EXECUTIVE SUMMARY

The 1995 traffic fatality count was 1,537, up 8.3 percent from the 1994 figure of 1,419. Compared with 1994, injuries were up 2.9 percent and total crashes were up 5.8 percent. These figures translated into a death rate of 1.8 per 100 million miles of travel, up 5.9 percent from the death rate of 1.7 reported in 1994. Nationally, fatalities were up 2.1 percent.

Exposure factors in 1995 showed increases in vehicle registrations, the number of licensed drivers, and travel mileage. They included motor vehicle registrations up 1.1 percent to 7.75 million; the number of drivers up 0.9 percent to 7.73 million; and vehicle travel mileage up 0.1 percent to 85.7 billion.

Consumption of alcohol continues to be a major factor in Michigan crashes, particularly the more serious crashes. In 1995, less than 6 percent of all crashes, including property damage only, were reported to involve drinking and less than 25 percent resulted in injury or death. However, almost 50 percent of alcohol-related crashes involved injury or death, and more than 36 percent of fatal crashes involved drinking. Over 60 percent of alcohol-related fatal crashes involved only one vehicle, whereas only 30 percent of all crashes involved one vehicle.

Data on crashes in this book was obtained from 1995 Michigan Traffic Crash Report Forms (UD-10) submitted by local police departments, sheriff jurisdictions, and the Department of State Police. Other related information was obtained from the Departments of Transportation, State, and Public Health.

This publication was produced for the Office of Highway Safety Planning by the University of Michigan Transportation Research Institute with data on file at the Michigan Department of State Police as of May 1, 1996. We acknowledge, with appreciation, all involved agencies for their assistance.

INTRODUCTION

We are pleased to present the *1995 Michigan Traffic Crash Facts*. Many of your comments and suggestions about the 1994 version were incorporated in the 1995 version. The Subject Index in the back was expanded to help you find more quickly the data you need.

Readers should take special note of a change in the way we processed 1995 fatalities. In previous years, alcohol involvement in fatal crashes remained on the State traffic crash file just as it was reported by the investigating officer. The USDOT Fatal Accident Reporting System (FARS) file, however, was updated if a later report indicated alcohol involvement. In 1995, we made a special effort to update the State file if we later discovered (by lab reports, death records, etc.) that alcohol was present in the victim's blood at the time of death. This modification resulted in a higher number of Alcohol Involved Fatalities being reported on the State file. When compared to previous years, it may appear that alcohol involvement increased sharply, when in reality, it was a result of our updating the State traffic crash file. Accordingly, we have updated the five- and ten-year trend charts for total alcohol involved fatalities in 1992-1994.

Your comments are important to us, so please take a moment to complete the enclosed questionnaire and return it to us. We try to make this report as useful as we can. This report is also available on the internet as part of OHSP's Home Page (<http://www.ohsp.msp.state.mi.us>).

**Historical
Information**

10 YEAR

Vehicle Registrations have been increasing steadily since 1986, reaching 7,751,336 in 1995.

Vehicle miles of travel have increased 21.4 percent since 1986, reaching 85.7 billion miles in 1995.

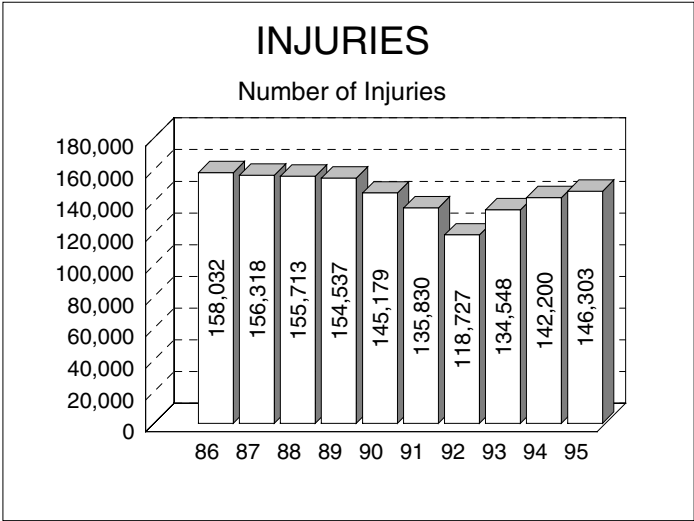

There were 421,073 total crashes statewide in 1995, a ten year high.

