## PREFACE

The 1985-86 North Dakota Grain and Oilseed Transportation Statistics Report was prepared by Dennis C. Ogg, Research Assistant, Upper Great Plains Transportation Institute.

This report represents a continuation of analysis concerned with the patterns and methods of distributing grains and oilseeds from North Dakota. This series began with the analysis of 1956-57 data and was published in Agricultural Economics Report 14, Department of Agricultural Economics, North Dakota State University. Subsequent years' data were analyzed in Agricultural Economics Reports 15, 17, 44 and 56, and Agricultural Experiment Station Bulletin 462. The compilation and analysis of data for the year 1967-68 in this series was assumed by the Upper Great Plains Transportation Institute. Also, the data representing the 1967-68 period were the first results of the requirements of the North Dakota Public Service Commission that all North Dakota elevators report monthly movements of grains and oilseeds by truck and rail. Prior to 1967-68, these data had been estimated from questionnaires completed by a small portion or sample of country elevators.

NORTH DAKOTA GRAIN AND OILSEED TRANSPORTATION STATISTICS  
1985-86

Objective of Report

This report represents a continuation of analyses concerned with the patterns and methods of distributing grain from North Dakota. The collection and compilation of this type of data began in 1956-57. The objective of this report, like prior reports, is to provide the necessary data base for identifying trends in the distribution of grain and oilseeds from North Dakota.

Scope of Report

Data were tabulated according to major characteristics which typically describe commodity flows. The major characteristics considered were: destination of shipment, mode of shipment, origin of shipment, time of shipment, and commodity shipped. These characteristics were defined as follows:

Destination of shipment: Minneapolis-St. Paul, Duluth-Superior, West (includes western states and North Pacific ports), and miscellaneous markets.

Mode of shipment: Rail or truck. Rail includes Commodity Credit Corporation shipments.

Origin of shipment: The nine crop reporting districts in North Dakota (Figure 1).

Time of shipment: By month, from July, 1985 to June, 1986 and previous years.

Commodity shipped: Hard red spring wheat, durum, barley, sunflower, oats, soybeans, flaxseed and corn.

Source of Data

The data used to analyze North Dakota grain distribution patterns for the period July, 1985 to June, 1986, were obtained from all country elevators in North Dakota. The data source is the North Dakota Public Service Commission's "Grain Movement Reports." Every country elevator in North Dakota is required under state statute to assemble and submit to the Public Service Commission such information desired by the commission on a monthly basis.

## Organization of the Remainder of the Report

The same general commodity flow characteristics are considered in this report as in previous reports of this nature. The commodity flow characteristic "commodity shipped" is used to delineate major sections of the report. That is, flow patterns for each type of grain are described in separate sections. The sections are presented in the following order: (1) Total (total grain and oilseed shipments), (2) Wheat (hard red spring wheat), (3) Durum, (4) Barley, (5) Sunflower, (6) Oats, (7) Soybeans, (8) Flaxseed, and (9) Corn.

Readers should note changes made in the 1984-85 hard red spring wheat, oats and flaxseed data. Data contained in UGPTI Report No. 59, "North Dakota Grain and Oilseed Transportation Statistics, 1984-85" were reported incorrectly. The corrections are included in this report.

