data element LAND_USE is defined by the Federal Highway Administration and does not necessarily coincide with the U.S. Census Bureau's definition or any other definition of urban or rural. It has been determined there are errors in the 1975 and 1976 data for this data element; consequently, care should be taken when comparing data over several years.

Total Lanes in Roadway (discontinued)

Definition: This data element identifies the attribute that best describes the number of travel lanes just prior to this vehicle's critical precrash event, based on the case materials.

Additional Information: The number of lanes refers to the number of lanes of a continuous cross-section of roadway. For example, a local roadway with one lane going north and one lane going south would be coded as two lanes. However, if a trafficway is a divided highway, with two lanes going north, a median, and two lanes going south, then the number of lanes is coded as two. If a trafficway has two lanes going north immediately adjacent to two lanes going south, one continuous cross-section of roadway, then the number of lanes is coded as four. This data element can be used with the trafficway flow data element TRAF_FLO to determine the trafficway geometry. For example: If (NO_LANES EQ 2) AND (TRAF_FLO EQ 1), then one has a two-lane roadway that is not physically divided, that is what most people think of as a two-lane road, one lane going in each direction.

In 2010, this data element was no longer collected at the Accident level. It is now collected at the Vehicle level and appears on the Vehicle data file as VNUM_LAN.

Trafficway Description (discontinued)

Definition: This data element identifies the attribute that best describes the trafficway flow just prior to this vehicle's critical precrash event, based on the case materials.

Additional Information: In 1975 and 1976 all divided highway traffic is coded as Level Data element 3, i.e., divided highway, other barrier or barrier type unknown. There is no distinction made among median strips, guardrails and other barriers for these two years.

Prior to 2010, this data element was called Trafficway Flow. In 2010, this data element was no longer collected at the Accident level. It is now collected at the Vehicle level and appears on the Vehicle data file as VTRAFWAY.

Vehicles in Transport (discontinued)

The VEHICLE Data File

The Vehicle data file includes in-transport motor vehicle data as well as driver and precrash data. It contains the data elements ST_CASE, STATE, and VEH_NO, which are described in the beginning of the Data Element Definitions and Codes section. ST_CASE and VEH_NO are the unique identifiers for each record. ST_CASE should be used to merge the Vehicle data file with the Accident data file. ST_CASE and VEH_NO should be used to merge the Vehicle data file with other vehicle-level data files and the Person data file. The Vehicle data file also contains the data elements on the following pages.

V4 **Number of Occupants**

Definition: This data element counts the number of occupants in this vehicle.

Additional Information: All, some, or none of the individuals may have died in the crash.

This data element also appears in the Parkwork data file as PNUMOCCS.

SAS Name: **OCUPANTS** *1975-2008*

V5 Unit Type

Definition: This data element identifies the type of unit that applies to this motor vehicle at the time it became an involved vehicle in the crash and was reported as a unit on the PAR.

Additional Information: This data element also appears in the Parkwork data file as PTYPE. The valid attributes for PTYPE are:

- 2 Motor Vehicle Not in Transport Within the Trafficway
- 3 Motor Vehicle Not in Transport Outside the Trafficway
- 4 Working Motor Vehicle (*Highway Construction, Maintenance, Utility Only*)

V6 Hit and Run

Definition: This data element identifies whether this vehicle was a contact vehicle in the crash that did not stop to render aid (this can include drivers who flee the scene on foot). Hit and run is coded when a motor vehicle in-transport, or its driver, departs from the scene; vehicles not in-transport are excluded. It does not matter whether the hit-and-run vehicle was striking or struck.

Additional Information: From 1975 to 1981 if no information was known about the Hit-and-Run vehicle and/or driver, the vehicle form and/or driver form were not filled out and were not counted as unknown. Starting in 1982 both a vehicle and a driver form were filled out and the data were identified as unknown. This is why, for example, there were approximately only 20 to 40 drivers with unknown sex listed in the FARS data file from 1975 to 1981 and more than 700 drivers with unknown sex from 1982 on.

This data element was removed from Accident data file in 2009.

This data element also appears in the Parkwork data file as PHIT_RUN.

V7 Registration State (FARS Only)

Definition: This element identifies the state in which this vehicle was registered.

Additional Information: For multiple state registrations prior to 1997 the value is 94. In 1997, values 93 and 94 were combined into 93. After 1997, the value for multiple state registrations is 93.

This variable also appears in the Parkwork data set as PREG_STAT.

V10 Vehicle Model

Definition: This data element identifies the model of this vehicle within a given make.

Additional Information: This data element also appears in the Person data file and in the Parkwork data file as PMODEL.

SAS Name: MODEL

Attribute Codes***1975-Later***

See the current FARS/NASS GES Coding and Validation Manual for vehicle model codes.

V11 Body Type

Definition: This data element identifies a classification of this vehicle based on its general body configuration, size, shape, doors, etc.

Additional Information: This data element also appears in the Person data file and in the Parkwork data file as PBODYTYP.

1975-1981: Within the yearly NHTSA report *Fatal Accident Reporting System*, the term "Light Trucks" includes Vans.

The body type data do not track with the original documentation. For example, the documentation states that BODY_TYP EQ 7 is for utility vehicles. However, when the data files are examined one sees that BODY_TYP EQ 43 is the value that will provide the desired result. The data files have been modified to make the early years for this data element compatible with 1981.

Note: Utility vehicles are also part of the light truck category

Note: BODY_TYP 40, large limousines, are not included as part of Passenger Cars or Passenger Vehicles.

1982-1990: Within the yearly NHTSA report *Fatal Accident Report System*, the term "Light Truck" includes Vans. Utility vehicles are also part of the light-truck category.

Note: BODY_TYP 13, large limousines and BODY_TYP 14, three-wheel automobiles or automobile derivatives, are not included as part of Passenger Cars or Passenger Vehicles.

Note: A single-unit truck that tows another vehicle, or a bobtail by itself, is considered a combination truck.

1991-Later: Within the yearly NHTSA publication *Traffic Safety Facts*, the term "Light Trucks" includes Vans.

Note: BODY_TYP 12, large limousines and BODY_TYP 13, three-wheel automobiles or automobile derivatives, are not included as part of Passenger Cars or Passenger Vehicles.

When defining School Buses 1993 and later be sure to include the new body type 24 (van-based school bus). However, body type 24 is not part of Buses.

When defining Transit Buses 1993 and later be sure to include the new body type 25 (van-based transit bus). However, body type 25 is not part of Buses.

Note: A single-unit truck that tows another vehicle, or a bobtail, is considered a combination truck.

V13 Vehicle Identification Number (VIN)

Definition: This data element records the vehicle identification number (VIN) of this vehicle assigned by the vehicle manufacturer. The VIN contains information on the vehicle such as: manufacturer, model year, model, body type, restraint type, etc.

Additional Information: From 1975 to 1993 the first ten characters of the VIN are recorded; from 1994 onward the first 12 are used. The vehicle manufacturers use the VIN to describe certain characteristics of a vehicle and to assign a serial number to the vehicle.

VINA is a software program, maintained by R. L. Polk & Co. that deciphers the VIN for 1966 and newer vehicles that are within the scope of the program. In FARS, the VINA program uses the VIN as input values and returns decoded values for automobiles, trucks, and motorcycles. Vehicle type, determined by the analyst-coded body type, is also used as input to facilitate the program processing. The names of many data elements decoded from the VIN begin with "VIN" or "PVIN." Some of the results from the VINA program are used as edit checks for these data.

Starting in 1981, the Vehicle Identification Numbers were required to conform to an international standard. For vehicles built prior to 1981 one may consult the National Automobile Theft Bureau's publication Passenger Vehicle Identification Manual for the year in question.

This data element also appears in the Parkwork data file as PVIN.

V14 Vehicle Trailing

Definition: This data element identifies whether this vehicle had any attached trailing units or was towing another motor vehicle. A trailing unit can be a horse trailer, fifth wheel trailer, camper, boat, truck trailer, towed vehicle or any other trailer.

Additional Information: This data element not only applies to tractor trailers, but also to boats, cars, and U-Haul-type vehicles that are towed with a trailer hitch. Vehicles pulled by a rope or chain are not counted as towed vehicles.

Note that the number of unknowns is 0 until 1982. From 1982 to 1984 the number of unknowns is approximately 2,500 per year. Starting in 1985 the number of unknowns falls to about 300 per year.

This data element also appears in the Person data file and in the Parkwork data file as PTRAILER.

V15 Jackknife

Definition: This data element identifies whether this vehicle experienced a jackknife anytime during the unstabilized situation.

Additional Information: Jackknife applies to a condition which occurs to a “semi” truck (i.e., cab and one or more trailers) while in motion. The condition reflects a loss of control of the truck by the driver in which the trailer yaws more than 15 degrees from its normal straight line path behind the cab. If the final resting configuration of the vehicle is in the jackknife position, it does not necessarily mean that the vehicle has jackknifed (such as, a crash occurring while the vehicle is backing up or parking).

From 1975 to 1979, the data element exists in the data files but has not been initialized. These data were not collected.

V16 Motor Carrier Identification Number (MCID)

Definition: This data element records the issuing authority and motor carrier identification number if applicable to this vehicle. This data element is the combination of two data elements, MCARR_I1 and MCARR_I2.

Additional Information: The Carrier Identification Number is found only on vehicles of interstate for-hire or private carriers in the transportation business. It is the unique number assigned to the Carrier by the United States Department of Commerce Commission, or the State. The number can be either a US DOT number (on interstate private carriers) or an ICC MC number (interstate for-hire carriers). Collected only for buses and trucks over 4,500 kg GVWR (Bodytype (V5)= 60, 64, 66-79), this data element is applicable to the following vehicles:

- Medium/Heavy Trucks: vehicles with two axles/six tires and/or gross weight greater than 10,000 pounds.
- Buses with 16 or more seats (including the driver)
- Trucks and Vans of any size carrying hazardous cargo.
- Light commercial trucks pulling a trailer with gross combination weight rating (GCWR) greater than 10,000 pounds.

This data element also appears in the Parkwork data file as PMCARR_ID.

V17 Gross Vehicle Weight Rating

Definition: This data element identifies the gross vehicle weight rating of this vehicle if applicable.

Additional Information: The Gross Vehicle Weight Rating (GVWR) or Gross Combination Weight Rating (GCWR) is a value specified by the manufacturer for a single-unit truck, truck tractor, or trailer. In the absence of a gross vehicle weight rating, an estimate of the gross weight of a fully loaded unit can be substituted.

