## **T. R. Lakshmanan, Director**

The Bureau of Transportation Statistics (BTS), established by the Intermodal Surface Transportation Efficiency Act of 1991, is an operating administration of the U.S. Department of Transportation (DOT). The Bureau is responsible for compiling, analyzing, and disseminating information on the nation's transportation systems. The Bureau collects information on intermodal transportation and other topics as needed. BTS is also responsible for enhancing the quality and effectiveness of DOT's statistical programs through research and improvements in data acquisition and use.

## Preface

Welcome to the State Freight Transportation Profile. This report presents information on freight transportation in Arkansas and is part of a series of reports covering all 50 States. The purpose of the report is to present the major Federal databases related to State freight movements. Along with tables generated for each State, this report gives descriptions of the databases, information on access and formats, and contact points.

The database descriptions are based on entries in the Bureau of Transportation Statistics' (BTS) *Directory of Transportation Data Sources*. This publication provides users with a comprehensive inventory of transportation data sources within the Department of Transportation, other Federal government agencies, U.S. private transportation organizations, and Canadian and Mexican government agencies.

This report was prepared by Felix Ammah-Tagoe and David Mednick under the direction of Rolf R. Schmitt, Associate Director for Transportation Studies. Oak Ridge National Laboratory (ORNL) prepared many of the tables and provided valuable assistance in compiling this report. Additional copies of this report may be obtained by contacting the Bureau of Transportation Statistics at (202) 366-3282, by faxing (202) 366-3640, or by e-mailing [orders@bts.gov](mailto:orders@bts.gov).

BTS plans to publish State profiles on other transportation topics as well. Because this is a new product, reader and user feedback is particularly essential to continued improvement. Please use the comment form enclosed or send comments to [info@bts.gov](mailto:info@bts.gov).

# Transportation Facilities

# National Transportation Atlas Databases—1996

## Abstract

The National Transportation Atlas Databases — 1996 (NTAD96) is a set of national geographic databases of transportation facilities. These databases include geospatial information for transportation modal networks and intermodal terminals, and related attribute information. Included are descriptions of the file formats and database metadata as prescribed by the Federal Geographic Data Committee (FGDC). The data support research, analysis, and decision making across all modes of transportation. The databases are most useful at the national level, but have major applications at regional, state, and local scale throughout the transportation community.

## Source of Data

The databases were compiled from many parts of the U.S. Department of Transportation, Oak Ridge National Laboratory, the U.S. Army Corps of Engineers, and the National Park Service.

## Attributes

Geographic Coverage of Data: United States  
First Developed: 1995  
Update Frequency: Annual  
File Format: ASCII, dBase  
Media: CD-ROM, Internet

## Significant Features/Limitations

The NTAD96 is available in both MS-DOS and UNIX compatible CD-ROM format. The files are also available on the Internet. The databases are designed for use within a geographic information system (GIS). Users should check the BTS world wide web site ([www.bts.gov](http://www.bts.gov)) for corrections and addenda.

## Sponsoring Organization

Department of Transportation, Bureau of Transportation Statistics

## Performing Organization

Oak Ridge National Laboratory, Vanderbilt University, and University of Tennessee Transportation Center

## Availability

CD-ROM: DOT/Bureau of Transportation Statistics, 400 7th Street, SW, Room 3430, Washington, DC 20590; (202) 366-3282; Fax: (202) 366-3640.

# ARKANSAS MAJOR TRANSPORTATION FACILITIES

-  Interstate Highway
-  Other National Highway System
-  Rail Line
-  Urbanized Area
-  Major Airport
-  Major Port
-  Urban Area with Rail Transit

Data provided by the U.S. Department of Transportation agencies, the U.S. Army Corps of Engineers, and the National Park Service, and are current as of 1995. Major airports are those that reported more than 250,000 enplanements in 1994. Major ports are those that handled more than one million tons of freight in 1994. Urban area with rail transit denotes urban areas with heavy- or light-rail transit.

Transportation Statistics**

# Commodity Movements

# Commodity Flow Survey

## Abstract

The Commodity Flow Survey (CFS) provides data on the movement of freight by type of commodity shipped and by mode of transport. The CFS is a continuation of statistics collected in the Commodity Transportation Survey from 1963 through 1977, and includes major improvements in methodology, sample size and scope. The Bureau of the Census used a sample of 200,000 domestic establishments randomly selected from a universe of about 800,000 in manufacturing, mining, wholesale, and some selected activities in retail and service. Each selected establishment reported a sample of shipments for a two-week period in each of the four calendar quarters of 1993. This produced a total sample of about 12 million shipments. For each sampled shipment, respondents reported domestic origin and destination, Standard Transportation Commodity Classification (STCC) code, weight, value, and modes of transport. Respondents also provided information on whether the commodity was shipped in a container, a hazardous material, or an export.

