The Bureau of Transportation Statistics (BTS), an operating administration of the U.S. Department of Transportation (DOT), is a national statistical agency, DOT's representative on the Federal Geographic Data Committee, and the home of the National Transportation Library. BTS compiles, analyzes, and makes accessible information about the Nation's transportation systems; collects information on various aspects of transportation; and enhances the quality and effectiveness of DOT's statistical programs through research, the development of guidelines, and the promotion of improvements in data acquisition and use.

For additional copies of this guide or information about BTS and its products and services, use the following contacts:

## BTS98-S-02

December 1998

America's transportation system has changed along with the nation's society and economy. The following table puts those changes in perspective:

| Characteristic | 1970 | 1996 |
| :--- | ---: | ---: |
| Resident population | $203,984,000$ | $265,284,000$ |
| Land area (square miles) | 3,540 million | 3,536 million |
| Total civilian labor force | 83 million | 134 million |
| Gross Domestic Product* | $\$ 3.4$ trillion | $\$ 6.9$ trillion |
| Median household income* | $\$ 29,600$ | $\$ 32,000$ |
| Average household expenditures* | 24,600 | $\$ 30,800$ |
| Number of households | $63,401,000$ | $99,627,000$ |
| Average life expectancy | 70.8 years | 76.1 years |
| Labor force participation of women | $46 \%$ | $59.3 \%$ | | Note: All dollar amounts are in 1992 chained dollars. |
| :--- |
| I Land areas were derived from different base data and changed due to |
| construction of reservoirs, draining of lakes, etc. |
| * Converted from current dollars to 1992 chained dollars using implicit |
| deflators for disposable personal income or personal consumption |
| expenditures in table 699 of source publication. |

The statistics in this Pocket Guide to Transportation were compiled by the Bureau of Transportation Statistics from multiple sources. The guide is divided into four sections:
Transportation System Extent and Use ..... 2
Transportation and the Economy ..... 18
Transportation and Safety ..... 23
Transportation, Energy, and the Environment ..... 26

## A

Transportation System Extent and Use merica is moving! In 1996, the U.S. transportation system served 265 million people and 6 million businesses and supported 4.4 trillion passenger-miles and 3.7 trillion ton-miles. The data presented in this section confirm that local and long-distance passenger travel and freight activity continue to grow. Many factors are influencing this growth: population increases, vehicle availability, the expanding economy, and higher consumer incomes.

## Table I.

The Transportation Network: 1996

| Mode | Components |
| :--- | :--- |
| Highway | Public roads |
|  | 46,036 miles of Interstate highway |
|  | 112,467 miles of other National Highway System |
|  | roads |
|  | $3,760,947$ miles of other roads |
| Air | Public-use airports |
|  | 5,389 airports |
|  | Airports serving large certificated carriers |
|  | 29 large hubs (72 airports), 4I7 million enplaned |
|  | passengers |
|  | 31 medium hubs (55 airports), 89 million enplaned |
|  | passengers |
|  | 60 small hubs (73 airports), 37 million enplaned |
|  | passengers |
|  | 622 nonhubs (650 airports), I5 million enplaned |
|  | passengers |
| Rail | Miles of track operated |
|  | I26,682 miles by Class I freight railroads |
|  |  |
|  |  |
|  |  |
|  | 27,660 miles by regional freight railroads |
|  | 24,500 miles by Amtrak (passenger) |

| Mode | Components |
| :---: | :---: |
| Urban Transit | Directional route-miles serviced* |
|  | Bus: 158,3I0 |
|  | Commuter rail: 3,682 |

Transportation and the Economy

Transportation not only gives us personal mobility, it enables us to transport goods quickly throughout the Nation. Transportation's share of the Gross Domestic Product (GDP) has held steady at about II percent since 1989, and contributed $\$ 847$ billion to a $\$ 7.64$ trillion GDP in 1996.

