The Crash Analysis and Reporting Unit compiles data and publishes statistics for reported motor vehicle traffic crashes per ORS 802.050(2) and 802.220(6). The data supports various local, county and state traffic safety programs, engineering and planning projects, legislative concepts, and law enforcement services.

Legally reportable motor vehicle traffic crashes are those involving death, bodily injury, or damage to personal property in excess of \$500 (for crashes that occurred prior to 9/01/1997) or \$1,000 (for crashes that occurred between 9/01/1997 and 12/31/2003). As of 01/01/2004, drivers are required to file an Accident and Insurance Report Form with DMV within 72 hours when damage to the driver's vehicle is over \$1,500; damage to any vehicle is over \$1,500 and any vehicle is towed from the scene as a result of damage from the accident; if injury or death resulted from the accident; or if damage to any one person's property other than a vehicle involved in the accident is over \$1,500. For more information on filing requirements, please contact DMV.

The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However, because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit cannot guarantee that all qualifying crashes are represented; nor can assurances be made that all details pertaining to a single crash are accurate.

Database expansion and refinement implemented in 2002 may result in slight differences between data reported in this publication and similar information reported in prior years.

INTRODUCTION

State highway crash rate tables present crash frequencies in relation to traffic volume and highway mileage. The four major sections of this publication are:

- I Results of Analysis
- II State Highway Crash Rates
- III Fatal Traffic Crash Summaries
- IV Appendix

Comparison of crash rates between highways should take into account the functional classification and vehicle miles traveled (VMT) for all highways under consideration. Failure to evaluate the data in this manner could lead to incorrect conclusions.

Part I presents tables which compare Oregon fatality rates to the statewide and national traffic and population death rates; average state highway crash rates by functional classification and VMT for the past five years; and detail on the current year crash rates, fatality rates, and combined fatal and serious injury rates. Tables that cross-reference posted Route Numbers with ODOT Highway Numbers are also included for your convenience.

Part II presents crash rate data for every highway. Highways are divided into sections designated by urban boundaries and city limits. Descriptions for each highway segment include beginning milepoint, segment length, number of crashes for the current year, average annual daily traffic counts, and crash rates for the current year and previous four years. Summaries are provided at the end of each section and each highway.

Part III presents summaries of the current year fatal crashes by roadway system, jurisdiction, crash type, and traffic conditions.

Part IV contains a glossary of terms used in this publication.

The Oregon Department of Transportation began summarizing traffic crash data in 1941, and publishing the results in 1948. The coding of traffic crash data is guided by the Crash Analysis and Reporting Unit's "Motor Vehicle Traffic Crash Analysis and Code Manual", and the ANSI D16-1.2007 Manual on Classification of Motor Vehicle Traffic Accidents, published by the National Safety Council.

PART I
RESULTS OF ANALYSIS

FACTS OF INTEREST

The state highway system accounted for 19,733,374,827 vehicle miles traveled (VMT)* during 2010, which is a 0.49 percent decrease from the 2009 final total of 19,830,607,058.

There were 180 fatal traffic crashes on the state highway system (including crashes on highway ramps, connections and frontage roads) during 2010. This is a 2.29 percent increase from the 176 fatal crashes reported for 2009. The total number of persons killed on the state highway system during 2010 was 197, an 8.06 percent decrease from the 2009 total of 211.

The number of crashes per million vehicle miles traveled on non-freeways for 2010 was 1.31. This is 3.19 times higher than the interstate freeway crash rate of 0.41, and 1.67 times higher than the crash rate of 0.78 for other freeways and expressways. The difference between non-freeway and freeway crash rates indicates that freeway travel is safer.

The USDOT estimates that 32,788 people were killed in traffic crashes nationwide during 2010, which is a 3.02 percent increase from the final 2009 figure of 33,808. Oregon, with a total of 317 fatalities in 2010, experienced a 15.92 percent decrease from the number of fatalities reported for 2009, which was 377.

TABLE I. COMPARISON OF MOTOR VEHICLE TRAFFIC AND POPULATION FATALITY RATES
1980 - 2010

Table I compares Oregon and national traffic fatality rates based on vehicle miles traveled and on population. The figures shown are estimates from state traffic authorities, the U.S. Census Bureau, and the Federal Highway Administration. Fatality rates are calculated using adjusted vehicle miles traveled (VMT) to account for mileage from county roads and city streets. They are not comparable to the rates shown on Table IV, which reports data for the state highway system only and excludes county roads, city streets, connections and frontage roads.