## Source of Data

A sample of manufacturing, mining, wholesale, auxiliary warehouses, and selected retail and service establishments completed a questionnaire.

## Attributes

Geographic Coverage of Data: U.S. totals, state, 89 National Transportation Analysis Regions (combination of Bureau of Economic Analysis Economic Areas)

First Developed: 1993

Update Frequency: Quinquennial (next planned survey year is 1997)

File Format: Aggregate data only will be released

Media: CD-ROM, Printed source, Internet

## Significant Features/Limitations

The 1993 CFS differs from previous surveys in expanded coverage of intermodal transportation, additional industry coverage, and more detailed geographic levels. Earlier surveys reported only the principal mode. The 1993 survey asked for all modes used for the shipment (for-hire truck, private truck, rail, water, pipeline, air, parcel delivery or U.S. Postal Service, other mode, unknown). The 1993 CFS produces data at the U.S., state, and National Transportation Analysis Region (NTAR) levels. There are 89 NTARs, comprised of BEA Economic Areas covering the United States.

The 1993 CFS does not cover shipments of crude petroleum and imports, which primarily affect water transportation and pipelines. Oak Ridge National Laboratory has estimated commodity flows for these two categories. Also, the Survey does not cover establishments classified in the Standard Industrial Classification as farms, forestry, fisheries, oil and gas extraction, governments, construction, transportation, households, foreign establishments, and most retail and service businesses. Furthermore, the CFS does not cover data on shipments originating in Puerto Rico and other U.S. territories and possessions. Commodities that are shipped from a foreign location to another foreign destination, through the United States (e.g., from Canada to Mexico) are also excluded from the Survey.

## Commodity Movements Originating in Arkansas Summary of 1993 CFS

In Arkansas, the CFS measured \$67 billion of goods shipments weighing 100 million tons. Arkansas accounted for approximately 1 percent of the value and 1 percent of the weight of total U.S. shipments. The CFS data cover shipments by establishments in mining, manufacturing, wholesale, and selected retail and service industries. The data exclude most shipments of crude oil; therefore, the totals and percentages do not fully reflect the contribution of pipeline shipments.

The major commodities shipped by establishments vary when measured by value and weight. The most important commodity originating in Arkansas by value was food or kindred products. Other important commodities by value were: miscellaneous freight shipments; electrical machinery, equipment, or supplies; pulp, paper, or allied products; and transportation equipment. Some of the main commodities shipped by weight were: lumber or wood products, excluding furniture; nonmetallic minerals; food or kindred products; petroleum or coal products; and pulp, paper, or allied products.

Local transportation of freight is important to Arkansas's commerce. The CFS shows that in 1993, about 26 percent of the value and 59 percent of the weight of total shipments from Arkansas were shipped to destinations within the state. Approximately 17 percent of the value and

51 percent of the weight of all shipments were between places less than 50 miles apart. In comparison, about 30 percent of the value and 56 percent of the weight of total U.S. shipments were between places less than 50 miles apart. In Arkansas, about 26 percent of the value and 62 percent of the weight of shipments were between places less than 100 miles apart.

About 74 percent of the value and 41 percent of the weight of all shipments from Arkansas went to other states. The top destination of shipments by value was Texas. Other important destination states by value were: Missouri, California, Tennessee, and Illinois. Important destination states by weight of shipments were: Texas, Louisiana, Missouri, Tennessee, and Oklahoma.

Most commodities were moved by truck, about 88 percent of the value and 85 percent of the weight. Rail was used to transport 5 percent of the value and 11 percent of the weight. The CFS data confirm the rising importance of parcel, U.S. postal, and courier services that have emerged in recent years. In 1993, this mode of transport was used to transport 109,000 tons of goods worth \$2 billion or 3 percent of the value of all shipments in Arkansas. In comparison, about 9 percent of the value of total U.S. shipments were moved by this mode.

1993 Commodity Flow Survey State Summary: Arkansas  
 Tabulation by the Bureau of Transportation Statistics, U.S. Department of Transportation

Summary	Value	Weight
Total shipments originating in Arkansas	\$66.9 billion	100.2 million tons
Percent of total U.S. shipments (preliminary U.S. estimate)	1.0	1.0

Commodity Shipments Originating in Arkansas Ranked by Value		Commodity Shipments Originating in Arkansas Ranked by Weight	
Commodity	Percent of value	Commodity	Percent of weight
Food or kindred products .....	22.0	Lumber or wood products, excluding furniture .....	21.1
Miscellaneous freight shipments .....	13.5	Nonmetallic minerals .....	20.7

# Surface Transborder Commodity Data

## Abstract

The Bureau of Census provides the Bureau of Transportation Statistics with unpublished freight flow data by commodity type by mode of transportation (rail, truck or pipeline) for U.S. exports and imports to and from Canada and Mexico. The purpose of this program is to provide information needed to monitor increased traffic associated with the North American Free Trade Agreement and provide border communities better data to plan transportation improvements.

