Office of Highway Safety

September 1978

U. S. DEPARTMENT OF TRANSPORTATION

FEDERAL HIGHWAY ADMINISTRATION

SUBJECT

Distribution of "Fatal and Injury
Accident Rates on Federal-Aid and
Other Highway Systems, 1976"

FHWA BULLETIN

September 27, 1978

The subject report is the tenth in a series of annual summaries of fatal and injury accident data submitted by the States in Table TA-1.

The form of the report has been changed. Highway systems were revised extensively during 1976, as required by the Federal-aid Highway Act of 1973, and a number of the States were unable to compile complete data for the new systems during the transition year.

Because of the highway system revisions, most of the data in this report is not directly comparable to data reported for earlier years (1967-1975). There are two exceptions. First, Interstate System statistics are comparable to those previously reported as Interstate-Final. Second, since urban boundaries did not change substantially in 1976, State and national totals for rural and urban areas may be compared with previous totals.

Copies of the report are being furnished to each Division for transmittal to the Governor's Highway Safety Representative. Additional copies are available from the Office of Highway Safety (HHS-32) upon request.

H. L. Anderson
Associate Administrator for Safety

EXPLANATORY NOTE

This publication contains data on fatal and injury accidents and fatally and nonfatally injured persons involved in motor vehicle traffic accidents for calendar year 1976. The 1976 data are classified by the realigned highway systems described below. Because of the transition to new system definitions, the data reported by highway system are not complete.

Highway Systems

In the Federal-aid Highway Act of 1973, the Congress introduced new definitions of highway systems based on general functional classifications, i.e., arterial, collector, and local. The new definitions became effective July 1, 1976. These functional classifications differ from the classifications used by the 50 States and the District of Columbia for calendar years 1967-1975. The classifications of highways for calendar year 1976 are:

1. Interstate (Arterial)
2. Other Federal-Aid Primary (Arterial)
3. Federal-Aid Urban (Arterial and Collector)
4. Federal-Aid Secondary (Collector)
5. Non-Federal-Aid (Arterial)
6. Non-Federal-Aid (Collector)
7. Non-Federal-Aid (Local)

Each of the functional classifications is further described as rural and urban except that Federal-Aid Urban highways are only in urban places, and Federal-Aid Secondary highways are only in rural places.

With one exception, no direct comparison of the data can be made between the classifications used beginning with the 1976 data and the classifications used in earlier years. 1/ The Interstate in 1976 is comparable to the system identified as the Interstate-Final during previous years. Previous years' data are not published with the 1976 data in this publication.

Compilations

The tables summarize the data for fatal and nonfatal injuries in motor vehicle traffic accidents for calendar year 1976 by highway system and by State. These tables are compiled from reports 2/ submitted to the Federal Highway Administration by the 50 States, the District of Columbia, Commonwealth of Puerto Rico, and the territories of American Samoa, Guam, and the Virgin Islands.

1/ Fatal and Injury Accident Rates on Federal-Aid and Other Highway Systems, 1967 through 1975.

2/ Federal Highway Administration, Table TA-1, "Statewide Mileage, Travel, and Nonfatal and Fatal Injury Accidents."

The first table (page 1) shows U.S. estimates by highway system. These estimates exclude the Commonwealth of Puerto Rico and the territories of American Samoa, Guam, and the Virgin Islands. Because of the transition of new definitions of highway classifications during 1976, there was less than 100 percent reporting from the 50 States and the District of Columbia for these highway systems.

The tables on pages 2-25 present motor vehicle traffic accident data by State for each highway system. The tables indicate the States for which data are not complete. The first set of these tables (pages 2-7) presents fatal accident data by State for each highway system, and the second set (pages 8-13) presents data on nonfatal injury accidents by State for each highway system. Similarly, the third set (pages 14-19) and the fourth set (pages 20-25) present data for fatalities and nonfatally injured persons, respectively.

The table shown on page 26, STATE TOTALS--1976, presents totals reported by the 50 States and the District of Columbia. There are two States and the District of Columbia which did not submit totals for each category of data. The sum shown is the total of all data shown in the table; it is not the estimated U.S. total. On page 27, the data reported by the Commonwealth of Puerto Rico and the U.S. territories are summarized.

