## EXECUTIVE SUMMARY

## About the Campus Travel Survey

The campus travel survey is a joint effort by the Transportation \& Parking Services (TAPS) on campus and the Sustainable Transportation Center, part of the Institute of Transportation Studies at UC Davis, meant to be administered annually each fall by a graduate student at the Institute of Transportation Studies. The main purpose of the survey is to collect annual data on how the UC Davis community travels to campus, including mode choice, vehicle occupancy, distances traveled, and vehicle/bicycle parking. It also offers an opportunity for TAPS to assess awareness of campus transportation services and perceptions of mobility options. This year's survey is the fourth administration of the Campus Travel Survey, which was first administered in the spring of 2006-07 as a pilot effort.

The 2009-10 survey was administered online in October 2009, distributed by email to a stratified random sample of 13,322 students, faculty, and staff (out of a total population of about 40,200). About 32 percent ( 4,263 individuals) responded to this year's survey, with about 28 percent actually completing it. For the statistics we present throughout this report, we weight the responses by role group (freshmen, sophomore, junior, senior, master's student, PhD student, faculty, and staff) so that the proportion of respondents in each group reflects their proportion in the campus population.

## Main findings

## Residential location and distances traveled

 About 77 percent of the (weighted) sample of respondents lives within Davis, including 14 percent who live on campus. This means that in the entire population of 40,200 campus affiliates, we estimate that about 4,800 live on campus, 25,000 live off campus in the city of Davis, and 9,400 live outside of Davis (see Figure 1).Based on respondents' geocoded residential locations, we estimate that the average distance traveled to campus is 6.5 miles. Among those living within Davis (off campus), the average distance is just 2.1 miles, and the maximum is about 5 miles. Because of the agricultural belt surrounding the city of Davis, those living outside of Davis are likely to live more than 10 miles away. We find
the average distance for those outside of Davis is about 23 miles. In total, we estimate that about 68 percent of the campus population lives within 3 miles of campus, 18 percent lives more than 10 miles away, and 7 percent lives more than 20 miles away.

Figure 1. Residential location, 2009-10

Figure 2. Cumulative percent of people living within each distance from campus

Students tend to live closer to campus than employees, and faculty tend to live closer than staff. Students are more likely to live within Davis, while employees, especially staff, are more likely to live outside of Davis (Figure 3). Almost all those living on campus are students, including 85 percent of freshmen. About 80 percent of the 25,000 people living off campus in the city of Davis are also students (Figure 4). As a result, about 82 percent of students live within 3 miles of Davis, compared with 51 percent of faculty and 30 percent of staff (Figure 2).

Figure 3. Where people in each role group live, and their percent of the total population

Figure 4. Composition of who lives in each location, and their percent of the total population

## Overall mode split

We estimate that on an average weekday, about 89 percent of people are physically on campus (a projected 35,626 people, including those living on campus). Among these, about 39 percent bike to get there, 34 percent arrive in personal vehicles, 20 percent ride public transit, and 7 percent walk or skate. These figures represent the percent of people primarily using this means of transportation (that is, for most of the way, or for the greatest amount of time or distance) from wherever they live to their campus destination, on an average weekday.

Because some people use different modes on different days, the total number of regular bikers or transit-riders, for instance, is substantially larger than the number doing it on any given day. In particular, while 39 percent bike on an average day, 47 percent reported biking as their primary means at least once during the week. Similarly, about 19 percent carpooled once in the week, 27 percent rode the bus, and 1.2 percent rode the train at least once as their primary means to get to campus. An additional number of people use some of these modes in combination with other modes. For instance, while 35 percent bike as their primary mode of travel on an average weekday (or 39 percent of those physically traveling), we estimate that 45 percent of the campus population has a bike on campus on an average weekday, a projected 18,123 people with bikes (see

Figure 6). This includes about 5,383 people who store bikes on campus overnight on an average weekday, about 52 percent of them owned by people living on campus. Counts indicate that the actual number of bikes left permanently on campus (presumably abandoned) is about double this figure.

Figure 5. Overall mode split 2009-10

Figure 6. Breakdown of daily bikes on campus

## Mode split among different groups

As found in previous years' surveys, the mode split varies substantially by residential location and role group. Most freshmen live on campus and therefore almost exclusively bike or walk to campus destinations. But these patterns do not persist when freshmen move off campus sophomore year. In general, anyone living off campus within the city of Davis has the most choice in transportation options, including biking, driving, riding the bus and (for some) walking.

Figure 7. Mode split among undergraduates from off campus within Davis, 2009-10

Figure 8. Mode split among grad students from off campus within Davis, 2009-10

Figure 9. Mode split among employees from off campus within Davis, 2009-10

Figure 10. Mode split from outside Davis, 2009-10 (all role groups)

Among this group (totaling about 25,000 overall), we see different patterns within different role groups. Among faculty and grad students living in the city of Davis (4,967 people), the most common modes are biking and then driving; there is an even split between biking and driving among staff in Davis $(3,708)$; and there is an even split between biking and riding the bus among undergrads living there $(16,322)$.

