INTRODUCTION TO THE ALASKA MARINE HIGHWAY SYSTEM

The Alaska Marine Highway System (AMHS) serves Alaskan communities by transporting passengers and vehicles between coastal communities. This service helps meet the social, educational, health and economic needs of Alaskans.

AMHS provides year-round scheduled ferry service throughout Southeast and Southwest Alaska, extending south to Prince Rupert, British Columbia and Bellingham, Washington. The system connects communities with each other, with regional centers, and with the continental road system. It is an integral part of Alaska's highway system, reaching many communities that would otherwise be effectively cut off from the rest of the state and nation. The AMHS also provides a coastal transportation alternative between Anchorage and the "Lower 48" states versus driving the Alaska Highway.

The AMHS is designed to provide basic transportation services to these communities—transportation that allows community access to health services, commodities, legal services, government services, and social services; transportation that meets the social needs of isolated communities; and transportation that provides a base for economic development.

Service and Amenities: AMHS service is divided into two major systems: the Southeast System (from Bellingham north to Yakutat) and the Southwest System (from Cordova west to Unalaska/Dutch Harbor). The AMHS fleet consists of eleven vessels; seven operate in the Southeast System and four operate in the Southwest System. All eleven vessels are designed to carry passengers and vehicles ranging in size from motorcycles to large freight container vans.

Trips on the AMHS can last several hours or several days, so passenger services are an important aspect of the State's transportation service. Most vessels provide food service, shower and restroom facilities, observation lounges, and reclining lounges. The larger vessels provide play areas for children. Six vessels have stateroom accommodations for overnight travel, or for passengers who want a space they can call their own while traveling. The AMHS may also offer special interest programs on-board its vessels during the summer season, including naturalist interpreter programs and Alaskan culture programs.

Freight Transport: One regular use of the AMHS is the year-round shipment of container vans. These vans transport time-sensitive cargo such as fresh vegetables, meat, and dairy products from Bellingham and regional Alaskan centers to communities served by the system.

Local restaurants, grocery stores, individuals, and food distribution businesses have established delivery schedules with the AMHS to ensure regular and continuous delivery of perishable goods. Shipping perishable supplies on AMHS is more cost-effective than air freight, and in many cases ensures delivery to communities on a more frequent basis than commercial barge and freight lines. Vans are also used to move fresh Alaska fish and seafood to markets, and to transport U.S. mail and household goods.

Planned service reductions: During the fall, winter and spring months, all vessels are scheduled for annual maintenance, which normally requires six weeks minimum per ship. This results in reduced service. Major projects to refurbish the vessels and to keep them in compliance with SOLAS (Safety of Life at Sea) requirements also keep vessels out of service. Vessels are put into lay-up during periods of low traffic demand, or as a means to reduce operating costs. During 2007, at some point, all vessels were out of service for maintenance, project work, or lay-up status.

Comparisons to Previous Years

Care must be taken when comparing the traffic data to 1997. A fishermen's blockade of the M/V Malaspina on July 19, 1997 resulted in a 138-day suspension of service to the Canadian port of Prince Rupert. Limited service was restored Dec. 4, with one trip per week by the M/V Aurora. The disruption had a major impact on AMHS traffic.

In January 2002, AMHS discontinued regular service to Hollis when the Inter-Island Ferry Authority's M/V Prince of Wales began service between Ketchikan and Hollis. The impact of discontinuing regular Hollis service can be seen when comparing previous years for Hollis and Ketchikan. While AMHS does not officially serve Hollis any longer, backup support for the Inter-Island Ferry Authority is provided as needed.

Prior to 2003, Yakutat traffic was included in the Southwest Region. From 2003 forward, Yakutat traffic has been reported in the Southeast Region. In 2007 the M/V Tustumena provided two trips per month down the Aleutian Chain. On June 9th, 2006 the M/V LeConte ceased operations as a 24/7 vessel and was converted to day boat status. Consequently, statistics for the M/V LeConte will reflect that change in status. Service to Seward was discontinued on September 29th, 2005. However, overall cross-gulf traffic was not impacted because Seward traffic was re-routed to Whittier.