The rates shown in these tables are uniformly carried out to two decimal places. This apparent precision surpasses the degree of accuracy of much of the data on which the computed rates are based. Collection and classification of information about miles of highway, vehicle-miles of travel, and motor vehicle traffic accidents is a highly complex undertaking in which thousands of persons participate. Because of this complexity and the necessity of subjective judgments at many points in the process, the computed rates should be regarded as approximations, not as precise measurements.

In addition to the fatalities reported in this publication, about 1,100 deaths per year occur in motor vehicle nontraffic accidents. Such accidents may, for example, occur in private driveways or involve off-the-road recreational or farm vehicles. The inclusion of nontraffic deaths in some of the figures published by the National Safety Council explains much of the difference between the statistics published by that organization and the fatality statistics in this publication.

Terms used in these tables are defined as follows:

An injury is any bodily harm received by a person in a motor vehicle traffic accident.

A fatal injury is any injury that results in death within one year of the accident.

A nonfatal injury is any injury other than a fatal injury.

A fatal accident is a motor vehicle traffic accident resulting in one or more fatal injuries.

A nonfatal injury accident is a motor vehicle traffic accident that results in one or more injuries, but no fatal injuries.

A fatality is the death of any person who suffers a fatal injury.

A nonfatally injured person is one who suffers a nonfatal injury in either a fatal accident or a nonfatal injury accident.

Vehicle miles are the miles of travel by all types of motor vehicles, as determined by the State highway departments on the basis of actual traffic counts and established estimating procedures.

The fatal accident rate, nonfatal injury accident rate, fatality rate, and nonfatal injury rate are, respectively, the number of fatal accidents, nonfatal injury accidents, fatalities, and nonfatally injured persons per 100 million vehicle miles.

An urban highway is any road or street within the boundaries of an urban area. An urban area is an area including and adjacent to a municipality or other urban place with 5,000 or more population. The boundaries of urban areas are fixed by the State highway departments, subject to the approval of the Federal Highway Administration, for purposes of the Federal-aid highway program.

A rural highway is any road or street which is not an urban highway.

The characteristics of the functional classes of highways referred to in this compilation of 1976 data are briefly described as follows:

Arterial highways serve major traffic movements or major traffic corridors. While they may provide access to abutting land, their primary function is to serve traffic moving through the area.

Local highways are those highways whose principal function is to provide direct access to abutting land.

Collector highways are those highways which link local highways to arterial highways.

The characteristics of the several Federal-aid highway systems referred to in this report are briefly described as follows:

Federal-aid Primary, Secondary, and Urban highway systems are those for which Federal-aid highway matching funds may be spent by the States.

The Federal-aid Primary system is a system of connected main roads important to interstate, statewide, and regional travel, consisting of rural arterial routes and their extensions into or through urban areas.

The Interstate system is a part of the Federal-aid Primary system. It is a system of freeways (i.e., expressways with fully controlled access) connecting and serving the principal cities of the continental United States.

The Federal-aid Secondary system consists of rural collector routes.

The Federal-aid Urban system consists of arterial routes and collector routes, exclusive of urban extensions of the Federal-aid Primary system.

Paper and microfiche copies of Fatal and Injury Accident Rates on Federal-Aid and Other Highway Systems for the years 1967 through 1972 may be purchased from the U.S. Department of Commerce, National Technical Information Service, Springfield, Virginia 22151. Accession numbers: are 1967--PB-206 147; 1968--PB-206 148; 1969--PB-206 151; 1970--PB-206 152; 1971--PB-218 136; 1972--PB-231 045. The 1973, 1974, and 1975 issues may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

1/ U.S. estimates exclude the Commonwealth of Puerto Rico and the Territories of American Samoa, Guam, and Virgin Islands. Estimates for fatal accidents, fatalities, nonfatal injury accidents and nonfatally injured persons are based on the partial data reported by States which are displayed in the following tables, together with totals reported by most States.

2/ "Highway Statistics 1976," U.S. Department of Transportation, Federal Highway Administration. "This table is preliminary because extensive estimating was done by the Highway Statistics Division to provide entries in all highway categories. Revised system categories were reported by the State highway agencies beginning with data for the year 1976. Full reporting in each highway category is expected for 1977 data. Table VM-2 for 1976 will be revised when data for 1977 is reported."

3/ Rates are per 100 million vehicle miles.

4/ Highway miles and daily vehicle miles per mile are for Non-Federal-Aid Arterial and Non-Federal-Aid Collector combined.