Among all of those in the city of Davis, the group most likely to bike is grad students (57 percent on an average weekday; a projected 1,900 people), followed by faculty ( 53 percent; 593 people) and staff ( 45 percent; 1,415 people), with undergraduates least likely to bike (40 percent; 5,957 people). However, because there are so many undergraduates, there are still more undergrads biking to campus on an average weekday than all other role groups combined.

Again among those living in Davis, the group most likely to drive is staff ( 45 percent; 1,432 people), followed by faculty ( 37 percent; 414 people), grad students ( 33 percent; 1,083 people), and undergraduates ( 14 percent; 2,168 people). Again, although just 14 percent of undergrads living off campus in Davis come by car, because there are so many undergrads, this group comprises about 42 percent of those driving to campus from within Davis.

Bus use is only prevalent among undergrads, with 40 percent of undergrads living in Davis riding on an average weekday ( 6,004 people), compared with 6 percent of grad students (204 people) and 4 percent of employees ( 170 people) living in Davis. However, the percent of undergraduates riding the bus declines from sophomore through senior year, as the percent biking continues to decline and the percent driving increases. (See overall trends by role group, all residential locations, in Figure 11.)

Those living outside of Davis have substantially different patterns from those living within Davis. About 89 percent of them travel by personal vehicle (compared with 23 percent among those living within Davis), and 83 percent of these drive alone rather than carpool (compared with 70 percent among those within Davis). In part because a disproportionate share of staff live outside of Davis, staff are more likely to arrive by vehicle and to drive alone than other role groups. However, even among those living outside of Davis, staff are more likely to drive than are faculty ( 91 versus 81 percent, respectively) and faculty are more likely to ride the train (13 percent of faculty versus 1 percent of staff).

Figure 11. Bike, bus, and vehicle mode share, by role group, 2009-10

Change in mode split, 2007 through 2010
Between 2007-08 and 2008-09, there was some shift toward what are thought of as more environmentally friendly, sustainable modes, but that this trend slowed between 2008-09 and 2009-10. In particular, while the percent of people biking had increased and the percent using cars had decreased between 2007-08 and 2008-09, these percentages returned to 2007-08 levels in 2009-10. However, the percent carpooling is still up since 2007-08 (by about 2 percentage points, to 8 percent on an average weekday) and the percent driving alone is down (by about 3 percentage points, to 26 percent). There was also a small but statistically significant increase in walking (up by about 2 percentage points since 2007-08). There has been no change in the percent riding the bus or train over the last two years. (See Table 1 and Figure 12.)

Perhaps the most notable change, for its overall magnitude as well its potential environmental impact and implications for campus planning, is that the total percent of people physically traveling to campus on an average weekday decreased by about 4.5 percent over the last two years, representing about 1,800 fewer people. This trend is observed in all role groups, among undergraduate and grad students, faculty, and staff, but is most pronounced among faculty and staff, with about 83 percent coming to campus on an average weekday, down by about 9 percentage points since 2007-08.

Table 1. Change in mode split, 2007-08 through 2009-10

|  | Percentagepoint change in those physically traveling | Among those physically traveling to campus, percentage-point change in those using: |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Personal vehicle |  |  | Bus | Train |
|  |  | Bike | Walk | Any | Drive alone | Carpool or ride |  |  |
| 2007-08 to 2008-09 | -2.7\% ** | 3.0\% ** | 0.7\% | -2.2\% ** | -4.3\% ** | 2.1\% ** | 1.1\% | n/a |
| 2008-09 to 2009-10 | -1.8\% ** | -1.5\% | 1.1\% * | 1.6\% | 1.4\% | 0.2\% | -1.0\% | -0.2\% |
| 2007-08 to 2009-10 | -4.5\% ** | 1.5\% | 1.8\% ** | -0.6\% | $-2.9 \% * *$ | 2.3\% ** | 0.1\% | n/a |

* Statistically significant difference with $p<0.1$ in a two-category $\chi^{2}$ test of the frequency of those using this mode versus those using any other mode in each year.
** Statistically significant at $p<0.05$.

## Vehicles on campus

Among those arriving by personal vehicle, about 77 percent drive alone, 17 percent carpool, and 6 percent get a ride with someone who drops them off before continuing on elsewhere. The average carpool size is 2.54 people (including the driver) and the average number of people dropped off by a driver continuing on elsewhere is 1.45 passengers (excluding the driver) per vehicle. Average vehicle ridership (AVR, as calculated by the South Coast Air Quality Management District) is roughly a ratio of the number of person-arrivals to vehicle-arrivals on campus over a five-day workweek, so higher AVR values (greater than 1.0) indicate more carpooling and/or use of alternative modes of transportation. We find the 2009-10 AVR for non-student employees living off-campus is 1.66, down slightly from 2008-09 and 2007-08. Overall AVR (among the entire campus community) is 3.30, down from 2008-09 but up from 2007-08 (see Table 2).

