Flight Test Report Guide

Introductory Note and General Instruction

1. Special Appendix to CAM 3 has been prepared to provide a guide to aid the applicant in conducting complete type certification flight tests and in the preparation of a flight test report. The report format is very similar to that which FAA flight test inspectors have used for years when conducting and preparing their report of official type inspection flight tests. The report guide may also be used to assure that the minimum required critical flight characteristics, performance and pilot operation aspects are considered during a type certification program.

2. To facilitate the location of and reference to applicable requirements, there is included a CAR/CAM cross reference index. In addition, opposite each item in the margin of the report guide is shown the applicable reference CAR/CAM 3 section together with any subsequent amendment number (in parenthesis). The report is arranged in a logical sequence of item investigation to facilitate the collection of flight data.

3. The report may be duplicated by an applicant. Only the portions and questions applicable to the model involved or to the alteration of a certificated model, need to be included in the final report. Care should be exercised that basic information is supplied in each instance and that any inapplicable items and questions are struck out. Whenever it is necessary or desirable to include extra information for a particular item, a notation should be entered "see remarks" or "see attachment _____".

4. It should be noted that the underlined answer (yes or no) to a question means that the model does not comply with the reference applicable requirement. In the preparation of a report, care should be exercised to either circle the right answer or to strike out the wrong answer(s). If the model has features providing equivalent airworthiness to the requirement, it should be explained under "REMARKS" per paragraph 3 above.

TABLE OF CONTENTS

SECTION IV PERFORMANCE (continued)

CAR AND CAM 3 CROSS REFERENCE INDEX

Section:		Item:
	Ground and Water Characteristics	
3.144	Longitudinal stability and control.....	VA(4) VA(5) VB(2) VC(1) VC(2) VC(3)
3.145	Directional stability and control.....	IIE7a VA(1) VA(2) VA(3) VB(6) VB(7) VC(1) VC(2) VC(3) VC(6)
3.145(c)	Directional stability and control.....	VB(3)
3.146	Shock absorption.....	VA(6)
3.147	Spray characteristics.....	VB(1)
	Flutter and Vibration	
3.159	Flutter and vibration	IIF1b IIF3b VE2p(22) VE2q(22) VE2s(15)(c)
	SUBPART C - STRENGTH REQUIREMENTS	
	Ground Loads	
3.242	Design weight.....	IIE9a IIE9d(1) IIE9d(2) IIE9d(3) IIE9d(4) IIE9d(5) IIE9g IIE9h IIE9i IIE9j

Section:		Item:
	SUBPART D - DESIGN AND CONSTRUCTION	
	Flutter and Vibration	
3.311	Flutter and vibration prevention measures.....	IIF1b IIF3b
	Control Surfaces (Fixed and Movable)	
3.328	Installation.....	IIE8b
	Control System	
3.335	General.....	IIA1a IIA1b IIA1d IIA1g(9)(d) IIB1a(1) IIE1a(6) IIE7c(1) IIE7d IIE8b IIE8d IIE9d(c)(6) VB(6) VC(5)
3.337	Trimming controls.....	IIA1d
3.337-2	Electrical trim tab systems.....	IIA1d(6)
3.337-3	Trim device indications.....	IIA1d(4)
3.338	Wing flap controls.....	IIA1e IIE12a
3.338-1	Wing flap position indicators.....	IIA1e
3.339	Flap interconnection.....	IIA1e
3.341	Control system locks.....	IIA1f
	Control System Details	
3.347	Spring devices.....	IIE8c IIF4
	Landing Gear	
	Shock Absorbers	
3.351	Tests.....	VA(7)

Section:		Item:
	Operation	
3.435	Fuel flow rate for pump systems.....	IIC3d(2)
3.437(a)	Determination of unusable fuel supply and fuel system operation on low fuel.....	IIIA1 IIIA1a
3.437(b)	Unusable fuel determination and low fuel system operation.....	IIIA1
3.437(c)	Unusable fuel determination and low fuel system operation.....	IIIA2b
3.437(d)	Unusable fuel determination and low fuel system operation.....	IIIA2c
3.437(f)	Unusable fuel determination and low fuel system operation.....	IIIA2a
3.437(e)	Unusable fuel determination and low fuel system operation.....	IIIA2e
3.438	Fuel system hot weather operation.....	IIIA2d
3.439	Flow between interconnected tanks.....	IIC3a(3)
	Fuel Tanks	
3.440	General.....	IIIA1b
3.446	Fuel tank vents and carburetor vapor vents.....	IIC3b(1) IIC3b(2)
3.447-A	Fuel tank vents.....	IIC3b(3)
	Fuel Pumps	
3.449	Fuel pump and pump installation.....	IIC3d(1)
3.449(b)	Fuel pump and pump installation.....	IIC3d(3)
	Lines, Fittings, and Accessories	
3.550	Fuel system lines and fittings.....	IIC1d(6)(b)
3.551(a)	Fuel valves.....	IIC3a(4)(a)
3.551(b)	Fuel valves.....	IIC3a(4)(b)
3.551(c)	Fuel valves.....	IIA1g(9)
	Oil System	
	Oil Tanks	
3.568(b)-A	Oil tank vent.....	IIC4a
	Lines, Fittings, and Accessories	
3.570	Oil system lines, fittings, and accessories.....	IIC1d(6)(c)
3.575(b)-A	Engine breather lines.....	IIC4a
3.577	Propeller feathering system.....	IIC2f(5)
	Cooling	
3.581	General.....	IIIC

_____

FLIGHT INSPECTION CONDUCTED BY: _____

REPORT PREPARED BY: _____

REPORT REVIEWED BY: _____

REPORT APPROVED BY: _____

SECTION 0. ADMINISTRATIVE INFORMATION

A. Administrative Data:

1. Airplane(s) Tested: Model No._____
Serial No._____Registration No._____

2. When were flight tests conducted?_____To_____

3. Where were flight tests conducted?_____

4. Has applicant:

3.65 a. Submitted a Report on Calibration of Instruments and correction of test results to standard atmospheric conditions..... Yes No

3.16 b. Submitted a report of his flight tests (Attach report)..... Yes No

3.62 c. Provided a pilot with a valid and appropriate pilot certificate to make the flight tests? (State which certificate_____) Yes No

3.64 d. Provided satisfactory emergency egress on the test airplane, such as door rip hinges, for use of the crew wearing parachutes? Yes No

3.63 5. Was the applicant's test pilot unable or unwilling to conduct any of the required official flight tests or, were items of non-compliance found which might render additional test data meaningless or which were of a nature to make further testing unduly hazardous?..... No Yes

If yes, were official flight tests discontinued and a formal notice of discontinuance issued? (Attach copy).....NA Yes No

6. If a partial type test, do attachments (page) describe nature of alteration?..... Yes No

If no, describe below:

_____

_____

_____

_____

_____

_____

SECTION O. ADMINISTRATIVE INFORMATION:

A. Administrative Data: (continued)

7. Were changes made to the airplane during type test? (If "yes", give details)..... Yes No

_____

_____

_____

_____

3.10 8. Are all CAR/CAM provisions met?..... Yes No

If "no" were they compensated for by factors which provide an equivalent level of safety?..... Yes No

(Describe all such compensating factors under remarks)

3.10 9. Were any regulatory or policy difficulties encountered during the type tests?..... Yes No

(If "yes", briefly state their nature under remarks and reference the separate communication which transmitted these difficulties with a recommended solution.)

3.750 10. Type(s) of operation:

a. Is the intended type(s) of operation to be:

(1) Transportation (Air Taxi, Business, Personal)?..... Yes No

(2) Work operations (Aerial Application, Surveying Patrol, Prospecting, Mapping, Conservation) other (Specify)?..... Yes No

(3) Day operations?..... Yes No

(4) Night operations?..... Yes No

(5) IFR operations?..... Yes No

b. Was any feature or characteristic of the airplane found which renders it unsafe for the category in which it is to be certificated and for the type of operation intended? No Yes

SECTION O. ADMINISTRATIVE INFORMATION:

A. Administrative Data: (continued)

3.750
3.651
3.655

11. Are all of the required equipment items provided for the intended type of operation and are they installed satisfactorily?..... Yes No

(List below all the equipment items installed, tested and found to comply, that were in excess of the minimum (day-VFR) requirements.)

_____

_____

_____

_____

_____

_____

_____

_____

3.11(a)
3.12

12. State below the date of the amended CAR 3 and the amendments, if any, which are applicable:

CAR 3 amended to_____

Amendments: No_____Date_____

_____Date_____

_____Date_____

3.16(b)
3.16-1

13. If airplane type is over 6,000 pounds, has the TCB decided upon the program, as required, for additional service tests?..... NA Yes No

(A copy of this accelerated service test report is to be forwarded to each TIR holder)

14. Has a copy of SECTION O. and SECTION I. of this report form been forwarded to all regions and Washington?..... Yes No

SECTION O. ADMINISTRATIVE INFORMATION

A. Administrative Data: (continued)

15. Flight Test Log:

Date	Time of Takeoff / Landing	Test Description	Remarks	Elapsed Time Hrs.	Elapsed Time Min.

Total Flight Test Time _____

SECTION O. ADMINISTRATIVE INFORMATION:

A. Administrative Data: (continued)

16. List results of special tests specified in the Type Inspection Authorization.

SECTION O. ADMINISTRATIVE INFORMATION

B. Reference Data:

SECTION I. CERTIFICATION INFORMATION:

A. Type of Operation Limitations:

3.20 1. Category: (check appropriate space(s))

Normal	( )	Landplane	( )
Utility	( )	Seaplane	( )
Acrobatic	( )		

47.21
49.30
3.750 2. Equipment: Items installed and found satisfactory for:
(check appropriate space(s))

General Operations (CAR 43)		Air Taxi Operations (CAR 47)	
VFR (Day)	( )	VFR (Day)	( )
VFR (Night)	( )	VFR (Night)	( )
IFR	( )	IFR (Day)	( )
		IFR (Night)	( )

3.74 B. Maximum Certificated Weights:

Category	Takeoff	Landing
Normal	_____lbs.	_____lbs.
Utility	_____lbs.	_____lbs.
Acrobatic	_____lbs.	_____lbs.

3.71
3.748 C. C.G. Limits: (To be noted in each case with wheels down. Also attach wt. vs c.g. chart.)

1. Most Forward C.G._____inches From Datum (___% MAC) Wt._____
2. Most Forward C.G._____inches From Datum (___% MAC) At. Max. Wt._____
3. Most Rearward C.G._____inches From Datum (___% MAC) Wt._____
4. Most Rearward C.G._____inches From Datum (___% MAC) At Max. Wt._____

SECTION I. CERTIFICATION INFORMATION: (continued)

D. Operating Limitations and Information:

1. Airspeeds: (M.P.H.)

3.739 (a) Never Exceed Speed (V_{ne}).....___CAS

3.740 (b) Maximum Structural Cruising Speed (V_{nc}):.....___CAS

3.741
3.771(c) (c) Maximum Rough Air or Maneuvering Speed (V_p).....___CAS

3.742(a) (d) Maximum Speed, Flaps Extended (V_{fe}):.....___CAS

3.742(b) (e) Maximum Speed, Intermediate Flaps, Flaps Extended:__°___CAS

3.771(a) (f) Maximum Speed, Landing Gear Extended:.....___CAS

3.778(a) (g) Maximum Speed for Lowering of Landing Gear:.....___CAS

3.743
3.111
3.771(b) (h) Minimum Controllability Speed (Multiengine V_{mc}):.....___CAS

SECTION I. CERTIFICATION INFORMATION:

D. Operating Limitations and Information: (continued)

3.747 2. Powerplant Limitations With Minimum Octane Fuel Rating Of_____

(a) Take-off Power (Time Limit_____Minutes)

R.P.M.	M.P.	B.H.P.	Altitude	Blower

3.746 (b) Maximum Continuous Power
3.759

R.P.M.	M.P.	B.H.P.	Altitude	Blower

3.759 (c) Avoid Continuous Operation of Engines:

(1) Between_____To_____R.P.M.

(2) No Restriction ( )

3.745 (d) Maximum Allowable Cylinder Head or Coolant Outlet Temperature (See
3.746 TIA)
3.759 T.O._____°C_____°F. MCP_____°C _____°F.

Type of Thermocouple: Washer_____ Bayonet_____

(e) Maximum Allowable Oil Temperature (See TIA)

T.O._____°C_____°F. MCP_____°C _____°F.

556107 O - 60 - 3

SECTION I. CERTIFICATION INFORMATION:

D. Operating Limitations and Information: (continued)

3. Propeller

(a) For fixed, ground adjustable, or automatic varying pitch:

(1) Diameter:

Not more than_____inches

Not less than_____inches

(2) Static R.P.M.

Not more than_____

Not less than_____

(b) For flight controllable:

(1) Type: (Circle one)

Two-position, Constant speed,

Feathering, Reversible.

(2) Diameter:

Not more than_____inches

Not less than_____inches

(3) Pitch in Degrees:

Low_____High_____

Feathered_____

(4) At_____inch Station

SECTION I. CERTIFICATION INFORMATION:

D. Operating Limitations and Information: (continued)

3.755(b) 4. Approved Flight Maneuvers

(a) Is airplane to be certificated in more than one category?..... Yes No

If "yes", state which category is "basic"_____

_____

3.20-2
3.755-1(a)(7) (b) If utility category is involved, list: NA

Approved Maneuvers	Entry Speeds MPH (CAS)
Spins	
Lazy eights	
Steep turns (over 60° bank)	
Chandelles	

3.108-A (c) If acrobatic category is involved, list: NA

Approved Maneuvers	Entry Speeds MPH (CAS)

SECTION I. CERTIFICATION INFORMATION:

D. Operating Limitations and Information: (continued)

3.749 5. Minimum Flight Crew

The minimum flight crew for contact (VFR) flight consists of

_____

_____

3.755(a) 6. Additional Placards or Markings Required For Safe Operation of this Type Airplane (due to its unusual design, operating, or handling characteristics):

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

3.72 7. Removable Ballast

Is removable ballast to be used to meet operational requirements?..... Yes No

If "yes", specify instructions below that are required governing its use.