In 2000 the GVWR was the sum of the weight of the power unit and its trailers. Since 2001 this data element is the gross vehicle weight of the Power Unit only. The weight of trailers is not added.

This data element also appears in the Parkwork data file as PGVWR.

Definition: This data element identifies whether this vehicle was engaged in emergency use. Emergency Use indicates operation of any motor vehicle that is legally authorized by a government authority to respond to emergencies with or without the use of emergency warning equipment, such as a police vehicle, fire truck or ambulance while actually engaged in such response.

Additional Information: This data element is applicable only if the vehicle was being used as an emergency vehicle at the time of the crash.

V24 Travel Speed

Definition: This data element records the speed the vehicle was traveling prior to the occurrence of the crash as reported by the investigating officer.

Additional Information: This data is collected after the crash, and is an estimate of the travel speed, which is often a judgment, rather than a measurement. Computing the mean without removing the unknowns will increase the mean travel speed.

For the years 1980 and 1981 travel speed was not collected. However, the data element is currently in the database for these two years with all data as missing. With this data element there has always been a high number of unknown cases. Since the data were considered somewhat "uncollectible," a decision was made not to collect the data for these two years. However, although the data were often unavailable, it was considered too important not to try to collect it.

Since 2005, data have been collected for parked vehicles and vehicles not in-transport. The values 00 and 000 only apply to motor vehicles in-transport, for example, a vehicle that is in-transport, but stopped at a stop light.

V25 Underride/Override

Definition: This data element identifies this vehicle's involvement in an underride or override during the crash.

Additional Information: Note the striking vehicle, not the vehicle struck, determines the underride/override condition. From 1975 to 1993 both the initial and principal impacts were counted. In the event and only in the event, that the initial or principal impact point was an underride/override were the data element IMPACT1 or IMPACT2 flagged/counted as such. However, all other underrides/overrides were not counted, nor should they have been counted. Impacts were counted, not underrides. Therefore, the data element UNDERIDE was added to the FARS in 1994.

The data element UNDERIDE is dependent on the data contained in PAR. The NASS CDS is based on the efforts of professional crash investigators performing detailed analysis of crashes. An analysis of the 1994-1996 FARS and NASS CDS data systems and the 1997 Trucks in Fatal Accident file revealed that underrides and overrides are generally not identified on the PARs.

This data element also appears in the Parkwork data file as PUNDERIDE.

SAS Name: **UNDERIDE**

V26 Rollover

Definition: This data element identifies this vehicle's involvement in a rollover or overturn during the crash. Rollover is defined as any vehicle rotation of 90 degrees or more about any true longitudinal or lateral axis. Rollover can occur at any time during the crash.

Additional Information: Data are not available from 1975 to 1977.

This data element also appears in the Person data file.

V28A Initial Contact Point

Definition: This data element identifies the area on this vehicle that produced the first instance of injury to non-motorists or occupants of this vehicle, or that resulted in the first instance of damage to other property or to this vehicle.

Additional Information: Prior to 2010 this data element was called "Initial Point of Impact." In 2010 and 2011 it was called "Initial Damaged Area." Since 2012 it is called "Initial Contact Point." Starting in 2010, this data element is derived from the crash events. It is the first recorded area of impact value for this vehicle in the Vevent data file.

The attributes Underride and Override were discontinued in 1993 and "Underride/Override" became its own data element in 1994. Prior to 1994, the striking vehicle, not the vehicle struck, determined the underride/override condition. After the crash, in the case of an override or underride one vehicle is over the other. If the striking vehicle is over the other, then the crash is an override. If the striking vehicle is under the other, the crash is an underride. See the information under "Underride/Override" about using this data element.

This data element also appears in the Person data file and in the Parkwork data file as PIMPACT1.

V29 Extent of Damage

Definition: This data element records the amount of damage sustained by this vehicle as indicated in the case materials based on an operational damage scale.

Additional Information: The data element name was "Extent of Deformation" from 1975 to 2008. The data element name was changed to "Extent of Damage" in 2009.

The data on 8 (Not Reportable) collected in 1976 are no longer contained in the data file. The data for that year are not consistent with the documentation of the time.

This data element also appears in the Parkwork data set as PVEH_SEV.

V30 Vehicle Removal

Definition: This data element describes the mode by which this vehicle left the scene of the crash.

Additional Information: The data element name was "Manner of Leaving Scene" from 1975 to 2008. The data element name was changed to "Vehicle Removal" in 2009.

The early years are not consistent with the documentation of the time.

This data element also appears in the Parkwork data set as PTOWED.

V32 Most Harmful Event

Definition: This data element describes the event that resulted in the most severe injury or, if no injury, the greatest property damage involving this vehicle.

Additional Information: "First Harmful Event" (HARM_EV) applies to the crash. "Most Harmful Event" (M_HARM) applies to the vehicle. Harmful events are judgment calls of the FARS analysts based on the data within the PAR.

From 2004 to 2009, the data elements "First Harmful Event," "Most Harmful Event," and the "Sequence of Events" have the same attributes. The harmful event attributes were modified to be consistent with the sequence of events data elements. Starting in 2009, these data elements still have the same attributes except non-harmful event attributes were added to the "Sequence of Events" data element.

This data element also appears in the Parkwork data file as PM_HARM.

V33 Related Factors- Vehicle Level

Definition: This data element records factors related to this vehicle expressed by the investigating officer.

Additional Information: There are also crash-level related factors in the Accident data file (CF1, CF2, and CF3), driver-level related factors in the Vehicle data file (DR_SF1, DR_SF2, DR_SF3 and DR_SF4) and person-level related factors in the Person data file (P_SF1, P_SF2, and P_SF3).

The FARS analyst may have used either of the two data elements to code a related factor. One must test both data elements to ensure that the selected related factor is included.

The set of *Pre-existing Vehicle Defects* that had been collected under "Related Factors- Vehicle Level" is now captured in the precrash level data element "Contributing Circumstances, Motor Vehicle" (Factor.MFACTOR).

These data elements also appear in the Parkwork data file as PVEH_CF1 and PVEH_CF2 in 2009 and prior and as PVEH_SC1 and PVEH_SC2 in 2010 and later.

V150 Fatalities in Vehicle (Number)

Definition: This derived data element records the number of fatalities that occurred in this vehicle and is derived by counting all persons with "Injury Severity" of 4 in the vehicle.

Additional Information: The data element "Fatalities" in the Accident data file provides the number of deaths for the entire crash.

This is a derived data element and is not coded on the form directly. In 1976, this value is always set to 0.

This data element also appears in the Parkwork data file as PDEATHS.

SAS Name: DEATHS

Attribute Codes**1975-Later**

01-99 Number of Fatalities that Occurred in the Vehicle.

V151 Driver Drinking

Definition: This data element records whether the driver was drinking and is derived from data elements in the Vehicle and Person data files.

Additional Information: Data from the Vehicle and Person data files are analyzed and if there is "sufficient information" to conclude that a driver was drinking, i.e., positive BAC data or police-reported alcohol involvement, then a driver is classified as drinking.

Note that alcohol data is often missing. For that reason this data element may under-count the actual number of drinking drivers. For detailed analysis of alcohol involvement, the Alcohol data files should be used.

A driver who is charged with an alcohol violation does not by itself make the driver a "drinking driver" by this definition.

D12 Driver Height

Definition: This data element identifies this driver's height (in inches).

Additional Information: This information was coded in 2 sub fields which are in Feet or in Inches. If both the Driver Height in Feet and Driver Height in Inches are known then we do the conversion using (Feet)*12 + inches; If Feet is Unknown or if Inches are 98 (Other) or 99 (Unknown) then DR_HGT=999 (Unknown). Minimum height 2 feet = 24 inches, Maximum height 8 feet 11 inches = 107 inches.

In 2009, if feet and/or inches are unknown (9,99) or blank then the Driver Height is left blank. However in 2010, if feet and/or inches are unknown (9,99) then the Driver Height is computed as 999 (Unknown). The Driver Presence data element is not taken into account. In 2011, if feet and/or inches are unknown (9,99) and Driver Presence is 1, then the Driver Height is computed as 999 (Unknown) otherwise Driver Height is computed as 998 (No Driver Present/Unknown if Driver Present).

D24 Related Factors- Driver Level

Definition: This data element records factors related to this driver expressed by the investigating officer.

Additional Information: There are also crash-level related factors in the Accident data file (CF1, CF2, and CF3), vehicle-level related factors in the Vehicle data file (VEH_SC1 and VEH_SC2), and person-level related factors in the Person data file (P_SF1, P_SF2, and P_SF3).

The person-related factors P_SF1, P_SF2, and P_SF3 are all set to 0 for drivers.

The FARS Analyst may have used any of the three data elements (1975-1996) or four data elements (1997-later) to code a driver-related factor. One must test all of these data elements to ensure that the selected related factor is included.

Early data files are not consistent with the documentation of the time. The following interpretation is suggested for current/future analysis.

A police pursuit is an event that is initiated when a law enforcement officer, operating an authorized emergency vehicle, gives notice to stop (either through the use of visual or audible emergency signals or a combination of emergency devices) to a motorist who the officer is attempting to apprehend and that motorist fails to comply with the signal by either maintaining speed, increasing speed, or taking other evasive action to elude the officer's continued attempts to stop the motorist. This is recorded if any "Related Factor – Driver Level" is coded as 37.

From 1975 to 1981, see "Related Factors- Crash Level" for attributes under *Swerving Due To* and *Vision Obscured By*.

Some information that had been collected under "Related Factors- Driver Level" is now captured in "Condition (Impairment) at Time of Crash- Driver or in two Non-Motor Vehicle Occupant data elements; "Non-Motorist Action/Circumstances Prior to Crash" and "Non-Motorist Action/Circumstances at Time of Crash."

PC5 Trafficway Description

Definition: This data element identifies the attribute that best describes the trafficway flow just prior to this vehicle's critical precrash event.

Additional Information: In 2010, this data element was no longer collected at the Accident level. It is now collected at the Vehicle level.

SAS Name: **VTRAFWAY**

PC6 Total Lanes in Roadway

Definition: This data element identifies the attribute that best describes the number of travel lanes just prior to this vehicle's critical precrash event.