TABLE III: COMPARISON OF CRASH RATE COMPONENTS, 2009 vs. 2010

Table III compares crash rate components for the last two years, by functional classification, urban and rural areas, and shows the percent difference from the previous year. The formula for calculating crash rates is found on page 25 of this publication.

TABLE IV: 2010 CRASH RATES BY JURISDICTION AND FUNCTIONAL CLASSIFICATION

Table IV reports state highway system crash rates by federally defined urban and rural areas and functional classification. Data for highway connections and frontage roads are excluded.

Note: Highway miles are based on highway system definition and inventory data as of July 2010. For official mileage data, refer to the 2010 Oregon Mileage Report at <http://www.oregon.gov/ODOT/TD/TDATA/publications.shtml>.

TABLE V: 2010 FATAL AND SERIOUS INJURY CRASH AND CASUALTY RATES

Table V reports data on state highway crashes that resulted in death or serious injury. A serious injury (INJ-A) is one that prevents a person from walking, driving or continuing normal activities which the person was capable of prior to sustaining the injury.

REFERENCE TABLE I: HIGHWAY NUMBERS, NAMES AND POSTED ROUTE NUMBERS

This publication lists each highway in the order of its State Highway Number. The following reference table lists the State Highway Number, Highway Name, and posted Route Number to facilitate the identification of a specific highway. Route numbers may traverse the highways in their entirety or only in part. A route number in common with another for less than one mile is not shown.

PART II

STATE HIGHWAY CRASH RATES

COMMENTS

CRASH RATE FORMULA

The crash rate is expressed as the number of crashes per million vehicle miles traveled (VMT). Fatality rates represent the number of persons killed per 100 million VMT. The same formula is used for “fatal and serious injury” crash rates as for fatality rates. VMT is calculated by multiplying the highway segment length, average annual daily traffic counts, and the number of days the highway segment was open for travel.

Rates are computed using the following formula, where:

- **NUMBER OF CRASHES** = the number of crashes that occurred on the given highway segment;
- **SEGMENT LENGTH** = the roadway length in miles, to the nearest one-hundredth;
- **AADT** = the average annual daily traffic for the highway segment; and
- **NUMBER OF DAYS** = the number of days during the year that the highway segment was open for travel.

$$\text{CRASH RATE} = \frac{(\text{NUMBER OF CRASHES}) * 1,000,000}{(\text{SEGMENT LENGTH}) * (\text{AADT}) * (\text{NUMBER OF DAYS})}$$

or

$$\text{CRASH RATE} = \frac{(\text{NUMBER OF CRASHES}) * 1,000,000}{(\text{VMT})}$$

RATES FOR SEGMENTS CONTAINING COUPLETS

Some highway segments contain couplets. A couplet is defined as the two roadways of a divided highway, usually named differently, bearing the same highway number, running approximately parallel to each other, providing for traffic flow in opposite directions, and separated by accessible land. The couplet roadway that bears traffic in the direction of increasing milepoints is considered to be on the **add mileage** side of the highway, and the couplet roadway that bears traffic in the opposite direction is on the **non-add mileage** side of highway.

In this publication, the letters “**CP**” next to a highway segment identifies it as the **non-add mileage** side of a couplet. Rates for the individual roadways of a couplet are calculated according to the crash rate formula above.

Non-add couplet mileage **is used** in calculating the **weighted average ADT** for total highway sections represented in this publication. However, non-add couplet mileage **is not used** when calculating **total miles** for the section. “Total miles” is composed of add mileage only.

SEGMENT CRASH COUNTS

Crashes are attributed to highway segments based on the beginning ("start") milepoint of the segment. Crashes that occur at a segment's end milepoint are attributed to the following segment, which begins with the same milepoint. The exceptions to this rule are segments that end the non-add side of a couplet, Z mileage end segments, and the final end segment of each highway.

A blank in the 'Crash' column indicates no crashes were recorded for the segment during the current data year. Crashes that occurred at indeterminate ("unknown") milepoints within an urban or rural area are included in the summary for each highway.

EQUATIONS AND OVERLAPPING ('Z') MILEAGE

Milepoint equations exist in areas where a highway was shortened due to realignment, somewhere other than at the beginning or ending milepoint. Section lengths displaying a lower number in the Miles column than is calculated by subtracting the begin milepoint from the end milepoint, are indicative of the existence of at least one milepoint equation in that milepoint range, or some combination of equations and 'Z' mileage. See Highway 33, milepoint range 23.18 to 34.32.

Overlapping mileage, also known as 'Z' mileage, is created when a highway is lengthened due to realignment, somewhere other than at the beginning or ending milepoint. Section lengths displaying a higher number in the Miles column than is calculated by subtracting the begin milepoint from the end milepoint, are indicative of the existence of 'Z' mileage in that milepoint range, or some combination of equations and 'Z' mileage. See Highway 33, milepoint range 39.39 to 44.57.