_____

_____

_____

_____

SECTION I. CERTIFICATION INFORMATION: (continued)

E. Summary of Performance Data:

1. Speeds (Maximum T.O. Weight)

a. Maximum level speed at _____Ft. Altitude at _____% M.C. Power:.....____C.A.S. - M.P.H.
b. Cruising Speed at _____Ft. Altitude at 75% M.C. Power:.....____C.A.S. - M.P.H.
c. Stalling speed, power off, flaps up:.....____C.A.S. - M.P.H.
d. Stalling speed, power off, landing flap (___°).____C.A.S. - M.P.H.
e. Stalling speed, power on at _____% M.C. Power, flaps up:.....____C.A.S. - M.P.H.
f. Stalling speed, power on at _____% M.C. Power landing flaps (_____°):.....____C.A.S. - M.P.H.

2. Climb Performance (All Engine(s) Operating: Maximum Take-off Weight)

(a) Normal climb (M.C. Power T.O. Flaps, Gear Up)

Altitude	S.L.	L. Blower Critical Altitude _____Ft.	H. Blower Critical Altitude _____Ft.	Service Ceiling _____Ft.	Absolute Ceiling _____Ft.
R/C (Ft/Min)				100	0
R/C Speed CAS (MPH)					
Slope					

(b) Balked Landing Climb (T.O. Power, Gear, Flaps Down, Maximum Landing Weight)

Altitude	S.L.	L. Blower Critical Altitude _____Ft.	H. Blower Critical Altitude _____Ft.	Service Ceiling _____Ft.	Absolute Ceiling _____Ft.
R/C (Ft/Min)				100	0
R/C Speed CAS (MPH)					
Slope					

SECTION I. CERTIFICATION INFORMATION:

E. Summary of Performance Data:

2. Climb Performance: (continued)

c. Critical Engine Inoperative (Left_____Right_____)
Maximum T.O. Weight - Inoperative Propeller, Feathered,
Windmilling at RPM, M.C. Power on other engine, Flaps Up

Altitude	S.L.	L. Blower Critical Altitude _____FT.	H. Blower Critical Altitude _____FT.	5000 FT.	Service Ceiling _____FT.
Landing Gear Up-Climb/ Descent* (Ft/Min)					50
Landing Gear Down-Climb/ Descent* (Ft/Min)					xxx
Best Rate Speed CAS-MPH					

* Show climb "+", descent "-"

3. Take-Off And Landing Performance:

a. Distance - Take-Off And Climb To 50 Feet (Maximum T.O. Weight Corrected To Standard Conditions.)

		S.L.	3500 Ft.	7000 Ft.
T.O. Ground Run	(ft.)			
Distance From Liftoff to 50 Feet.	(ft.)			
Total	(ft.)			
CAS At 50 Ft. At Least 1.3 V_{SO} = _____	(MPH)			

b. Distance - Land Over 50 Foot Obstacle and Stop (Maximum Landing Weight Corrected To Standard Conditions.)

CAS At 50 Ft.	(MPH)			
Distance From 50 Feet To Touchdown	(ft.)			
Ground Roll	(ft.)			
Total	(ft.)			

F. Cross component of wind velocity for safe take-off and landing has been demonstrated to be _____MPH (Must be at least 0.2 V_{SO})

SECTION II. EQUIPMENT AND FLIGHT OPERATION

A. Pilot and Passenger Compartment:

1. Controls:

3.335	a. Do all controls operate with sufficient ease, smoothness, and positiveness during flight?.....	Yes	No
3.335 3.384(a)	b. Are complete engine, propeller, landing gear, flight (with exception of primary flight), ignition, fuel valves, and other aircraft controls arranged and identified to provide convenience in operation and to prevent inadvertent operation?.....	Yes	No
3.384	(1) Are above cockpit controls convenient to the pilot?...	Yes	No
3.384	(2) May full and unrestricted movement of each cockpit control be obtained without any interference from either the pilot's clothing or cockpit structure?.....	Yes	No
3.384	(3) Do the primary flight controls operate as follows:		
	Aileron - Right (clockwise) for right wing down.....	Yes	No
	Elevator - Rearward for nose up.....	Yes	No
	Rudder - Right pedal forward for nose right.....	Yes	No
3.762 3.762-1	c. Are all cockpit controls, except primary flight controls and pushbutton starter controls marked as to method of operation and function?.....	Yes	No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

1. Controls: (continued)

3.335
3.337
3.384(a)

d. Are all trimming controls:

(1) So designed, arranged, identified, and located to provide convenience in operation and prevent the possibility of confusion and subsequent inadvertent, improper or abrupt operation?..... Yes No

(2) Provided with adjacent means to indicate control movement relative to the airplane motion?..... Yes No

(3) Position indicators easily visible to the pilot and so located and operated as to preclude the possibility of confusion?..... Yes No

3.337-3

(4) Provided with adjacent means to indicate the position of the trim device with respect to its range of adjustment including when the trim device is in neutral?..... Yes No

(5) Employing tabs provided with an irreversible system?.. Yes No

(a) If "yes", is there any indication of reversibility in flight?..... No Yes

3.337-2

(6) Employing electrical actuating systems such that no dangerous uncontrollability reactions can occur in the event of an electrical malfunction when corrective action (primary control system) is delayed two seconds after malfunction detection and without requiring undue effort or concentration by the pilot for a prolonged period of time and perform all necessary maneuvers and operations?..... NA Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

1. Controls: (continued)

3.338 e. Are flap controls:

3.338-1

3.339 (1) Such that the flap(s) will not move from any position required for performance compliance unless further adjusted or by an automatic load limiting device?..... Yes No

(2) Provided with an indicator or other means to indicate the flap extended, retracted, and any other position required for performance compliance?..... Yes No

(3) Such that the rate of movement in response to the pilot's control, or automatic device, results in unsatisfactory flight or performance characteristics?. No Yes

(4) Such that flaps are mechanically interconnected?..... Yes No

(a) If "no", has airplane safe flight characteristics with flaps retracted on one side and extended on other?..... Yes No

3.384(c) (3-5) (5) Located centrally or to the right of the pedestal centerline or of the powerplant throttle control centerline and sufficiently displaced from the landing gear control to avoid confusion?..... Yes No

3.341 f. Is a control surface lock system installed?..... Yes No

If "yes", answer the following:

(1) When in "locked" position, does it provide an unmistakable warning to the pilot?..... Yes No

(2) Are means provided to preclude possibility of the lock becoming engaged in flight?..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

1. Controls: (continued)

g. Powerplant Controls:

3.384(b) (1) In multiengine airplanes, are identical controls for the several engines so located as to prevent any misleading impression as to the pertinent engine?.... NA Yes No

3.627 (2) Will controls maintain any set position without further attention and without creeping due to control loads or vibration?..... Yes No

3.627 (3) Have controls adequate strength and rigidity under operating loads?..... Yes No

3.628 (4) Throttle Controls:

(a) Does each throttle afford a positive and immediately responsive means of controlling the engine?..... Yes No

(b) Are controls so grouped to permit separate and also simultaneous control of all engines?.. NA Yes No

(c) Does a forward motion open the throttle?..... Yes No

3.629 (5) Ignition Switches:

(a) Can all ignition switches on multiengine airplanes be quickly shut off?..... NA Yes No

(b) If a master control is provided, are means provided to prevent inadvertent operation?.... NA Yes No

3.630 (6) Mixture Controls:

Is separate and also simultaneous control of all engines considered satisfactory?..... Yes No

3.631 (7) Propeller Speed and Pitch Controls:

(a) Are controls grouped to permit control of all propellers both separately and together?..... Yes No

(b) Do controls permit ready synchronization of all propellers?..... NA Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

1. Controls:

g. Powerplant Controls: (continued)

3.632 (8) Propeller Feathering Controls:

Is a separate control provided for each propeller and are means provided to prevent inadvertent operation? NA Yes No

3.551(c) (9) Fuel System Controls:

(a) Are fuel valves provided with either positive stops or feel in the on and off positions?..... Yes No

3.764 (b) Are these valves marked clearly (on or adjacent to valve) to indicate:

3.764(a) (1) Position corresponding to each tank and any cross feed position that may exist?..... Yes No

3.764(b) (2) The specific sequence in which the tanks are to be used when this sequence is required for safe operation of the airplane?..... NA Yes No

3.764(c) (c) On multiengine airplanes, are controls for engine selector valves marked to indicate position corresponding to each engine?..... NA Yes No

3.335 (d) Are fuel valves so located that it is unlikely to accidentally move them by pilots legs, clothing, etc.?..... Yes No

3.764(d) (e) Is the usable capacity of each tank indicated adjacent to or on the fuel tank selector control?. Yes No

3.634 (10) Carburetor Air Preheat Controls:

Are separate controls provided to regulate the temperature of the carburetor air for each engine?. NA Yes No

3.381(a) h. General:

May the pilot perform all his duties and operate the controls in a correct manner without unreasonable concentration and fatigue?..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment: (continued)

2. Crew Accommodations:

a. Vision:

(1) Does the cockpit arrangement permit the pilot to have an extensive, clear and undistorted view for safe operation of the airplane in flight and on the ground?..... Yes No

(2) If tinted windshields and/or side windows are installed, does this tinting impair day, night or IFR vision?.. NA Yes No

(3) Does the pilot, during flight in a moderate rain condition, have view of the flight path for normal flight and landing with sufficient protection from the elements that vision is not impaired?..... Yes No

(a) Is this obtained by a window, the windshield, or a portion thereof which may be opened in flight?..... Yes No

(b) Or, by an item of equipment which will maintain the windshield in a clean condition without continuous attention by the pilot?..... Yes No

(c) While observing the flight path through the open window or windshield, are the flight instruments visible without difficulty or excessive head movement?.... Yes No

(4) Is the pilot's compartment free of glare and reflections which would interfere with the pilot's vision:

(a) During sunny-day flight?..... Yes No

(b) During night flight?..... NA Yes No

3.661(a) b. Are all flight, navigation, and powerplant instruments for use by each pilot easily visible to him?..... NA Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

2. Crew Accommodations: (continued)

3.386 c. Crashworthiness provisions:

(1) Does it appear that all occupants, making proper use of belts or harnesses will, with reasonable probability, escape serious injury from penetrating or relatively solid objects (structural features which can be lethal in a crash), including a wheels-up landing, in the event of a minor crash?..... Yes No

3.386(c) (2) For airplanes, other than in which the possibility of a turnover is remote, is there reasonable protection of the occupants in a complete turnover?..... NA Yes No

3.387(d) (3-4) d. Exits:

Are exits provided for A Category that will permit all occupants with parachutes to bail out quickly at normal flight speeds?..... NA Yes No

3.390(a) e. Seats:

(1) If crew seats are adjustable, are adjustments easily made, intermediate positions secure, not subject to displacement during takeoff and landing operations, and operate satisfactorily?..... NA Yes No

3.390(b) (2) Are all seats in the A Category capable of accommodating passengers wearing parachutes unless placarded otherwise? Yes No

3.755(a) f. Operational Placards and Markings:

(1) Are the following operational placards displayed in a conspicuous place, clear, and not subject to misinterpretation:

3.755(b)
3.755-1
3.770 (a) Category placard which states the basis of all markings and placards with reference, if required, to AFM information on other categories, and includes the following statement?..... Yes No

"This airplane must be operated as a_____ or_____category airplane in compliance with the operating limitations stated in the form of placards, markings, and manuals".

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

2. Crew Accommodations:

f. Operational Placards and Markings:

(1) Are the following operational placards....(continued)

3.769 (b) Prohibited or approved flight maneuvers placard?..... Yes No

3.755-2(b) (c) Flaps operational settings placard, if dangerous characteristics result from an improper setting?.. NA Yes No

3.124(c)(4) (d) Spin recovery procedure placard?..... NA Yes No

(For acrobatic category, and utility category when demonstrated to meet acrobatic category requirements)

3.771 (e) Airspeed Placards

____ Maximum speed with landing gear extended?.... NA Yes No

____ Minimum control speed with one engine inoperative? NA Yes No

____ Rough air or maneuvering speed?..... Yes No

3.766
3.755-1(a)(6) (f) Weight and Loading Placards (baggage, cargo, seats, cabin, removable ballast, Normal Category Operations vs Utility Category)..... NA Yes No

3.768 (g) Emergency Exit Placards (placard and controls to be colored red, placard to be adjacent to control and to clearly indicate it as an emergency exit and its method of operation)?..... NA Yes No

3.755(a) (h) Additional Placards (having a direct bearing on safe operation and required by the type's unusual design, operating, or handling characteristics)..... NA Yes No

If additional placards are required, list below:

_____

_____

_____

_____

_____

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

2. Crew Accommodations:

f. Operational Placards and Markings: (continued)

3.756 (2) Are the following instrument markings clear and easily visible to the pilot?

3.757(a) (a) Airspeed indicator

3.757-1

V_{ne}	– Red radial line.....		Yes	No
Caution Range	– Yellow arc (from V_{ne} to V_{no}).....		Yes	No
Normal Range	– Green arc (from V_{no} to V_{sl}).....		Yes	No
Flap Range	– White arc (from V_f to V_{s_o}).....		Yes	No

3.757(b) (b) Variable V_{ne} and V_{no} speed limitations, if applicable.. NA Yes No

3.759 (c) Powerplant Instruments

3.759-1

Maximum safe limit	– Red radial line.....		Yes	No
Minimum safe limit	– Red radial line.....		Yes	No
Normal operating range	– Green arc.....		Yes	No
Takeoff range	– Yellow arc.....		Yes	No
Precautionary range	– Yellow arc.....		Yes	No
RPM range(s), if any, to be avoided	– Red arc.....	NA	Yes	No

3.755(a) (d) Additional Instrument Markings..... NA Yes No

(Having a direct bearing on safe operation and required by the type's unusual design, operating, or handling characteristics.)

If additional markings are required, list below:

_____

3.765(b) (3) Accessory and Auxiliary Controls

Are all emergency controls colored red and clearly marked as to their method of operation?..... NA Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

2. Crew Accommodations: (continued)

g. Operating Limitations and Information for Crew

3.777 (1) Airplane Flight Manual

An AFM is required for airplanes with maximum certificated weight over 6000 lbs.