Additional Information: The number of lanes refers to the number of lanes of a continuous cross-section of roadway. For example, a local roadway with one lane going north and one lane going south would be coded as two lanes. However, if a trafficway is a divided highway with two lanes going north, a median, and two lanes going south, then the number of lanes is coded as two. If a trafficway has two lanes going north immediately adjacent to two lanes going south, one continuous cross-section of roadway, then the number of lanes is coded as four. This data element can be used with the Trafficway Description data element VTRAFWAY to determine the trafficway geometry. For example: If (VNUM_LAN= 2) AND (VTRAFWAY=1), then one has a two-lane roadway that is not physically divided, which is what most people think of as a two-lane road (i.e., one lane going in each direction).

If the roadway is a divided trafficway, the number of travel lanes counts only lanes in the direction of travel of the first harmful event. If the roadway is an undivided trafficway, the number of travel lanes are all the lanes regardless of their direction of travel.

In 2010, this data element was no longer collected at the Accident level. It is now collected at the Vehicle level.

Discontinued VEHICLE Data Elements

Axle (discontinued)

Definition: This data element counts the total number of axles on the vehicle (and converter dolly), including the trailing units (includes raised axles).

Additional Information: The major change in this data element from 1994 to 1995 is the count of axles on the vehicle rather than the deployed axles on the ground. From 1991 to 1994, this data element counts the total number of deployed axles on the *ground* for the vehicle including trailing units. From 1995 to 2007, this data element counts the total number of axles on the *vehicle* for the vehicle including trailing units.

This data element was discontinued after 2007.

Carburetion (discontinued)

Definition: This data element identifies the number of barrels for the engine of this vehicle or a code indicating that the engine is high-performance, fuel-injected, turbocharged, or electronically-controlled.

Additional Information: This data element is derived by the VINA analysis system scanning the VIN for vehicles of model year 1966 and later that have verifiable VIN numbers.

This data element, formerly V129, was discontinued in 2013. See the Vindecode data file for VIN decoded data elements. Prior to 2013, this data element also appeared in the Person data file and in the Parkwork data file as PCARBUR.

Crash Avoidance Maneuver (discontinued)

Definition: This data element is collected to indicate if an avoidance maneuver was taken by the driver to avoid the crash.

Additional Information: AVOID is the maneuver that the driver executed to attempt to avoid the crash. See VEH_MAN, Vehicle Maneuver, for the maneuver the driver was executing just prior to entering a crash situation.

This data element was discontinued after 2009.

Cubic Inch Displacement (discontinued)

Definition: This data element identifies the manufacturer's cubic inch displacement of the engine pistons for this vehicle.

Additional Information: This data element is derived by the VINA analysis system scanning the VIN for vehicles of model year 1966 and later that have verifiable VIN numbers.

This data element, formerly V127, was discontinued in 2013. See the Vindecode data file for VIN decoded data elements. Prior to 2013, this data element also appeared in the Person data file and in the Parkwork data file as PDISPLACE.

Most Damaged Area (discontinued)

Definition: This data element identifies the area on this vehicle that was most damaged during an event in the crash.

Additional Information: Prior to 2010 this data element was called "Principal Point of Impact." In 2010 and 2011 it was called "Most Damaged Area." This data element was replaced with "Damaged Areas" (MDAREAS) in 2012 which records all damaged areas to this vehicle in the Damage data file.

The attributes Underride and Override were discontinued in 1993 and "Underride/Override" became its own data element in 1994. Prior to 1994, the striking vehicle, not the vehicle struck, determined the underride/override condition. After the crash, in the case of an override or underride one vehicle is over the other. If the striking vehicle is over the other, then the crash is an override. If the striking vehicle is under the other, the crash is an underride. See the information under "Underride/Override" about using and interpreting the data element UNDERIDE.

This data element also appears in the Person data file and in the Parkwork data file as PIMPACT2.

Vehicle Role (discontinued)

Definition: This data element Indicates the vehicle's role in single or multi-vehicle crashes.

Additional Information: This data element was discontinued after 2009.

Note when a vehicle is both striking and struck, i.e., Value = 3, the event cannot simultaneously be at the same point of the vehicle. A vehicle must have at least one striking impact point and a struck impact point. A classic example is a chain reaction rear-end crash, where a vehicle which is both striking and struck is located within the chain.

VIN Length (discontinued)

Definition: This data element identifies the actual length of the VIN for this vehicle.

Additional Information: This data element is derived by the VINA analysis system scanning the VIN for vehicles of model year 1966 and later that have verifiable VIN numbers.

This data element, formerly V125, was discontinued in 2013. See the Vindecode data file for VIN decoded data elements. Prior to 2013, this data element also appeared in the Parkwork data file as PVIN_LNGT.

SAS Name: VIN_LNGT

Attribute Codes**1981-2012**

VIN Make (discontinued)

Definition: This data element identifies the National Crime Information Center (NCIC) Standard Make Abbreviation for this vehicle.

Additional Information: This data element is derived by the VINA analysis system scanning the VIN for vehicles of model year 1966 and later that have verifiable VIN numbers. For a listing of these codes please refer to the Polk VINtelligence Manual.

This data element, formerly V114, was discontinued in 2013. See the Vindecode data file for VIN decoded data elements. Prior to 2013, this data element also appeared in the Person data file and in the Parkwork data file as PVINMAKE.

SAS Name: **VINMAKE**

Attribute Codes**2010-2012**

xxxx 4-Character Make Abbreviation

VIN Model (discontinued)

Definition: This data element identifies the VIN model for this vehicle obtained from the VINA program.

Additional Information: This data element is derived by the VINA analysis system scanning the VIN for vehicles of model year 1966 and later that have verifiable VIN numbers. For a listing of these codes please refer to the Polk VINtelligence Manual.

If one needs to select cars based on make and model the data element of choice is VINA_MOD rather than MAK_MOD.

The VINA_MOD is only unique within the vehicle make. That is, different makes of vehicles can have the same VINA_MOD. To ensure that the correct vehicle is selected the data element MAKE or VIN_MAKE (available 2010 and later) must be used in conjunction with VINA_MOD. The data elements VINA_MOD, MAKE and VINMAKE are in the Vehicle data file and the Person data file.

This data element, formerly V115, was discontinued in 2013. See the Vindecode data file for VIN decoded data elements. Prior to 2013, this data element also appeared in the Person data file and in the Parkwork data file as PVINA_MOD.

The PERSON Data File

The Person data file includes motorist and non-motorist data. It contains the data elements ST_CASE, STATE, VEH_NO, and PER_NO, which are described in the beginning of the Data Element Definitions and Codes section. ST_CASE, VEH_NO, and PER_NO are the unique identifiers for each record. ST_CASE and VEH_NO should be used to merge the Person data file with the Vehicle data file. ST_CASE, VEH_NO, and PER_NO should be used to merge the Person data file with other person-level data files. The Person data file also contains the data elements on the following pages.

In the Person data file, motor vehicle occupants are PER_TYPE = 1, 2, 3, 9. Motor vehicle occupants have valid vehicle numbers. Non-motor vehicle occupants are PER_TYPE = 4, 5, 6, 7, 8, 10 or 19. VEH_NO = 0 for non-motor vehicle occupants.

P6/NM6 Sex

Definition: This data element identifies the sex of this person involved in the crash.

Additional Information: From 1975 to 1981, if no information was known about the hit-and-run vehicle and/or driver, then neither the vehicle form nor the driver form were filled out and were not counted in the FARS census. Starting in 1982 both a vehicle and a driver form were filled out and the data were identified as unknown. This is why there were approximately only 20 to 40 drivers with unknown sex listed in the FARS data file from 1975 to 1981 and 700 to 1000 drivers with unknown sex from 1982 on.

On March 22, 1995, a quick review of the 1994 Annual Report File revealed that of the 768 persons in the 1994 data file with unknown sex; over 90 percent were involved in hit-and-run crashes.

P8/NM8 Injury Severity

Definition: This data element describes the severity of the injury to this person in the crash using the KABCO scale.

Additional Information: It is important to realize that some States do not always collect data on persons who were in a crash but were not injured. If the analysis being performed depends on non-injured occupants -- for example some paired comparisons -- check the data at the State level.

P12 Air Bag Deployed

Definition: This data element records air bag availability and deployment for this person as reported in the case materials.

Additional Information: This data element is designed to collect both air bag availability and deployment for each occupied seat position. Variation in the presentation of the source data on the state crash report forms and the selections coded on the PAR may produce unlikely combinations or missing data. For example:

1. If the seat position does not have an air bag at the time of manufacture, but the information on the PAR indicates an air bag was available or deployed, the information on the PAR may have taken precedence.
2. If the seat position has an air bag installed at the time of manufacture and the PAR indicates there is no air bag available, then the PAR information may have taken precedence.

P13 Ejection

Definition: This data element describes the ejection status and degree of ejection for this person, excluding motorcycle occupants.

Additional Information: In the mid 1970's there were a large number of people coded as ejection unknown and a corresponding small number of people coded as not ejected. However, the totally ejected and partially ejected counts are the same magnitude as in later years.

Starting in 2011, "Not Applicable" includes people not in motor vehicles (i.e., pedestrians, bicyclists, etc.)

P15 Extrication

Definition: This data element identifies if equipment or other force was used to remove this person from the vehicle.

Additional Information: In Massachusetts, if an occupant is not injured, data for Protection system use and ejection are not coded on the PAR.

From 1975 to 1976 the EXTRICAT and EJECTION data elements were combined in a single field. The data files were changed in 1977 to the current format. In 1975 and 1976 there are fewer persons identified as not extricated than in later years. Both the count of extricated persons and unknowns seem high for these years. From 1977 to 1981 there was not an edit check to prevent one coding an occupant as being both ejected and extricated. There are 69, 48, 83, 98, and 88 persons coded as both totally ejected and extricated in the 1977, 1978, 1979, 1980, and 1981 respectively.

P26/NM25 Related Factors- Person Level

Definition: This data element records factors related to motor vehicle occupants other than drivers expressed by the investigating officer.

Additional Information: There are also crash-level related factors in the Accident data file (CF1, CF2, and CF3), vehicle-level related factors in the Vehicle data file (VEH_SC1 and VEH_SC2), and driver-level related factors, also in the Vehicle data file (DR_SF1, DR_SF2, DR_SF3 and DR_SF4).

The FARS analyst may have used any of the three data elements to code a related factor. One must test all three data elements to ensure that the selected related factor is included.

Person-related factors for all drivers are coded 00. Person-related factors for non-drivers can have non-zero values as listed below.

For 1975 to 1981, values 02 to 06 correspond to 01 to 05 for the 1982 to 2009 data. Values of 20 and higher correspond directly the same values for 1982 to 2009.

