## Michigan Traffic Crash Facts

Office of Highway Safety Planning  
Michigan Department of State Police

## PREFACE

*The 1992 traffic fatality count was 1,300, down 8.8 percent from the 1991 figure of 1,425. Compared with 1991, injuries were down 12.6 percent and total crashes were down 5.5 percent. These figures translated into a death rate of 1.5 per 100 million miles of travel, down 11.8 percent from the death rate of 1.7 reported in 1991.*

*Exposure factors in 1992 showed across the board increases. They included motor vehicle registrations up 1.1 percent to 7.41 million; vehicle travel mileage up 2.5 percent to 84.0 billion; and the number of licensed drivers up 2.3 percent to 7.78 million.*

*Substantial reductions in total reported crashes and increased travel were credited with the lowered death toll and rate in 1992. Restraint usage continues to be elusive and reads like fact and fiction: While direct observation studies report an approximate 57.0 percent usage rate, the usage rate gathered from accident reports came in at 76.6 percent. Alcohol involvement, especially in fatal crashes, still takes its toll.*

*Data on crashes in this booklet were obtained from 1992 Michigan Traffic Crash Report Forms (UD-10) submitted by local police departments, sheriff jurisdictions, and the Department of State Police. Other related information was obtained from the Departments of Transportation, State, and Public Health.*

*This publication was produced for the Office of Highway Safety Planning by the University of Michigan Transportation Research Institute with data on file at the Michigan Department of State Police as of July 19, 1994.*

*We acknowledge, with appreciation, all involved agencies for their assistance.*

Col. Michael D. Robinson, Director  
Michigan Department of State Police

## INTRODUCTION

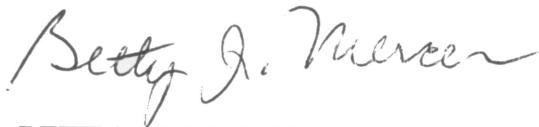

The data contained in this report was submitted by Michigan's 660+ law enforcement agencies on the revised Uniform Traffic Crash Report (UD-10). For several reasons, **the reader is cautioned to treat the 1992 data as "transitional." Direct comparisons and trends using data from this report should be made cautiously.**

The need to develop a more efficient way to process the 410,000+ crash forms received each year by the Michigan State Police, Criminal Justice Data Center, became apparent in the early 1990s. The UD-10 was drastically redesigned in 1992, the first time in some 20 years, allowing an optical scanning device to "read" data "bubbles" and store the information on computer. This greatly reduced the amount of time necessary to process each form.

Unfortunately, computer applications have their share of technical challenges. In some instances, the computer read the data and accepted the information verbatim, regardless of logic. Every effort was made to process all "readable" reports in the system. An estimated 6-10% of the UD-10 forms submitted for 1992 could not be processed due to physical damage to the form or technical problems with the data recorded on the form. However, a considerable amount of research was conducted on 1992 fatal crashes to assure that **fatal counts in this report accurately match those reported to the US Department of Transportation's Fatal Accident Reporting System (FARS).**

Inadvertent errors by the officer completing the form also contributed to the problem. The most frequent errors attributed to the investigating officer were, and continue to be, **incorrectly filled or unfilled bubbles; stray marks, marks outside a box or marks in the margin; incorrect or missing Override numbers and failure to correctly date the second page or corrected copy.**

Numerous computer software changes were made after 1992 as changes to the UD-10 form itself. We anticipate that 1993 data will be improved in quality over 1992 data. We are also reviewing the training material and *Instruction Manual*. Our commitment to the people of Michigan and to the many transportation-related agencies that rely on this data for improving traffic safety is to continue refining both the UD-10 form and computer software to obtain the highest quality crash data the process will allow.

## VEHICLE REGISTRATIONS

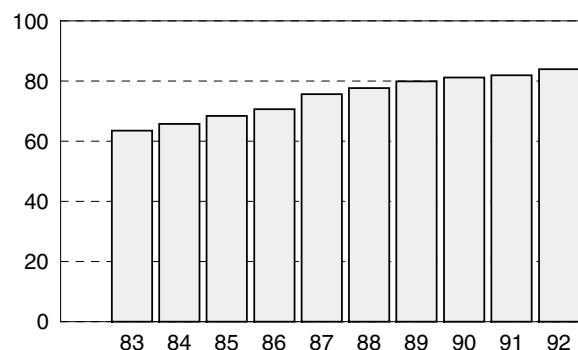

MILLIONS OF MOTOR VEHICLES

Vehicle Registrations have been increasing steadily since 1983, reaching 7,411,192 in 1992.

## VEHICLES MILES TRAVELED

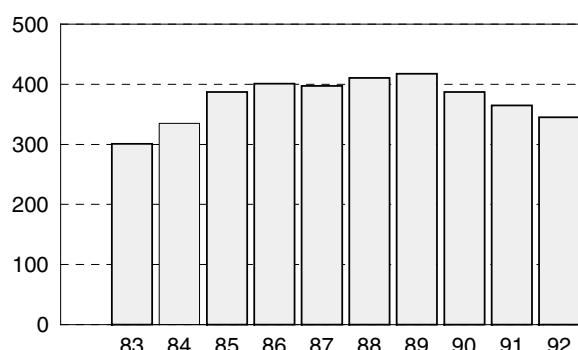

BILLIONS OF MILES

Vehicle miles of travel have increased about 32% since 1983, reaching 84.0 billion miles in 1992.