Is maximum certificated airplane weight over 6000 lbs.? (_____lbs.) Yes No

If "yes", answer the following:

(a) Is an Airplane Flight Manual provided?..... Yes No

(b) Does it contain only required material, or, is there a distinct separate section confined to the required material?..... NA Yes No

(c) Is the FAA approved portion so marked and identified that no one can easily err in distinguishing approved from unapproved information?..... NA Yes No

(d) If more than one page, is a cover provided with the title "Airplane Flight Manual"?..... NA Yes No

(e) Does each page bear the notation "FAA approved" and date of issuance?..... NA Yes No

(f) Is the material bound in a semi-permanent manner so that pages will not be easily lost, but so that revised pages can be inserted?..... NA Yes No

(g) If airplane has tentative approval only, does the following statement appear on the inside of the front covering page?..... NA Yes No

"The certificate of airworthiness issued to the aircraft described hereon, subject to the final issuance of a covering type certificate, is based upon tentative approval of aircraft of this model. Upon issuance of a covering type certificate it may become necessary to make certain modifications or adjustments to the subject aircraft in order that the certificate of airworthiness may remain effective."

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

2. Crew Accommodations:

g. Operating Limitations and Information for Crew:

(1) Airplane Flight Manual: (continued)

3.777-1(e)	(h) Does the sequence of sections and of items within sections follow the outline of CAM 3.777-1(d) thru (h), except where inapplicable?.....	NA	Yes	No

(2) Required information: Is the following information provided?

3.778(a)	(a) Operating Limitations			
	Airspeeds - Correct airspeed indicator markings?.....		Yes	No
	- Design and maneuvering speeds?.....		Yes	No
	- Maximum safe speed to lower gear?.....		Yes	No
	- Significance of limitations and of color?..		Yes	No
3.778(b)	Powerplant - An outline and explanation of all powerplant limitations?.....		Yes	No
	- Correct powerplant instrument markings?...		Yes	No
3.73 3.778(c)	Weight - Maximum certification weight?.....		Yes	No
	- Weight Empty (including a list of items of equipment installed and their locations) and its C.G. location?.....		Yes	No
	- Useful load?.....		Yes	No
	- Useful load composition, including weight of fuel and oil with full tanks?.....		Yes	No
3.778(d)	Load Distribution - C.G. limits?.....		Yes	No
3.76	- Satisfactory loading combinations?	NA	Yes	No
3.72	- Removable ballast amount(s), location, and any cautionary information, such as adverse effects on spins?.....	NA	Yes	No

556107 O - 60 - 4

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

2. Crew Accommodations:

g. Operating Limitations and Information for Crew:

(2) Required information: Is the following information provided?

(a) Operating Limitations: (continued)

3.778(e) Maneuvers – All authorized maneuvers (with appropriate entry speeds) by category?..... NA Yes No

– All unauthorized maneuvers?..... NA Yes No

– Statement re "characteristically incapable of spinning"?..... NA Yes No

3.778(f) Flight Load Factor – Positive limit load factors in terms of acceleration which structure can stand?..... Yes No

3.778(g) Flight Crew – Minimum number and functions of each, if more than one person required to operate plane safely?..... NA Yes No

3.755-2(b) Flap Settings – Improper settings, if any, and resulting dangerous characteristics? NA Yes No

(b) Operating Procedures

3.779 NORMAL PROCEDURES (Preferably in a separate section)

– Recommended airspeeds, power settings, trim and flap settings to be used in each of the basic phases of flight, namely:

(1) Preflight..... Yes No

(2) Takeoff and climb-out..... Yes No

(3) Inflight maneuvering or cruising..... Yes No

(4) Approach (including a go-around) and landing roll..... Yes No

(5) Post flight..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

2. Crew Accommodations:

g. Operating Limitations and Information for Crew:

(2) Required information: Is the following information provided?

(b) Operating Procedures: (continued)

EMERGENCY PROCEDURES (Preferably located in a separate section or on red colored pages for quick reference)

- Recommended procedures for coping with different types of emergency or critical situations, such as:

(1) A go-around with an engine out.....	NA	Yes	No
(2) A landing gear malfunction.....	NA	Yes	No
(3) Engine malfunction (on a multiengine airplane)	NA	Yes	No
(4) Carburetor icing.....	NA	Yes	No
(5) Impact/external icing.....		Yes	No
(6) Turbulent air (IFR/VFR) speed and control configuration.....		Yes	No
(7) Obstacle clearance speed and configuration (from short fields and during precautionary landings).		Yes	No
(8) Fire.....		Yes	No
(9) Electrical failures (including impact on navigational devices).....		Yes	No
(10) Hydraulic failures.....	NA	Yes	No
*(11) Other pertinent information peculiar to the airplane's operating characteristics and necessary to safe operation.....	NA	Yes	No

* Includes such items as unusable fuel quantity; effects of various configurations on flight characteristics, performance, and handling (gear and flaps down, propeller not feathered and windmilling; cowl flaps open; stall warning variations; effect on an electrical stall warning indicator when master switch is turned off, etc.)

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

A. Pilot and Passenger Compartment:

2. Crew Accommodations:

g. Operating Limitations and Information for Crew:

(2) Required information: Is the following information provided? (continued)

3.780	(c) Performance Information			
3.755-2(a)	(1) Stalling speed at maximum weight, gear/flaps down, M.C. power.....		Yes	No
	(2) Stalling speed at maximum weight, gear/flaps up, M.C. power.....		Yes	No
3.120(e)	(3) Loss of altitude and pitch below level flight during stall recovery.....	NA	Yes	No
	(4) Climb at M.C. power in takeoff configuration.....		Yes	No
	(5) Climb at M.C. power (all engines) climb configuration.....		Yes	No
	(6) Climb at takeoff power in landing configuration (for go-around).....		Yes	No
	(7) Climb - engine out - enroute configuration...	NA	Yes	No
	(8) Climb/sink - engine out - landing/approach configuration.....	NA	Yes	No
	(9) Landing distance and speed from 50 feet.....		Yes	No
3.122 3.780(b)	(10) Variation of stalling speed with angle of bank up to 60° (maximum weight, gear/flaps up).....		Yes	No
	(11) Items required for airplanes with a maximum certificated weight over 6000 lbs.			
	(a) Takeoff distance and speed to clear 50 feet		Yes	No
3.780-1 3.780-2 3.780-3	(b) Variation (calculated) of takeoff distance, landing distance and rates of climb from effects of altitude and temperature.....		Yes	No
3.780(d) (3-5)	(12) The best climb/minimum descent speed for multiengine airplanes with one engine inoperative?.....	NA	Yes	No

REMARKS

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

B. Fire Protection:

3.388-2 1. Built-in Fire Extinguishing Systems:

a. Is a built-in fire extinguishing system installed?..... Yes No

If "yes", answer the following:

3.335 (1) Is it properly identified, or marked for method of operation and does it operate satisfactorily?..... Yes No

(2) Can a hazardous amount of fire extinguishing agent enter the pilot or passenger compartment in flight or on the ground (as a leak or when operated)?..... No Yes

b. Is a fire detection system installed?..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

C. Powerplant

1. Engine:

a. Engine Name and Model _____
T. C. No. _____

b. Carburetor Name and Model _____

c. Engine Gear Ratio _____

d. Operation:

3.15(a) (1) Is the engine(s) new or in such condition that it apparently is developing its power rating(s)?..... Yes No

3.411(b) (2) Are vibration characteristics of engine installation apparently normal at all operating speeds on the ground and in flight?..... Yes No

If "no", indicate rough spots _____ to _____ R.P.M. to be avoided.

3.662 (3) Does the engine(s) shake instruments excessively, such as to cause the accuracy of the instruments to be inadequate, or to cause damage to them?..... No Yes

3.429 (4) Does the engine(s) accelerate promptly upon quickly opening throttle after glide for landing?..... Yes No

3.429 (5) Is there any uneven engine operation during takeoff which might indicate that carburetor will not feed properly in bumpy takeoff?..... No Yes

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

C. Powerplant:

1. Engine:

d. Operation: (continued)

(6) Do the following items show signs of excessive vibration and/or distortion from engine movement, air loads, or accelerated flight conditions?

3.625 (a) Cowling..... No Yes

3.550 (b) Fuel Lines..... No Yes

3.570 (c) Oil Lines..... No Yes

3.671 (d) Instrument Lines..... No Yes

3.616 (e) Manifolds..... No Yes

3.627 (f) Powerplant Controls..... No Yes

(g) _____..... No Yes

(h) _____..... No Yes

3.429 (7) Engine idling speed on ground_____R.P.M.:

Is idling speed such that engine will continue to function during all maneuvers encountered in official flight tests?..... Yes No

3.627 (8) Any undesirable characteristics noted in engine control operation, or arrangement?..... No Yes

2. Propeller:

a. Blades:

(1) Make and Model_____

(2) T. C. No._____

(3) Number of Blades_____.(4) Diameter_____

(5) Material_____.(6) Activity Factor_____

(7) Thickness ratio at 3/4 radius_____

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

C. Powerplant:

2. Propeller:

b. Hub:

(1) Make and Model _____

(2) T. C. No. _____

c. Pitch:

(1) Fixed Wood _____ Inches At 3/4 radius

(2) Fixed Metal _____ Degrees At _____ Station or 3/4 radius (Indicate which)

(3) Ground Adjustable _____ Degrees At _____ Station

(4) Controllable:	Low	High	Feathered	Reversed	Station
	Degrees				Inches
(a) Two Position	____°	____°			____
(b) Constant Speed	____°	____°			____
(c) Feathering	____°	____°	____°		____
(d) Reversible	____°	____°	____°	____°	____
(e) Auto. Varying	____°	____°			____

d. Propeller Governor Model _____

e. Propeller Deicing Model _____

f. Operation:

3.417 (1) Does operation of the propeller(s) appear smooth at all operating speeds on ground and in flight?..... Yes No

(If "no", indicate rough spots _____ to _____ R.P.M. to be avoided)

_____

_____

_____

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

C. Powerplant:

2. Propeller:

f. Operation: (continued)

3.419 / 3.419-1 (2) If fixed pitch, ground adjustable, or automatically varying: NA

3.85-5 (a) Is it desired that prop permit T.O. r.p.m. at best angle of climb speed in balked landing configuration?..... Yes No

If "yes" are engine cooling requirements set at this speed?..... Yes No

If "no", is the propeller pitch such that the engine maximum permissible T.O. r.p.m. is not exceeded at T.O. power during takeoff and initial climb at best rate of climb speed?..... Yes No

R.P.M._____ I.A.S._____ M.P.H.
(C.A.S._____ M.P.H.)

(b) What is full throttle static r.p.m. (on ground)?

_____

3.420 (3) If controllable: NA

Is the positive low pitch stop in the hub set so that the engine maximum permissible T.O. r.p.m. is not exceeded at T.O. power during takeoff and initial climb at best rate of climb speed?..... Yes No

R.P.M._____ I.A.S._____ M.P.H.
(C.A S._____ M.P.H.)

(4) If constant speed: NA

3.421(a) (a) By adjustment of the governor control, is the engine speed limited to a value not exceeding the maximum permissible T.O. r.p.m.?..... Yes No

3.421(b) (b) With blades set in lowest pitch, the governor inoperative, engine operating at T.O. manifold pressure with airplane stationary and perpendicular to the wind, is the control stop in the hub set so that the static r.p.m. of the engine does not exceed 103% of the maximum permissible takeoff r.p.m.?..... Yes No

(State R.P.M. at which it is set_____)

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

C. Powerplant:

2. Propeller:

f. Operations:

(4) If constant speed: (continued)

3.419-1(b) (c) Is the airplane to be operated with and without ADI (anti-detonation injection)?..... Yes No

If "yes", were the above tests made at the lower pitch setting of the wet and dry ratings?..... Yes No

(5) If feathering: NA

3.577
3.637(b) (a) Is feathering dependent on engine oil supply?... Yes No

If "yes", in event of failure of any portion of the lubrication system other than the tank itself, may feathering be satisfactorily accomplished?..... NA Yes No

(b) At takeoff climb speed, what is time required to:

1. Feather from windmilling at_____ RPM;_____seconds

2. Unfeather until propeller reaches 1000 RPM; _____seconds

3.416(c) (3-5) (c) Can each propeller be unfeathered individually in flight?..... Yes No

(6) If reversible: NA

3.631 (a) Are these controls so grouped to permit control of the propellers separately and/or together?.. Yes No

3.627 (b) Are these controls provided with means to prevent inadvertent operation?..... Yes No

(c) At landing, what is time required to reverse the propeller from idling in low pitch to M.C. R.P.M. in negative thrust_____seconds?..

(d) Does putting throttle back increase deceleration thrust?..... Yes No

(If "no", explain procedure used):

REMARKS

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

C. Powerplant:

2. Propeller:

f. Operations: (continued)

3.411(b) (7) Deicing system:

Is deicing provided for each propeller?..... Yes No

(If "yes", conduct the following test; at cruising speed, and starting with a full tank of deicing fluid, put on maximum flow to all propellers for a 15 minute timed period, and answer the following:

(a) Is distribution to each propeller and operation in flight satisfactory?..... Yes No

(b) What is amount of fluid used?_____gallons per engine.