NM4 Number of Motor Vehicle Striking Non-Motorist

Definition: This data element identifies the "Vehicle Number" (VEH_NO) of the in-transport vehicle that made contact with this non-motorist.

Additional Information: This data element applies only to non-motorists/non-occupants and reflects the vehicle that made contact with the non-motorist/non-occupant identified by the Person Number (PER_NO).

The number must match the vehicle number of the striking vehicle. This number is similar to VEH_NO, except that the non-motorist/non-occupant was struck by the vehicle, rather than being within the vehicle.

The PARKWORK Data File

The Parkwork data file includes Vehicle data elements applicable to Parked and Working Vehicles. It contains the data elements ST_CASE, STATE, and VEH_NO, which are described in the beginning of the Data Element Definitions and Codes section. ST_CASE and VEH_NO are the unique identifiers for each record. The Parkwork data file also contains the data elements on the following pages.

The Parkwork data file replaced the Vehnit data file in 2010. The Vehnit data file ran from 2005 to 2009 and its element and attribute history is also provided here.

C4A Number of Motor Vehicles in Transport (MVIT)

V31 Sequence of Events

Definition: This data element describes this event. A motor vehicle traffic crash is a series of events resulting from an unstabilized situation. This series of harmful and non-harmful events is recorded in chronological order based on the PAR narrative and diagram.

Additional Information: From 2004 to 2009, Sequence of Events was collected at the vehicle level and up to six events (SEQ1-SEQ6) were stored in the Vehicle data file.

“First Harmful Event,” “Most Harmful Event,” and the “Sequence of Events” data elements have the same harmful event attributes. The harmful event attributes were modified to be consistent. “Sequence of Events” also has non-harmful event attributes.

The VEVENT Data File

The Vevent data file includes harmful and non-harmful events for each in-transport motor vehicle. It contains the data elements ST_CASE, STATE, VEH_NO, EVENTNUM, and VEVENTNUM, which are described in the beginning of the Data Element Definitions and Codes section. ST_CASE, VEH_NO, and VEVENTNUM are the unique identifiers for each record. ST_CASE and VEH_NO should be used to merge the Vevent data file with the Vehicle data file. The Vevent data file also contains the data elements on the following pages.

C17 Vehicle Number (This Vehicle)

Definition: This data element identifies the "Vehicle Number" (VEH_NO) of this in-transport motor vehicle described in this event.

Additional Information: This is the vehicle described in "Sequence of Events" for this event.

If Vehicle #1 (V1) impacts Vehicle #2 (V2), then we have at least 2 Vevent records.

Example:

<u>VEH_NO</u>	<u>EVENTNUM</u>	<u>VNUMBER1</u>	<u>SOE</u>	<u>VNUMBER2</u>
1	1	1	12	2
2	1	1	12	2

The explanation of these 2 records is as follows:

V1 was involved in event 1 where V1 impacts V2

V2 was involved in event 1 where V1 impacts V2

PC16 Driver Distracted By

Definition: This data element identifies the attribute(s) which best describe this driver's attention to driving prior to the driver's realization of an impending critical event or just prior to impact if realization of an impending critical event does not occur.

Additional Information: Distraction from the primary task of driving occurs when drivers divert their attention from the driving task to some other activity. Also, driving while daydreaming or lost in thought is identified as distracted driving by NHTSA. Physical conditions/impairments (fatigue, alcohol, medical condition, etc.) or psychological states (anger, emotional, depressed, etc.) are not identified as distractions by NHTSA.

D23 Condition (Impairment) at Time of Crash- Driver

Definition: This data element identifies physical impairments to this driver that may have contributed to the crash as identified by law enforcement.

Additional Information: This data element attempts to identify physical impairments to this driver which may have contributed to the cause of the crash. These impairments can appear anywhere in the case materials--in the narrative section, in the violations section, in a column entitled "Contributing Factors" or "Driver Action," etc.

Some information that had been collected under "Related Factors- Driver Level" is now captured under this new data element.

The FACTOR Data File

The Factor data file identifies each vehicle factor (as a separate record). It contains the data elements ST_CASE, STATE, and VEH_NO, which are described in the beginning of the Data Element Definitions and Codes section. The data file also contains MFACTOR which is described below. ST_CASE, VEH_NO, and MFACTOR are the unique identifiers for each record. ST_CASE and VEH_NO should be used to merge the Factor data file with the Vehicle data file.

PC4 Contributing Circumstances, Motor Vehicle

Definition: This data element describes this vehicle's possible pre-existing defects or maintenance conditions that may have contributed to the crash.

Additional Information: Most of these data elements can be found in Related Factor- Vehicle Level (SAS names VEH_CF1 and VEH_CF2 in the Vehicle data file in 2009 and prior, and VEH_SC1-VEH_SC2 in 2010).

The MANEUVER Data File

The Maneuver data file identifies each avoidance attempt (as a separate record). It contains the data elements ST_CASE, STATE, and VEH_NO, which are described in the beginning of the Data Element Definitions and Codes section. The data file also contains MDRMANAV which is described below. ST_CASE, VEH_NO, and MDRMANAV are the unique identifiers for each record. ST_CASE and VEH_NO should be used to merge the Maneuver data file with the Vehicle data file.

PC15 Driver Maneuvered to Avoid

Definition: This data element identifies the thing(s) this driver attempted to avoid while the vehicle was on the road portion of the trafficway, just prior to the first harmful event for this vehicle.

Additional Information:

SAS Name: MDRMANAV

Attribute Codes**2010-Later**

The VIOLATN Data File

The Violatn data file identifies each violation (as a separate record). It contains the data elements ST_CASE, STATE, and VEH_NO, which are described in the beginning of the Data Element Definitions and Codes section. The data file also contains MVIOLATN which is described below. ST_CASE, VEH_NO, and MVIOLATN are the unique identifiers for each record. ST_CASE and VEH_NO should be used to merge the Violatn data file with the Vehicle data file.

D21 Violations Charged

Definition: This data element identifies all violations charged to this driver.

Additional Information: Prior to 2010, this data element was in the Vehicle data file. In 2010, this data element changed to identify all violations charged in the crash and was therefore moved here to its own data file.

The VISION Data File

The Vision data file identifies each visual obstruction (as a separate record). It contains the data elements ST_CASE, STATE, and VEH_NO, which are described in the beginning of the Data Element Definitions and Codes section. The data file also contains MVISOBSC which is described below. ST_CASE, VEH_NO, and MVISOBSC are the unique identifiers for each record. ST_CASE and VEH_NO should be used to merge the Vision data file with the Vehicle data file.

PC14 Driver's Vision Obscured by

Definition: This data element records impediments to this driver's visual field that were noted in the case materials.

Additional Information: Most of these data elements can be found in "Related Factor – Driver Level" from 1982 to 2008. This data element was added to the Vehicle data file in 2009. In 2010, the data element was changed to identify all that apply in the crash and was therefore moved here to its own data file.

SAS Name: **MVISOBSC**

The NMCRAASH Data File

The Nmcraash data file identifies each non-motorist action at the time of the crash (as a separate record). It contains the data elements ST_CASE, STATE, VEH_NO, and PER_NO, which are described in the beginning of the Data Element Definitions and Codes section. The data file also contains MTM_CRSH which is described below. ST_CASE, PER_NO, and MTM_CRSH are the unique identifiers for each record. ST_CASE, VEH_NO, and PER_NO should be used to merge the Nmcraash data file with non-motorists from the Person data file.

NM12 Non-Motorist Action/Circumstances at Time of Crash

Definition: This data element describes the action(s) and/or circumstances of this non-motorist that law enforcement indicated may have contributed to the crash.

Additional Information: Some information that had been collected under Person Level Related Factors are now captured under this new data element. Please note the "non-motorist" may include people in not-in-transport motor vehicles, however this data element is only collected for people who are not occupants of motor vehicles.

SAS Name: **MTM_CRSH**

Attribute Codes**2010-Later**

- 00 No Improper Action
- 01 Dart/Dash
- 02 Failure to Yield Right-Of-Way
- 03 Failure to Obey Traffic Signs, Signals or Officer
- 04 In Roadway Improperly (*Standing, Lying, Working, Playing*)

The NMIMPAIR Data File

The Nmimpair data file identifies each non-motorist impairment (as a separate record). It contains the data elements ST_CASE, STATE, VEH_NO, and PER_NO, which are described in the beginning of the Data Element Definitions and Codes section. The data file also contains NMIMPAIR which is described below. ST_CASE, PER_NO, and NMIMPAIR are the unique identifiers for each record. ST_CASE, VEH_NO, and PER_NO should be used to merge the Nmimpair data file with non-motorists from the Person data file.

NM14 Condition (Impairment) at Time of Crash- Non-Motorist

Definition: This data element identifies physical impairments to this non-motorist that may have contributed to the crash as identified by law enforcement.

Additional Information: This data element attempts to identify physical impairments to this non-motorist which may have contributed to the cause of the crash. These impairments can appear anywhere in the case materials--in the narrative section, in the violations section, in a column entitled "Contributing Factors" or "Driver Action," etc.

Some information that had been collected under "Related Factors- Person Level" is now captured under this new data element.

SAS Name: NMIMPAIR

Attribute Codes**2010-Later**

99	Unknown if Impaired

The NMPRIOR Data File

The Nmprior data file identifies each non-motorist action immediately prior to the crash (as a separate record). It contains the data elements ST_CASE, STATE, VEH_NO, and PER_NO, which are described in the beginning of the Data Element Definitions and Codes section. The data file also contains MPR_ACT which is described below. ST_CASE, PER_NO, and MPR_ACT are the unique identifiers for each record. ST_CASE, VEH_NO, and PER_NO should be used to merge the Nmprior data file with non-motorists from the Person data file.

NM11 Non-Motorist Action/Circumstances Prior to Crash

Definition: This data element describes the action(s) of the non-motorist immediately prior to their involvement in the crash.

Additional Information: Some information that had been collected under Person Level Related Factors are now captured under this new data element. Please note the "non-motorist" may include people in not-in-transport motor vehicles, however this data element is only collected for people who are not occupants of motor vehicles.

SAS Name: **MPR_ACT**

Attribute Codes**2010-Later**

The SAFETYEQ Data File

The Safetyeq data file identifies each item of safety equipment (as a separate record). It contains the data elements ST_CASE, STATE, VEH_NO, and PER_NO, which are described in the beginning of the Data Element Definitions and Codes section. The data file also contains MSAFEQMT which is described below. ST_CASE, PER_NO, and MSAFEQMT are the unique identifiers for each record. ST_CASE, VEH_NO, and PER_NO should be used to merge the Safetyeq data file with non-motorists from the Person data file.

