CAUTION: Extensive efforts have been made to assure the quality of information contained in this report. It is impossible, however, to achieve complete accuracy and consistency of the reported data. In addition, the reported data do not include all relevant information generally necessary to explain apparent differences in performance (e.g., information related to work rules, topography, climate, and unusual events such as strikes and service start-ups). Users of this report, therefore, should be careful not to draw unwarranted conclusions based solely on the data contained herein.

Transit Profiles

The Thirty Largest Agencies For the 1991 Section 15 Report Year

October 1992

Introduction

This publication consists of consolidated profiles for the thirty (30) largest transit agencies in the United States. The criteria used to determine the thirty (30) largest transit agencies is operating expense reported for the 1991 report year. The data contained in each profile consists of general and summary reports, as well as modal, performance, and trend indicators for the 1991 report year. The 1991 Report Year is defined as a transit reporting agency with a fiscal year ending on or between January 1 and December 31.

In order to provide a more user friendly and easily understood document, a unique publication name has been created for some transit agencies. There were 515 reports included in the Section 15 reporting system for the 1991 report year. Many transit systems have similar names such as "Mass Transportation Authority" or "Regional Transit District." The publication names attempt to place emphasis on urbanized area names to assist with geographical references and also to show relationships with regional governing bodies and contractual relationships with purchased transportation providers.

The left page of the profile shows both, general and financial system information. General information includes the Size of the Urbanized Area, Service Area, Service Supplied, Service Consumed, and the Number of Vehicles Operated in Maximum Service. Financial information includes the Sources of Operating Funds, Summary of Operating Expenses, Sources of Capital Funds Expended, and Uses of Capital Funds. In addition, two pie graphs at the bottom of the page depict the Sources of Operating Funds and Sources of Capital Funds Expended. Pie graphs that have zero value or equal to 100% are not depicted. In addition, the pie graphs are not shown for Sources of Operating Funds where contractual relationships exist and/or where operating subsidiaries are derived from parent organizations.

The right page of the profile portrays transit system characteristics by mode. For systems with more than four modes, only the four largest modes are included. If a transit system operates either or both Motor Bus (MB) and Heavy Rail (HR), these modes will always appear in columns one and two respectively. Two other columns are provided if additional modes are operated (other than or in addition to the primary modes). The columns are arranged in descending order of their respective operating expense. Specific financial and service characteristics, as well as performance measures are listed for each mode. Performance measures have been derived from individual mode characteristic data. The performance measures indicate service efficiency, cost effectiveness and service effectiveness for each mode. These performance measures can be easily compared among various transit systems.

At the bottom of the right page are line graphs for selected performance measures. They are provided for the modes in columns 1 and 2 to indicate trend data from 1988 through 1991.

Inconsistent patterns on the line graphs are due to certain anomalies in the database. There are several reasons for these anomalies. They include: 1) the transit agency commenced reporting after 1988; 2) a new mode was reported after 1988; 3) a report was not received for a given year between 1988 and 1991; 4) a waiver was granted for financial, and/or sampling information; and 5) data was either questionable, partially deleted, or zeroed for a given year.

For transit systems with purchased transportation relationships exceeding one hundred (100) vehicles operated in maximum service, the reports of both the transit agency and the purchased transportation provider(s) have been consolidated in order to provide a comprehensive summary of financial performance as well as the amount of transit service supplied and consumed. Where this consolidation has occurred, a notation of the purchased transportation providers and Section 15 Identification Numbers has been made in the general information section and an asterisk has been placed next to the purchased transportation expense figure.

Financial information reported by transit agencies that file at one of the three voluntary reporting levels (A,B, or C) was aggregated to equivalent required - level (R) data for the profiles in this report.

Appendix A is an average of the thirty (30) largest agencies. Each data item is the average of the thirty (30) transit profiles included in this report. This average can be used to compare with individual transit system performance.

Appendix B provides a Cross Reference Table and indicates where each data item appearing in this Profile can be located in the Section 15 report filed by individual transit systems. For data items that were derived, the formula used to calculate each item is listed. Appendix B is based on a 1991 R (Required) reporting level.