3.637(a) (3-2) (c) Can hazardous quantities of any flammable deicer fluid flow to the engine compartment? NA Yes No

3.637(d) (d) Are provisions made to guard against inadvertent operation of the shutoff means?... NA Yes No

3.637(d) (e) Is it possible for crew to reopen the shutoff means after it has been closed?..... NA Yes No

3. Fuel System:

a. Arrangement:

3.430 (1) Is it possible for any one fuel pump to draw fuel from more than one tank at the same time?..... NA No Yes

3.430 (2) In gravity feed system, can any engine be supplied with fuel from more than one tank at a time in such a way that tanks feed unequally?..... NA No Yes

3.439 (3) When tank outlets are interconnected, is it possible for fuel to flow between tanks in quantities sufficient to cause an overflow of fuel from the tank vent when the tanks are full and the airplane is operated in various critical attitudes?.... NA No Yes

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

C. Powerplant:

3. Fuel System:

a. Arrangement: (continued)

3.633	(4) Fuel Shutoff Valves		
3.551(a)	(a) Are means provided to permit the flight personnel to shutoff rapidly the flow of fuel to any engine individually in flight?.....	Yes	No
3.551(b)	(b) Can the flight personnel reopen the valves rapidly in flight after they have been closed?.	Yes	No
3.637(d) (3-2) 3.551(b) (3-5)	(c) Are fuel shutoff valves guarded against inadvertent operation?.....	Yes	No
3.637(a) (3-2)	(d) Does closing the fuel shutoff valve for any engine make any of the fuel supply unavailable to the remaining engines?..... NA	No	Yes

b. Fuel Tank Details:

3.446	(1) During normal operation, is there any noticeable syphoning or spilling of fuel?.....	No	Yes
3.446	(2) Are vents terminated at points where the discharge of fuel from the outlet will cause fumes to enter personnel compartments?.....	No	Yes
3.447-A	(3) In acrobatic type airplanes, is there excessive loss of fuel during acrobatic maneuvers-including short periods of inverted flight, or any syphoning from a vent when normal flight has been resumed?..... NA	No	Yes

c. Fuel Quantity Indicators:

3.672 3.672-1	(1) Are suitable means provided to indicate to the flight personnel the quantity of fuel in gallons or pounds in each tank during flight?.....	Yes	No
	(2) Are exposed sight gages so installed and guarded as to preclude the possibility of breakage and damage?. ..... NA	Yes	No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

C. Powerplant:

3. Fuel System:

c. Fuel Quantity Indicators: (continued)

3.672 (3) Are there any small auxiliary tanks that do not have quantity indicators?..... Yes No

If "yes", does the relative size of the tanks, rate of fuel transfer, and operating instructions guard against overflow and assure that the crew will receive prompt warning if fuel transfer is not being achieved as intended?..... Yes No

3.673 (4) When a fuel flowmeter indicator is installed, does the bypass operate satisfactorily in the event of malfunctioning?..... NA Yes No

d. Emergency Fuel Pump and Installation:

3.449 (1) Are emergency pumps easily available for immediate use?..... Yes No

3.435 (2) Is excessive effort required in hand-emergency pumps for continued operation at the rate of 60 complete cycles (120 single strokes) per minute? NA No Yes

3.449(b) (3) Does the emergency and normal pump operate continuously?..... Yes No

If "yes", are means provided to indicate to the crew when either pump is malfunctioning?..... Yes No

4. Lubrication System:

3.568(b)-A
3.575(b)-A a. Is there hazardous loss of oil during acrobatic maneuvers, including short periods of inverted flight?..... NA No Yes

3.637 (3-2) b. Oil Shutoff Means

(1) Are means provided to permit the flight personnel to shutoff the flow of oil to any engine individually in flight?..... NA Yes No

(2) Can the flight personnel reopen the valves in flight after they have been closed?..... NA Yes No

(3) Are these oil shutoff means reasonably protected from inadvertent operation?..... NA Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

C. Powerplant: (continued)

5. Cooling System: (For air or liquid cooled engines)

3.627 a. Are all cowling flaps and shutters, and their actuating mechanism sufficiently rigid and positively operable?.... Yes No

3.627 b. Do cowling flap and shutter controls maintain any necessary position without constant attention by flight personnel and not tend to creep due to control loads and/or vibration?..... Yes No

6. Induction System:

3.605(b) a. Using the alternate air intake system, is there any excessive loss of power above the power lost due to the increase in temperature of the air?..... NA No Yes

3.607 b. Is carburetor air preheater provided?..... Yes No

(1) If a preheater is used in combination with fluid deicing system, is flow available to all engines simultaneously?..... NA Yes No

(2) Is the cockpit control sufficiently strong and so arranged that it will not "spring" or otherwise fail to function in the event of ice formation when in the "cold" position?..... Yes No

(3) Does the carburetor air heat control maintain any necessary position without constant attention by the flight personnel and not tend to creep due to control loads and/or vibration?..... Yes No

7. Exhaust System:

3.615(b) a. Are exhaust gases discharged at such a location that they will not cause a glare to seriously affect pilot visibility at night?..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION: (continued)

D. Electrical System:

1. Fuses, Circuit Breakers and Switches.....Installed?... Yes No

3.691 a. Are protective devices in circuits essential to safety in flight so located and identified that fuses may be replaced or circuit breakers reset readily in flight?..... Yes No

3.695 b. Are switches so installed as to be readily accessible to the appropriate crew members?..... Yes No

3.695 c. Are switches adequately labeled as to operation and circuit controlled?..... Yes No

2. Lights:

a. Instrument Lights.....Installed?.. Yes No

3.697 (1) Are instrument lights installed in such a manner that direct rays are shielded from the pilot's eyes?..... Yes No

3.697 (2) Are direct rays reflected from the windshield or other surface into the pilot's eyes?..... No Yes

3.696 (3) Is sufficient illumination provided so that all instruments, switches, placards, etc., are easily readable and discernible?..... Yes No

b. Landing Lights.....Installed?.. Yes No

3.699 (1) Are landing lights installed such that no dangerous glare is visible to the pilot?..... Yes No

(2) Do they sufficiently light the runway?..... Yes No

(3) Is the glow, reflection or halation from the landing lights in the pilot's compartment considered objectionable?..... No Yes

556107 O - 60 - 5

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

D. Electrical System:

2. Lights: (continued)

3.705 (3-1) c. Rotating (anticollision) Light System.....Installed?... Yes No

(1) Is light so located that emitted light is not detrimental to crew's vision or result in adverse effects on control of the airplane?..... Yes No

(2) Is light so located that it does not detract from the conspicuity of the position lights?..... Yes No

3.652 d. All Lights:

(1) Are all light switches so installed as to be readily accessible to the appropriate crew members?..... Yes No

3.652 (2) Are switches adequately labeled as to operation and the light controlled?..... Yes No

(3) Does the operation of the switches appear adequate for service use?..... Yes No

3.652 3.681 3. Are there any unsatisfactory features in connection with the electrical system operation, any hazards in itself, in methods of operation, or in effects on other parts?..... No Yes

REMARKS

SECTION II. EQUIPMENT AND FLIGHT OPERATION: (continued)

E. Equipment and Operatonal Features:

1. Flight Control Installations:

a. Automatic Pilot System.....Installed?.... Yes No

Make and Model _____

	Servo Unit Model No.	Gear Train Model No.	Capstan Sizes
Rudder	_____	_____	_____
Elevator	_____	_____	_____
Aileron	_____	_____	_____
Trim	_____	_____	_____

3.667(a) (1) Can the automatic pilot system be quickly and positively disengaged by the human pilot(s) to prevent it from interfering with his control of the airplane?..... Yes No

(a) If "no", can the autopilot be sufficiently over-powered by one human pilot to enable him to control the airplane?..... Yes No

(2) Is the system dependent upon pilot "overpowering" to maintain flight control in the event of a malfunction?..... Yes No

If "yes", answer the following:

(a) Does the system have any features subject to malfunction which are located between the over-powering component and the unit's attachment to a flight control?..... Yes No

If "yes", is there a mechanical disconnect device that satisfactorily disengages the complete system from the flight controls?..... Yes No

4b.612-4 (b) Is it possible to overpower servo forces plus resultant airloads in all configurations of flight demonstrated, including maximum speed for which approval is sought, without exceeding the following control forces measured at the pilot's controls; pitch - 50 lbs., roll - 30 lbs., yaw-150 lbs?..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

1. Flight Control Installations:

a. Automatic Pilot System: (continued)

3.667(d)	(3) Is an emergency disengagement device provided?.....	Yes	No
	If "yes" answer the following:		
	(a) Is it located on the pilot's (and copilot's) control wheels to the side away from the throttles?.....	Yes	No
	(b) Does it operate satisfactorily?.....	Yes	No
3.667(b)	(4) Is automatic synchronization provided for each control system involved?.....	Yes	No
	(a) If "no", are satisfactory means provided to indicate readily to the pilot the alignment of the actuating device in relation to the control system it operates?.....	Yes	No
3.667(c)	(5) Are all manually operated controls for the system's operation readily accessible to the pilot?.....	Yes	No
	Also to the copilot if a copilot is required?... NA	Yes	No
3.335	(6) Is each control clearly marked to indicate its method of operation?.....	Yes	No
3.667(d)	(7) Have positive means been provided to prevent the engagement of the system before the automatic pilot is ready for operation, or when any gyroscopic components are caged or inoperative?.....	Yes	No
	(a) If "no", have positive means been provided to indicate to the pilot when the automatic pilot is ready and when any controllable gyroscopic components are inoperable?.....	Yes	No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

1. Flight Control Installations:

a. Automatic Pilot System: (continued)

(8) List the servo stall forces used during the tests below:

Stall Force at Servo (in-lbs) at "Capstan" or "Connection to the control system." (State which)

	Minimum	Maximum
Rudder	_____	_____
Aileron	_____	_____
Elevator	_____	_____
Trim	_____	_____

4b.612-4(h) (If an envelope of forces has been used, the tests to determine the adequacy of the automatic pilot to control the aircraft will be accomplished at the minimum servo stall force settings, and tests to determine that the aircraft will not be endangered from severe loads or dangerous deviations in the flight path will be conducted at the maximum servo stall force settings)

3.667(d) (9) Flight Tests

With the aircraft loaded at the most critical GW and c.g. for the condition to be tested, can the aircraft be smoothly maneuvered to the fullest extent appropriate to the type of automatic pilot and airplane, including the use of altitude control and coordinated turn control when installed, without inadvertently placing loads beyond an envelope of 0 to + 2 "G" or encountering dangerous deviations from the flight path?..... Yes No

Conditions at which tests were made: GW_____lbs.; C.G._____% MAC

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

1. Flight Control Installations:

a. Automatic Pilot System:

(9) Flight Tests (continued)

(a) When an oscillatory condition is induced in the airplane controls through a single malfunction:

Can it produce loads hazardous to the airplane with a minimum delay of 3 seconds after detecting the malfunction and prior to the pilot taking corrective action?..... No Yes

When used in conjunction with an instrument landing aid, can it produce dangerous deviation from the flight path or any degree of loss of control within a minimum delay of one second after detecting the malfunction and prior to pilot taking corrective action?

(See following test data.)

	Cruising Flight 75% METO Power Flaps Up_____ Gear Up_____ Cruising Altitude_____ Ft. Engines: "HG_____ RPM_____ BHP_____ Weight_____. C.G._____% MAC			ILS Approach 1.4 V_{SO} Approach Flaps_____° Landing Gear Down_____ Engines: "HG_____ RPM_____ BHP_____ Weight_____. C.G._____% MAC		
Test Data	Aileron	Rudder	Elevator	Aileron	Rudder	Elevator
Period of Resulting Oscillation						
Maximum Angle of Bank, Yaw, or Pitch						
Time Before Corrective Action Is Taken						
Maximum Altitude						
Minimum Altitude						
Maximum Maneuver Acceleration						
Minimum Maneuver Acceleration						

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

1. Flight Control Installations:

a. Automatic Pilot System:

(9) Flight Tests (continued)

(b) In any of the tests below, when corrective action is taken with a minimum delay of 3 seconds after the pilot detects the signal or combination of signals of the malfunction, does the simulated failure and/or subsequent corrective action (1) create loads beyond an envelope of 0 to 2G, (2) speeds beyond V_{ne}, or (3) dangerous deviations from the flight path?..... No Yes

Test #1 Climb - 75% MCP, Flaps & Gear Up.

Test #2 Cruise - 75% MCP, Flaps & Gear Up.

Test #3 Descend - Maximum permissible auto-pilot speed, Flaps & Gear Up. (Attach test data)

Test #4 Multiengine aircraft with critical engine inoperative, propeller in minimum drag position - MCP on operative engine(s), Flaps & Gear Up.

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:
1. Flight Control Installations:
a. Automatic Pilot System:
(9) Flight Tests (continued)

3.667(d)
(4b.612-4(c))

(c) Does the autopilot system include an approach coupler?..... Yes No

If "yes", in any of the tests below, when corrective action is taken with a minimum delay of one second after pilot detects the signal or combination of signals of the malfunction, does the simulated failure or subsequent corrective action produce (1) hazardous flight path, or (2) any degree of loss of control?..... No Yes

Test #5 ILS Approach at $1.4V_{s1}$, flaps in approach position, gear down, all engines operating.

Test #6 ILS Approach with configuration and speed for and with critical engine inoperative.

Test #7 ILS Approach at $1.4V_{s1}$, flaps in approach position gear down and a simulated critical engine failure during the approcah. (Attach test data)

3.667(d)
(4b.612-4(c))

(d) If no approach coupler is incorporated in the system, will autopilot satisfactorily meet tests and conditions of Tests #4, 5 and 6 above where manual control is used?..... NA Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

1. Flight Control Installations:

a. Automatic Pilot System: (continued)

(10) Test Data:

Test #_____ Flight phase being tested:_____
(Climb, cruise, descent, approach)

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

1. Flight Control Installations:

a. Automatic Pilot System: (continued)

(11) Test Results

3.667 At the critical weight and c.g. for the phase of flight condition tested, answer the following:

(a) Can the autopilot satisfactorily control the airplane in all maneuvers appropriate to the type of autopilot installed?..... Yes No

(b) Does each control satisfactorily perform its intended function?..... Yes No

(c) When used in conjunction with an ILS aid, can smooth transition be made from cruising or descent through approach to a landing configuration?.. NA Yes No

(d) When used in conjunction with an ILS aid, does an engine failure cause deviations from the flight path greater than 3°/sec.?..... NA No Yes

(e) When used in conjunction with an ILS aid, has pilot a visual means of knowing when the autopilot is uncoupled from the ILS aid?..... NA Yes No

(f) With an ILS aid coupler, is automatic pilot capable of conducting an approach with airplane trimmed for critical engine inoperative flight?..... NA Yes No

(g) If an automatic trim system is incorporated, can its failure create a hazard to automatic or manual flight?..... NA No Yes

(h) Is the autopilot system subject to adverse reactions from spurious signals from:

- Variation in the power source..... No Yes

- Induced signals from other systems?..... No Yes

- Feedback signals from other equipment, operating on same autopilot power source?..... No Yes

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:
1. Flight Control Installations:
a. Automatic Pilot System: (continued)

3.667
(4b.612-4(b))

(12) Airplane Flight Manual Information

Is the following information included in the AFM?..... Yes No

(a) Operations Limitations Section -

- Autopilot airspeed limitations (specify) _____

_____

- Other operating limitations, if any, such as "approach localizer at angle of 45° or less" (specify) _____

_____

_____

(b) Operating Procedures Section

- Normal operating Information (specify) _____

_____

_____

_____

(c) Emergency Operating Procedures Section

- Altitude lost in following flight phase conditions:

Cruise _____ ft.