NM13 Non-Motorist Safety Equipment

Definition: This data element indicates the safety equipment that was used by this non-motorist involved in the crash.

Additional Information: There can be one or more safety equipment responses for each nonmotorist.

SAS Name: MSAFEQMT

Attribute Codes**2010-Later**

- 1 None Used
- 2 Helmet
- 3 Reflective Equipment/Clothing (*Jacket, Backpack, etc.*)
- 4 Protective Pads Used (*Elbows, Knees, Shins, etc.*)

- 9 Unknown if Used

The VINDECODE Data File

The Vindecode data file provides vehicle specification data for all vehicle types, mainly passenger vehicles, trucks and motorcycles. It contains the data elements ST_CASE, STATE, and VEH_NO, which are described in the beginning of the Data Element Definitions and Codes section. ST_CASE and VEH_NO are the unique identifiers for each record. ST_CASE and VEH_NO should be used to merge the Vindecode data file with the Vehicle or Parkwork data file.

The Vindecode data file contains 81 data elements derived from the VIN using the RL Polk VIN verification and decoding program, VINtelligence. Descriptions of the data elements and their contents can be found in the Polk VINtelligence Deluxe Package and Field Descriptions documentation in *Appendix F: Changes to the FARS VIN Decoded Data Elements*.

Holidays

The length of a "FARS holiday" depends on the day on which the holiday occurs. NHTSA uses the following times for holiday analysis:

DAY OF HOLIDAY	TIME PERIOD USED FOR ANALYSIS
Sunday or Monday	6 p.m. Friday to 5:59 a.m. Tuesday
Tuesday	6 p.m. Friday to 5:59 a.m. Wednesday
Wednesday	6 p.m. Tuesday to 5:59 a.m. Thursday
Thursday	6 p.m. Wednesday to 5:59 a.m. Monday
Friday or Saturday	6 p.m. Thursday to 5:59 a.m. Monday

HOLIDAY DESCRIPTIONS AND CALENDARS

The following table gives a detailed description of the time periods included within the following major holidays: New Year's, Memorial Day, Fourth of July, Labor Day, Thanksgiving and Christmas. The number of whole days in the holiday period is shown in parentheses. Since the holiday period data retrieval is associated with the alcohol related data, the holiday periods are given from 1982 onwards to match with the BAC data.

Note: When using the Alcohol data files, the New Year's Day holiday period for 1982 will be incomplete since no Alcohol data files exist prior to 1982.

Manner of Collision

Note: From 1975 to 2001, the manner of collision is totally dependent on the directions of travel of the vehicles involved. The direction of travel of the vehicles is often misunderstood. The direction of a vehicle is determined by the precrash condition direction of travel, just before the vehicle goes out of control. Example (1): Assume two vehicles are heading toward each other on the same roadway, one going north and the other going south. If the southbound vehicle skids on a patch of ice and turns 180° and immediately is struck in the rear by the vehicle going north, then the manner of collision is “Head-On,” not “Rear-End.” Example (2): Had the vehicle going north sideswiped the southbound vehicle, which after the ice skid was pointed north, the manner of collision would be “Sideswipe Opposite Direction,” even though both vehicles are pointed north at the time of the sideswipe. The precrash condition directions of travel, for both vehicles, determine the outcome. These examples involve a rotation of a vehicle just before the crash and can account for 20 to 30 percent of the coded cases. See *Impact* also in this Appendix.

Starting in 2002 and later, the manner of collision is dependent on the geometry of the points of impact. That is, Example (1) above is now coded 01, Front-to-Rear (includes Rear-End) and Example (2), is now coded 07 Sideswipe, Same Direction. This is a major change in the MAN_COLL data element. Care must be taken when using this data element over a time period that spans 2001 to 2002.

Since 2002, this data element has been based on the impact location (front, side, or rear) and vehicle orientation (facing in the same or opposite directions) of the contact vehicles in the First Harmful Event. The use of “direction of force” will no longer be used in determining this data element. Prior to 2002, the “direction of force” immediately preceding the collision was allowed to be considered, especially in head-on collisions.

Notes: Refers only to crashes in which the “First Harmful Event” is a collision between two motor vehicles in-transport (codes 12 and 13).

Atmospheric Condition

Accident.WEATHER1 and Accident.WEATHER2 are coded data elements, and Accident.WEATHER is derived from these two. To derive WEATHER from these two data elements, the priority ranking of each attribute is as follows:

- Snow
- Blowing Snow
- Sleet or Hail
- Freezing Rain or Drizzle
- Rain
- Fog, Smog, Smoke
- Severe Crosswinds
- Blowing Sand, Soil, Dirt
- Other
- Cloudy
- Clear

School Bus Related

School Bus – refers to a motor vehicle which satisfies the following criteria:

- externally identifiable to other traffic units as a school/pupil transport vehicle;
- operated or owned by a public school or private school;
- where the institution's students may range from pre-school through high school;
- whose occupants, if any, are associated with the institution; and,
- the vehicle is in operations at the time of the crash to and from the school or on a school-sponsored activity or trip.

Also check the data element SPEC_USE in the Vehicle data file. When the data element SPEC_USE is set to the value 2 then the vehicle is used as a school bus.

This code applies to crashes in which a vehicle functioning as a school bus was directly or indirectly involved. The "school bus" does not have to be a traffic unit in the crash, but it must have been involved in some school-related activity (e.g., children boarding or alighting from the bus; bus stopping at or pulling from a location of such activity, etc.)

If school-bus-related is yes, then the crash and all fatalities in that crash are school-bus-related.

Additional explanation – inclusions:

- A collision involving a motor vehicle in-transport in which one or more than one school bus strikes or is struck by another road vehicle (directly involved).
- A collision involving a pedestrian in which a child approaching or leaving a school bus, stopped and with its red lights flashing, is struck and injured by a motor vehicle (indirectly involved).
- A collision crash or non-collision crash involving a motor vehicle in-transport passing a school bus stopped and with its red lights flashing (the school bus is a non-contact vehicle indirectly involved).
- A collision crash in which a child approaching or leaving a school bus, stopped and with its red light flashing, is struck and injured by a pedalcyclist (school bus indirectly involved).

Additional explanation – exclusions:

- A collision crash or non-collision crash involving a motor vehicle which is normally used as a school bus, but is carrying only senior citizens when the collision occurs.

Trafficway Identifier

If "Route Signing" is 1 (Interstate), then "I-" is in the first two spaces of "Trafficway Identifier"

If "Route Signing" is 2 (US Highway), then "US-" is in the first three spaces of "Trafficway Identifier"

If "Route Signing" is 3 (State Highway), then "SR-" is in the first three spaces of "Trafficway Identifier"

If Route Signing is 4 (County Road), then "CR-" is in the first three spaces of Trafficway Identifier followed by the route number OR name if there is no number.

If Route Signing is other than 1, 2, 3 or 4, the route name or identifier is left-justified.

Immediately after the route designation (I-, US- or SR-), the corresponding highway number appears. For example, Interstate 70 should be coded as "I-70" and US 66 should be coded as "US-66." A dash is used in the highway designation between the capital letters and the number.

If one trafficway is both a State Highway and an Interstate Highway, "Route Signing" must always be coded "1-Interstate."

(a) If the "Trafficway Identifier" and "Milepoint" are available for only the State Highway then the "Route Signing" is coded as "1-Interstate." "I-" is in the first two spaces of "Trafficway Identifier" followed by the full State Highway Identifier as normal (including any letters.) If California business loop (CA215) is also Interstate 15, then "Trafficway Identifier" is code as "I-SR215" or "I-CA215."

(b) If the "Trafficway Identifier" and "Milepoint" are available for both the State Highway and the Interstate Highway, then "I-" appears in the first two spaces of "Trafficway Identifier" followed by the Interstate number. The Interstate "Milepoint" is coded. E.g., "I-15" (SR215) or "I-15" (CA215).

Similarly, if a State Highway is also a U.S. Highway, then the "Route Signing" is coded as "2-US Highway."

(a) If the "Trafficway Identifier" and "Milepoint" are available only for the State Highway, then the "Route Signing" is coded as "2-US Highway." "US-" appears in the first three spaces of "Trafficway Identifier" followed by the full State Highway Identifier as normal (including any letters). The State Highway "Milepoint" is coded. E.g.; If Florida Route 25 is also US Route 27, then code "US-SR25" or "US-FL25."

(b) If the "Trafficway Identifier" and "Milepoint" are available for both the U.S. Highway and the State Highway, then "US-" is in the first three spaces of "Trafficway Identifier" followed by the U.S. route number. The State Highway Identifier appears anywhere after the US route number. The US Route "Milepoint" is coded. E.g. "US-27" (SR25) or "US-27" (FL25).

⁽¹⁾ Body type code 24 (van-based school bus) was added in 1993. When solely defining School Buses be sure to include body type code 24.

⁽²⁾ Body type code 25 (van-based transit bus) was added in 1993. When solely defining Transit Buses be sure to include body type code 25.

⁽³⁾ Body type coded 94 (motorized wheelchair) was added in 1997 and deleted in 1998.

⁽⁴⁾ "Light Trucks & Vans" is frequently referred to as just "Light Trucks."

Vehicle (Body Type) Classification (continued)

- ⁽⁵⁾ Body type code 67 (medium/heavy pickup (Ford Super Duty 450/550)) was added in 2001. For the purposes of medium and heavy truck classifications, this body type will be considered a medium truck.
- ⁽⁶⁾ Van-based bus (24, 25) and van-based motor home (23) body type codes were deleted in 2003.
- These attributes were removed because a review of the FARS Analyst coding revealed that they were rarely capturing them.
- ⁽⁷⁾ New code was added in 2004 for Vehicle Trailing (tow_veh) - 5 (vehicle towing another motor vehicle). In 2009 the attribute was split into two to distinguish between fixed and non-fixed linkages (5 and 6). This attribute is not a part of the selection criteria for Light, Large, Heavy, or Combination Truck classifications. Beginning with 2004, an unknown truck type (light/medium/heavy) that was towing another vehicle - (BODY_TYP=79 and TOW_VEH=5,6) - should be classified as Other/Unknown. This classification is subject to change.
- ⁽⁸⁾ From 1982 to 1990, Vehicle Trailing (TOW_VEH) attribute value 5 (yes, two or more trailing units) existed in 1982 only. Including "5" in the range from 1982 to 1990 does not affect the classification.