JURISDICTIONAL CATEGORIES

Section breaks occur at urban transportation boundaries, and when entering or exiting city limits. This results in the following four jurisdictional categories:

- **URBAN CITY:** segment occurs at or inside urban transportation boundary, and at or inside city limits.
- **SUBURBAN AREA:** segment occurs at or inside urban transportation boundary, but outside city limits.
- **RURAL CITY:** segment occurs outside urban transportation boundary, but inside city limits.
- **RURAL AREA:** segment occurs outside urban transportation boundary and outside city limits.

Data for these areas are summarized for each highway, as are crashes that occurred at indeterminate ("unknown") milepoints within an urban or rural area.

PART IV
APPENDIX

GLOSSARY

Many of the entries below are reproduced from the list of terms defined by the Highway Inventory Database Representatives and approved by the Oregon Transportation Management System Steering Committee.

A

Add Mileage

The term "add-mileage" generally applies to the roadway that carries milepoints that have increasing values in the direction of travel. The term originated from the fact that the direction of increasing milepoints is used for mileage summarization, whereas separate roadways mileposted in the opposite direction are not counted in totals. The Pacific Highway 1, Interstate 5, is the only exception in that the add-mileage is accumulated in the direction of decreasing milepoints.

Alignment

The horizontal and vertical control of a section of roadway or other transportation facility (e.g. multi-use paths, railway, etc.).

At Grade

Used to represent that a feature and a roadway meet at the same elevation.

B

Beginning Milepoint

The milepoint notation, to the nearest 0.01 mile, that describes the location of the beginning of a linear feature or attribute

C

Common Alignment

Any length of roadway upon which more than one state highway is designated.

Connection

A street or road, open to vehicular travel, which joins a road from the State of Oregon Highway System to any other road, entity, or another state owned road. A connection is usually much shorter than a spur or frontage road.

Couplet

The two roadways of a divided highway, named differently, approximately parallel with traffic flow in opposite directions and separated by accessible land uses. In I.T.I.S. all couplets are divided highways.

GLOSSARY

CP

Non-add mileage side of couplet.

Crash

Any motor vehicle collision or non-collision event which results in a fatality, bodily injury, or damage to a person's property. Crashes that are considered "reportable" for the purposes of ODOT's Statewide Crash Data System must meet the criteria described on the initial page of this publication.

E

EBD

Eastbound direction of travel

ECL

East city limits

Ending Milepoint

The milepoint notation, to the nearest 0.01 mile, that describes the location of the end of a linear feature or attribute

F

FHWA

Federal Highway Administration

Freeway

State highway which meets federal freeway standards

Frontage Road

A road secondary to and generally parallel to a highway, providing service to abutting property and adjacent areas and for control of access. A frontage road may or may not be directly connected to the highway it services.

Functional Classification

The federal system by which roads are grouped into functional systems according to the type of service and amount of traffic the facility carries. This system determines the level of federal funding available for maintenance and improvements. Federal functional classification is determined using federal guidelines and is approved by FHWA.

GLOSSARY

H

Highway

Every public way, road, street, thoroughfare and place, including bridges, viaducts and other structures within the boundaries of this state, open, used or intended for use of the general public for vehicles or vehicular traffic as a matter of right. Some highways are designated by the Oregon Transportation Commission as State Highways – see the definition of State Highway for more information.

Highway Number

See State Highway Index Number.

Hwy

Highway

I

INT

Interchange

Interchange

A system of interconnecting roadways and structures in conjunction with one or more grade separations that provides for the movement of traffic between two or more roadways on different levels.

Intersection

The area where two or more roadways join or cross at the same elevation.

Interstate Route

A route system that consists of all presently designated freeway routes meeting the Interstate geometric and construction standards for future traffic, except for portions in Alaska and Puerto Rico. The interstate System is the highest classification of arterial roads and streets, and provides the highest level of mobility, at the highest speed, for a long uninterrupted distance. This system is intended for through traffic, has full access control, and has grade separations at major intersections. Interstate Routes are signed routes. All Interstate Routes are state highways.

J

JCT

Junction

GLOSSARY

Junction

The intersection of two or more state highway roadways.

Jurisdiction

The governmental "entity" that owns the road. A road is said to have federal, state, county, city or private jurisdiction.

L

Lane

A portion of roadway, usually indicated by pavement markings, designated for travel by one line of vehicles.

Located Line

A surveyed alignment where a road is planned to be built. The location where highway construction places have been developed, and the geographic location surveyed for construction, but no paved surface yet exists.