ILS Approach _____ ft. (with ILS coupler)

ILS Approach _____ ft. (w/o ILS coupler)

ILS Approach _____ ft. (Engine out w/coupler)

ILS Approach _____ ft. (Engine out w/o coupler)

- Other emergency procedures information (specify)

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

1. Flight Control Installations:

a. Automatic Pilot System: (continued)

(13) Are any cockpit placards required and installed in addition to those provided at each control (ref. item(6) above)?..... Yes No

If "yes", are these included in the AFM?..... Yes No

(Specify each such one below)

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

1. Flight Control Installations: (continued)

b. Gyroscopic Indicators

Are one or more gyroscopic instruments installed?..... Yes No

If "yes", answer the following:

3.668 (1) Is energy for actuating all gyroscopic instruments from a reliable source with capacity sufficient to maintain required accuracy at all speeds above the best rate of climb speed?..... Yes No

3.668 (2) Is the installation subject to malfunctioning due to rain, oil, and other detrimental elements?..... No Yes

3.668 (3) Is a satisfactory means provided to indicate to the pilot the adequacy of the power being supplied to the instruments?..... Yes No

3.668(a) (4) If multiengine airplane, answer the following: NA

(a) Are two independent sources of energy supplied?... Yes No

3.668(a) (b) Is a means provided to indicate the adequacy of the power being supplied by each source?..... Yes No

3.668(a) (c) Is a suitable means installed to select either power source for the proper functioning of the instruments should failure of one source occur?.... Yes No

(Specify whether manual or automatic_____)

3.668(b) (d) Are the installation and power systems such that failure of one instrument or of either energy supply will not interfere with the proper supply of energy to the remaining instruments or from the other source?..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

1. Flight Control Installations: (continued)

3.661(b) c. Instrument Locations and Arrangements:

(1) If a multiengine airplane, are identical powerplant instruments so located as to prevent confusion as to the engine to which each relates?..... NA Yes No

3.665 (2) Static Air Vent System

Are the airspeed indicator, altimeter and any other instruments which are provided with static air case connections influenced by airplane speed, the opening and closing of windows, airflow variation, moisture, or other foreign matter which seriously affects their accuracy?..... No Yes

3.666 (3) Magnetic Direction Indicator

Does the deviation in level flight exceed 10° on any heading?..... No Yes

3.669 (4) Flight Director Instrument

Is a flight director (zero reader, etc.) installed?.... No Yes

If "yes" is:

(a) Its installation and operation free from adverse effects on the performance and accuracy of the required instruments?..... Yes No

(b) A means provided for disconnecting the flight director instrument from the required instruments or their installations?..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features: (continued)

2. Deicers:

3.712 a. Are pneumatic deicers installed?..... Yes No

(1) If "yes", are positive means provided for the deflation of all the boots?..... Yes No

3.10 (2) Are stall characteristics satisfactory with all deicers in operation?..... Yes No

(3) List deicer installations:

_____

3. Flares:

a. Are flares installed?..... Yes No

3.714 (1) If "yes", are release controls so installed that danger from accidental discharge is reduced to a minimum?..... Yes No

3.714 (2) Are release controls operated easily by pilot or copilot?..... Yes No

3.714 (3) Was a ground test for operation of flares considered adequate?..... Yes No

If "no", is the release of flares satisfactory in flight?..... Yes No

3.762 (4) Are flare controls plainly marked as to function and method of operation?..... Yes No

3.718 4. Emergency Flotation and Signaling Equipment:

a. Signaling device:

Is very pistol or equivalent device easily accessible, function satisfactorily, and free from hazard in operation? NA Yes No

3.711 b. Rafts and Life Preservers:
3.717

Is each raft and life preserver readily available to the crew and passengers, and plainly marked as to method of operation?NA Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features: (continued)

5. Radio Equipment:

Is radio equipment installed?..... Yes No

If "yes":

3.721 a. Is radio equipment and installation free from hazards in themselves, in method of operation, and in effects on components?..... Yes No

3.652 b. Does the installed radio equipment:

(1) function properly?..... Yes No

(2) adequately perform the functions for which it is to be used?..... Yes No

3.652 c. Is the radio equipment adequately labeled as to identification and function?..... Yes No

REMARKS

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features: (continued)

3.725 6. Engine Driven Accessories for Multiengine Airplanes:

a. Are engine driven accessories essential to the safe operation of the airplane so distributed among two or more engines that the failure of any one engine will not impair the safe operation of the airplane by malfunctioning of these accessories during the type(s) of operations intended?..... NA Yes No

7. Landing Gear:

3.145 a. Nose (or tail) wheel:

Does wheel unit function satisfactorily during ground operations and not require an exceptional degree of pilot skill or alertness (for a private pilot) to maintain directional control?..... Yes No

(Is nose (or tail) wheel steerable?..... Yes No)

(Can nose (or tail) wheel be locked?..... Yes No)

3.356 b. Gear is:.....Retractable Fixed

If gear is retractable, answer following:

(1) Does the positive means provided for the purpose of maintaining the wheels in the extended position operate satisfactorily?..... Yes No

3.356 (2) Can the landing gear, wheel well doors, and retracting mechanism in the extended position withstand the flight loads during retraction at $1.6V_{s1}$ flaps retracted, or at maximum gear extension speed, whichever is greater?..... Yes No

(Indicate speed of test_____M.P.H. I.A.S._____C.A.S.)

3.356 (3) At speed of $1.6V_{s1}$ (Flaps retracted) or at maximum speed
3.356-1 with gear extended, whichever is greater, is the operation of the landing gear retracting mechanism and the doors satisfactory for the extension and the retraction of the gear, including degree of yawed flight expectable in this configuration?..... Yes No

3.359 (4) Does the indicator satisfactorily show the pilot at all
3.765(a) times when the wheels are secured in either extreme position?..... Yes No

556107 O - 60 - 6

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

7. Landing Gear:

b. If gear is retractible, (continued)

3.359
3.359-2
3.359-1(a) (5) For landplane, is an aural or equally effective device installed which shall function continuously after the throttle is closed until the gear is down and locked?.. Yes No

3.357 (6) Is gear manually operated?..... Yes No

If "no", specify type of means used _____, and answer the following:

3.357 (a) Is an auxiliary means provided for extending the landing gear?..... Yes No

3.765(b) (b) Is this control colored red and clearly marked as to method of operation?..... Yes No

3.358 (c) Is the operation of this auxiliary means satisfactory?..... Yes No

c. Brakes:

3.335
3.384 (1) Is operation of brake control system satisfactory?..... Yes No

3.363 (2) Are brakes adequate to prevent the airplane from rolling on a paved runway while applying takeoff power to the critical engine?..... Yes No

3.363 (3) Are brakes of sufficient capacity to provide adequate speed control during taxiing without the use of excessive pedal or hand forces?..... Yes No

3.335
3.384 d. Parking Brakes Installed?..... Yes No

If "yes", answer the following:

(1) Is lock positive and operation satisfactory for ground starting of engine(s)?..... Yes No

(2) Is arrangement such that inadvertent locking during flight unlikely?..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features: (continued)

8. Control System Operation:

a. During any of the flight testing of this airplane, has it been necessary to change the travels of any of the control surfaces or tabs?..... No Yes

If "yes", list the item and the change in travel in degrees:

_____ _____

_____ _____

_____ _____

_____ _____

3.328 b. If an adjustable stabilizer is used, do stabilizer stops limit travel to a range permitting safe flight and landing? NA Yes No

3.347 c. Are any bungee devices used in any control system?..... No Yes

(1) If "yes", what are the control systems? _____

_____

_____

(2) Is rubber cord used for this purpose?..... No Yes

(3) Has the reliability of spring devices or other suitable device been established by tests simulating service conditions?..... Yes No

(a) If "no", has it been demonstrated that the failure of the spring or device will not cause flutter or unsafe flight characteristics?..... Yes No

_____

_____

_____

_____

_____

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

8. Control System Operation: (continued)

3.335 d. Do flight controls have a boost system or systems installed?.. No Yes

(1) If "yes", list the system and the type of boost operation:

_____ _____

_____ _____

_____ _____

(2) Has it been demonstrated that the airplane may be flown and landed safely in the event of failure of the boost system?..... Yes No

(a) If "no", is an adequate and reliable emergency boost control system provided which is completely independent of the primary boost system and which has been demonstrated to permit the airplane to be flown and landed safely?..... Yes No

REMARKS

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features: (continued)

9. Fuel Jettisoning System:

3.242 a. Is the maximum takeoff weight greater than 105% of the maximum landing weight?..... No Yes

(If "yes", is provision made for the jettisoning of fuel)?. Yes No

b. If a fuel jettisoning system is provided, complete preliminary tests using nonflammable colored fluid consisting of_____

_____.

c. Information:

(1) Which tanks use the same chutes?_____

_____

(2) Which tanks are symmetrically disposed about the center-line of the fuselage?_____

_____

(3) Give location of each dump chute _____

_____

d. Test results (with nonflammable fluid)

3.242 (4b.437(b)) (1) Does dumped fluid come in contact with any portion of airplane?..... No Yes

3.242 (4b.437(b)) (2) Does dumped fluid or fumes enter any portion of the airplane?..... No Yes

3.242 (4b.437(b)) (3) Is control of airplane adversely affected by dumping process?..... No Yes

3.242 (4b.437(d)) (4) Does dump valve operating mechanism permit closing valves?..... Yes No

3.242 (4b.437(d)) (5) Is there any evidence of leakage of valve after closing?. No Yes

3.335 (6) Is mechanism considered adequate?..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

9. Fuel Jettisoning System:

d. Test results (with nonflammable fluid) (continued)

3.384 (4b.475) (7) Are fuel jettisoning controls conveniently located to operating personnel, provided with guards to prevent inadvertent operation, and located apart from any fire extinguishing controls?..... Yes No

3.384 (8) Are controls identified and clearly marked as to method of operation?..... Yes No

(If answer to any of these questions is underscored, describe fully under "Remarks".)

REMARKS

e. If preliminary tests are satisfactory, complete following tests using gasoline (Octane rating_____):

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

9. Fuel Jettisoning System: (continued)

3.242 (4b.437a) g. What is the time to jettison fuel from maximum takeoff weight to maximum landing weight?_____minutes.

(1) Is this time greater than 10 minutes?..... No Yes

(2) If "yes", is the average rate of jettisoning fuel per minute not less than 1% of the maximum takeoff weight?.. Yes No

3.242 (4b.437a) h. Is it demonstrated that flap extension does not adversely affect fuel jettisoning?..... Yes No

(1) If "no", is a placard provided adjacent to the dumping control to warn flight personnel against dumping fuel while the flaps are extended?..... Yes No

(2) Is a notation to this effect also included in the airplane operating manual?..... Yes No

3.242 (4b.437) i. During above tests:

(1) Does dumped fuel come in contact with any portion of airplane?..... No Yes

(2) Does dumped fuel or fumes enter any portion of the airplane?..... No Yes

(3) Is control of airplane adversely affected by dumping process?..... No Yes

(4) Is there any evidence of leakage of valve after closing? No Yes

3.242 (4b.437c) j. Is it possible to jettison fuel in the tanks used for take-off and landing below the level providing 45 minutes flight at 75% M.C. power?..... No Yes

(1) If "yes", is an auxiliary control provided which is independent of the main jettisoning control to do this? Yes No

(If answer to any of these questions is underscored, describe fully under "Remarks".)

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features: (continued)

10. Pressurization of Cockpit and Cabin:

a. Is pressurization provided for cockpit and/or cabin? (Circle which)?..... Yes No

b. What are the following operational limits:

(1) Maximum pressure differential that can be maintained?_____p.s.i.

(2) Maximum pressure altitude for which the aircraft is approved?_____feet.

(3) Considering items (a) and (b), what is the internal pressure altitude that can be maintained at the maximum operating altitude?_____feet.

3.395(a) c. Are two pressure relief valves installed, at least one of which is the normal regulating valve?..... Yes No

3.395(a) d. Is the positive pressure differential automatically limited to a predetermined value during the maximum flow from the pressure source?..... Yes No

3.395(a) e. Is there an appreciable rise in pressure when one relief valve is inoperable?..... No Yes

3.395(b) f. Are reverse pressure differential relief valves installed that will automatically prevent a negative differential that would damage the structure?..... Yes No

3.395(c) g. Is a means provided by which the pressure differential can be rapidly equalized?..... Yes No

3.395(d) h. Is a regulator installed to control the intake and/or exhaust airflow so that the required internal pressure and airflow rates can be maintained?..... Yes No

This control is automatic_____, manual_____.

3.395(e) i. Are instruments provided to show the pilot the pressure differential, the absolute cabin pressure, and the rate of change of the absolute pressure?..... Yes No

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features:

10. Pressurization of Cockpit and Cabin: (continued)

3.395(f) j. Is a warning system provided for the pilot to show when the safe or preset limits on pressure differential and on absolute internal pressure are exceeded?..... Yes No

3.395(g) k. Is structure designed for pressure differentials up to the maximum relief valve setting in combination with landing loads?..... Yes No

If "no", is a warning placard provided for the pilot?..... Yes No

3.396(b)(2) l. Do all parts of the pressurization system function properly under all possible conditions of pressure, temperature, and moisture up to the maximum altitude selected for certification?..... Yes No

3.396(b)(3) m. Do the pressure supply, pressure and flow regulators, indicators, and warning signals in steady and stepped climbs and descents at rates corresponding with the maximum attainable without exceeding the operating limitations of the airplane up to the maximum altitude selected for certification operate satisfactorily?..... Yes No

3.396(b)(4) n. Do all doors and emergency exits operate properly after being subjected to the flight tests in "m" above?..... Yes No

o. Are provisions made to keep the windshield adequately clear of ice and fog at all intended operating altitudes?. Yes No

p. Are adequate controls and equipment provided for the satisfactory maintenance of the above?..... Yes No

3.10 11. Noise Survey of Cockpit:

a. Does it appear that there is sufficient sound insulation in the cockpit so that the operating personnel would not be unduly affected as to interfere with the safe operation of the airplane?..... Yes No

If an instrument is available, what is the maximum decible reading?_____

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

E. Equipment and Operational Features: (continued)

12. Time of Operation of Flaps and Landing Gear:

3.338 a. Time of operation of flaps: (With throttles closed, gear up, speed (at V_f)_____M.P.H. I.A.S.)