2000 to 2007 Traffic Data Sources

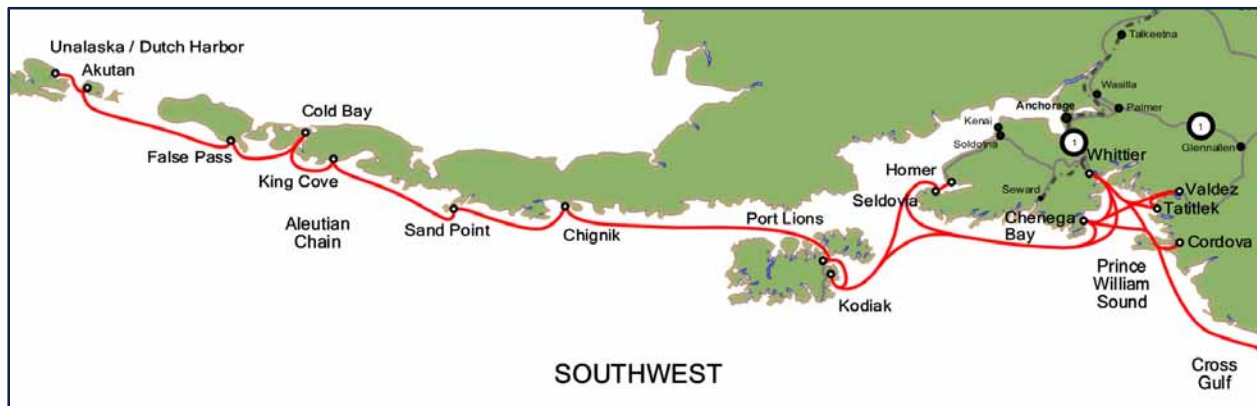

For the year 2000 through 2007, counts are based on tickets that were issued for the sailings. This substitution should not affect the traffic totals or the traffic between ports when compared to previous years; however, some counts may not be accurate when subtotaed by vessel.

Southwest Alaska Routes

The Southwest system serves Prince William Sound, Kodiak Island, the Alaska Peninsula, and the Aleutian Islands. The M/V Tustumena provides regular service between Kodiak, Port Lions, Seldovia and Homer. In 2007, between April and October, the M/V Tustumena traveled out the Aleutian chain twice a month to Unalaska/Dutch Harbor, stopping at Chignik, Sand Point, King Cove, False Pass, Akutan and Cold Bay. This trip is not made in the winter because of adverse weather conditions.

In 2007 service in Prince William Sound to Valdez, Cordova and Whittier was provided by the M/V Aurora. The M/V Chenega provided additional service during the summer season, and the M/V Kennicott provided supplemental service. AMHS also provided forty-three stops in the village of Tatitlek and thirty-five stops in Chenega Bay.

Tourist passengers add a significant percentage to the Prince William Sound traffic in the summer, especially between Valdez and Whittier. In the winter months when traffic demand was significantly reduced and weather conditions worsened, the M/V Chenega was removed from service. The M/V Aurora was also removed from service for maintenance, leaving the M/V Tustumena to provide sailings between the ports.

Cross-Gulf Service

When the M/V Kennicott joined the fleet in summer 1998, a vessel certified to operate in open waters, the ferry system expanded to include regular cross-gulf sailings. Also known as "inter-tie trips", these sailings connect Southeastern Alaska with Southcentral and Southwest regions of the state.

All cross-gulf trips include a stop at the port of Yakutat, a community that is unique in that it is served only on a cross-gulf route. During 2007, the AMHS provided Yakutat with fifty-three port calls.

Southeast Alaska Routes

The southeast AMHS route system is divided into two subsystems: the mainline routes which typically take more than one day for the ship to travel; and shorter routes where the vessels depart their home port in the morning, travel to destination ports and then return to their home port on the same day. The shorter routes are commonly referred to as “day boat” routes.