Table 12.
U.S. Merchandise Trade by Mode and Region: 1996 (In billions of 1996 dollars)

| Mode and region | Value of imports | Value of exports |
| :---: | :---: | :---: |
| U.S.-Canada border: <br> Truck <br> Rail <br> Pipeline | $\begin{array}{r} \$ 98.4 \\ 39.8 \\ 12.8 \end{array}$ | $\begin{array}{r} 102.7 \\ \text { I5.7 } \\ 0.2 \end{array}$ |
| U.S.-Mexico border: <br> Truck <br> Rail Pipeline | $\begin{array}{r} 48.4 \\ 12.3 \\ \text { NS } \end{array}$ | $\begin{array}{r} 44.1 \\ 5.1 \\ \text { NS } \end{array}$ |
| Atlantic Coast: Waterborne ${ }^{1}$ | 140.8 | 98.3 |
| Pacific Coast: Waterborne ${ }^{2}$ | 187.5 | 82.6 |
| Gulf Coast: Waterborne | 57.4 | 54.4 |
| Great Lakes: Waterborne | 3.4 | 3.1 |
| All air freight | 185.9 | 196.2 |

NS Not significant. I Contain data for Puerto Rico and the U.S.Virgin Islands.
${ }^{2}$ Contain data for Hawaii and Alaska.
Note: Excludes data for imports that are valued at less than $\$ 1,250$, and exports that are valued at less than $\$ 2,500$. Import value is for U.S. general imports, custom value basis. Export value is FAS (free alongside ship) and represents the value of exports at the port of export, including the transaction price and inland freight, insurance, and other charges. Values for truck, rail, and pipeline trade contain data for transshipments (shipments that entered or exited the United States through U.S. Customs ports even when the actual origin or final destination was other than the United States). Values for waterborne data include merchandise shipped through the United States in transit from one foreign country to another and for merchandise shipped through inland ports in the Atlantic, Pacific, Gulf, and Great Lakes regions.

## Federal, State, and Local Transportation Revenues and Expenditures <br> (In millions)

|  | $\mathbf{1 9 8 5}$ | $\mathbf{1 9 9 0}$ | $\mathbf{1 9 9 4}$ | $\mathbf{1 9 9 5}$ |
| :--- | ---: | :--- | :--- | :--- |
| Current dollars |  |  |  |  |
| Revenues: | 18,388 | 21,532 | 25,553 | 30,223 |
| Federal | 24,355 | 34,629 | 42,861 | 44,846 |
| State | 9,294 | 13,740 | 17,565 | 18,647 |
| Local | 27,705 | 30,166 | 38,672 | 39,930 |
| Expenditures: <br> Federal (less grants) <br> Federal grants to <br> states and localities | 18,227 | 19,786 | 23,721 | 25,034 |
| State and local | 46,810 | 69,703 | 85,407 | 89,359 |

Note: Statistics in this table are based on data from the U.S. Department of Commerce, Bureau of the Census, which uses different definitions and accounting methods than those used by some modal administrations of the U.S. Department of Transportation. For example, revenues in this table are limited to gasoline taxes, tolls, and other sources that are collected directly from transportation users. Revenue statistics published by the Federal Highway Administration also include other items such as investment income and other taxes and fees.

Source: U.S. Department of Transportation, Bureau ofTransportation Statistics, Government Transportation Financial Statistics, FY 1985-95, (Washington, DC: forthcoming).

## Transportation and Safety

> Transportation has been the cause of roughly half of all accidental deaths in the United States over the last 26 years. Crashes involving motor vehicles account for about 95 percent of all transportation fatalities and most injuries. Despite this enormous toll, transportation safety has improved: there were far fewer fatalities in 1996 than in 1970, even though vehicle-miles of travel doubled.