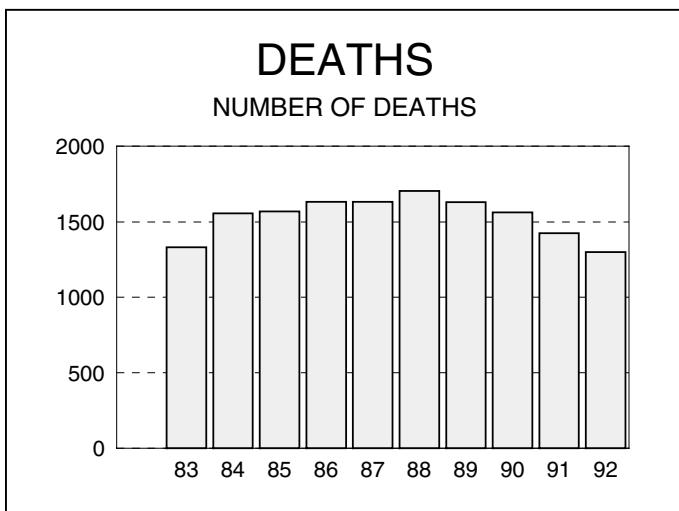

## CRASHES

THOUSANDS OF CRASHES

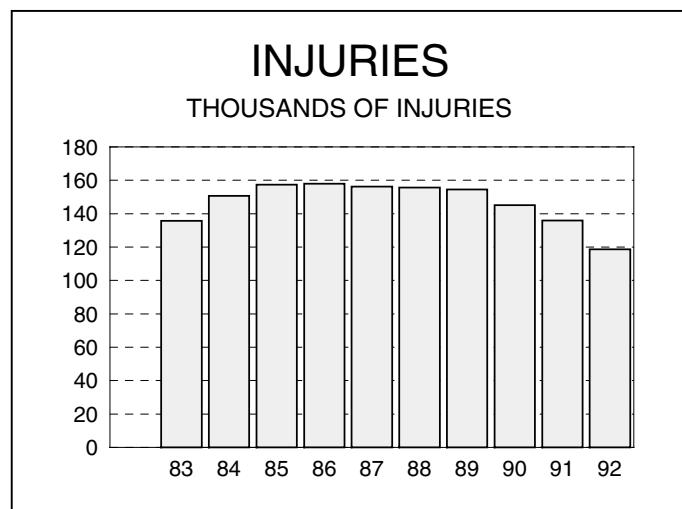

Total crashes increased from 1983, peaking in 1989. Since 1989, total number of crashes has decreased. Between 1991 and 1992, total crashes decreased 5.5% statewide.

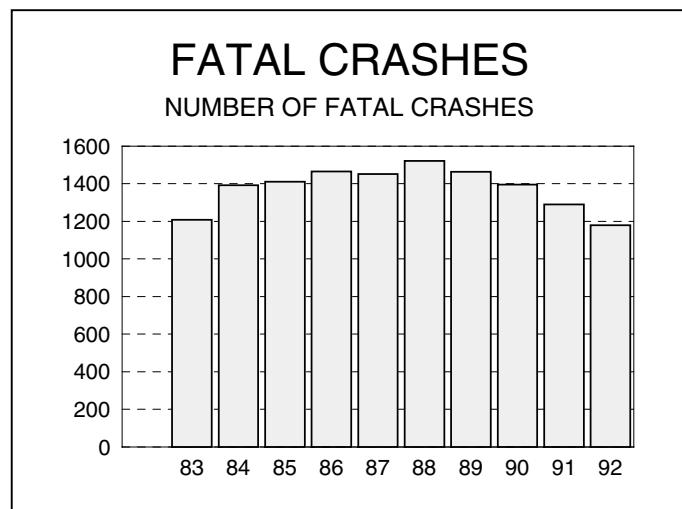

## 10 YEAR TRENDS (continued)

After reaching a peak in 1988, deaths in motor vehicle crashes declined 23.7%. In 1992, 1,300 people died in motor vehicle crashes.

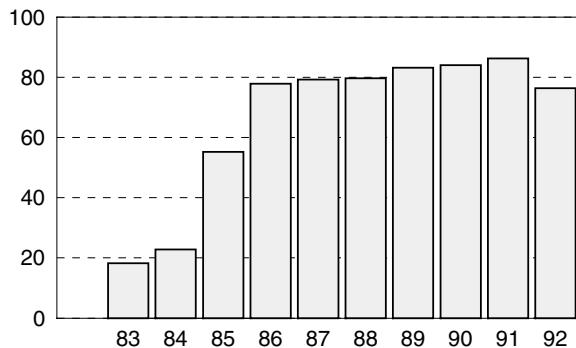

Mirroring the trend in deaths, nonfatal injuries have declined 23.8% since 1988. In 1992, 118,727 people received nonfatal injuries in Michigan motor vehicle crashes.

After reaching a peak in 1988, fatal crashes declined 29.1%. In 1992, there were 1,179 fatal crashes.

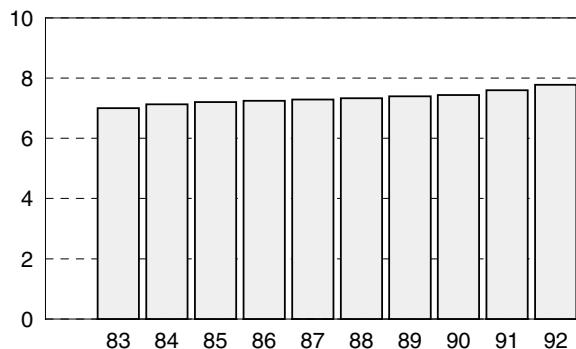

# 10 YEAR

## RESTRAINT USAGE ANNUAL AVERAGE PERCENTAGE OF OCCUPANTS

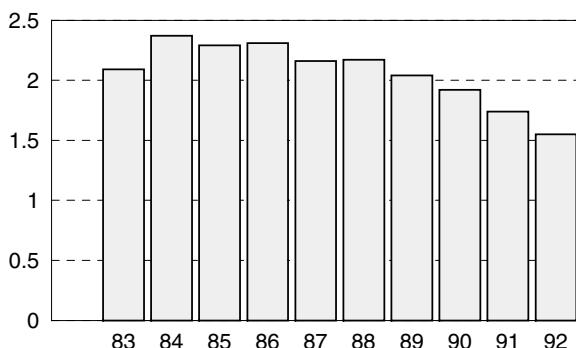

The percentage of motor vehicle occupants using restraints as reported by police in traffic crashes increased dramatically following implementation of Michigan's safety belt law. It continued to increase slowly until declining for the first time in 1992.

## TOTAL DRIVERS MILLIONS OF DRIVERS

The number of drivers in Michigan has increased steadily since 1983, reaching 7.78 million drivers in 1992.

## MILEAGE DEATH RATE DEATHS PER 100 MILLION VEHICLE MILES

Fatal Crash Rate Per 100-Million-Veh-Miles	1.6	1.4	-12.5
Cost of Crashes		\$8,578,547,000	

Michigan experienced an 8.8% decline in traffic fatalities, as well as a 12.6% decline in injuries and a 5.5% decline in crashes. A 2.6% increase in vehicle mileage contributed to a 12.5% decrease in the fatality rate per mile.

The National Safety Council [2] estimated a national decline in traffic fatalities of 7% between 1991 and 1992.

The cost estimate for Michigan crashes in 1992 (listed in the table above) is based on the National Safety Council's cost estimating procedures. Average comprehensive costs per person are based on the following figures:

Comprehensive Costs, 1992	
Death .....	\$3,040,000
Incapacitating injury .....	\$117,400
Nonincapacitating evident injury .....	\$27,500
Possible injury .....	\$13,800
No injury .....	\$1,800

The procedures used by the National Safety Council were extensively revised in 1993, and comparisons to previous year's cost estimates are not practicable.