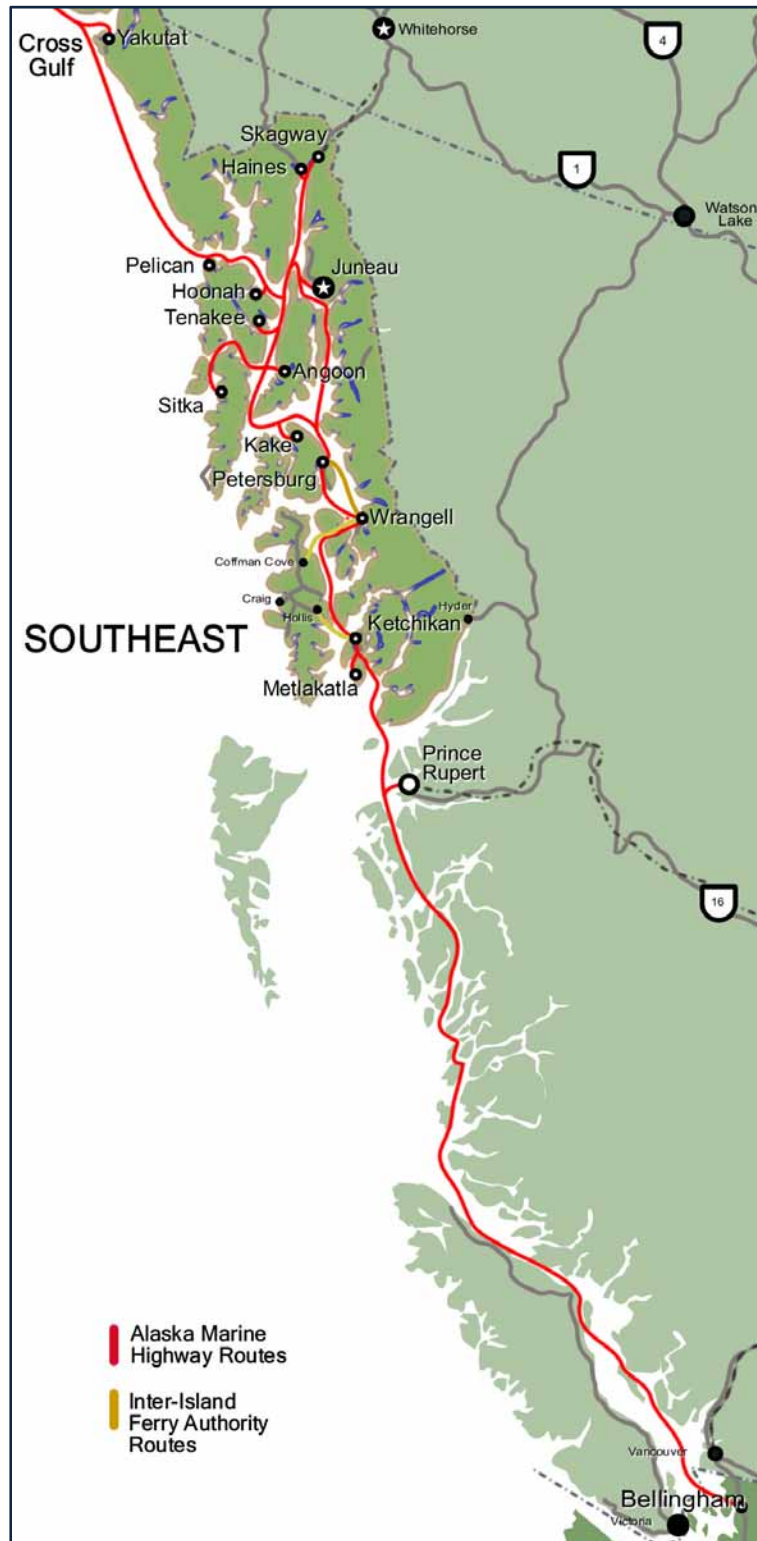

The mainline routes carry a high percentage of tourists in the summer (see Demographic Passenger Chart, page 25), and provide service between Bellingham, Washington or Prince Rupert, British Columbia at Skagway, Alaska. Along the way, the ships stop in Ketchikan, Wrangell, Petersburg, Sitka, Juneau, and Haines. Although Kake and Hoonah are smaller communities, they are served by certain mainline sailings.