10 YEAR TRENDS (continued)

Deaths in motor vehicle crashes began increasing in 1993 after a steady decline from 1988 with a low of 1,300 in 1992. In 1995, 1,537 people died in motor vehicle crashes.

Mirroring the trend in deaths, nonfatal injuries had declined since 1986, with a low in 1992. 146,303 people received nonfatal injuries in Michigan motor vehicle crashes in 1995, up 2.9 percent from 1994.

After reaching a peak in 1988, fatal crashes had declined until 1992. In 1995, there were 1,386 fatal crashes, up 9.8 percent from 1994.

10 YEAR

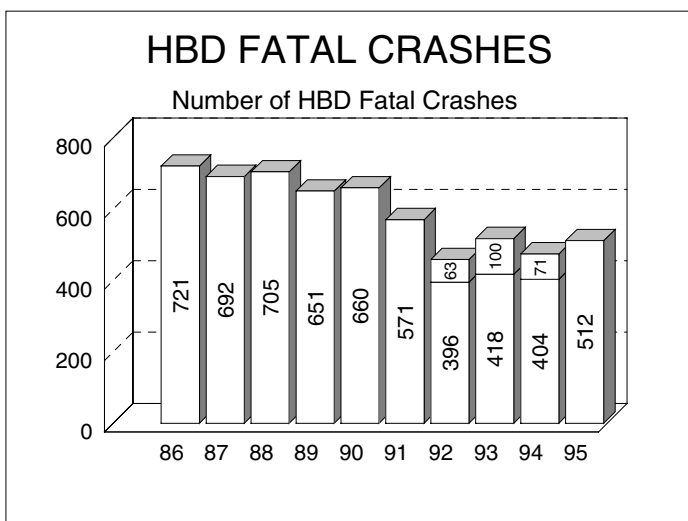

Deaths in alcohol related crashes had decreased from 1986 until 1993. There were 566 HBD fatalities in 1995, up 6.8 percent from 1994.

Revised HBD Fatality & Fatal Crash Counts

The numbers in the upper sections of the bars for 1992-1994 represent additional alcohol-related fatalities (and HBD fatal crashes below) that were reported after the official May 1 file close-out date in the following year. New procedures in the handling of fatal crash reports, begun in January 1995, have resulted in more timely identification of alcohol involvement in fatal crashes.

Mirroring the trend in deaths, HBD injuries decreased until 1993. There were 16,190 injuries in 1995, down 4.6 percent from 1994.

Alcohol involvement in fatal crashes has decreased 29 percent since 1986. In 1995, there were 512 HBD fatal crashes, up 7.8 percent from 1994.

10 YEAR TRENDS (continued)

The percentage of motor vehicle occupants using restraints as reported by police in traffic crashes increased dramatically following implementation of Michigan's safety belt use law in July 1985. It continued to increase slowly until declining for the first time in 1992.

Note: Please see additional restraint usage information on page 98.

The number of drivers in Michigan increased 0.9 percent to 7,733,397 million in 1995.

The 491.3 total crash rate in 1995 is a 5.7 percent increase from 1994.

10 YEAR

The 1.8 death rate in 1995 is a 5.9 percent increase from 1994.

The 116.9 personal injury crash rate in 1995 is a 2.5 percent increase from 1994.

The 372.8 property damage crash rate in 1995 is a 6.7 percent increase from 1994.