## Source of Data

U.S. Department of Commerce/Bureau of the Census, Foreign Trade Division.

## Attributes

Geographic Coverage of Data: U.S., Canadian, Mexican totals  
Time Span of Data Source: 04/93-03/95  
First Developed: 1993  
Update Frequency: Annual  
File Format: dBase  
Media: CD-ROM

## Significant Features/Limitations

Files are organized by commodity detail or by geographic detail to satisfy Census confidentiality regulations.

## Sponsoring Organization

U.S. Department of Transportation, Bureau of Transportation Statistics

# Rail Shipments

# Rail Waybill Data, 1988-1992

## Abstract

This database contains public-use, aggregate, non-confidential rail shipment data such as origin and destination points, type of commodity, number of cars, tons, revenue, length of haul, participating railroads, and interchange locations. The data are based on the Carload Waybill Sample, which is a proprietary sample of freight waybills that were submitted to the Interstate Commerce Commission (now the Surface Transportation Board) by Class I Railroads.

## Source of Data

Class I Railroads.

## Attributes

Geographic Coverage of Data: U.S. Class I Railroads  
Time Span of Data Source: 1988-1992  
First Developed: 1994  
Media: CD-ROM

## Sponsoring Organization

## Rail Shipments From and To Arkansas, 1994\*

---

Originated within Arkansas: major commodities shipped by rail, ranked by weight

Commodity	Tonnage	Percent of state total
Nonmetallic minerals	3,674,876	23
Lumber or wood products	3,533,698	22
Food products	1,889,276	12
Primary metal products	1,728,216	11
Glass and stone	1,574,220	10

---

---

Terminated within Arkansas: major commodities shipped by rail, ranked by weight

Commodity	Tonnage	Percent of state total
Coal	11,677,824	49
Farm products	4,026,390	17
Chemicals	1,814,744	8
Lumber or wood products	1,768,970	7
Food products	1,484,184	6

---

\*The five largest (by tonnage terminated and originated) of the 36 two-digit Standard Transportation Commodity Code groupings, and the percentage that commodity represents of all tonnage handled within the state.

# Waterborne Commerce

# Origin and Destination of Waterborne Commerce of the United States, Public Domain Data

## Abstract

This database contains aggregated information that depicts waterborne commodity movements between 26 geographical regions or between individual states of the United States. This database protects the confidentiality of the data provided by the individual companies and provides the origin/destination of commodity flows.

## Sources of Data

Vessel operating companies file vessel operations reports.

## Attributes

Geographic Coverage of Data: U.S. totals, U.S. territories  
Time Span of Data Source: 1985-1994  
First Developed: 1985  
Update Frequency: Annual  
File Format: ASCII  
Media: Diskette, Printed Source, CD-ROM

## Significant Features/Limitations

All companies moving commerce by water are required by law to report.

## Sponsoring Organization

U.S. Army Corps of Engineers, Products and Services Office

## Corresponding Print Source

Origin and Destination of Waterborne Commerce of the United States, Public Domain

# United States Waterway Data

## Abstract

This collection of data bases is a compilation of information related to the navigable waters in the United States including inland, off-shore, Great Lakes and Saint Lawrence Seaway. Data on commerce, facilities and performance, imports and exports, and accidents are included along with the geographic waterways network.

## Sources of Data

U.S. Army Corps of Engineers, Waterborne Commerce Statistics Center and Navigation Data Center; U.S. Department of Commerce Bureau of the Census; and U.S. Coast Guard.

# Transportation Establishments

# 1992 Census of Transportation Geographic Area Series (TC92-A-1)

## Abstract

Presents data for establishments with payroll from selected transportation services for the United States, each state, District of Columbia, and selected Metropolitan Statistical Areas (MSAs). Presents general statistics on number of establishments, revenue, payroll, and employment by varied transportation classifications. Data are also provided on revenue and employees per establishment, and on revenue and payroll per employee. Comparative statistics showing percent changes in revenue and payroll between 1982 and 1992 are also shown for some kind-of-business classifications.

transportation services. Excludes firms without paid employees, governmental establishments, and auxiliary establishments.

# **Truck Registration and Vehicle-Miles Traveled**

# Truck Inventory and Use Survey (TIUS)

## Abstract

This database provides detailed information on the physical and operational characteristics of the Nation's truck population. Collected from an approximately 154,000 truck sample, individual state and United States estimates are produced. Physical characteristics include model year, body type, empty weight, truck type, axle arrangement, length, and engine size. Operational characteristics include major use, products carried, annual and lifetime miles, area of operation, miles per gallon, operator classification, and hazardous materials transported.