During 2007, the five largest AMHS vessels were used on the Southeast mainline routes. These were the M/V Columbia, M/V Kennicott, M/V Malaspina, M/V Matanuska, and M/V Taku. Frequent service was provided on the North Lynn Canal route during the peak summer season. This route provides round-trip service between Juneau, Haines and Skagway.

The day boat routes connect the smaller communities of Southeast Alaska with each other and with the Southeast Alaska mainline communities (Ketchikan, Petersburg, Wrangell, Sitka, Juneau, Haines and Skagway) that serve as regional centers for commerce, government health services, and/or connections to other transportation systems. The day boat routes primarily serve local residents, and include Angoon, Hoonah, Kake, Metlakatla, Pelican, and Tenakee.

In 2007 there were three AMHS vessels that provided service on the day boat routes supplemented by contract vessels on an as needed basis. These were the M/V LeConte, the M/V Fairweather and the M/V Lituya. The M/V Lituya is dedicated to providing day boat service between Ketchikan and Metlakatla.

The Southeast System connects with the continental road system at Bellingham, Washington, Prince Rupert, British Columbia, and in Alaska at Haines and Skagway.

CURRENT ANNUAL TRAFFIC

The tables and charts in this section provide a visual summary of the traffic data collected from the Passenger and Vehicle Traffic Summaries by Month, and the traffic is shown both by region and by types of vessels.

The tables presented below and the charts shown on page 20 break the traffic down by region utilizing passenger and vehicle counts to and from ports in the Southeast Region, then counts to and from ports in the Southwest Region. The steep bell curves display the seasonal nature of AMHS traffic, a pattern that is repeated consistently from year to year.