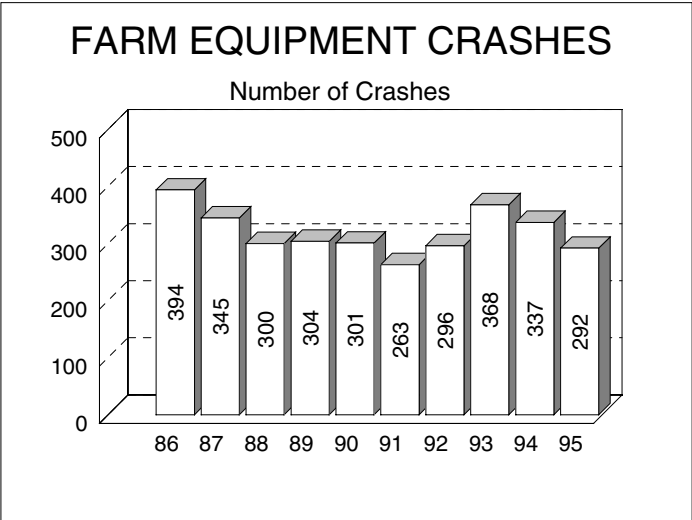

10 YEAR TRENDS (continued)

121 vehicle-train crashes occurred in 1995, a 17.7 percent decrease from 1994. Train data is provided by the Michigan Department of Transportation [3].

There has been an 82.6 percent rise from 34,252 vehicle-deer crashes in 1986 to 62,535 in 1995.

In 1995, there were 292 farm equipment crashes, down 13.4 percent from the 1994 figure of 337.

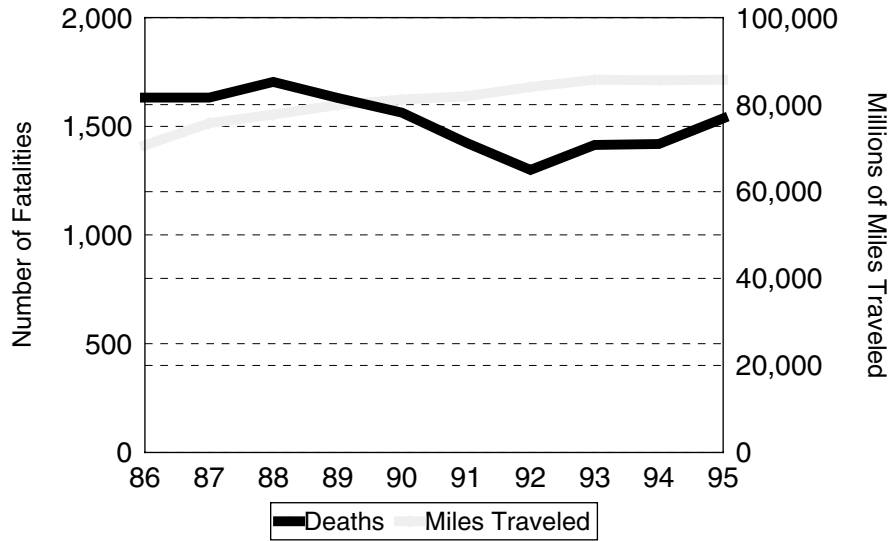

DEATH & INJURY PER CRASH INVOLVED OCCUPANT

The number of deaths and injuries on Michigan roads has remained significantly lower than the peak number in 1986. However, 1,314 occupants of motor vehicles were fatally injured, 16,355 suffered an A (incapacitating) injury, 33,070 sustained a B (nonincapacitating) injury, and 89,289 sustained a C (possible) injury in 1995.

MILEAGE DEATH RATES 1986 - 1995

Comparison - Michigan to U.S. and Surrounding States

The chart above compares the Michigan mileage death rates (motor vehicle traffic deaths per 100,000,000 vehicle miles) to those of its neighboring states and the overall U.S. rates for a ten year period.

Michigan has placed consistently in the middle of the pack, mirroring the U.S. trend towards a reduced fatality rate. Over the last three years, the Michigan mileage death rate has risen to match the U.S. rate.

VMT described in billions of miles

* In 1995, Indiana changed its source for VMT reporting from the Indiana State Police to the Federal Highway Administration. Indiana VMTs have been adjusted back to 1986.