Speeding

A fatal crash is “speeding” related if any of the following applies:

1. At least one driver involved in the crash had a speeding related “Related Factor-Driver Level.” Note that in 2009 the “Related Factor-Driver Level” attributes associated with speeding related were deleted and a new data element, “Speed Related,” was introduced to capture this information. The element name was changed in 2013 to “Speeding Related.”
2. At least one driver involved in the crash had a speeding related “Violations Charged.”

Note: This definition was revised in 2002. The previous definition for “speeding” only looked at “Related Factor-Driver Level.” By expanding the definition to include “Violations Charged,” “speeding” fatal crashes and fatalities increase by less than one percent.

Fatal speeding-related crashes are not captured prior to 1982 using this scheme because “Violations Charged” did not identify speeding violations prior to 1982. This method only applies to 1982 through 2008 data.

VIN Weight- Auto

FARS collects information on the weight of cars involved in fatal crashes. Vehicle weight is not generally available for light trucks, however, the weight data element, WGTCD_TR, is. NHTSA often partitions car weight into six classes. This has been done in *An Analysis of Fires in Passenger Cars, Light Trucks, and Vans*, Tessmer, DOT HS 808 208, 1994; *Passenger Car Weight and Injury Severity in Single-Vehicle Nonrollover Crashes*, Partyka and Boehly, 1989; ESV Report 89-2b-O-005 and *Development of Databases in Support of an Analysis of Fire Incidence Using the Fatal Accident Reporting System*, Walz and Klein, September 14, 1993. The partition is defined as:

Car Weight Classes	
Class	Weight Range in Pounds
Class 1	Car Weight < 1,950
Class 2	$1,950 \leq \text{Car Weight} < 2,450$
Class 3	$2,450 \leq \text{Car Weight} < 2,950$
Class 4	$2,950 \leq \text{Car Weight} < 3,450$
Class 5	$3,450 \leq \text{Car Weight} < 3,950$
Class 6	$3,950 \leq \text{Car Weight}$

Note: If you are going to use this data element as a continuous data element, consider defining a new data element, say AUTO_WT as $\text{AUTO_WT} = \text{VIN_WT}/1000$. That is, AUTO_WT is the weight of the car in 1,000s of lbs. Its coefficient is less likely to be zero.

Vehicle Identification Number (VIN)

Data elements = VIN_1 ... VIN_12 The 1st to 12th character of the vehicle identification number

The first character of the VIN usually identifies the country or Nation of Origin; the most common are:

VIN_1 =	1	U.S.
	2	Canada
	3	Mexico
	J	Japan
	K	Korea
	L	Taiwan
	S	England
	VF	France (V for Europe, F for France)
	W	West Germany
	Y	Sweden
	Z	Italy

1981-Later

The second and third characters of the VIN, more or less, identify the make of the vehicle; the most common AUTOMOBILE makes are:

VIN_2|VIN_3 =

2A - AVANTI	E3 - EAGLE	G2 - PONTIAC
A3 - MITSUBISHI	F1 - EAGLE	G3 - OLDSMOBILE
AB - ISUZU	MEDALLION	G4 - BUICK
AJ - JAGUAR	(IF VIN_1 = V	G6 - CADILLAC
AM - MASERATI (IF	SEE	G8 - SATURN

CF - ASTON MARTIN	FF - FERRARI	VW - VOLKSWAGEN
DB - MERCEDES	FR - PININFARINA	
BENZ	G1 - CHEVROLET	

Vehicle Identification Number (VIN) (continued)**1981-Later**

The 10th letter or number of the VIN tells you the model year of the vehicle. Note that this may be different from when it was manufactured, as many automobile manufacturers start to produce next year's model this year. Find the model year by matching the 10th digit of your VIN to the table below:

VIN_10 =

A = 1980	A = 2010
B = 1981	B = 2011
C = 1982	C = 2012
D = 1983	D = 2013
E = 1984	E = 2014
F = 1985	F = 2015
G = 1986	G = 2016
H = 1987	H = 2017
J = 1988	J = 2018
K = 1989	K = 2019
L = 1990	L = 2020
M = 1991	M = 2021
N = 1992	N = 2022
P = 1993	P = 2023
R = 1994	R = 2024
S = 1995	S = 2025
T = 1996	T = 2026
V = 1997	V = 2027
W = 1998	W = 2028
X = 1999	X = 2029
Y = 2000	Y = 2030
1 = 2001	1 = 2031
2 = 2002	2 = 2032
3 = 2003	3 = 2033
4 = 2004	4 = 2034
5 = 2005	5 = 2035
6 = 2006	6 = 2036
7 = 2007	7 = 2037
8 = 2008	8 = 2038
9 = 2009	9 = 2039

As shown, each letter or number has been assigned to two different years. To find out which one applies, compare it to the 7th letter or number in the VIN. If the 7th VIN position is a letter, then the vehicle is made in 2010 through 2039. If the 7th VIN position is a number, then the vehicle is made prior to 2010.

Police Pursuits

A pursuit is an event that is initiated when a law enforcement officer, operating an authorized emergency vehicle, gives notice to stop (either through the use of visual or audible emergency signals or a combination of emergency devices) to a motorist who the officer is attempting to apprehend and that motorist fails to comply with the signal by either maintaining his/her speed, increasing speed or taking other evasive action to allude the officer's continued attempts to stop the motorist.

High Speed Chase with Police in Pursuit	37	

FARS 1982-1993

If at least one driver in a crash has a "Related Factor-Driver Level" of *High Speed Chase with Police in Pursuit* (37) then that crash is considered a "police pursuit" crash and all fatalities in that crash are considered "fatalities in crashes involving police in pursuit."

(DR_CF1=37) or (DR_CF2=37) or(DR_CF3=37)

Specific fatality types in a "police pursuit" crash can be identified as follows:

1. *occupant of police vehicle* - all occupants (PER_TYP IN (1,2,9)) of special use vehicle police (SPEC_USE=5)
2. *occupant of chased vehicle* - all occupants (PER_TYP IN (1,2,9)) of vehicle with a driver having a "driver related factor" of high speed chase with police in pursuit (DR_CF1=37 OR DR_CF2=37 OR DR_CF3=37)
3. *occupant of other vehicle* - all other occupants (PER_TYP IN (1,2,9)) - excludes occupant of police vehicle and chased vehicle
4. *non-occupant* - pedestrians, pedalcyclists, and other non-occupants (PER_TYP IN (3,4,5,6,7,8))

Police Pursuits (continued)FARS 1994 and later

If a crash has a "Related Factor- Accident Level" of *Police Pursuit Involved* (20) or a driver in the crash has a "Related Factor-Driver Level" of *High Speed Chase with Police in Pursuit* (37), then that crash is considered a "police pursuit crash" and all fatalities in that crash are considered "fatalities in crashes involving police in pursuit."

(CF1=20) or (CF2=20) or (CF3=20) or (DR_CF1=37) or (DR_CF2=37) or (DR_CF3=37)
(or (DR_CF4=37) since 1997)

Note that data elements DR_CF1-DR_CF4 were renamed to DR_SF1-DR_SF4 in 2010.

Specific fatality types can be identified as follows:

1. *occupant of police vehicle* - all occupants (*PER_TYP IN (1,2,9)*) of special use vehicle police (*SPEC_USE=5*)
2. *occupant of chased vehicle* - all occupants (*PER_TYP IN (1,2,9)*) of vehicle with a driver having a driver related factor of high speed chase with police in pursuit (*DR_CF1=37 OR DR_CF2=37 OR DR_CF3=37*). In 1997, DR_CF4 was added.
3. *occupant of other vehicle* - all other occupants (*PER_TYP IN (1,2,9)*) - excludes occupant of police vehicle and chased vehicle
4. *non-occupant* - pedestrians, pedalcyclists, and other non-occupants (*PER_TYP IN (3,4,5,6,7,8,10,19)*)
5. *unknown* - (*PER_TYP=99*), this code existed for one year – 1996

Person Type (continued)

Note: The early data has been modified to fit this format. For example, from 1975 to 1977 there was a value for fatal crashes involving a non-motorist in an animal drawn vehicle. This data has been reclassified into one of the values below.

- (1) Customarily, "Unknown Occupant" is placed in the "Passenger" category, unless they need to be distinguished from "Passengers".
- (2) "Occupant of motor vehicle not in-transport" refers to occupants of parked motor vehicles (any motor vehicle stopped off the roadway). In 2005, this definition was expanded to include parked/stopped off roadway/working motor vehicles and occupants of motor vehicles in motion outside the trafficway boundaries. Prior to 2005, occupants of working motor vehicles (working highway maintenance vehicles, cherry pickers, etc.) were coded "08." At that time, code "08" was labeled "Other Pedestrians."
- (3) "Occupant of non-motor vehicle transport device" refers to persons riding in an animal-drawn conveyance, on an animal, or injured occupants of railway trains, etc.
- (4) The code for "other pedestrians (08)" was created in FARS in 1994. This code was the result of further detailing the previous coding of "other or unknown non-occupant (8)" as 1) other pedestrians and 2) unknown non-occupant. Since it is not possible to differentiate "other pedestrians" from "unknown non-occupants" prior to 1994, we have kept them in the "other non-occupant" category for consistency across data years. "Other pedestrians" is used for occupant of a transport device used as equipment (working highway maintenance trucks, cherry pickers, etc.), pedestrians using conveyances, and people in buildings. Examples of pedestrian conveyances are skateboard riders, people in wheelchairs, people on roller skates, and sled riders.
- (5) Prior to 2005, code "08" was labeled "Other Pedestrians" and also included occupants of motor vehicles used as equipment (working highway maintenance vehicles, cherry pickers, etc.). For occupants of working motor vehicles, see code "03."
- (6) Prior to 2007, code "08" included persons in buildings. For persons in buildings, see code "10 – Persons In/On Buildings."
- (7) "Unknown person type" existed in data years 1995 and 1996 only. It was found that this attribute did not add any value to the data element.

**Improperly used* helmets are classified as “Not Used.” In 2010, the Restraint/Helmet Mis-Use (REST_MIS) data element was introduced and “*Improperly Used*” attributes were removed from the Restraint Use (REST_USE) data element.

Historically, *child safety seat used improperly* was classified as “Not Used” in FARS. In June of 2003, this attribute was re-classified as USED. All other *improperly used* restraint systems were placed in categories as appropriate.