**HIGHLIGHTS**

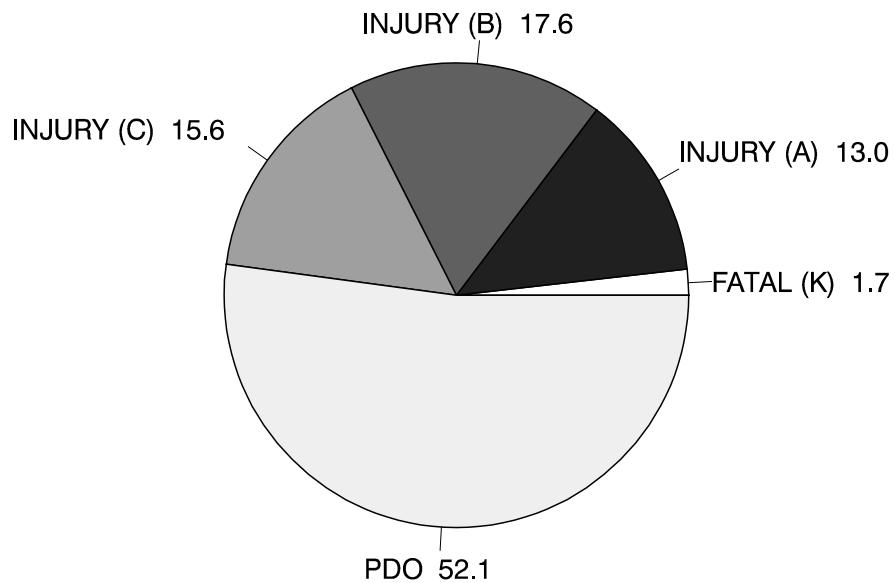

## ALL CRASHES BY INJURY SEVERITY

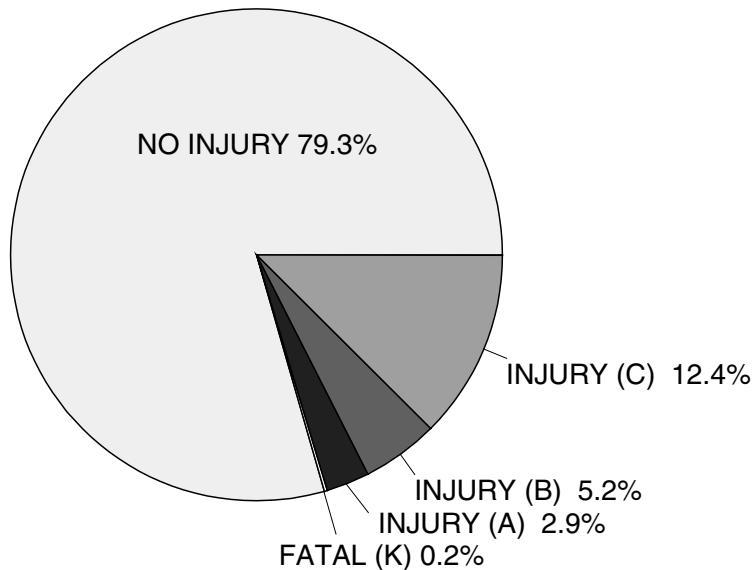

## HBD CRASHES BY INJURY SEVERITY

The problem of the drinking driver, pedestrian, and/or cyclist is seen when one compares the two charts on this page. A fatality in the crash is six times more likely when one of the crash-involved operators is reported as had been drinking.

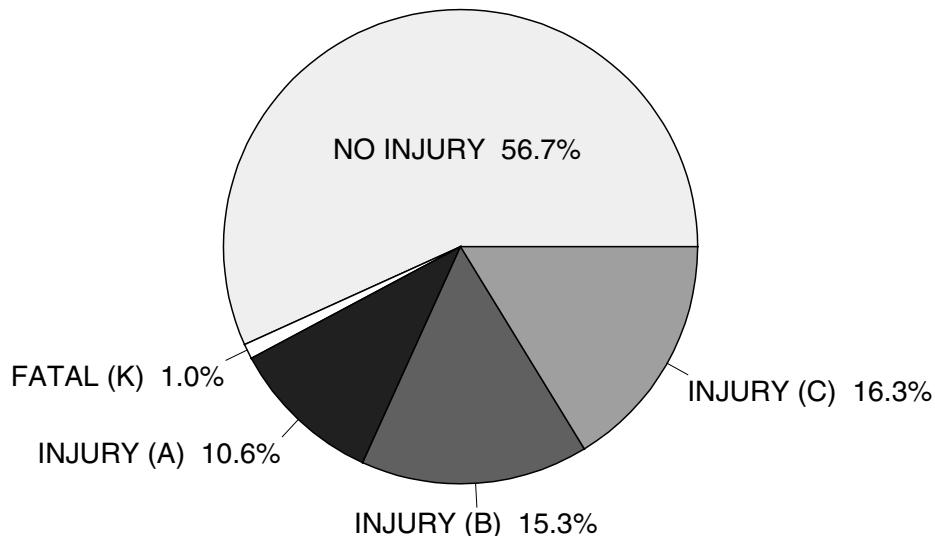

## DEATH & INJURY PER CRASH INVOLVED OCCUPANT

Occupants in Crashes

The majority of people involved in crashes (79.3%) are not injured. More than half of those who are injured receive only minor (C) injuries. Increased use of occupant restraints and airbags can reduce the number of killed and injured even further.

Occupants in HBD Crashes

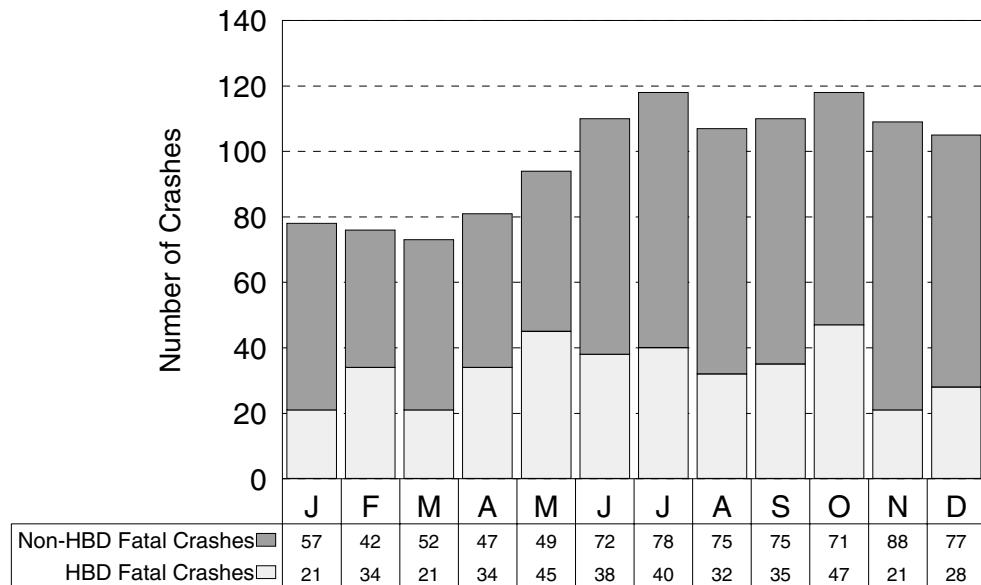

Crashes involving drinking tend to be more serious than nondrinking crashes. The percentage of fatalities is five times higher than in all crashes and the more serious injury levels are about three times higher.