AVERAGE AGE OF DRIVERS IN CRASHES 1986 - 1995

Reflecting the demographic trend of increasing age in the general population, the average age of crash-involved drivers has also increased. An aging driving population has implications for law enforcement prioritizing, highway design, traffic signing considerations, and Emergency Medical System procedures.

Note: Fatal HBD Crash numbers for 1992, 1993, and 1994 have not been revised. See page 11.

Highlights

INJURY EXPERIENCE FOR PERSONS WHO HAD BEEN DRINKING

Alcohol and/or drug use affects the judgment and behavior of persons in addition to motor vehicle drivers. Consider the experience of drinking bicyclists, pedestrians, motorcyclists, snowmobilers, and ORV/ATV riders, when looking at crash statistics. Alcohol should not be used by anyone intending to navigate a roadway.

ALL CRASHES BY INJURY SEVERITY

HBD CRASHES BY INJURY SEVERITY

The problem of the drinking driver, pedestrian, and/or cyclist is seen when one compares the two charts on this page. A fatality in the crash is seven times more likely when one of the crash-involved operators is reported as had been drinking.

DEATH & INJURY PER CRASH INVOLVED OCCUPANT

Occupants in Crashes

The majority of occupants involved in crashes are not injured (79.9%). More than half of those who are injured receive only minor (C) injuries. Increased use of occupant restraints and airbags can reduce the number of killed and injured even further.

Occupants in HBD Crashes

Crashes involving drinking tend to be more serious than nondrinking crashes. The percentage of fatalities is six times higher than in all crashes and the more serious injury levels are three to four times higher.

ALL DRIVERS and HBD DRIVERS INJURY SEVERITY - EJECTED vs. NOT EJECTED

As can be seen in the two charts below, death and injury are much more likely when drivers are ejected from their vehicles.

When compared to the charts above, the charts below demonstrate that the injury severity is much worse for drivers who had been drinking in both ejected, and nonejected events.

ALL OCCUPANTS and OCCUPANTS of HBD CRASHES INJURY SEVERITY - EJECTED vs. NOT EJECTED

As can be seen in the two charts below, death and injury are much more likely when occupants are ejected from their vehicles.

When compared to the charts above, the charts below demonstrate that the injury severity is much worse for occupants in a crash where drinking is reported in both ejected, and nonejected events.

ALCOHOL INVOLVEMENT IN FATAL CRASHES

Fatal crashes were lowest in number during February, March and April. The number of fatal crashes then increased, peaking in September. These numbers follow the increase in travel during the summer months. The number of HBD fatal crashes by month does not show a discernible trend. Total persons killed in fatal crashes closely follows the number of crashes, as would be expected.

HBD Fatal Crashes by Month

Alcohol Related Fatalities by Month

HBD Fatal Crashes by Day of Week

Saturday had the most fatal crashes in 1995. Saturday and Sunday had the highest proportions of drinking related fatal crashes. Almost half of weekend fatal crashes involved drinking, while only 26.5 percent of fatal crashes on Monday involved drinking.

HBD Fatal Crashes by Time of Day

Not surprisingly, the midnight to 2:59 AM time period had the highest rate of drinking involvement (76.8%), while the late morning hours had the lowest (8.4%).

There were 13 fatal crashes where the time of day was unknown. Of these 13 fatal crashes, 6 were HBD.

ALCOHOL INVOLVEMENT IN INJURY CRASHES

Alcohol involvement in injury crashes is an important indicator of the alcohol impaired driving problem. In 1995, the highest number of HBD injury crashes occurred in December with 1,029. The highest proportion of HBD injury crashes also occurred in December with 11.5 percent of the injury crashes involving alcohol.

HBD Injury Crashes by Month

Alcohol Related Injuries by Month

HBD Injury Crashes by Day of Week

HBD injury crashes follow the same basic trends as total crashes through the work week, but the weekend sees a dramatic increase in the proportion of HBD injury crashes to total injury crashes.