The majority of restraint usage analysis focuses on 1) child safety seat or belt use for passenger vehicle occupants or; 2) helmet use for motorcyclists. Be sure to include the appropriate body types in your selection criteria - see the section on [Vehicle \(Body Type\) Classification](#).

Appendix C: Changes in FARS Data Elements by SAS Data File and Year

The tables below show each year a change was made to a data element. Elements are shown within the data set in which they can be found. Elements that appear in more than one data set are shown within the primary data set to which they belong. For example, MOD_YEAR is a Vehicle level element (V12. Vehicle Model Year) and primarily belongs to the Vehicle data set but it is also provided in the Person data file as a courtesy. Therefore, changes to this data element can be found in the Vehicle table below.

This is a note for how to read the tables below:

The first row in which the letter "A" appears is the first year that data element was coded. If the letter "A" appears through the column there have been no significant changes in the way in which the data element has been coded. If the letter "B" appears in a column, there has been a significant change in the way the data element has been coded. The first row, which contains the letter "B," indicates which year the first change was made. The letter "C" indicates the year the second change was made, and so on.

Appendix D: Summary of 2010 and 2011 FARS Changes

2010 FARS/NASS GES Standardization

The purpose of this document is to inform users of NHTSA's Fatality Analysis Reporting System (FARS) and National Automotive Sampling System General Estimates System (NASS GES) data about some of the more significant changes to the 2010 data as a result of the standardization of the data elements between the two systems. In addition to the changes outlined below, a listing of all specific data element changes can be found in the following table:

[Variables with Changes in Definitions and Attributes](#)

The FARS/NASS GES Standardization began in 2006, with the second phase being implemented in the 2010 data collection year. The definition and element attribute changes introduced in 2010 are the most substantive and most numerous changes in one year in the reconciliation of the FARS and NASS GES data systems. In the 2011 data collection year – the third and final planned phase of the FARS/NASS GES Standardization – nearly all remaining data element attribute and file structure differences will be addressed. As a single, unified data entry system, FARS/NASS GES will be compatible with the Model Minimum Uniform Crash Criteria (MMUCC), the guideline used by nearly all States to develop and revise their crash forms and databases. Once complete, the FARS/NASS GES Standardization will simplify crash data coding and analysis as well as reduce costs and errors.

Probably the most notable changes were the introduction of precrash information in FARS (already collected in NASS GES) and a change to case structure or how the groups of related data elements are organized. For example, in 2009 a FARS case consisted of Crash, Vehicle, Driver and Person coding forms. In 2010, the Person level form was split into Motor Vehicle Occupant and Non-Motor Vehicle Occupant forms, and the Precrash form was added (new to FARS, though not to NASS GES).

These structure changes also include changes to how the data are now stored and made available. For example, for FARS, there are now 16 data tables rather than 4. This results from the changes in the number of coding forms and from changes in specific data elements. Several data elements that used to allow only a specified number of responses now have a "select-all-that-apply" format. There is a separate data table for each of these data elements.

At the Crash level, a Crash Events Table was added to FARS (and modified in NASS GES). In NASS GES, Non-Harmful Events were added to the Crash Events Table.

The precrash information represents not only a new coding form, but more importantly, largely a new concept for FARS, attempting to collect data about the conditions, events and driver actions that preceded and may have contributed to the crash. Precrash data is intended to improve crash avoidance research and has been included in NASS GES since 1992.

The new FARS Precrash form information consists of 23 data elements, 9 of which were previously coded at the Crash level, 3 each at the Vehicle and Driver levels, and 8 new elements. Nine trafficway descriptor data elements were moved from the crash level to the new precrash level. These elements provide details about the characteristics of the trafficway selected for each vehicle.

A Pedestrian/Bicycle crash typing software application was added to the Non-Motor Vehicle Occupant form for both systems to help identify the precrash actions for parties involved in certain non-motorist-related crashes. (Please see *Appendix E: Pedestrian and Bicyclist Data Availability Change* for updates.)

Type of Intersection was added to both systems. Bus Use and Vehicle Configuration were two Vehicle level elements that are new to NASS GES in 2010 and modified for FARS (element attributes were consolidated and redefined). Condition at Time of Crash was added at the Driver and the Non-Motor Vehicle Occupant levels for both systems. For motor vehicle occupants, there is now an Indication of Misuse of Restraint System or Helmet Use in both systems.

Some of the information that had been collected under FARS Related Factors was redistributed to new data elements. For example, some Person Related Factors have been removed and are now captured in two new Non-Motor Vehicle Occupant elements; Non-Motorist Action/Circumstances Prior to Crash and Non-Motorist Action/Circumstances at Time of Crash. Some Vehicle Related Factors are now captured under the new Precrash elements, Contributing Circumstances, Motor Vehicle and Driver Distracted By. The Driver Level element, Violations Charged, is now a "Select-all-That-Apply" element.

Multiple data elements that are part of the Model Minimum Uniform Crash Criteria (MMUCC) had the attribute "Not Reported" added in 2010 to account for information missing from the case source materials.

To ensure that data quality was not compromised as a result of the standardization, NHTSA refined and enhanced its quality control processes. These enhancements enable the identification of coding discrepancies and development of training tailored to eliminate or reduce these discrepancies.

The final phase of the FARS/NASS GES standardization will occur during the 2011 data collection year, at which point FARS and NASS GES, while remaining separate data systems, will share a single data entry system and uniform set of data elements.

New in 2010 FARS

There were many changes to the 2010 FARS, most of which are the result of NHTSA's efforts to standardize variables in FARS and the National Automotive Sampling System's (NASS) General Estimates System (GES). Additions, deletions, and changes are listed below.

2010 Data Elements with Changes in Definitions and Attributes

Below is a list of FARS data elements that had substantial changes for 2010.

Trafficway Descriptor Data Elements 2010

As part of the data standardization effort to harmonize the data in FARS and NASS GES and align both data systems with the data elements recommended in MMUCC, nine data elements were moved from the Crash Level in FARS to the a new Precrash Level method of collection. Some data elements also had title changes as a result. The changes are identified below with ***bold/italics***. Those data elements are:

2009 Crash Level Data elements	2010 Precrash Level Data elements
C21 Trafficway Flow (TRAF_FLO)	PC5 Trafficway <i>Description</i> (VTRAFWAY)
C22 Number of Travel Lanes (NO_LANES)	PC6 <i>Total Lanes in Roadway</i> (VNUM_LAN)
C23 Speed Limit (SP_LIMIT)	PC7 Speed Limit (VSPD_LIM)
C24 Roadway Alignment (ALIGNMNT)	PC8 Roadway Alignment (VALIGN)
C25 Roadway Profile (PROFILE)	PC9 Roadway <i>Grade</i> (VPROFILE)
C26 Roadway Surface Type (PAVE_TYP)	PC10 Roadway Surface Type (VPAVETYP)
C27 Roadway Surface Condition (SUR_COND)	PC11 Roadway Surface Condition (VSURCOND)
C29 Traffic Control Device (TRAF_CON)	PC12 Traffic Control Device (VTRAFCON)
C30 Traffic Control Device Functioning (T_CONT_F)	PC13 Traffic Control Device Functioning (VTCONT_F)

In the FARS data collection years 2009 and prior, the set of data elements above-left (C21-C27) provided details about the characteristics of the trafficway to which the crash had been assigned. Crashes were assigned to the trafficway on which the First Harmful Event occurred. If the First Harmful Event occurred outside the boundaries of a trafficway (e.g. private property), the crash was assigned to the trafficway on which the vehicle was traveling when the Unstabilized Situation began.

In at-intersection crashes, assignment was to the highest function class of trafficway at the intersection. If the vehicles were traveling on two different trafficways of equal function class prior to an at-intersection crash, it was assigned to the trafficway on which the motor vehicle precipitating the crash was traveling.

The data elements C29 Traffic Control Device and C30 Traffic Control Device Functioning were coded with respect to the control most applicable to the crash. If more than one device was present, the highest device (lowest number on the attribute list) most related to the crash was selected.

In the FARS data collection years starting in 2010, this set of data elements above-right (PC5-PC13) provide details about the characteristics of the trafficway that each in-transport motor vehicle was traveling on just prior to its Critical Precrash Event. The Critical Precrash Event is the event which made the crash imminent (i.e., something occurred which made the collision possible). For vehicles departing the trafficway prior to their critical precrash events, the trafficway selected for classification is the one the vehicle departed. If this vehicle is in a junction just prior to its critical precrash event, the trafficway selected for classification is the one it is on before entering the junction.

While these data elements were still collecting the same general information in 2010, there are some important differences to note. First, by being collected for each vehicle, different trafficway characteristics could be recorded for each vehicle in the crash. Second, in some circumstances the procedural change to being recorded for each vehicle based on its precrash location rather than the location of the first harmful event resulted in different data being provided than would have been in the same crash in prior years.

The types of crashes most affected by the change were those that occur in junction. For example, in a crash where two vehicles were traveling on the same trafficway in opposite directions (e.g. North-South) that have an at-intersection crash in the junction of a higher function class trafficway, the characteristics of the lower class trafficway that each of the vehicles were traveling on before entering the intersection area are recorded in the data elements PC5-PC13 for each vehicle. In prior years, the characteristics of the higher functional class trafficway would have appeared on the Crash Level. Also note that in such a case, on the Crash Level this crash would still be recoded to the higher functional class trafficway in the data elements C10 National Highway System, C11 Roadway Function Class, C12 Route Signing, and C13 Trafficway Identifier and none of the vehicle level characteristics can be attributed to this trafficway.

The data elements in RED are new to 2011 FARS.
The data elements in BLUE are changed in 2011 FARS.