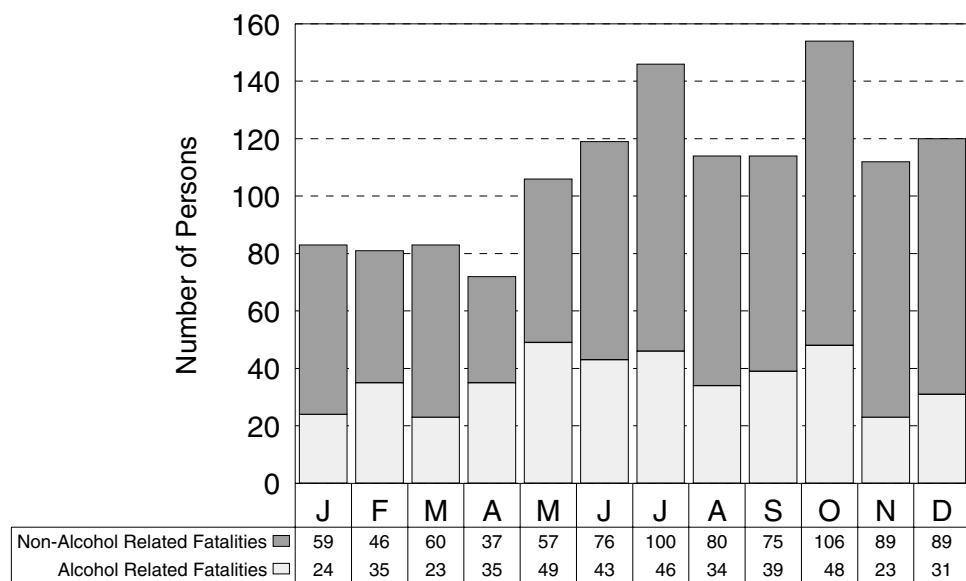

## ALCOHOL INVOLVEMENT IN FATAL CRASHES

Fatal crashes are lowest in number during the winter months and increase steadily from March on, peaking in July. The number of fatal crashes then slowly decreases again in late fall. These numbers follow the increase in travel during the summer months. The number of HBD fatal crashes by month does not show a discernible trend. Total persons killed in fatal crashes closely follows the number of crashes, as would be expected.

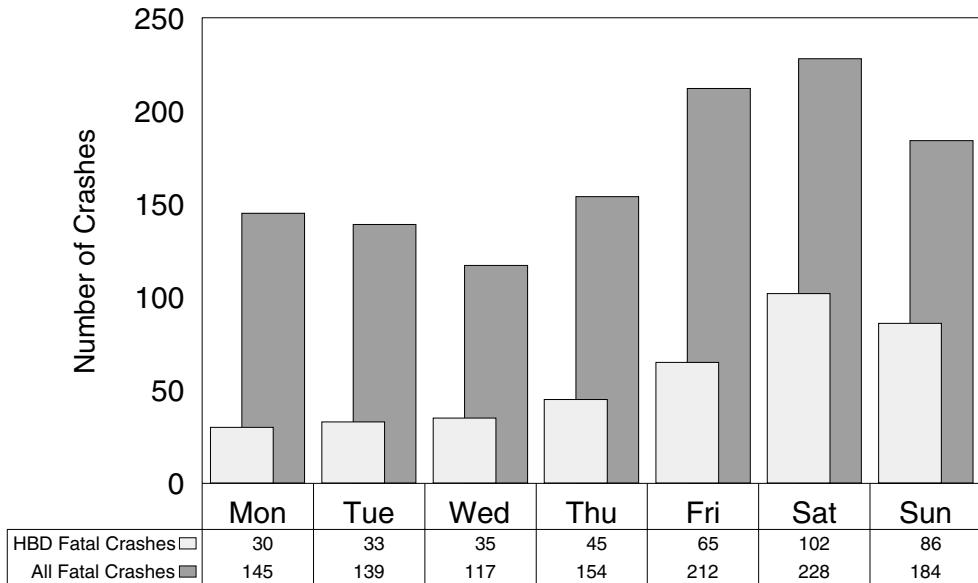

**Fatal Crashes by Month**

**Total Persons Killed by Month**

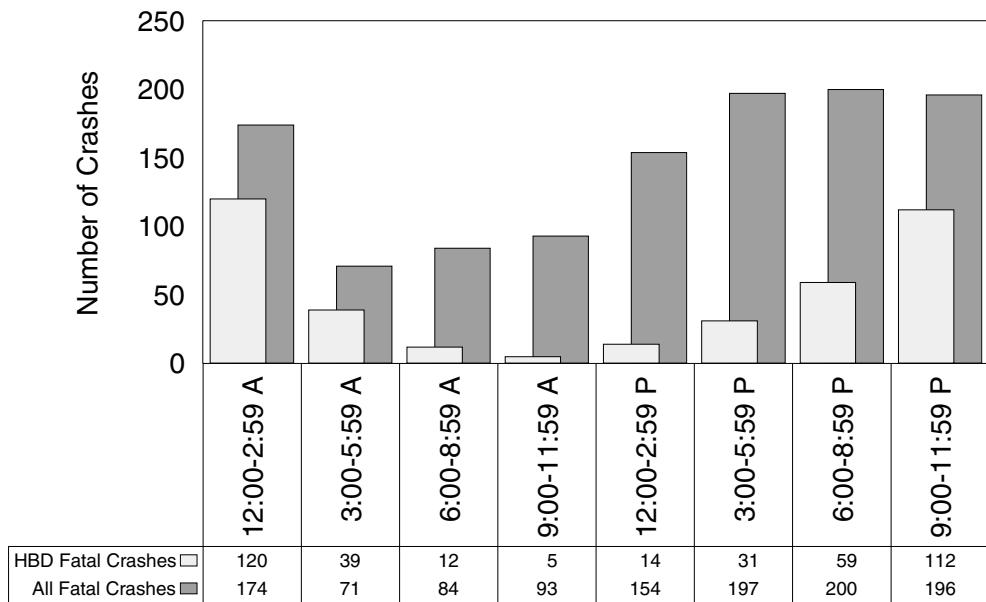

## HBD Fatal Crashes by Day of Week

Saturday has the most fatal crashes, and also the highest proportion of drinking related fatal crashes. Almost half (44.7%) of Saturday fatal crashes involved drinking, while only 20.7% of fatal crashes on Monday involved drinking.