HBD Injury Crashes by Time of Day

Total injury crash frequencies peak in the hours between 12:00 PM and 5:59 PM, while HBD injury crash frequencies peak between 6:00 PM and 2:59 AM. A particularly hazardous travel period is 12:00 AM to 2:59 AM.

MOST SEVERE OUTCOME IN HBD CRASHES BY COUNTY

Note: While the Michigan *Traffic Crash Report* (UD-10) requests officers to report Bodily Alcohol Content (BAC) of all persons tested for alcohol after a traffic crash, only the BAC testing of deceased motor vehicle drivers and deceased railroad train engineers is required by law. Consequently, alcohol involvement in nonfatal crashes is frequently unreported, and is therefore generally believed to be higher than indicated in this table.

Crash

ALL CRASHES INJURY SEVERITY BY MONTH

The charts on this page show that the months of June, August, and September are peak months in terms of the ratio of the number of crashes involving death or injury to the number of noninjury crashes. That is, if a person was in a motor vehicle crash during one of these months there was a higher chance of that crash resulting in death or injury to one of the involved persons than if that crash happened during one of the other months.

CRASH EXPERIENCE BY ROADWAY TYPE

The table below provides a detailed breakdown of estimated vehicle mileage, crashes, death rates (deaths per 100 million vehicle miles), and crash rates (crashes per 100 million vehicle miles) for the major roadway types in Michigan. All rates are lowest on limited access highways. 1995 estimated mileage figures were provided by the Michigan Department of Transportation [10].

Time and Severity

Crash frequencies peak in the late afternoon, then drop off steadily until 6:00 AM (the morning rush hour). Fatal crash frequencies rise with the frequency of other crashes, but continue at a high rate well into the early morning hours. There are proportionally more fatal crashes during the midnight to 2:59 AM time period.

Group "A" is any vehicle that is towing a vehicle or trailer that has a gross vehicle weight rating (GVWR) over 10,000 lbs.

Group "B" is any single vehicle (including buses) with a GVWR of 26,001 lbs. or more. This would include a combination of vehicles with a combined GVWR over 26,000 lbs. when towing a trailer that has a GVWR of 10,000 lbs. or less.

Group "C" is any single vehicle with a GVWR of less than 26,001 lbs. or a combination of vehicles having a combined GVWR under 26,001 lbs. when the vehicle is required to display placards for hazardous material or designed to carry 16 passengers (including driver). Group "C" is also any vehicle carrying 15 or less people (including driver) transporting children to or from school and home on a regular basis for compensation.

VEHICLE TYPES IN CRASHES BY CRASH SEVERITY

FATAL

The top chart shows that 4 out of 5 vehicles involved in fatal crashes are automobiles or pickups. Van, Motorhome, the vehicle type that includes the popular mini-van, has a fatal crash involvement of 7.0 percent.

INJURY

As with fatal crashes, Injury and PDO crashes are represented primarily by cars and pickups. One should also note the decline in proportional representation for motorcycles and heavy trucks compared to their levels in fatal crashes.

The 1995 death rate for motorcyclists was 21.5 per 100 million vehicle miles traveled compared to the overall 1.8 mileage death rate per 100 million vehicle miles traveled.

DRIVER GENDER INFORMATION - ALL CRASHES

Crash Severity

A higher proportion of crashes involved male drivers than female drivers. When we examine the severity of crashes involving drivers of each gender, we see that fatal crashes are more prevalent among male drivers than female drivers (0.4% vs. 0.24%).

This 1995 chart was processed with numbers for all drivers (vehicle level).

REPORTED OCCUPANT RESTRAINT USAGE FOR ALL DRIVERS AND INJURED PASSENGERS

Restraint use by motorists is measured two ways: by what motorists REPORT to police at the scene of a traffic crash (reported usage), and by DIRECT OBSERVATION studies where motorists are totally unaware of the presence of researchers (observed usage). As expected, reported usage is routinely much higher than observed usage.

Of the 750,324 drivers and injured passengers involved in crashes, 596,413 (79%) were REPORTED to be using occupant restraints.