Table 16.
Fatalities by Transportation Mode

| Mode | 1970 | 1980 | 1990 | 1995 | 1996 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Large air carrier | 146 | I | 39 | 168 | 380 |
| Commuter air | N | 37 | 7 | 9 | 14 |

## (v) Transportation, Energy, and the Environment

The U.S. transportation system provides many benefits, but also produces undesirable byproducts, such as air and water pollution, noise, solid waste, damage to wildllife habitats and ecosystems, and the potential for global climate change. While other sectors have moved away from oil over the last 20 years, transportation remains almost entirely dependent on petroleum-much of it imported-as its energy source. Greenhouse gas emissions from transportation are increasing because of growing freight activity and passenger travel, slowing of energy efficiency improvements, and America's continuing reliance on fossil fuels.

Figure 8.
U.S. Petroleum Production and Consumption

Quadrillion Btu

Transportation's Share of U.S. Petroleum Use: 1950-96
Million barrels per day

SOURCE: U.S. Department of Energy, Energy Information Administration, Annual Energy Review 1996, DOE/EIA-0384(96) (Washington, DC: I997), table 5.I2.

Figure 10.

## Carbon Dioxide Emissions from Energy Consumption: 1980-96

Million metric tons of carbon

Note:Tons of carbon can be converted to tons of carbon dioxide gas by multiplying by 3.667. One ton of carbon equals 3.667 tons of carbon dioxide gas.
Source: U.S. Department of Energy, Energy Information Administration, Annual Energy Review 1997, DOE/EIA-0384(97), (Washington, DC: July 1998), table 12.2 and figure I2.2.

Figure 11 .
U.S.Transportation-Related Air Emissions:

1970-96
Index (1970=1.0, $1990=1.0$ for PM-2.5)

Key: $\mathrm{NO}_{\mathrm{x}}=$ oxides of nitrogen; PM-10 and PM-2.5= airborne particulates of less than 10 microns or 2.5 microns, respectively; $\mathrm{CO}=$ carbon monoxide; VOC = volatile organic compounds.
Note:Transportation emissions include all onroad mobile sources and the following nonroad mobile sources: recreational vehicles and boats, airport service equipment, aircraft, commercial marine vessels, and railroads. Other nonroad sources, such as lawnmowers and farming equipment, are not included. Lead estimates include onroad mobile sources only.

[^15]
## clossary

Air carrier-Certificated providers of scheduled and nonscheduled services.

Class I railroad-A railroad with an annual gross operating revenue in excess of $\$ 250$ million (based on 1991 dollars).
Commuter rail-Local and regional passenger train operations between a central city and adjacent suburbs.

Directional route miles-The sum of the mileage in each direction over which transit vehicles travel while in revenue service.

Fatality-For purposes of compiling DOT safety statistics, any injury that results in death within 30 days of a transportation crash or incident.

General aviation-All civil aviation operations other than scheduled air services and nonscheduled air transportation operations.

Inland water vessels-Includes self-propelled dry cargo and offshore support vessels, passenger carriers, and vehicular and railroad car ferries, railroad cars, tankers, and towboats; and non-self-propelled dry cargo and tanker barges, and railroad car floats operating on the Atlantic, Gulf, and Pacific coasts, Mississippi River System, Gulf Intracostal Waterway, and Great Lakes System.

Other 2-axle, 4-tire vehicles-Includes vans, pickup trucks, and sport/utility vehicles.
Passenger-mile-One passenger transported one mile. One vehicle traveling 3 miles carrying 5 passengers generates 15 passenger miles.

Personal-use vehicles-Cars, pickup trucks, or vans; other small trucks; rental cars, trucks, or vans; recreational vehicles or motor homes; or motorcycles or mopeds.
Ton-miles-A unit of measure equal to the movement of one ton over one mile.

## Truck:

Single unit-A large truck on a single frame with at least 2 axles and 6 tires. Excludes "other 2-axle, 4-tire vehicles" noted above.
Combination-A power unit (truck or truck tractor) and one or more trailing units.
Vehicle-mile-One vehicle traveling one mile.

Statistics published in this Pocket Guide to Transportation come from a number of different sources. Some statistics are based on samples and are subject to sampling variability. Statistics may also be subject to errors, such as omission, duplication, and errors in reporting, recording, and processing data. For more information about the accuracy of statistics in this publication, refer to the sources listed.