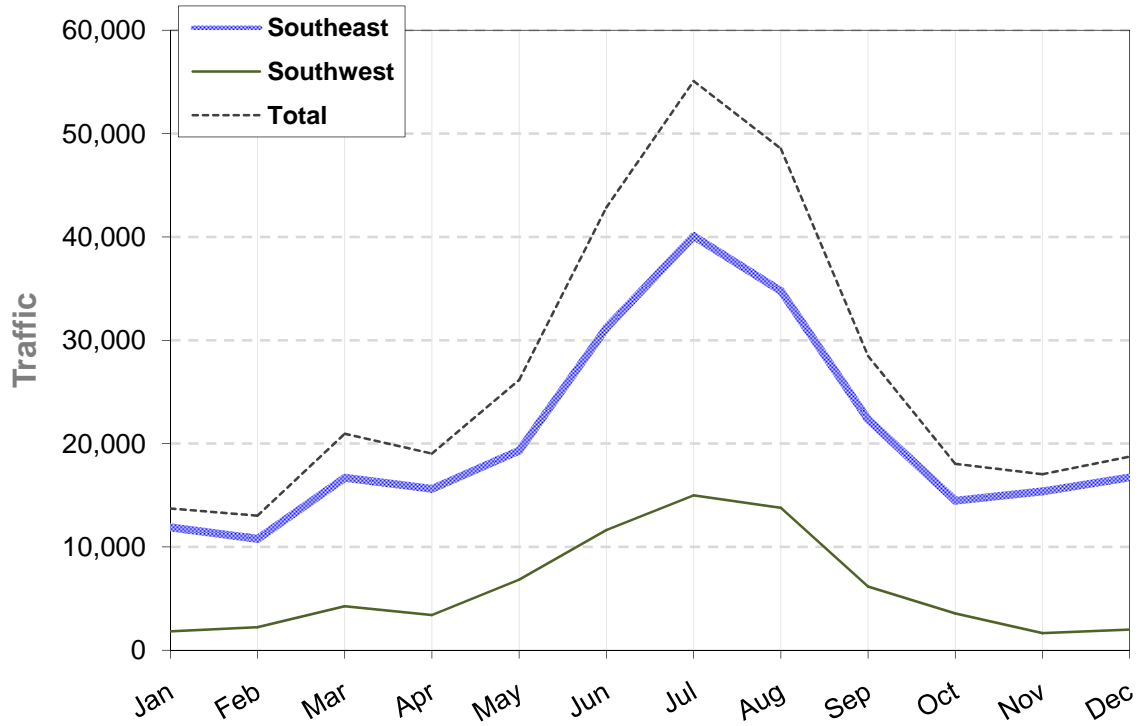

The tables and charts presented on page 21 are broken down by three general vessel types. The Southeast vessels are the mainline vessels sailing the long haul routes in the Southeast Panhandle area, the M/V Columbia, M/V Kennicott, M/V Malaspina, M/V Matanuska and M/V Taku. The Southwest vessels are the M/V Aurora and M/V Tustumena. Day Boat vessels include the M/V Lituya, M/V LeConte, M/V Fairweather, M/V Glacier, M/V St. Aquilina, Catamaran, and even though the M/V Chenega is a Southwest Region vessel, it is included in this category. Day boats are vessels that depart their home port in the morning, make various stops at small communities then return to their home port at the end of the day. See page 3 for a detailed explanation.

See page 19 for an interpretation of the information on this page.

TARIFF TRAFFIC

Tariff information should be viewed only as a superficial indicator of travel trends. These categories refer only to those who qualified for the tariff rates which are based on season, route, and other limiting factors.

Cardeck space is predominantly sold by vehicle length. However, some consideration must be given to width, to the overall weight of the vehicle traffic on the cardeck, and to the effect of vehicle placement on the vessel's overall stability. Consequently, vehicle tariffs are classified as Standard (up to 8-1/2' wide), Wide (up to 9' wide), Extra Wide, and Vans. In 2007, the number of vehicles of standard width comprised over 95.7% of the motorized car deck traffic. Due to their height and weight, vans must be categorized separately. Vans are defined as vehicles, normally commercial, and from 12'-13' in height with enclosed cargo space. Vans can be any length and either self-propelled or towed. A flatbed truck or trailer, with a load higher than 10 feet from the ground, is also considered a van.

Recreational vehicles are defined as truck/campers, camper vans, motorhomes, and vehicles with trailers. Although RVs are identified with a separate class, they are also classified by width. In the first table below, the RV traffic is broken out by width. Recreational vehicles of all widths made up 5.0% of the total motorized cardeck traffic, and 8.1% of the linear feet. In addition, 2,193 non-motorized forms of transport were ticketed. Non-motorized traffic includes bicycles, kayaks and canoes that are not being transported in a car, truck or trailer. Another tariff number that has no impact on actual traffic but is always of interest, are the pets, confined to the car deck, that traveled by ferry in 2007. This category includes all animals including livestock.

The pie charts on pages 24 and 25 present the length of various types of vehicles measured in feet. The labels for each slice in each pie chart represent the upper limit of the category size. For example, in the Car Length Chart on page 24, the pie slice labeled 15' is to be read as "cars larger than 10 feet up to and including 15 feet." The next slice is to be read as "cars larger than 15 feet up to and including 19 feet."