However, a DIRECT OBSERVATION study by the University of Michigan Transportation Research Institute [14] estimated 66.8 percent of motorists overall used safety belts in 1995.

Occupants in crashes were over ten times more likely to be killed if they were not wearing their restraints.

In Michigan, helmet use law requires that all motorcycle riders wear a helmet. As a result, according to studies by UMTRI [15], approximately 99 percent of the motorcyclists in Michigan wear helmets when riding. The fact that most fatalities (where helmet use is known) are wearing their helmets does not indicate that helmets are not an effective safety device.

Group "B" is any single vehicle (including buses) with a GVWR of 26,001 lbs. or more. This would include a combination of vehicles with a combined GVWR over 26,000 lbs. when towing a trailer that has a GVWR of 10,000 lbs. or less.

Group "C" is any single vehicle with a GVWR of less than 26,001 lbs. or a combination of vehicles having a combined GVWR under 26,001 lbs. when the vehicle is required to display placards for hazardous material or designed to carry 16 passengers (including driver). Group "C" is also any vehicle carrying 15 or less people (including driver) transporting children to or from school and home on a regular basis for compensation.

PRINCIPAL CLASSES OF MOTOR VEHICLE DEATHS

Of the 1,537 motor vehicle deaths in Michigan in 1995, more than half occurred in daylight crashes. Nonpedestrians (mostly occupants of motor vehicles) accounted for 87.8 percent of the deaths. 16 of 1,537 cases were lost due to unknown lighting conditions.

MICHIGAN VEHICLE CODE

Public Act 300 of 1949

Edited by the Office of Highway Safety Planning for discussion purposes.
Editorial remarks by OHSP appear in italic print.

MCL 257.622, Amended 1967 - The driver of a motor vehicle involved in an accident that injures or kills any person, or that damages property to an apparent extent totaling \$400 or more, shall immediately report that accident at the nearest or most convenient police station, or to the nearest or most convenient police officer. The officer receiving the report, or his or her commanding officer, shall immediately forward each report to the director of State Police on forms prescribed by the director of State Police (*State of Michigan Traffic Crash Report, also known as the UD-10*). The forms shall be completed in full by the investigating officer. The director of State Police shall analyze each report relative to the cause of the reported accident and shall prepare information compiled from reports filed under this section for public use. A copy of the report . . . shall be retained for at least three years at the local police department, sheriff's department, or local state police post making the report. (*As the repository of UD-10s submitted by Michigan law enforcement agencies, the Department of State Police microfilms all UD-10s received at its Criminal Justice Data Center. The Data Center retains a microfilm copy of UD-10s for a period including the current year plus the three previous years. Microfilm copies and electronic databases containing information from individual UD-10s for crashes prior to this time period are purged.*)

MCL 257.624, Amended 1980 (1) - A report required by this chapter shall not be available for use in a court action, but a report shall be for the purpose of furnishing statistical information regarding the number and cause of accidents.

(2) The Office of Highway Safety Planning (OHSP) may authorize scientific studies and research for the reduction of death, injury, and property losses. All information, records of interviews, written reports, statements, notes, memoranda, or other data collected pursuant to the scientific studies and research conducted by the state, or by other persons, agencies, or organizations authorized by OHSP shall be used solely for the purpose of medical or scientific research and shall not disclose the name or identity of a person unless the person authorizes, in writing, the use of his or her name or identity. If a subject of the research study is deceased, the executor or heir of the deceased person may authorize, in writing, the disclosure of the deceased's name or identity. The furnishing of information to OHSP or to a representative of an authorized study or research project shall not nor subject a person, hospital, sanitarium, rest home, nursing home, or other person or agency furnishing the information to any action for damages or other relief. The information, records, reports, statements, notes, memoranda, or other data shall not be admissible as evidence in a court or before any other tribunal, board, agency, or person. A person participating in an authorized study or research project shall not disclose, directly or indirectly, the information so obtained except in strict conformity with the research project.