Appendix E: Pedestrian and Bicyclist Data Availability Change

In 2010, NHTSA added new precrash data elements for pedestrians and bicyclists (non-motorist) to the data collected in the Fatality Analysis Reporting System (FARS) and the National Automotive Sampling System (NASS) General Estimates System (GES). These data are intended for countermeasure research and development. However, NHTSA's National Center for Statistics and Analysis (NCSA) quality control team has identified inconsistencies between the new non-motorist data elements and comparable pre-existing FARS elements that can lead to different results. Consequently, NHTSA has removed the Pdtype data file from the 2010 and 2011 FARS and NASS GES while research is conducted on how improvements can be made. This Pdtype data file includes some non-motorist data (see below). The following data elements have been removed:

- PB30 – Crash Type - Pedestrian
- PB31 – Crash Type Location - Pedestrian
- PB32 – Pedestrian Position
- PB33 – Pedestrian Initial Direction of Travel
- PB34 – Motorist Direction
- PB35 – Motorist Maneuver
- PB36 – Intersection Leg
- PB37 – Pedestrian Scenario
- PB38 – Crash Group – Pedestrian
- PB30B – Crash Type - Bicycle
- PB31B – Crash Location - Bicycle
- PB32B – Bicyclist Position
- PB33B – Bicyclist Direction
- PB38B – Crash Group - Bicyclist

Appendix F: Changes to the FARS VIN Decoded Data Elements

FARS implemented a new structure for its VIN decoded data elements in 2013. This was warranted due to the renovation of the RL Polk VIN verification and decoding program. RL Polk upgraded their PC VINA VIN validation and decoding program to their new VINtelligence application, and no longer supports PC VINA. The FARS data collection software was therefore retooled to work with the VINtelligence application. The output is now stored in the Vindecode data file. The data file contains 81 VIN decoded data elements. Descriptions of these data elements are provided below from the Polk VINtelligence Deluxe Package and Field Descriptions documentation.

Note: The twelve characters of the VIN are still provided as individual data elements (V101-V112) in the Vehicle and Parkwork data files. The 24 VIN decoded data elements that used to be on the Vehicle, Parkwork and Person data files were discontinued in 2013. These data elements can still be found in the discontinued sections of the Vehicle and Parkwork data files in this Manual.

Element Identifier	SAS Name	Field Description
V200	ABS	(Brakes-ABS Code) A code that describes whether a vehicle has or does not have anti-lock brakes, and what kind of brakes they are. (Not coded for heavy truck). This is based on the series code that is assigned the vehicle from VINA.
V201	ABS_T	(Brakes-ABS Code) description
V202	BATKWRTG	The measure of total battery power expressed in kilowatts. For example: 71KW, 85KW, 75KW, 67KW.
V203	BATTYP	A value that identifies the kind of battery in the vehicle. For example: PbA- Lead Acid, NMH- Nickel Metal Hydride.
V204	BATTYP_T	The description of the Polk assigned code for the Battery Type Code. For example: PbA- Lead Acid, NMH- Nickel Metal Hydride.
V205	BATVOLT	The voltage rating of the battery as provided by the manufacturer.
V206	BLOCKTYPE	(Block Type) Description
V207	BODYSTYLE	A Polk assigned code that describes the body style of the vehicle. For example, CP=Coupe.
V208	BODYSTYLE_T	The description of the Polk assigned code Body Style Code For example: Coupe
V209	CARBBRLS	The number of barrels on a carbureted engine.
V210	CARBTYP	The description of the Polk assigned code which identifies the vehicle carburetion type. For example Carburetor, Fuel Injection, Unknown or Electric n/a.
V211	CYCLES	(Cycle Count) Refers to the cycle or stroke of an engine. 2-strokes are lightweight and simpler, but they burn oil, by design. Few cars on the road in North America are two-strokes, the last one offered was a 1967 Saab.
V212	CYLNDRS	Contains a code that represents the number of cylinders a vehicle's combustion engine can have.
V213	DISPCLMT	(Displacement Liters) displacement in rounded Liters, where 1,000 cubic centimeters = 1 liter. Even domestic makes will advertise displacement in terms of liters (e.g. 5.0 liter mustang, which equates to a 302 CID or 4967 cc displacement).
V214	DISPLCC	(Displacement CC) displacement in cubic centimeters. We intend to use this as the definitive, exact displacement value, i.e. 4967 cc.

Element Identifier	SAS Name	Field Description
V215	DISPLCI	(Displacement CID) displacement in cubic inches. This is a rounded, marketing value, like 302 cubic inches, instead of 4967 cc.
V216	DOORS	The number of doors the vehicle has
V217	DRIVETYPE	(Drive Type) This element describes type of driving configuration for cars and trucks such as FWD, AWD, RWD.
V218	DRIVETYPE_T	(Drive Type) description
V219	DRIVWHLS	Number of wheels driven by the power train. For example in a 6x4 configuration this would be the 4.
V220	DRL	(Daytime Running Lights)A Polk assigned code that identifies whether or not the vehicle has daytime running lights.
V221	DRL_T	(Daytime Running Lights) description
V222	ENGHEAD	(Head Configuration) Describes the cylinder head's camshaft/valve configuration.
V223	ENGHEAD_T	(Head Configuration) description
V224	ENGMFG	(Mfr.) description
V225	ENGMODEL	(Model) description
V226	ENGVINCD	(Code) Code derived from the VIN (not the secondary VIN for a motorcycle). Usually a single character, some manufactures give full positions 4-8 and engine information from that; they do not break it down any further.
V227	ENGVVT	Used to determine if a car has Variable Valve Timing
V228	FUEL	(Fuel) What an internal combustion burns to move a piston in a cylinder
V229	FUEL_T	(Fuel) description
V230	FUELINJ	The type of fuel injection used by a vehicle. For example, Direct, Throttle body
V231	GVWRANGE	Contains a code that identifies the Polk standard groupings of gross vehicle weights to which a vehicle may belong. This information is typically captured only for trucks.
V232	GVWRANGE_T	The description for the manufacturers assigned Gross Vehicle Weight (GVW) for trucks. This rating may or may not equal the actual GVW.
V233	INCOMPLT	Indicator that signifies whether the vehicle is consider "incomplete" (Y/N)
V234	MCYUSAGE	A further breakdown of body style for motorcycles to indicate if it is On-Road or Off-Road.
V235	MCYUSAGE_T	A further breakdown of body style for motorcycles to indicate if it is On-Road or Off-Road.
V236	MSRP	Contains the base price of the vehicle as designated by the OEM's specifications. BASE PRICE includes only the price for the base model of the vehicle, excluding any optional equipment that may have been added as a result of the vehicle's TRIM LEVEL.
V237	NCICMAKE	Contains the Polk standardized abbreviation for the OEM's vehicle make. The vehicle make generally contains what the general public usually considers to be a vehicle brand name, for example, Chrysler, Dodge, Ford, Mercury, Toyota, GMC, Chevy, etc.
V238	PLNTCITY	(City) This is the city where the plant is located.
V239	PLNTCNTRY	(Country) This is the country where the plant is located. Example values are USA, Canada and Japan.
V240	PLNTSTATE	(State or Province) This is the state or province (Canada) location of the plant.
V241	PSI_F	(Front Tire Pressure) Vehicle Mfr. recommendation for tire pressure, in pounds/sq. in.

Element Identifier	SAS Name	Field Description
V242	PSI_R	(Rear Tire Pressure) Vehicle Mfr. recommendation for tire pressure, in pounds/sq. in.
V243	REARSIZE	(Rear Tire Size Description) As in "17R245"
V244	RSTRNT	(Restraint Type) A Polk assigned code that identifies the type of restraints that a vehicle has based on VIN.
V245	RSTRNT_T	(Restraint Type) description
V246	SALE_CNTRY	(Country Sold / Specific Market) Country where the vehicle is planned to be sold (may have different emissions standards).
V247	SALE_CNTRY_T	(Country Sold / Specific Market) description
V248	SECURITY	(Security Type) Describes the security system (if any) installed on this model.
V249	SECURITY_T	(Security Type) description
V250	SHIPWEIGHT	Contains the base weight of the vehicle, as defined in the OEM's specifications. The base weight of a vehicle is the empty weight of the base model of the vehicle (i.e., the stripped down version of the vehicle)
V251	SUPCHRGR	Indicates if the engine has a supercharger or not.
V252	SUPCHRGR_T	Indicates if the engine has a supercharger or not. Yes, No or Unknown.
V253	TIREDESC_F	more specific tire description (ex. Michelin Eagle P245/40ZR)"
V254	TIREDESC_R	more specific tire description (ex. Michelin Eagle P245/40ZR)"
V255	TIRESIZE_F	(Front Tire Size Description) As in "17R245"
V256	TKAXLEF	(Axle- Type, Front Axle) The location of the front axle of a truck tractor. Set forward increases stability on the highway, Setback increases maneuverability in tight spaces.
V257	TKAXLEF_T	(Axle- Type, Front Axle) short description
V258	TKAXLER	(Axle- Type, Rear Axle) Represents rear axle configuration on a truck tractor. Tandem axles increase load bearing capability.
V259	TKAXLER_T	(Axle- Type, Rear Axle) short description
V260	TKBEDL	(Bed Length) Code representing the manufacturer's description of the relative size of the cargo area of a pickup truck or van. A "long" Ford Ranger bed (compact pickup) may well be shorter than a "short" bed on an F350 (large industrial pickup).
V261	TKBEDL_T	(Bed Length) description
V262	TKBRAK	(Brake Type) The type of brakes on the Vehicle (currently commercial truck only). Truck VIN determines this currently
V263	TKBRAK_T	(Brake Type) description
V264	TKCAB	(Cab Configuration) Cab Type describes the physical configuration of a truck's cabin.
V265	TKCAB_T	(Cab Configuration) medium description
V266	TKDUTY	(Duty Type) A Polk assigned code that represents the duty type of a truck engine, based on manufacturer information
V267	TKDUTY_T	(Duty Type) medium description
V268	TONRATING	(Tonnage Rating) description
V269	TURBO	Indicates if the engine has a turbocharger.
V270	TURBO_T	Indicates if the engine has a turbocharger. Yes, No or Unknown.
V271	VEHTYPE	A Polk assigned code that defines the type of a vehicle represented by a specific VIN. For example: M,P,C or T.

Element Identifier	SAS Name	Field Description
V272	VEHTYPE_T	The description of the Polk assigned code for the vehicle type code. For example: passenger, truck, motorcycle, commercial trailer.
V273	VINMAKE_T	(Make- Name) Full name of the make (i.e. Chevrolet)
V274	VINMODEL_T	(Model Code) description
V275	VINYEAR	The marketing year defined by the OEM which the vehicle was produced. The value contained in this attribute may not always match the calendar year in which the vehicle was actually manufactured. Many OEMs release models prior to calendar year.
V276	VLVCLNDR	(Valves Per Cylinder) Number of intake/exhaust valves per cylinder.
V277	VLVTOTAL	(Valves Total) Total number of intake/exhaust valves.
V278	WHEELS	The number of wheel ends on the vehicle. For example in a 6x4 configuration this would be the 6.
V279	WHLBLG	Contains the longest distance between the front and rear axles of a vehicle in inches for a particular series of that vehicle.
V280	WHLBSH	Contains the distance between the front and rear axles of a vehicle in inches of the base model of the vehicle.