(1) What is time to lower flaps from retracted to landing position?_____seconds.

(2) What is time to lower flaps from retracted to landing position by emergency means?_____seconds.

(3) What is time to raise flaps from landing position to fully retracted position?_____seconds.

(4) What is time to raise flaps from landing position to fully retracted position by emergency means?_____ seconds.

3.358 b. Time of operation of landing gear: (At any desired power, flaps retracted, speed (at 1.6 V_{s1})_____M.P.H. I.A.S.)

(1) What is time required to extend and lock landing gear from retracted position?_____seconds.

(2) What is time required to retract landing gear?_____ seconds.

3.357 (3) What is the time required to extend and lock the landing gear by emergency means?_____seconds.

(4) What is time required to retract the landing gear by emergency means?_____seconds.

13. Auxiliary Powerplant:

3.652 a. Are auxiliary powerplant units installed?..... Yes No

(1) If "yes", is the starting and the operation satisfactory?..... Yes No

_____

_____

_____

SECTION II. EQUIPMENT AND FLIGHT OPERATION: (continued)

F. Flutter and Vibration:

1. Test at V_d (to be investigated in increments of progressively higher speeds).

a. Test Information and Data:

(1) Are deicers installed?..... Yes No

If "yes" (See II E.2.a.)

(2) Service propeller installed. (See II C.2.)

(Should be propeller having both largest diameter and highest static R.P.M. to be noted in aircraft specifications)

(3) Maximum takeoff Wt._____lbs. at most rearward

C.G._____% MAC Ref.: Page_____App._____.

(4) Is airplane trimmed for level flight at M.C. power or at full throttle?..... Yes No

3.419(b) (5) Is V_d obtained (with power optional but not exceeding 110% M.C. R.P.M.) using service propeller?..... Yes No

(High pitch may be used for controllable propeller)

If "no", what propeller was used to permit V_d?

Make and Model_____

_____

(6) Maximum reading:

** Airspeed_____M.P.H. I.A.S.,_____M.P.H. C.A.S.

Engine_____R.P.M.

Manifold Pressure_____in. Hg.

* Acceleration_____G's.

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

F. Flutter and Vibration:

1. Test at V_d (continued)

3.159 b. During test were any of the following encountered:

3.311

(1) Excessive tail buffeting?..... No Yes

(2) Excessive vibration?..... No Yes

(3) Flutter?..... No Yes

(4) Airfoil divergence?..... No Yes

(5) Control reversal?..... No Yes

2. Test at V_{ne} for power off R.P.M. in glide with service props.

3.419(b) (Required only if service prop not used in obtaining V_d for above)

%V_{ne}	I.A.S. (M.P.H.)	C.A.S. (M.P.H.)	R.P.M.	*Maximum Acceleration
70				
80				
90				
100				

* Should not exceed maximum value on TIA.

Did service propeller cause engine R.P.M. to exceed 110% M.C. R.P.M. with power off at V_{ne}?.....NA No Yes

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

F. Flutter and Vibration: (continued)

3. Test at V_f (flaps extended, landing position):

a. Test Information and Data:

(1) Maximum landing weight_____lbs. at most rearward C.G._____% MAC Ref.: Page_____App._____.

(2) Maximum readings:

** Airspeed_____M.P.H. I.A.S.,_____M.P.H. C.A.S.

Engine_____M.P.H.

* Acceleration_____G's

Manifold Pressure_____in. Hg.

3.159 b. During test were any of the following encountered:
3.311

(1) Excessive buffeting?.....	No	Yes
(2) Excessive vibration?.....	No	Yes
(3) Flutter?.....	No	Yes
(4) Airfoil divergence?.....	No	Yes
(5) Control reversal?.....	No	Yes

3.347 4. Spring Devices in Control Systems

a. If there are spring devices in the control systems and section II E.8.c.(3) is answered in the negative, were items F. 1 and 3 investigated with the spring disconnected and inactive?..... NA Yes No

(If "yes", were flutter and vibration characteristics satisfactory?)..... Yes No

* Should not exceed maximum value on TIA.

** If other than design value, explain under "REMARKS".

SECTION II. EQUIPMENT AND FLIGHT OPERATION:

F. Flutter and Vibration: (continued)

3.117 5. Dynamic Stability (Short Period Oscillation)

3.118

3.118(a)(4) a. *** Is any short period oscillation (about any axis) occurring between stalling speed (V_s) and maximum permissible speed (V_{ne}) heavily damped with the primary controls:

(1) Free..... NA Yes No

(If answer is "yes", or "no", describe under "REMARKS")

* Should not exceed maximum value stated on pertinent TIA.

** If other than design value, explain reason under "REMARKS".

*** The test for this characteristic is to excite the individual control by a short sharp disturbance.

REMARKS

REMARKS

SECTION III. POWERPLANT OPERATION

A. Fuel System:

3.437(b) 1. Unusable Fuel Supply:
3.437(a)

The Unusable Fuel Supply Is The Quantity Remaining In The Tank After First Evidence of Malfunctioning of Engine

	Condition		Tank #1 Gallons	Tank #2 Gallons	Tank #3 Gallons	Tank #4 Gallons	Tank #5 Gallons
		Indicate amount of fuel in Tank at Start of Each Test (Should be as Low as Practical)					
Note the critical unusable fuel and order of the conditions in being critical	1	Level Flight at M.C. power or at V_c, whichever is less including sideslips and skids of greatest severity likely to be encountered in normal service or turbulent air.					
	2	Climb at M.C. power at calculated best angle of climb at minimum weight including sideslips and skids of greatest severity likely to be encountered in normal service or turbulent air.					
	3	Transition to best rate of climb by rapid application of power following a power-off glide at 1.3 V_{so} including sideslips and skids of greatest severity likely to be encountered in normal service or turbulent air.					

3.437(a) a. Is it desired that all the tanks feed the engine(s) in all conditions listed above?..... Yes No

(If "no", is each tank placarded against use in the conditions of flight not investigated?)..... Yes No

3.440 b. Is the unusable fuel supply in any tank greater than 5% of the tank capacity or 1 gallon?..... No Yes

(If "yes", is a placard and a suitable notation included in the airplane flight manual to indicate to the flight personnel that the fuel remaining in the tank when the indicator reads zero cannot be used safely in flight?).. Yes No

556107 O - 60 - 7

SECTION III. POWERPLANT OPERATION:

A. Fuel System: (continued)

2. Operation:

3.437(f) a. Is there any malfunctioning during takeoff and climb for one minute at the calculated attitude of best angle of climb at takeoff power and minimum weight using quantity of fuel in each tank that does not exceed the unusable fuel plus 0.03 gallons for each M.C. horsepower?..... *No* Yes

3.437(c) b. For "Utility Category Airplanes," is there any malfunctioning during the execution of all approved maneuvers included in the approved operating limitations? (The fuel in each tank shall not exceed the unusable fuel plus 0.03 gallons for each M. C. power)..... NA No Yes

3.437(d) c. For "Acrobatic Category Airplanes," is there any malfunctioning during the execution of all approved maneuvers included in the airplane flight manual. (The fuel in each tank shall not exceed the unusable fuel plus 0.03 gallons for M.C. power)..... NA No Yes

3.438 d. Does airplane have a suction lift fuel or other system conducive to vapor formation?..... Yes No

If "yes", did any vapor lock occur when using fuel at a temperature of 110°F under the critical operating conditions? No Yes

3.437(e) e. Time to regain power: (more than one supply source involved). NA

(1) From level flight at M.C. power run dry on each tank, turn on another tank containing ample fuel:

(a) Is time to regain power acceptable?..... Yes No

(Not more than 10 seconds for single engine, 20 seconds for multiengine).

Tank Number Run Dry	Tank Number Turned On	TIME TO REGAIN POWER	
		Using Auxiliary Pump	Without Auxiliary Pump

SECTION III. POWERPLANT OPERATION: (continued)

B. Carburetor Air Heat Rise:

3.606 1. Test Data:

Airplane weight at takeoff (optional)_____lbs., optional C.G._____% MAC and be flown in level flight at cruising mixture setting in air free of visible moisture. Ref.: Page_____Appendix_____

NOTE: May be flown at only one altitude if O.A.T. of 30°F is available.	MINIMUM ALTITUDE				INTER-MEDIATE ALTITUDE				MAXIMUM ALTITUDE (75% M.C. Power or Full Throttle)

SECTION III. POWERPLANT OPERATION:

B. Carburetor Air Heat Rises: (continued)

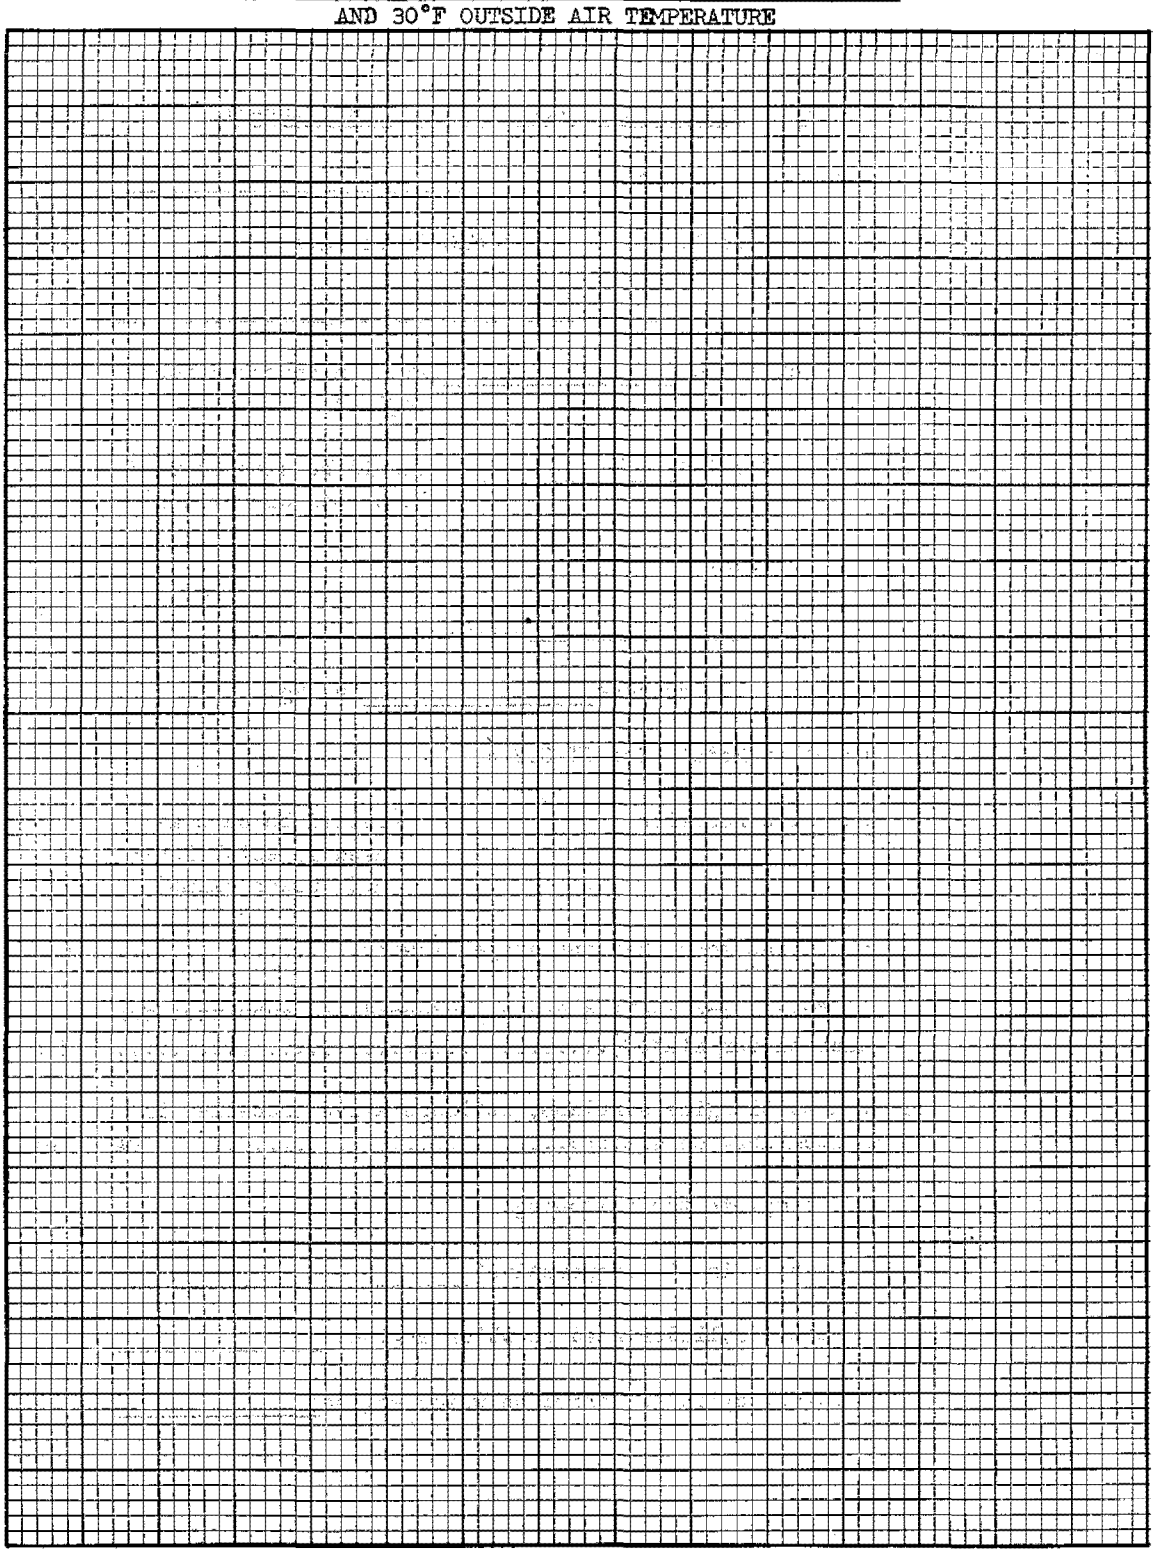
2. Test Results (corrected to correct power and outside air temperature)

	Type Engine (& Carb.)	Required Heat Rise At 30°F O.A.T.	Actual Heat Rise At 30°F O.A.T.	Requirements Met
3.606(a)	Sea level (Venturi)	90°F at 75% M.C. power		NA Yes No
3.606(d)	Single engine Sea level (non ice prone)	90°F at 75% M.C. power plus Sheltered alternate air source with preheat at least that of engine cylinder downsteam air		NA Yes No
3.606(e) (3-5)	Multiengine Sea level (non ice prone)	90°F at 75% M.C. power		NA Yes No
3.606(b)	Altitude (Venturi)	120°F at 75% M.C. power		NA Yes No
	Altitude (non ice prone)	100°F at 60% M.C. power or 40°F with fluid deicing system		NA Yes No

3. For multiengine airplanes, were above results obtained from the critical engine (least carburetor air heat rise)?..... NA Yes No

CARBURETOR AIR HEAT RISE AT _____% RATED B.H.P.
AND 30°F OUTSIDE AIR TEMPERATURE

B.H.P. _____% M.C. POWER



OUTSIDE AIR TEMPERATURE °F

CARBURETOR AIR HEAT RISE °F

SECTION III. POWERPLANT OPERATION: (continued)

3.581 C. Cooling:

1. Climb Conditions (in air free of visible moisture):

3.582 a. Takeoff weight (max.)_____

C.G. (optional)_____% MAC Ref.: Page_____

Appendix_____

b. Fuel Octane No._____(minimum approved for engine)

c. Mixture Setting_____(should be same as used in normal operations)

d. Engine Power:

(1) _____R.P.M.