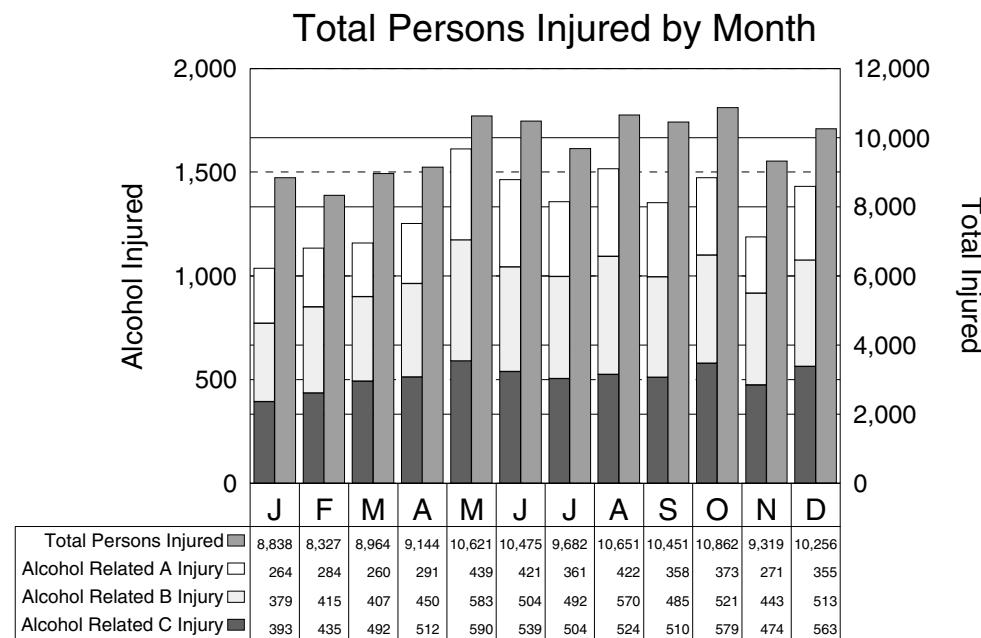

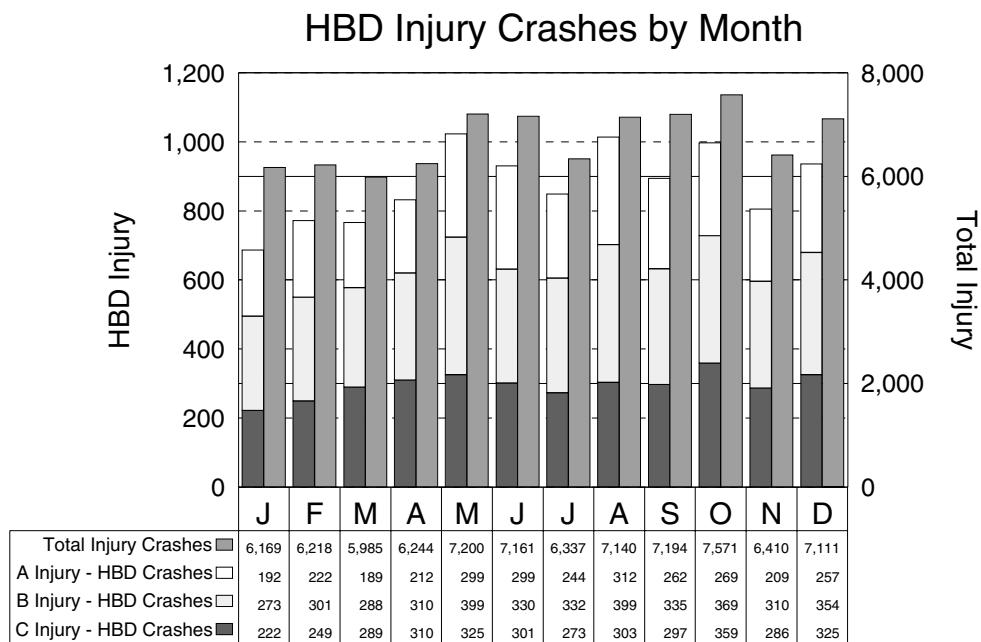

## HBD Fatal Crashes by Time of Day

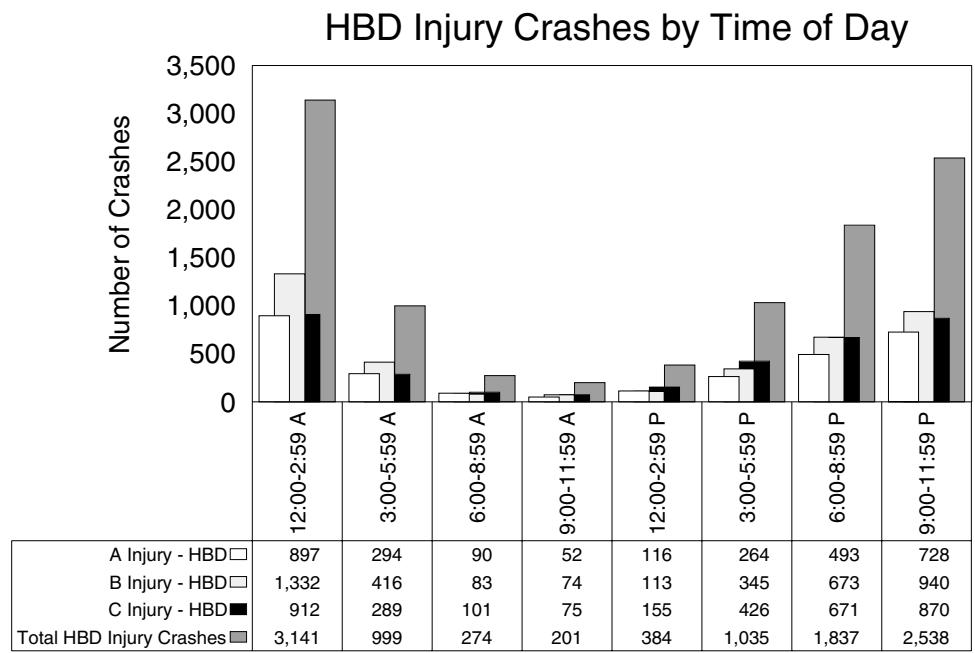

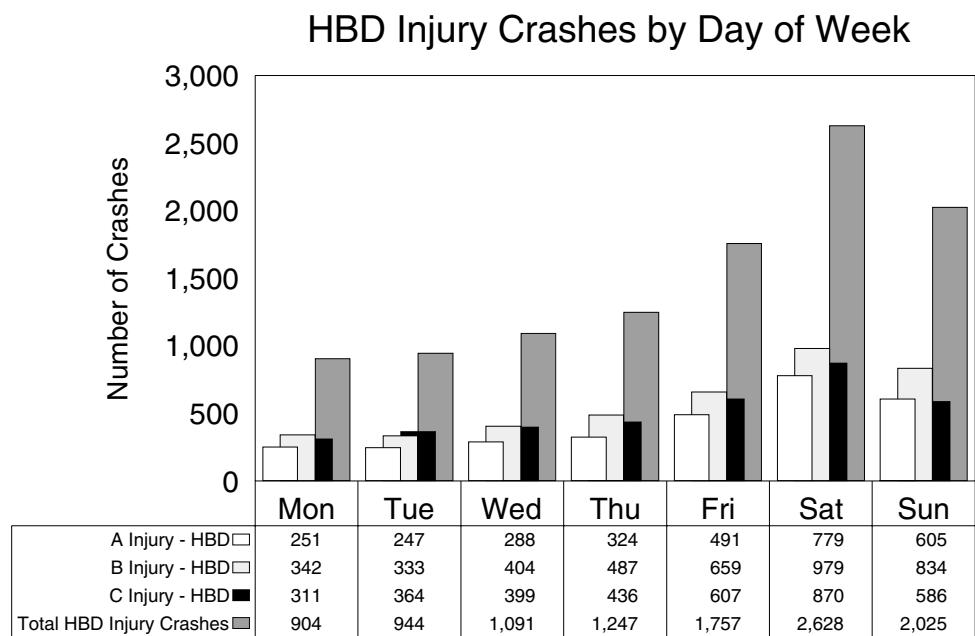

Not surprisingly, the midnight to 3:00 AM time period has the highest rate of drinking involvement (70%), while the late morning hours are the lowest (5.4%).

## ALCOHOL INVOLVEMENT IN INJURY CRASHES

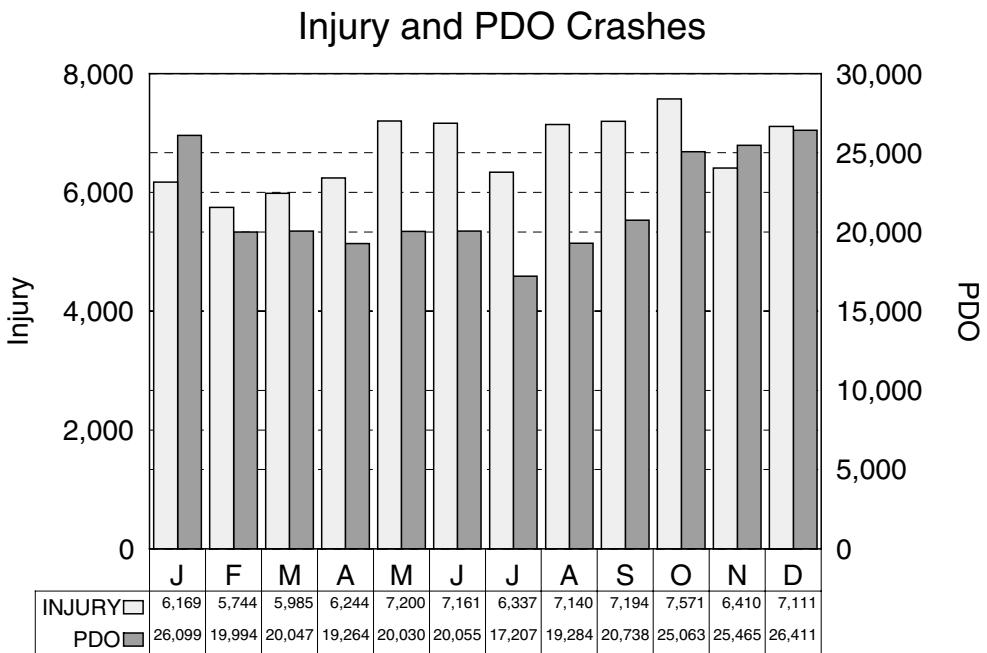