## Source of Data

Owners of private and commercial trucks registered in each state complete a mail survey.

## Attributes

Geographic Coverage of Data: U.S. totals, 50 states, District of Columbia  
Time Span of Data Source: 1992  
First Developed: 1963  
Update Frequency: Quinquennial  
Last Update: 1995  
File Format: ASCII  
Media: CD-ROM, Microdata File, Printed Source

## Significant Features/Limitations

Only source of comprehensive data collected for trucks that are classified by their physical and operational characteristics and that also provide microdata records to data users of the transportation community. The records on the microdata file are modified to avoid disclosure of a sampled vehicle or operating company.

# Highway Statistics

## Abstract

This annual publication compiles a wide range of information on highway extent, condition, performance, use, and finance. Freight-related tables include numbers of trucks and trailers by State, vehicle miles of travel, and information on commercial drivers licenses.

## Source of Data

State agencies.

## Attributes

Geographic Coverage of Data: U.S. totals, 50 states, District of Columbia  
Time Span of Data Source: 1994  
First Developed: 1945  
Update Frequency: Annual  
Last Update: 1995  
File Format: HTML, Excel  
Media: CD-ROM, Internet, Printed Source

## Significant Features/Limitations

Data on numbers of trucks and truck vehicle miles of travel are not consistent between *Highway Statistics* and the Census Bureau's Truck Inventory and Use Survey. *Highway Statistics* is based on the total number of vehicles registered in each State throughout the reporting year, while the Truck Inventory and Use Survey is based on a snapshot of the vehicle fleet at the middle of the year. Vehicle types are also classified differently.

# Motor Carrier Statistics

# Motor Carrier Financial and Operational Statistics

## Abstract

This data program was transferred to the Bureau of Transportation Statistics by the Interstate Commerce Commission Termination Act of 1995. Class I and II Motor Carriers of Property and Passengers are required to submit financial, employee, operating, and other data pursuant to 49 U.S.C. 14123. Unless otherwise prohibited, these reports are made available to the public through a reports reference facility. In addition, selected data are published in aggregate and for the largest carriers.

## Source of Data

Class I and Class II Motor Carriers of Property and Class I Motor Carriers of Passengers.

## Attributes

Geographic Coverage of Data: Class I and Class II Motor Carriers of Property and Class I Motor Carriers of Passengers.  
Update Frequency: Continuously  
Media: Printed Source

## Significant Features/Limitations

The reports from carriers are made available unaudited and unedited.

## Sponsoring Organization

U.S. Department of Transportation, Bureau of Transportation Statistics

## Availability

DOT/Bureau of Transportation Statistics, 400 7th Street, SW, Room 4201, Washington, DC 20590; (202) 366-4383; Fax: (202) 366-3383.

## State Data

Due to the recent transfer of the program to BTS, state-level data are not available for publication. In the future, BTS plans to publish selected earnings and other data for carriers by state.

# Fatal Truck Crashes

# Truck and Bus Accident Factbook

## Abstract

This report presents aggregate statistics on trucks and buses involved in traffic accidents.

# **Rail Accidents and Fatalities**

# Railroad Accident/Incident Reporting System (RAIRS)

## Abstract

RAIRS contains four data bases: rail equipment, injury/illness, grade-crossing accidents, and railroad summary (freight and passenger). These data bases include information on all railroad accidents, grade-crossing accidents, railroad employee casualties, and any other injuries on railroad property. These data bases provide the basis for accident analyses and assessment as well as annual reports.

# **Hazardous Materials Incidents**

# Hazardous Materials Incident Reporting System

## Abstract

This system is used to process information on the unintentional release of hazardous materials during the course of transportation. This information is compiled in accordance with the requirement levied in the Transportation Safety Act of 1974, Public Law 93-633. The major uses of the system are to highlight problem areas, pinpoint need for corrective action, and provide a statistical compilation of all accidents and incidents involving hazardous materials. The system contains information on each reported incident and consists of data elements such as the date of the incident, location, shipper, carrier, commodity involved, and other detailed information concerning the packaging and nature of the incident. Monthly and yearly reports are generated and include, but are not limited to, incidents by mode, incidents involving exemptions, commodity, container, cause and state summaries.

## Source of Data

Carriers of hazardous materials are required to report to the U.S. Department of Transportation, Research and Special Programs Administration certain unintentional release that occurred during transportation. These reports include (a) immediate telephone notification made to the U.S. Coast Guard's national Response Center (NRC) since 1982; and (b) written reports on hazardous material spills, Form F5800.1, made within 30 days of the incident and collected since 1971.