(2) Manifold Pressure_____in. Hg.

e. Propeller Model (See II C.2.a.)

f. Cowl Flap Position_____(should be same as used in establishing M.C. power climb)

g. Has engine more than one stage blower?..... No Yes

(If "yes", are cooling tests performed and submitted for each blower stage?)..... Yes No

h. If a multiengine airplane, is inoperative propeller in minimum drag condition?..... NA Yes No

Also complete the following:

Which engine is inoperative?_____

Hottest cylinder head on which engine?_____

Hottest cylinder barrel on which engine?_____

SECTION III. POWERPLANT OPERATION:

C. Cooling:

1. Climb Conditions (in air free of visible moisture): (continued)

3.583-1 i. Is "winterization" equipment installed?..... Yes No

If "yes", answer the following:

(1) What is applicant's selected maximum temperature_____°F

(2) Is this value used in lieu of the 100°F hot day in correction of test data to maximum anticipated temperatures?..... Yes No

(3) Does the AFM clearly indicate that the winterization equipment must be removed whenever the temperature reaches the limit for which approved?..... Yes No

(4) Is the cockpit placarded similarly (with item (3) information)?..... Yes No

(5) Is airplane equipped with an outside air temperature gage or with a cylinder/barrel/oil gage (whichever is critical)?..... Yes No

3.586 (3-2) j. Cooling test procedure requirements (strike out nonapplicable sections):

(1) For Sea Level Engines, Single Engine Airplane:

After stabilizing engine temperatures in flight with engines operating at not less than 75% MCP, start at lowest practicable altitude and climb for one minute at takeoff power; continue climb at full throttle until at least 5 minutes after the occurrence of the highest temperature recorded:

Is climb conducted at a speed greater than best R/C speed?..... No Yes

(a) If "yes", is the slope of the flight path at the cooling speed equal to or greater than the minimum required angle of climb?..... Yes No

(b) If "yes", is a cylinder head temperature indicator provided?..... Yes No

SECTION III. POWERPLANT OPERATION:

C. Cooling:

1. Climb Conditions (in air free of visible moisture)

j. Cooling test procedure requirements (strike out nonapplicable sections): (continued)

(3-2) (2) For Supercharged Engines, Single Engine Airplane:

After stabilizing engine temperature in flight with engine operating at not less than 75% MCP, tests for each blower stage should start at 1,000 feet below the actual engine critical altitude of each stage and continue at least 5 minutes after the occurrence of the highest temperature recorded:

Is climb conducted at a speed greater than best R/C speed?..... No Yes

(a) If "yes", is the slope of the flight path at the cooling speed equal to or greater than the minimum required angle of climb?..... Yes No

(b) If "yes", is a cylinder head temperature indicator provided?..... Yes No

3.587(a) (3) For multiengine airplanes that meet the minimum one engine inoperative climb performance:

(3-2) With the airplane in the configuration that was used in establishing the critical engine inoperative climb performance, the operating engine(s) at M.C. power or at full throttle (above the critical altitude), and after the temperatures are stabilized in flight with engines operating at not less than 75% MCP the climbs, for each blower stage, shall be started at the lower of the two following altitudes, and continued for 5 minutes after the first occurrence of the highest temperature:

1,000 feet below the actual engine critical altitude of the lowest practicable altitude (when applicable);

1,000 feet below the altitude at which the single-engine inoperative rate of climb is 0.02 V_{so} 2.

Is climb conducted at a speed not over the speed used in establishing the one engine inoperative climb performance?..... Yes No

SECTION III. POWERPLANT OPERATION:

C. Cooling:

1. Climb Conditions: (in air free of visible moisture)

j. Cooling test procedure requirements (strike out nonapplicable sections):

3.587(a) (3) For multiengine airplanes that meet the minimum one engine inoperative climb performance: (continued)

(a) If speed exceeds the best rate of climb speed with one engine inoperative, is a cylinder head temperature indicator provided for each engine?.... NA Yes No

(For high blower cooling, the minimum altitude for start of climb need not be lower than the lowest approved altitude for high blower operation.)

3.587(b) (4) For multiengine airplanes that cannot meet the minimum
3.587-1 one engine inoperative: (for airplanes having positive climb)

(3-2) After stabilizing temperature in flight with engines operating at not less than 75% M.C. power, the climb shall be commenced at as near sea level as practicable for low blower and shall be conducted at the best rate of climb speed.

(5) For multiengine airplanes that cannot meet the minimum one engine inoperative: (for airplanes with zero climb or a rate of sink)

(3-2) While stabilizing temperature in level flight at the lowest practical altitude above the ground with engines operating at not less than 75% M.C. power, use M.C. power on test engine and sufficient power on remaining engine(s) to maintain level flight at the speed for minimum rate of descent. When temperature is thus stabilized reduce power on remaining engine(s), maintain speed for minimum rate of descent, and record test data.

Is climb or descent conducted at best one-engine inoperative rate of climb or minimum rate of descent speed?.. Yes No

(For high blower cooling, the altitudes for conducting these tests should be that approved for high blower operation.)

SECTION III. POWERPLANT OPERATION:

C. Cooling:

1. Climb Conditions (in air free of visible moisture): (continued)

556107 O - 60 - 10

SECTION IV. PERFORMANCE:

G. Landing:

1. Airplanes with maximum certificated weight greater than 6000 lbs. (continued)

c. Landing Test Results

(1) Are above landing runs made in such a manner that their reproduction shall not require an exceptional degree of skill or exceptionally favorable conditions?..... Yes No

(2) Are landings made such that there was no excessive vertical acceleration, tendency to bounce, nose over, ground loop, porpoise or water loop?..... Yes No

(3) Is landing gear arrangement nosewheel or tailwheel?_____

(a) Were above landings made in level on tail down altitude?_____

(b) If nosewheel, and landings were made in level altitude, can flared landings be made tail down with most forward c.g.?..... NA Yes No

(c) If tailwheel, and landings were made in level altitude, can landing be made tail down at most forward c.g.?..... NA Yes No

(4) Are data for inclusion in the AFM submitted to indicate the variations in the landing run for a change in altitude from S.L. to 7000 ft. and in temperature from 0°F to 100°F?..... Yes No

Are these data also attached to this TIR?..... Yes No

3.86-1 (5) Were landing distances established with use of reversible thrust propellers?..... NA No Yes

2. Landing Tests - Applicable to Airplanes Having A Maximum Certificated Weight Of 6000 Lbs. Or Less.

3.87 Was it demonstrated that the airplane can be safely landed and brought to a stop without requiring an exceptional degree of piloting skill (by private pilot), and without excessive vertical acceleration tendency to bounce, nose over, groundloop, porpoise or water loop?..... Yes No

SECTION V. HANDLING QUALITIES

A. Ground Handling

To be determined at most adverse authorized Weight and C.G. position for each test conducted:

3.145 1. Is there any unusual ground looping tendency?..... No Yes

Is this demonstrated during power-off landings at normal landing speed during which brakes or engine power are not used to maintain a straight path?..... Yes No

3.145 2. Is directional control during taxiing and takeoff satisfactory? Yes No

3.145 3. Is there any uncontrollable looping tendency during taxiing, takeoff, or landing in 90° crosswinds up to a wind intensity of 0.2 V_{so} _____ M.P.H.?..... No Yes

a. Is airplane tested in 90° crosswind greater than 0.2 V_{so}?.. Yes No

(1) If "yes", what is this wind value_____M.P.H.

(2) Are characteristics satisfactory at this value?..... Yes No

(3) Is this the highest 90° crosswind intensity which is recommended for this airplane?..... Yes No

3.144 4. Is there any uncontrollable tendency to nose over in any operating condition reasonably expected for the type, including rebound during landing or takeoff?..... No Yes

3.144 5. Do wheel brakes operate smoothly and exhibit no undue tendency to induce nosing over?..... Yes No

3.146 6. Does shock absorbing mechanism appear to be adequate to prevent damage to any part of the airplane when operated on the roughest ground which may reasonably be expected in normal operation (specify type of surface used for test)..... Yes No

_____

_____

_____

3.351 7. Is shock absorbing mechanism, under the above conditions, such that "bottoming" or other possible damage to structure will not occur?..... Yes No

SECTION V. HANDLING QUALITIES: (continued)

B. Water Handling

To be determined at maximum takeoff weight and with most unfavorable authorized C.G. position for each test conducted:

3.147 1. Does the spray during taxiing, takeoff and landing at any time:

a. dangerously obscure the vision of the pilots?..... No Yes

b. produce damage to the propeller or other parts of the airplane?..... No Yes

3.144 2. Is there any dangerous or uncontrollable porpoising at any speed or condition at which the airplane is normally operated? No Yes

3.145(c) 3. Can airplane be held on a straight course during takeoff run with takeoff power on all engines?..... Yes No

3.106 4. Can airplane be safely controlled in the event of failure of any engine at any point in the takeoff run and in taxiing?... Yes No

3.145 5. Can airplane be maneuvered and sailed safely under all expected conditions?..... Yes No

3.145 3.335 6. If water rudders are provided, do they perform satisfactorily?..... NA Yes No

3.145 7. Is airplane satisfactorily controllable during taxiing, takeoff, or landing in 90° crosswinds up to a wind intensity of 0.2 V_{so} _____ M.P.H.?..... Yes No

a. Is airplane tested in 90° crosswind greater than 0.2 V_{so}? Yes No

If "yes", answer the following:

(1) What is this wind value _____ M.P.H.

(2) Are characteristics satisfactory at this value?.... Yes No

(3) Is this the highest 90° crosswind intensity which is recommended for this airplane?..... Yes No

b. Estimate maximum wind velocity in which satisfactory 360° turns can be executed at or below hump speed _____ M.P.H.

c. Estimate the wave height (trough to crest) of the roughest water upon which the airplane has been operated _____ _____ inches.

SECTION V. HANDLING QUALITIES: (continued)

C. Ski Handling

To be determined at the most adverse authorized Weights and C.G. positions for each test condition:

3.144 3.145	1. Are takeoff characteristics satisfactory?.....	Yes	No
3.144 3.145	2. Are landing characteristics satisfactory?.....	Yes	No
3.144 3.145	3. Can airplane be satisfactorily maneuvered on the ground?.....	Yes	No
3.106 3.780-3	4. Are the airplane's flight characteristics satisfactory with the skis installed?.....	Yes	No
3.335	5. Are brakes provided?.....	Yes	No
	(If "yes", are these considered satisfactory?).....	Yes	No
3.145	6. Is there any uncontrollable looping tendency during taxiing, takeoff, or landing in 90° crosswinds up to a wind intensity of 0.2 V_{so}_____M.P.H.?.....	No	Yes
	a. Is airplane tested in 90° crosswind greater than 0.2 V_{so}?..	Yes	No
	(1) If "yes", what is this wind value_____M.P.H.		
	(2) Are characteristics satisfactory at this value?.....	Yes	No
	(3) Is this the highest 90° crosswind intensity which is recommended for this airplane?.....	Yes	No

SECTION V. HANDLING QUALITIES: (continued)

D. Takeoff Characteristics

3.84a 1. Determination of Elevator Effectiveness (Applicable to airplanes having a maximum certificated weight of 6000 lbs. or less)

3.84(a),(b) a. Is takeoff power used?..... Yes No

b. Is loading at most unfavorable weight?..... Yes No

c. Is loading at most unfavorable C.G.?..... Yes No

d. Is exceptional piloting skill required to make safe take-off?..... No Yes

e. Airplane is of tailwheel type or nosewheel type (Circle which)

(1) If tailwheel type, is elevator control at $0.8V_{s1}$ sufficient to hold airplane on runway until a safe takeoff speed is attained?..... Yes No

(2) If nosewheel type, is elevator control at $0.85\ V_{s1}$ sufficient to raise nosewheel clear of takeoff surface? Yes No

REMARKS

SECTION V. HANDLING QUALITIES: (continued)

E. Flight Characteristics (If flight characteristics are affected by altitude they should be investigated at the most adverse normally expected operating altitude.)