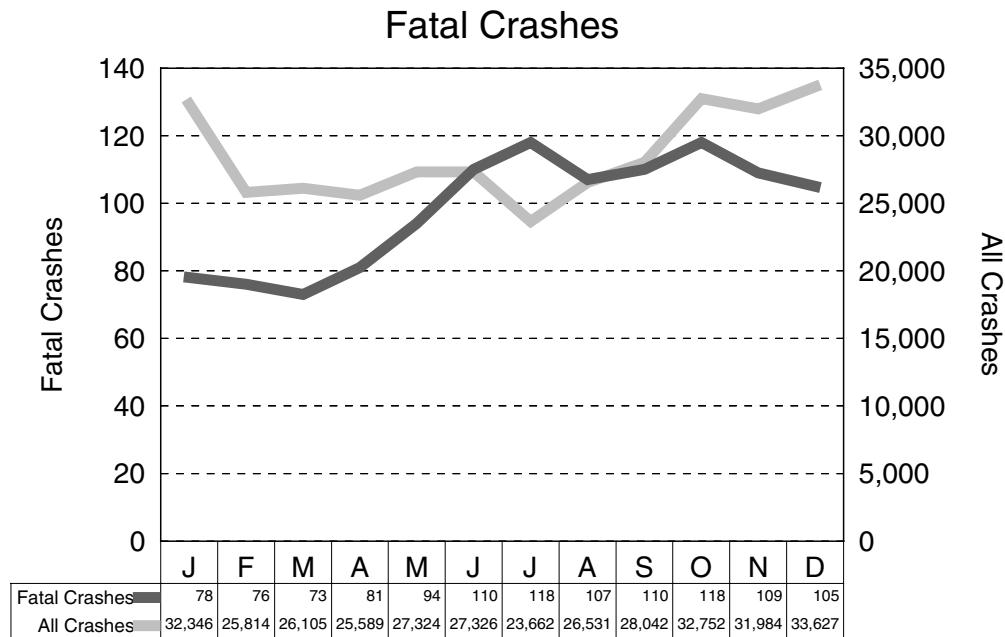

Alcohol involvement in injury crashes is an important indicator of the alcohol impaired driving problem. In 1992, HBD Injury crashes were highest in May, August, and October, with about 1,000 HBD Injury crashes in each of those months. The highest proportion of HBD Injury crashes occurred in May with 14.2% of the injury crashes involving alcohol.