M

Mainline

Refers to all roadways for a highway, excluding connections and frontage roads.

Milepoint

A given measurement between highway mileposts.

Milepoint Equation

A statement that specifies two different milepoints that exist at a single point on the same roadway. This is a method of accounting for changes in a linear measurement system without re-milepointing the entire roadway. The changes in milepoints are usually caused by new construction.

Municipal

Of or pertaining to the area within the limits of an incorporated city.

N

NBD

Northbound direction of travel

GLOSSARY

NCL

North city limits

Non-Add Mileage

Roadways with one direction of travel and milepoints that decrease in the direction of travel. The Pacific Highway 1, Interstate 5, is the only exception in that the non-add mileage is accumulated in the direction of increasing milepoints.

Non-Freeway

State highway or segment of highway which does not meet federal freeway standards.

Non-System

Roadway that is not administered by ODOT and not part of the State Highway System.

O

O-Pass

Overpass

OR / ORE

A route system established by the Oregon Transportation Commission (OTC) in 1932 to facilitate travel on main highways over the shortest distance and the best roads throughout the state. This route system is currently regulated by the OTC. OR Routes are signed routes. Not all OR Routes are state highways. Not all state highways have an OR Route number.

Overlapping Mileage

See Z Mileage

O-Xing

Over-crossing

P

Primary

Refers to a state highway having a highway number lower than 100.

R

Roadbed

Completed excavations and embankments for the subgrade, including ditches, side slopes, and slope rounding, if any.

GLOSSARY

Roadway

I.T.I.S. defines "roadway" as the portion of the highway, including shoulders, intended for vehicular use. The ODOT CAR Unit codes traffic crashes according to the ANSI D16-1.1996 definition, 2.2.28, which distinguishes shoulder areas from roadways, in classifying motor vehicle traffic crash locations.

Route

A designated path through a road network

Rural Area

Generally, the geographic area that exists outside an urban transportation boundary. For the purposes of this publication, "Rural Area" is a sub-category representing the area which exists outside an urban transportation boundary *and* outside the limits of an incorporated city.

Rural City

For the purposes of this publication, "Rural City" is a sub-category representing the area which exists outside an urban transportation boundary but at or inside the limits of an incorporated city.

R/W

Right of way

S

SBD

Southbound direction of travel

SCL

South city limits

Secondary

Refers to a state highway having a highway number higher than 99.

Segment

A length of highway between a given set of milepoints.

Signed Route

Any designated route which is signed (e.g. US, OR / ORE, Interstate, scenic byway, historic route, etc.

Spur

Any State Highway designated as such by the Oregon Transportation Commission; prevalently a branch or extension of an existing State Highway.

GLOSSARY

State Highway

A land-based public way designated by the Oregon Transportation Commission as a highway for the purpose of vehicular travel. The State of Oregon commonly has, but may not have all, right, title, interest, jurisdiction, maintenance and control of the entire area within the highway right-of-way.

State Highway Index Number

An Oregon Transportation Commission approved identifier assigned to a highway. The valid range of identifiers is from 1 to 499. This number is used internally within ODOT, and should not be confused with the Route Number posted along the highway. Reference Tables 1 and 2 of this publication cross-reference the highway index number with their posted route numbers.

Suburban Area

For the purposes of this publication, "Suburban Area" is a sub-category representing the area which exists inside an urban transportation boundary but outside the limits of an incorporated city.

System

A shortened term indicating that the subject roadway is a State Highway, under ODOT jurisdiction

T

Temporary Mileage

Milepoints assigned to a temporary traveled route.

Temporary Traveled Route

Roads that are meant to temporarily function as state highways until a replacement state highway alignment is built or dedicated. These roads do not belong to ODOT, but ODOT has legally agreed to maintain them. TTR's can occur because of a detour or highway construction.

U

Urban Area

Generally, the whole geographic area that exists at or within an urban transportation boundary. For the purposes of this publication, Suburban Areas and Urban Cities exist within an Urban Area.

GLOSSARY

Urban City

For the purposes of this publication, "Urban City" is a sub-category representing the area which exists at or inside the limits of an incorporated city which is in turn within an urban transportation boundary.

US Route

A route system that was established by Congress in 1926 to facilitate travel on main highways over the shortest distance and best roads nationwide. This route system is currently regulated by an AASHTO committee. US Routes are signed routes. Not all US Routes are state highways.

U-Xing

Under-crossing

W

WBD

Westbound direction of travel

WCL

West city limits

Z

Z Mileage

Milepoints assigned to a roadway when the roadway has been lengthened due to realignment.