1. Most Forward C.G. Condition at Maximum T.O. Weight

SECTION V. HANDLING QUALITIES:

E. Flight Characteristics:

1. Most Forward C.G. Condition - At Maximum T.O. Weight:

f. Special Longitudinal Control Tests (continued)

3.109(d) (3-5) (8) Is it possible to maintain a speed of not more than $1.5V_{S1}$ with a pilot control force of not more than 10 pounds during a power-off glide with landing gear and wing flaps extended with the most forward center of gravity position approved at maximum weight?..... Yes No

and with the most forward center of gravity position approved regardless of weight?..... Yes No

3.109(e) (3-5) (9) Is it possible, without the use of the primary means of longitudinal control, to control the descent of the airplane with the use of all other normal flight and power controls to a zero rate of descent and to an attitude suitable for a controlled landing without requiring exceptional strength skill or alertness on the part of the pilot, or without exceeding the operational and the structural limitations of the airplane?..... Yes No

SECTION V. HANDLING QUALITIES:

E. Flight Characteristics:

1. Most Forward C.G. Condition at Maximum T.O. Weight: (continued)

3.109(c) g. Controllability test for flap retraction with simultaneous application of M.C. power at speed of 1.1 V_{S1}

Configuration	Information	Result
Steady level flight, power sufficient for speed of 1.1 V_{S1} ( )	Hp_____Ft.	Is exceptional piloting skill (for a private pilot) required to maintain essentially level flight?
	Power Before Test R.P.M.____ In.Hg.____	
Gear Extended ( )	Power After Test R.P.M.____ In.Hg.____	No Yes
Landing Flap_____°		

h. General Controllability

3.106 (1) Is the airplane satisfactorily controllable and maneuverable about all three axis during takeoff, climb, level flight, dive and landing (with and without power)? Yes No

(2) Is it possible to make a smooth transition from one flight condition to another, including turns and slips, without requiring an exceptional degree of pilot skill, alertness, or strength (by a private pilot) and without danger of exceeding the limit load factor under all conditions of operation probable for the type?..... Yes No

(3) Are the control values both for temporary and prolonged application (strength of pilots limits) exceeded in any operation?..... No Yes

(11) Speeds for item (5) above:

(a) For normal category airplanes over 4000 lbs.: $1.2V_{s1}$

(b) For all other airplanes:

All speeds from $1.2V_{s1}$ down to the lowest speed attainable in steady unstalled flight.

3.117 j. "Formerly called for longitudinal short period oscillation" investigation. Omitted since item already covered by item II F 5 under flutter investigation.

SECTION V. HANDLING QUALITIES:

E. Flight Characteristics:

2. Most Rearward C.G. Condition at Maximum T.O. Weight: (continued)

3.118(b) k. Directional Stability (2 control airplane)

Is the directional stability adequate by demonstrating that the airplane can be rapidly rolled from a 45° bank to a 45° bank in the opposite direction without exhibiting dangerous skidding characteristics with the airplane in the configuration of (flaps and landing gear up), (landing flaps and landing gear down), (power off and 75% M.C. power) and over a range of speeds considered appropriate for the airplane?..... Yes No

3.118(b) l. Lateral Stability (2 control airplane)

(1) Are flaps and landing gear retracted?..... NA Yes No

(2) Is airplane trimmed for level flight at

(a) The lower of 0.9 of high speed in level flight or V_C? Yes No

Which is lower_____, and what are speed values_____MPH-IAS _____MPH-CAS

(3) Is lateral stability adequate by demonstrating that the airplane will not assume a dangerous attitude or speed when all the controls are abandoned for a period of two minutes when in the above configuration?..... Yes No

3.118(b) m. Dynamic Stability (2 control airplane)

Is any short period oscillation between stalling speed and the maximum permissible speed heavily damped with primary controls:

(1) Free?..... Yes No

(2) Fixed?..... Yes No

556107 O - 60 - 12

SECTION V. HANDLING QUALITIES:

E. Flight Characteristics:

2. Most Rearward C.G. Condition at Maximum T.O. Weight: (continued)

3.106 n. General Controllability

(1) Is the airplane satisfactorily controllable and maneuverable about all three axes during takeoff, climb, level flight, dive and landing (with and without power)?..... Yes No

(2) Is it possible to make a smooth transition from one flight condition to another, including turns and slips, without requiring an exceptional degree of skill, alertness, or strength on the part of the pilot (private) and without danger of exceeding the limit load factor under all conditions of operating probable for the type?..... Yes No

(3) Are the control values both for temporary and prolonged application (strength of pilots limits) as listed in CAR 3.106 exceeded in any operation?..... No Yes

o. Acrobatic Controllability (Applicable to Categories U and A only)

3.108-A
3.107-U
3.778(e)(2),(3)

(1) It is demonstrated that the following acrobatic maneuvers are performed readily and safely?..... NA Yes No

Maneuvers	Maximum Safe Entry Speeds (M.P.H.)
(a) Stalls (except whip stalls) (accelerated or high speed stalls)	_____IAS _____CAS
(b) Steep turns (over 60° bank)	_____IAS _____CAS
(c) Spin (except when placarding against same)	_____IAS _____CAS
(d) Lazy eights	_____IAS _____CAS
(e) Chandelle	_____IAS _____CAS
(f) _____	_____IAS _____CAS
(g) _____	_____IAS _____CAS

(2) Are the above maneuvers listed with recommended entry speeds in the Airplane Flight Manual?..... Yes No

* (These items to be investigated for Utility Category, and are minimum required for Acrobatic Category).

E. Flight Characteristics:

2. Most Rearward C.G. Condition at Maximum T.O. Weight:

t. Spins: (continued)

(4) Categories N - U

3.124(d)

(a) Does applicant desire airplane to be designated "characteristically" incapable of spinning?..... Yes No

(If "yes", perform the following:)

(1) Is airplane capable of being spun in any configuration and from non-acrobatic maneuver; i.e., power on or off, flaps and gear up or down?..... No Yes

(If "yes", describe fully under "REMARKS")

(2) With airplane modified as indicated below, is airplane capable of being spun in any configuration and from any non-acrobatic maneuver; i.e., power on or off, flaps and gear up or down?..... No Yes

(If reply is "yes", describe fully under "REMARKS")

Is gross weight 5% in excess of T.O. weight? (_____lbs.) Yes No

Is center of gravity at least 3% aft of the rearmost position for which approval is desired(_____% MAC)? Yes No

What is reference page _____appendix _____ for above.

Is elevator up travel 4° in excess of the normal elevator travel stop limit?..... Yes No

(What is this up range_____degrees)?

Is rudder travel in each direction increased by 7° over that limited by the normal rudder travel stop?..... Yes No

(What is this new rudder range_____ degrees)?

SECTION V. HANDLING QUALITIES:

E. Flight Characteristics:

2. Most Rearward C.G. Condition at Maximum T.O. Weight:

t. Spins

(4) Categories N – U: (continued)

(b) Placards (Categories N and U only)

(1) Category N – Is the airplane placarded against spins?..... Yes No

(2) Category U – If the airplane has been demonstrated to meet Category A spin requirements, is a placard placed in the cockpit setting forth the use of controls required for recovery from spinning maneuvers?..... NA Yes No

a. Most Rearward C.G. Condition at Maximum T.O. Weight: (continued)

3.110(a) (5) Lateral Control

(a) Landing gear position	Up	Down
(b) Wing flaps (most favorable climb position) (°)	°	°
(c) Critical inoperative engine?	Left, Right	Left, Right
Is inoperative propeller in minimum drag position?	Yes No	Yes No
If windmilling, what is RPM? (RPM)		
(d) Are other engine(s) operating at M.C. power	Yes No	Yes No
RPM		
Manifold pressure (in.Hg.)		
(e) Is trim speed in climb at V_y or $1.4V_{S1}$?	Yes No	Yes No
State which_____.		
MPH-IAS		
MPH-CAS		
(f) Pressure altitude of test (Ft.)		
(g) Outside air temperature (°F)		
(h) Can 15° banked turns be made to left?	Yes No	Yes No
(i) Can 15° banked turns be made to right?	Yes No	Yes No
(j) Do control forces increase proportionately with deflection?	Yes No	Yes No
(k) What is maximum force at maximum deflection? Rudder		
Aileron		

SECTION V. HANDLING QUALITIES:

E. Flight Characteristics:

3. Multiengine Flight Characteristics With Critical Engine Inoperative:

a. Most Rearward C.G. Condition at Maximum T.O. Weight: (continued)

3.110(b) (6) Directional Control

15° Change in Heading With and Against Inoperative Engine		
(a) Landing gear position	Retracted	Extended
(b) Wing flaps (most favorable climb position) (degrees)		
(c) Critical inoperative engine?	Left, Right	Left, Right
State minimum drag position of inoperative propeller		
If rotating, what is RPM?		
(d) Are other engines operating at M.C. power?	Yes No	Yes No
RPM		
Manifold pressure (in.Hg.)		
(e) Is trim speed in climb at or below V_y or $1.4V_{S1}$?	Yes No	Yes No
(MPH-IAS)		
(MPH-CAS)		
(f) Pressure altitude (ft.)		
(g) Outside air temperature (°F)		
(h) During test, are wings level laterally within 5°?	Yes No	Yes No
(i) Are any dangerous characteristics encountered when heading is suddenly altered 15° to left, or to heading where rudder force is 150 lbs. ? (If heading is limited by rudder force, describe details and state heading in "REMARKS")	Yes No	Yes No
(j) Are any dangerous characteristics encountered when heading is suddenly altered 15° to right, or to heading where rudder force is 150 lbs. ? (If heading is limited by rudder force, describe details and state heading in "REMARKS") (lbs.)	Yes No	Yes No
(degrees)		

NOTE: Gear down is usually most critical for nose wheel planes and gear up for tail wheel planes. If inspector is uncertain, conduct test in both positions.

SECTION V. HANDLING QUALITIES:

E. Flight Characteristics:

3. Multiengine Flight Characteristics With Critical Engine Inoperative:

a. Most Rearward C.G. Condition at Maximum T.O. Weight: (continued)

3.111
3.106 (7) Minimum Control speed

(a) Is landing gear retracted?	Yes No	Yes No
(b) Wing flap in take-off position (degrees)		
(c) Which is critical inoperative Engine? (throttle closed)	Left, Right	Left, Right
(1) RPM of inoperative engine? (RPM)		
(d) Are other engines operating at T.O. or maximum available power?	Yes No	Yes No
(1) RPM		
(2) Manifold pressure (in.Hg.)		
(e) Pressure altitude of test (Ft.)		
(f) Outside air temperature (°F)		
(g) What is the minimum control speed such that (MPH-IAS) (MPH-CAS)		
(1) Recovery of control to straight flight at this speed is effected without change of power?	Yes No	Yes No
(2) Bank does not exceed 5°?	Yes No	Yes No
(3) Rudder force (_____lbs.) did not exceed 150 lbs.?	Yes No	Yes No
(4) No dangerous attitudes or uncontrollable tendencies encountered?	Yes No	Yes No
(5) No exceptional pilot skill strength or alertness required (of a private pilot) to prevent a change of heading in excess of 20° before recovery is complete?	Yes No	Yes No
(h) Does the minimum controllability speed exceed $1.2V_{S1}$?	No Yes	No Yes

3.106
3.111 (8) Transition Controllability

If the rudder force exceeds 20 lbs. for maintaining straight flight at V_{mc} in the configuration for item (7) above, answer the following:

Can straight flight control be maintained (by a private pilot) until the airplane has been placed in its "clean" configuration and attained its best R/C speed (single engine inoperative)? Yes No

SECTION V. HANDLING QUALITIES:

E. Flight Characteristics:

3. Multiengine Flight Characteristics With Critical Engine Inoperative:

a. Most Rearward C.G. Condition at Maximum T.O. Weight: (continued)

3.123 (9) Power On Stall - Critical Engine Inoperative

(a) Is landing gear retracted?		Yes No	Yes No
(b) Are wing flaps retracted?		Yes No	Yes No
(c) Which is critical inoperative engine? (throttle closed)		Left, Right	Left, Right
(1) RPM of inoperative engine?			
(d) Are other engines operating at 75% M.C. power?		Yes No	Yes No
(1) If "no", is power used that at which the use of maximum control travel just holds the wings laterally level in approaching the stall?		Yes No	Yes No
(2) What is RPM?			
(3) What is manifold pressure?	(in.Hg.)		
(e) Pressure altitude of test	(Ft.)		
(f) Outside air temperature	(°F)		
(g) Trim speed at $1.5V_{s1}$	(MPH-IAS)		
(h) Trim speed at $1.5V_{s1}$	(MPH-CAS)		
(i) Maximum roll	(degrees)		
(j) Maximum yaw	(degrees)		
(k) Maximum pitch below level	(degrees)		
*(l) Altitude lost	(Ft.)		
(m) Maximum IAS during recovery	(MPH)		
(n) Maximum CAS during recovery	(MPH)		
(o) Maximum acceleration during recovery	(G)		
(p) Was there any undue spinning tendency?		No Yes	No Yes
(q) Was recovery made without applying power to inoperative engine?		Yes No	Yes No
(r) Were operating engines throttled back during the recovery from the stall?		No Yes	No Yes

	Good	Fair	Poor	Unsatisfactory
(s) Controllability				
(1) Longitudinal:				
(2) Lateral:				
(3) Directional:				

* Difference in altitude as measured on sensitive altimeter from moment airplane pitches to altitude at which horizontal flight is regained.

SECTION V. HANDLING QUALITIES:

E. Flight Characteristics:

3. Multiengine Flight Characteristics With Critical Engine Inoperative:

a. Most Rearward C.G. Condition at Maximum T.O. Weight: (continued)

(10) Directional Trim, Airplane With Four Or More Engines, Two Critical Engines Out

(a) Is landing gear retracted?		Yes No
(b) Are wing flaps retracted?		Yes No
(c) Maximum weight (at which level flight speed range is 10 MPH or more	(lbs.)	
(d) Rearmost C.G. (Ref. Page Appendix)	(% MAC)	
(e) Pressure altitude	(Ft.)	
(f) Outside air temperature	(°F)	
(g) Operating engines at M.C. power		
Manifold pressure	(in.Hg.)	
Rev. per minute	(RPM)	
Brake horsepower	(BHP)	
(h) Which two engines are inoperative?		
(i) Are inoperative propellers feathered?		Yes No
(j) If "no", inoperative propellers are windmilling at RPM		
(k) Maximum level flight speed	(MPH-IAS)	
	(MPH-CAS)	
(l) Can airplane be trimmed at a speed 10 MPH (CAS) less than the maximum level flight CAS		Yes No
(m) If "no", what is rudder force necessary for straight flight?	(Lbs.)