SAILINGS

The following three tables of sailings shows the sequence of ports traveled by AMHS vessels during 2007, and the number of times each different sequence occurred. Of the 2,737 Southeast sailings, 95 different routes are represented, and of these, 30 occur only one or two times. In the combined Southwest and Cross Gulf systems there were 1,254 sailings that occurred with 18 of the 46 different routes saw only occasional use. It is also noteworthy that many of the routes are minor variations of a standard pattern. Sometimes a vessel is rerouted to accommodate a special event, or a schedule change is needed for an unexpected mechanical repair. Seasonal transitions also account for these variations. Excursion trips, identified in this report as EXC are another type of infrequent sailing. HTL is the code for when a vessel supplied hotel service to a port.

Seasonal demand and vessel availability both affect regularly scheduled routes. The summer season includes the months from May through September, and the winter season includes the months January through April and October through December. Of the 68 different Southeast routes, 36 were scheduled in both summer and winter, 19 were summer only, and 13 were winter only. Of the 47 Southwest/Cross Gulf routes, 23 occurred year round, 2 were scheduled only during the summer, and 21 were winter only. But, when the numbers of system wide sailings are examined, the summer season, while shorter, comprises 62% of the 1,163 Southwest / Cross Gulf sailings and 52% of the 2,753 Southeast sailings.

MONTHLY PORT TRAFFIC

The data contained in the traffic tables comes from standard reports generated from the AMHS Reservations Management System (RMSIII). Following is a brief explanation of the terms used, and a description of the reports.

A “passenger” is any individual who got on or off the vessel, including drivers, infants, partial-fare travelers, and anyone traveling on a pass.

A “vehicle” is any passenger or cargo conveyance transported on the vessel, including construction equipment, container vans, motorcycles, unaccompanied cars shipped by dealers, and employee cars traveling on a space available basis. The vehicle count is not related to size; i.e. a 40-foot van is counted as one vehicle as is a 15-foot compact car.

The count of passengers, vehicles and cabins is derived from reservation information for specific vessels. A traveler who must transfer vessels to reach a destination or who is traveling on vacation and stopping to visit several communities is counted more than once. For example, a traveler from Pelican to Bellingham will show up in the passenger count as one who embarked at Pelican and disembarked at Juneau. This person will also be counted as one who embarked at Juneau and disembarked at Bellingham.

These tables provide the monthly total of embarking and disembarking passengers and vehicles by port. This summary gives an overview of seasonal travel trends, and allows the reader to easily identify the busiest and slowest ports and travel months. Information is provided for the total system by geographic area and by vessel.

Note that the quantity of passengers and vehicles embarking and disembarking in the regional charts presented on pages 32-34 do not match due to the fact that the M/V Kennicott loads and off loads passengers and vehicles in both the Southeast and Southwest regions. For example, when a passenger embarks on the Kennicott in Ketchikan (Southeast) and disembarks at Whittier (Southwest), the actions are recorded and reported in the appropriate region.

PORT TO PORT TRAFFIC (ON / OFF)

These tables summarize inter-port passenger and vehicle traffic. They provide origin-destination information for analyzing through-traffic movements on the vessels. Information is provided for the total system for the year by geographic area (Southeast, Southwest, and Cross-Gulf) and by vessel. The report also includes summary tables for the summer season. These On/Off tables do not reflect the origin-destination of passengers and vehicles that transferred to another vessel. They show where all of the traffic that boarded a vessel at each port traveled to on that particular vessel.

Southeast Alaska On/Off (Calendar Year)

1 January - 31 December

LINK VOLUME SUMMARY

The link volume summary reports are used to establish a measure of capacity utilized relative to the capacity provided. This report shows the traffic and capacity on each "link" of the system. A "link" is defined as a departure from one port and an arrival at the next. A complete trip usually consists of several links. For example, a passenger going from Juneau to Skagway in one trip would typically travel on two links "Juneau to Haines" and "Haines to Skagway." This passenger would be counted as one on each of these links. Consequently, the link volume count includes both the through-traffic and the traffic embarking from the first port in the link pair.

The link volume for each pair of ports is directional, with the port of origin appearing first. The link volume for "Bellingham-Ketchikan" indicates the total traffic northbound between Bellingham and Ketchikan with no intermediate stops. Cross-gulf links are listed in a separate table named "Cross-Gulf Link Volume."