HBD Injury crashes follow the same basic trends as total crashes seen in the following charts. Crash frequency peaks on Friday, Saturday, and Sunday, and in the hours between 6:00 PM and 3:00 AM ( 12:00 AM - 3:00 AM is a particularly hazardous travel period).

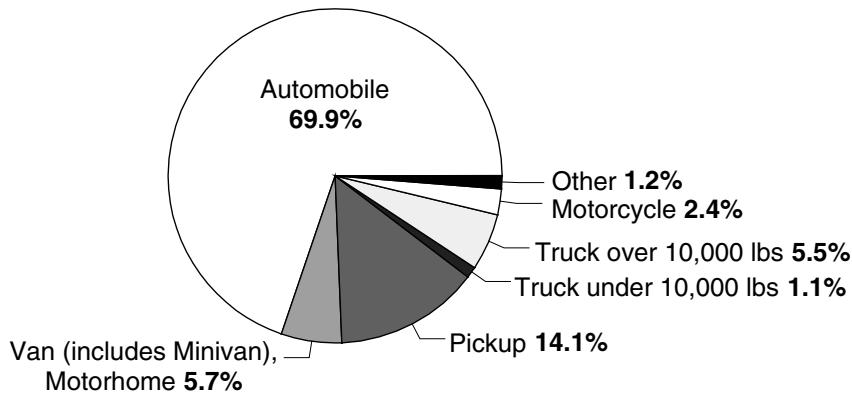

## ALL CRASHES INJURY SEVERITY BY MONTH

The charts on this page show that the months of June, July, and August are peak months in terms of the ratio of the number of crashes involving death or injury to the number of non-injury crashes. That is, if a person was involved in a crash in June - August, there was a higher chance of that crash resulting in death or injury to one of the involved persons than if that crash happened during one of the other months.

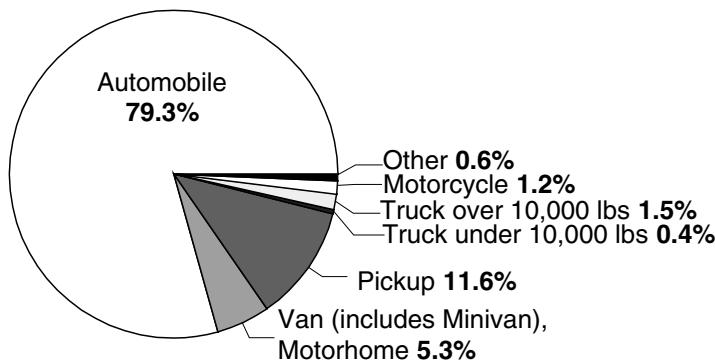

## VEHICLE TYPES IN CRASHES BY CRASH SEVERITY

### FATAL

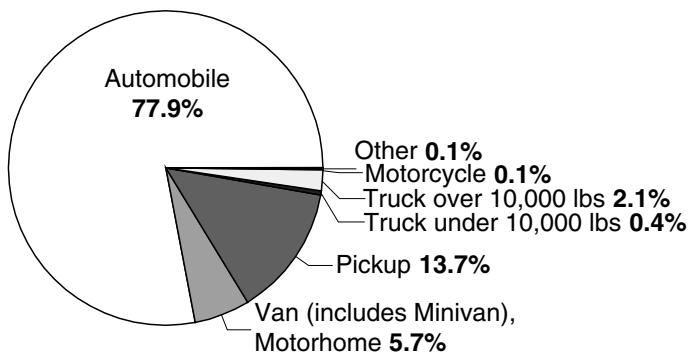

The top chart shows that 5 out of 6 vehicles involved in fatal crashes are automobiles or pickups. The next most frequent vehicle type is van (includes the popular minivan), motorhome (5.7%).

### INJURY

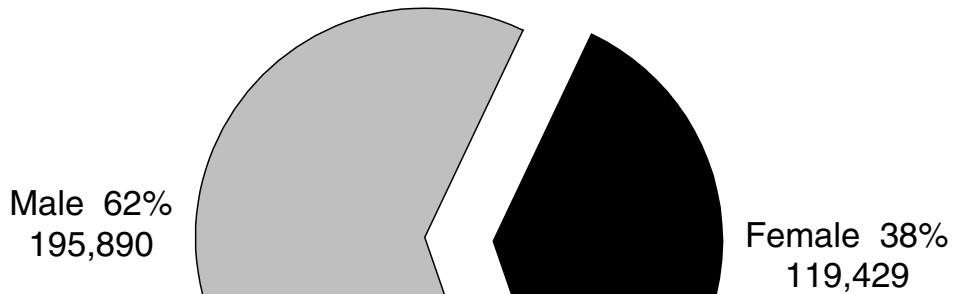

As with fatal crashes, Injury and PDO crashes are predominated by cars and pickups. One should also note the decline in proportional representation for motorcycles and heavy trucks compared to their levels in fatal crashes.

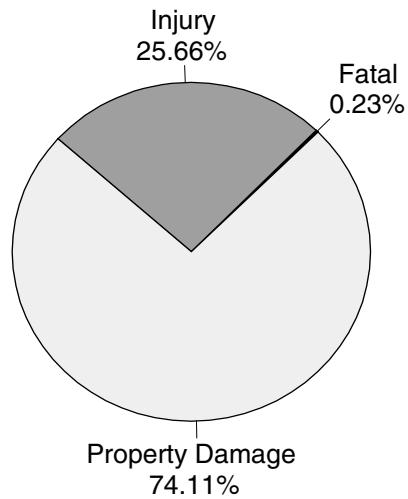

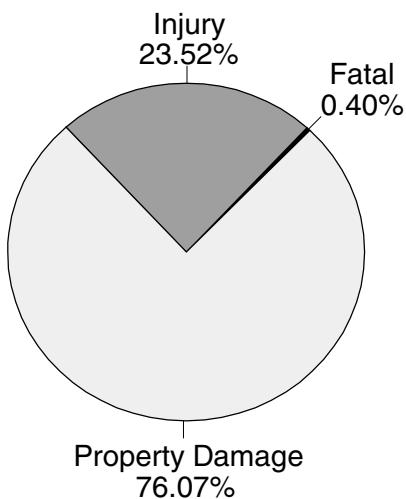

### PROPERTY DAMAGE ONLY

## DRIVER GENDER INFORMATION - ALL CRASHES

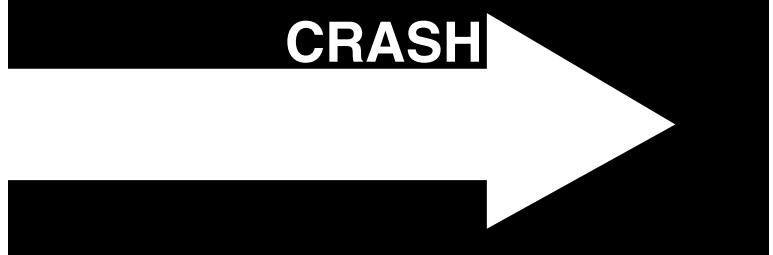

Crash Severity

A higher proportion of crashes involve male drivers than female drivers. When we examine the severity of crashes involving drivers of each gender, we see that fatal crashes are twice as prevalent among male drivers than female drivers (0.4% vs. 0.2%).