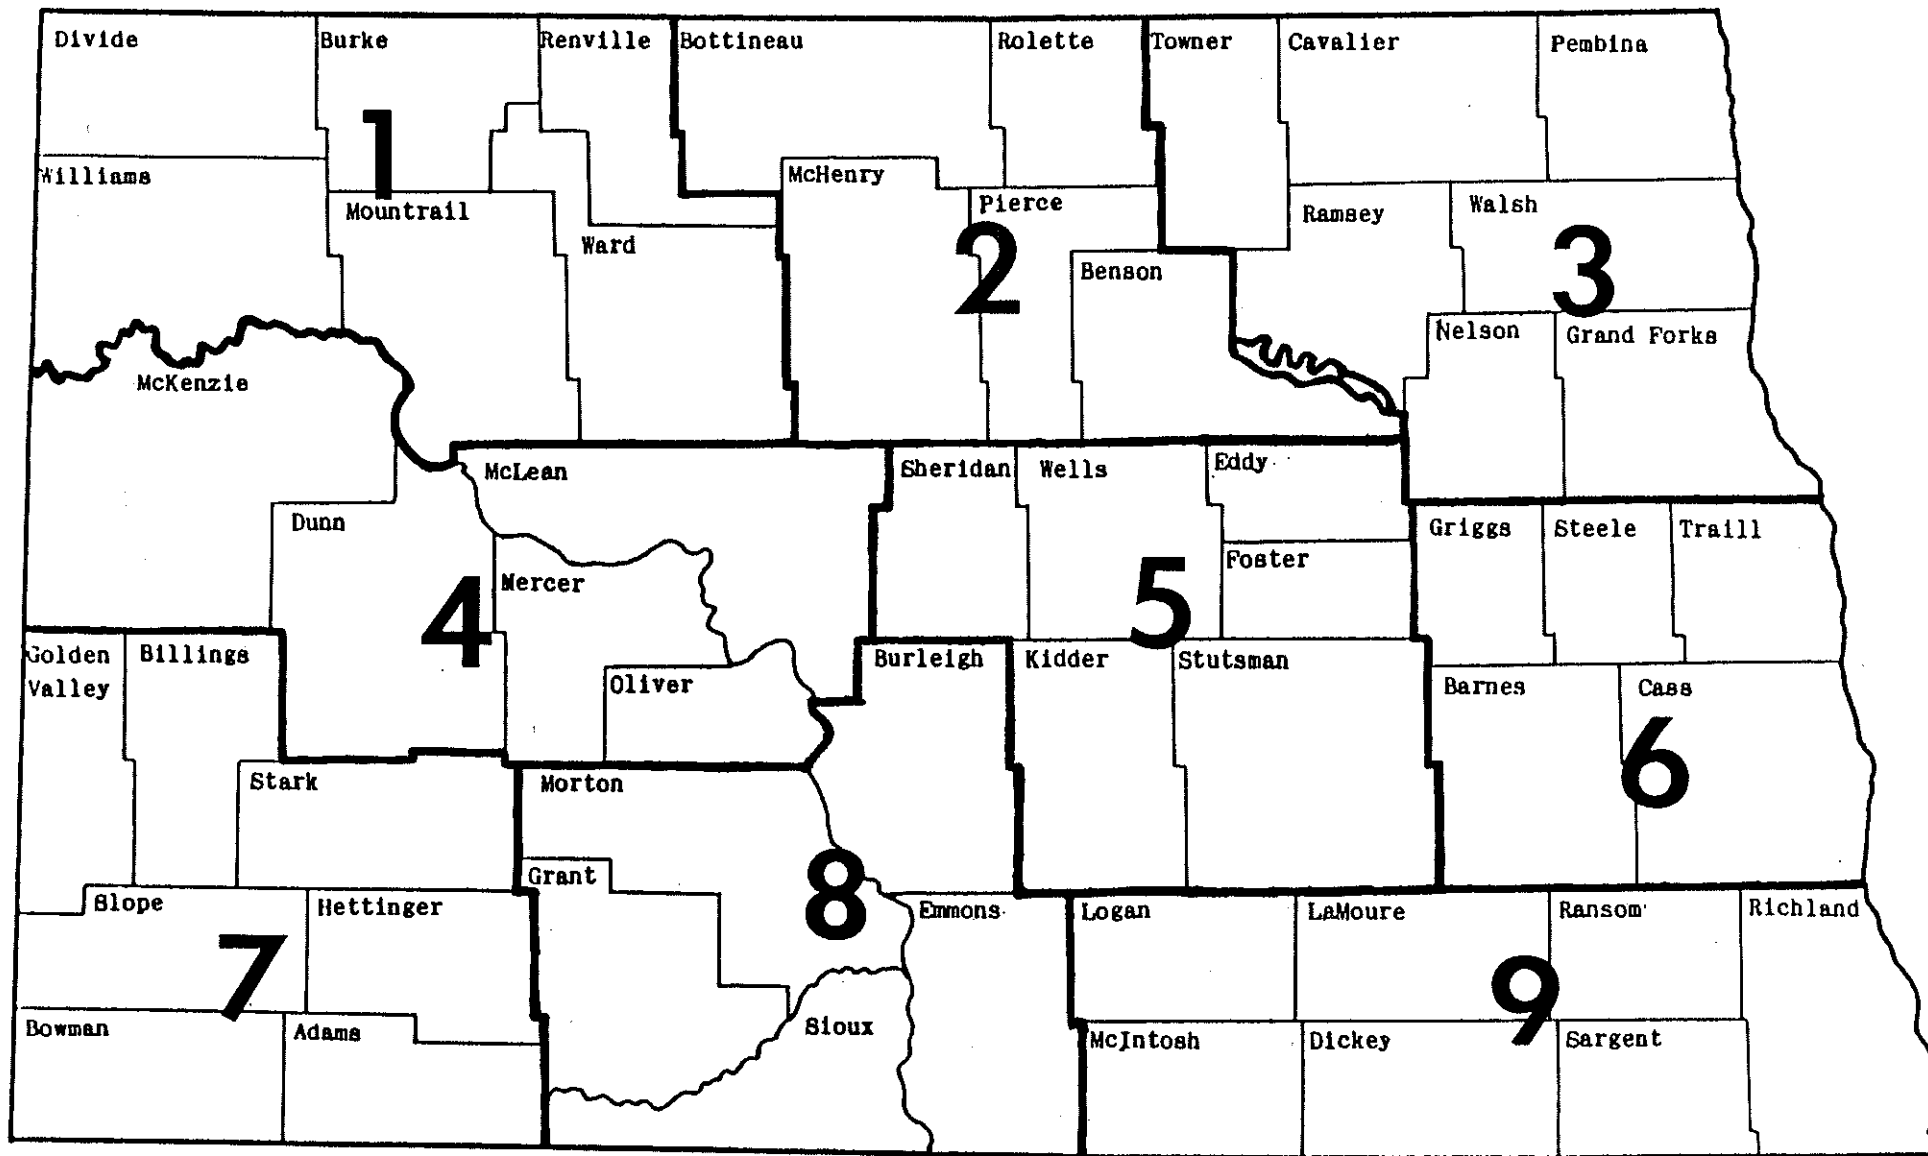

Figure 1. North Dakota Crop Reporting Districts and Counties.