Link volume data is provided by geographic area and by vessel. Passenger and vehicle counts, total passenger and vehicle miles for each link, and capacity ratios for both passengers and vehicles are reported. Number of trips, trip length, and total miles for each link are also shown.

Monthly Link Volume Tables are provided by region. In these tables, only total counts are provided for passengers, vehicles, and trips by month.

The link volume data is useful because of the finite capacity of the vessels and the variation in size from vessel to vessel. One hundred and twenty-five passengers on the M/V Aurora traveling from Petersburg to Kake would have the same passenger link volume capacity ratio, 50%, as 225 passengers traveling on the M/V Taku. Where the link volume ratios are high, this is an indication that additional service may be warranted.

The link length in the table is given in nautical miles. (Statute miles for each link are shown on the diagrammatic maps). The "vessel miles" is the total number of nautical miles traveled over each link during the year, and is determined by multiplying the number of trips by the link length.

Passenger capacity: As the Vessel Information Table on page 5 shows, each vessel not only has functional booking limits, but also has a maximum capacity as authorized by the U.S. Coast Guard. Furthermore, both categories can be different for the summer and winter seasons. While the AMHS occasionally increases the capacity on "full" sailings to accommodate additional passengers, it never goes beyond the U.S.C.G. limit.

The 2007 report, following the example set with the 1996 report and continued since then, uses the functional booking limit set for each sailing to calculate capacity ratios. Prior year reports used a number closer to the U.S.C.G. limit. This change results in a higher capacity ratio on most links, but more accurately reflects the percentage of usable passenger space.

Vehicle Capacity: This report continues to use linear feet to measure vehicle capacity. Vehicle capacity ratios are calculated by dividing the total linear feet sold on the car deck by the vehicle capacity in linear feet. The capacities used in the 1994 and 1995 reports were based on an analysis of fiscal year 1994 sailings. For the 1996 and subsequent reports, the vehicle capacity used has been changed to reflect the amount of space used for booking purposes.

The actual amount of "saleable" space on the car deck depends on the amount of open space between vehicles, needed for maneuvering vehicles on the car deck, and for pathways for people entering or exiting their vehicles. The mix of vehicles can affect this non-saleable space, as well as the number of vans being carried.

Prior to 1994, the vehicle car deck capacity was defined as one vehicle per twenty foot length with a lane width of eight feet. The total number of 20' x 8' lengths on the car deck was the "vehicle capacity." The actual number of vehicles on the car deck was divided by the "vehicle capacity" to obtain the vehicle capacity ratio.

When comparing multi-year data it is important to note the differences in vehicle capacity ratio calculations or the results will indicate an artificial change. The number of vehicles per link and the number of trips per link can be used to evaluate whether increases or decreases in link volume capacity ratios are significant or just reflect a change in the methodology.

In 2007 the booking capacity of the Catamaran has been set artificially low to accommodate all last minute walk-on passengers and excess baggage, causing the percentage of utilization to be artificially high as can be seen in the chart on page 67.

STATEROOM USAGE

These reports focus on stateroom usage and are similar to the Link Volume Summary Reports of Passengers and Vehicles. They show the percentage of cabins used on each link and are reported by geographic region and vessel. Regional reports of stateroom usage are displayed alphabetically by embarking port and capacity ratio. Individual vessel tables provide the link volume ratio by month. Of the eleven vessels in the AMHS fleet, six have staterooms: the M/V Columbia, the M/V Kennicott, the M/V Taku, the M/V Malaspina, the M/V Matanuska, and the M/V Tustumena.

2000 to 2007 Traffic Data Sources

The year 2000 through 2007 Annual Traffic Volume Reports are based on counts from issued tickets. Years prior to 2000 were based on counts from used tickets. Issued ticket data is pre-sailing data, and used ticket data is post-sailing data.

M/V Tustumena Staterooms