## CRASH EXPERIENCE BY ROADWAY TYPE

The table below provides a detailed breakdown of estimated vehicle mileage, crashes, death rates (deaths per 100 million vehicle miles), and crash rates (crashes per 100 million vehicle miles) for the major roadway types in Michigan. All rates are highest on county and local roads and lowest on limited access highways. 1992 estimated mileage figures were provided by the Michigan Department of Transportation [3].

Group "B" is any single vehicle (including buses) with a GVWR of 26,001 lbs. or more. This would include a combination of vehicles with a combined GVWR over 26,000 lbs. when towing a trailer that has a GVWR of 10,000 lbs. or less.

Group "C" is any single vehicle with a GVWR of less than 26,001 lbs. or a combination of vehicles having a combined GVWR under 26,001 lbs. when the vehicle is required to display placards for hazardous material or designed to carry 16 passengers (including driver). Group "C" is also any vehicle carrying 15 or less people (including driver) transporting children to or from school and home on a regular basis for compensation.

A total of 506 crashes involving 565 snowmobiles were reported in Michigan during 1992. Of these crashes, 13 were fatal with 13 people killed.

## MICHIGAN MOTOR VEHICLE-DEER INVOLVED/ASSOCIATED CRASHES

Michigan had 42,494 reported motor vehicle-deer crashes during 1992. 13 people were killed as a result of those collisions.

Contrary to common belief, motor vehicle-deer crashes are happening in Michigan's southern, heavily populated counties; Kent County had the highest number with 1,634 such crashes in 1992.

## MICHIGAN FARM EQUIPMENT CRASHES

A total of 296 crashes involving farm equipment were reported on Michigan roadways during 1992. Of these crashes, 5 were fatal crashes with 2 drivers and 1 passenger of the farm equipment killed.

## MICHIGAN VEHICLE-TRAIN CRASHES

According to Michigan Department of Transportation [4] figures, a total of 153 crashes involving trains were reported in Michigan during 1992. The National Highway Traffic Safety Administration's 1992 Fatal Accident Reporting System [5] reported 24 fatal crashes in Michigan. 30 persons were killed as a result of those collisions.

## MOTORCYCLE AND MOTOR SCOOTER DATA

Death Rate based on deaths per 100 million vehicle miles traveled	21.4	13.3	-37.9

Motorcycle and motor scooter registrations declined by 6.7% in 1992. This reduction in exposure may have helped in the dramatic decline in the death rate.

There was a dramatic drop in crash involvement for the elderly driver (75 and over) and also for younger driver age groups (except 17 years old).

## DRIVER - NOT EJECTED vs. EJECTED

Driver Injury Severity - Not Ejected

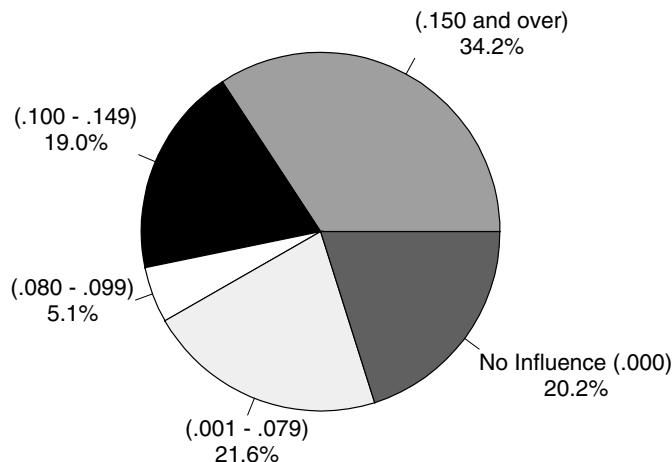

Driver Injury Severity - Ejected

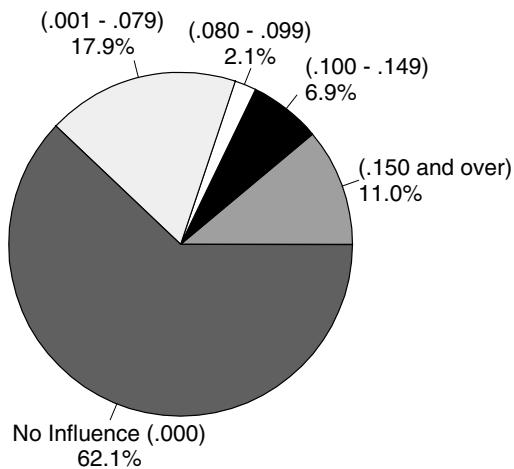

As can be seen in the two charts on this page, death and injury are much more likely when drivers are ejected from their vehicles.

## DRIVER BLOOD ALCOHOL TEST RESULTS

Blood Alcohol Test Results  
of Drivers Tested - All Crashes

Blood Alcohol Test Results  
of Drivers Tested - Fatal Crashes

The risk of crash involvement increases rapidly as the concentration of alcohol in the blood increases. Compared to a not-drinking driver, the risk of fatal crash involvement doubles at a blood-alcohol level of .05, is seven times greater at .10 and 25 times greater at .15. Alcohol use also increases the severity of injuries in a given impact. [7]

A total of 1,841 drivers were involved in crashes with at least one fatality. Of these, 1,696 drivers were not tested for blood alcohol or there was no result given on the crash report. The results of those tested are shown in the fatal crash chart above.

Group "B" is any single vehicle (including buses) with a GVWR of 26,001 lbs. or more. This would include a combination of vehicles with a combined GVWR over 26,000 lbs. when towing a trailer that has a GVWR of 10,000 lbs. or less.

Group "C" is any single vehicle with a GVWR of less than 26,001 lbs. or a combination of vehicles having a combined GVWR under 26,001 lbs. when the vehicle is required to display placards for hazardous material or designed to carry 16 passengers (including driver). Group "C" is also any vehicle carrying 15 or less people (including driver) transporting children to or from school and home on a regular basis for compensation.

## PRINCIPAL CLASSES OF MOTOR VEHICLE DEATHS

Of the 1,300 motor vehicle deaths in Michigan in 1992, more than half occurred in nondaylight crashes. Nonpedestrians (mostly occupants of motor vehicles) accounted for 87% of the deaths.