Figure 12. Change in mode split 2007-08 through 2009-10

Table 2. AVR, 2007-08 through 2009-10

|  | $2007-08$ | $2008-09$ | $2009-10$ |
| :--- | ---: | ---: | ---: |
| Overall | 3.20 | 3.51 | 3.30 |
| Employees and student $\quad \mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 2.31 |  |
| $\quad$ employees | 1.67 | 1.71 | 1.66 |
| Employees (non-student only) | 2.75 | 2.99 | 2.83 |
| All off-campus residents <br> Off-campus employees and <br> student employees | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 2.20 |
| Off-campus employees (non- <br> $\quad$ student only) | 1.67 | 1.69 | 1.66 |

Counting one vehicle for each person driving alone and a partial vehicle proportionate to the number of occupants in vehicles with more than one person, we estimate that 10,891 vehicles travel
to UC Davis each day. This means there are about 3.69 people on campus for every one vehicle. Among the vehicles coming to campus, an estimated 82 percent ( 8,925 vehicles) park on campus, 12 percent ( 1,337 vehicles) park off campus, and 5 percent ( 525 vehicles) drop passengers off without parking.

## VMT and carbon emissions

Based on distance from campus, mode choice, and vehicle occupancy, we generate rough estimates of the total number of vehicle-miles traveled (VMT) on the way to and from campus on an average weekday, as well as the carbon emissions associated with this travel. In particular, we estimate that the campus community covers about 418,300 miles per day roundtrip, generating about 274,600 vehicle-miles of travel in personal vehicles, and about 279,000 vehicle-miles travel overall (additionally including estimates of VMT by bus and train). Travel in personal vehicles generates an estimated 302,089 pounds-equivalent of $\mathrm{CO}_{2}$ daily, or 25.0 per person arriving by vehicle, on average. We estimate a total of 346,854 pounds-equivalent of $\mathrm{CO}_{2}$ generated daily by users of all modes, averaging 8.6 pounds per person campus-wide.

## Awareness of TAPS and other transportation services

The GoClub was newly launched in the September 2009, as an overarching program for marketing alternative transportation options on campus. As of the October 2009 survey, about 3 percent of survey respondents reported having used it and an additional 14 percent reported that they had heard of it (Figure 13). More than half had heard of Zipcar, launched on campus in the fall as well. Less than half had heard of programs such as the discount bus passes with the purchase of a parking permit, of the lock-cutting service, and of the new ride-matching network Zimride.

Figure 13. Percent who have heard of each service, 2009-10

## INTRODUCTION

## About the campus travel survey

The campus travel survey is a joint effort by the Transportation \& Parking Services (TAPS) on campus and the Sustainable Transportation Center, part of the Institute of Transportation Studies at UC Davis, meant to be administered annually each fall by a graduate student at the Institute of Transportation Studies. The main purpose of the survey is to collect annual data on how the UC Davis community travels to campus, including mode choice, vehicle occupancy, distances traveled, and vehicle/bicycle parking. It also offers an opportunity for TAPS to assess awareness of campus transportation services and perceptions of mobility options.

This year's survey is the fourth administration of the campus travel survey. The survey was first administered in the spring of 2006-07 as a pilot effort, with a second survey conducted in the fall of 2007-08 (see Congleton 2009) and a third conducted in the fall of 2008-09 (see Lovejoy, et al. 2009). The next administration of the survey is planned for October 2010.

## Development of the survey instrument

The content of the survey was based on the previous year's survey, retaining key questions relating to mode choice and residential location, among others. An ongoing attempt to refine question wording has meant that some variables are not directly comparable across years. (See Appendix A for a full copy of the 2009-10 survey instrument. See Appendix B for a summary of changes in the 2009-10 survey compared to the 2008-09 and 2007-08 surveys, as well as suggestions for potential modifications to the survey in future years.) The online survey was prepared using the Lime Survey software (http://www.limesurvey.org/), hosted on a server at the Institute of Transportation Studies administered by Ning Wan (a sample screenshot of the online appearance of the survey is shown in Appendix A). Staff at TAPS, at the Office of Resource Management and Planning, at Student Affairs Research and Information, as well as faculty, staff, and students affiliated with the Institute of Transportation Studies provided feedback on survey content, and assisted with pre-testing the online survey.

## Sampling procedure

The goal of the sampling procedure was to draw a sufficiently large sample for reliable statistical estimates within the following groups: freshmen, sophomores, juniors, seniors, master's/professional students, PhD students, faculty, and staff. We used standard statistical techniques to determine the minimum sample size needed for estimates with a $+/-5 \%$ margin of error, based on the assumed population size of each of the groups, shown in the first column of Table 3. ${ }^{1}$ In past years, we assumed that we might expect 20 percent of those invited to complete

1 For each strata, the minimum sample size, $n$, was calculated as $n=\frac{z_{\alpha / 2}^{2} S^{2}}{e^{2}+\frac{z_{\alpha / 2}^{2} S^{2}}{N}}$, where $N$ is the total
population, $S^{2}$ is the population variance, $z_{\alpha / 2}$ is the $(1-\alpha / 2)^{\text {th }}$ percentile of the standard normal distribution for degree of certainty $1-\alpha$, and $e$ is the acceptable margin of error of the estimate (Lohr 1999, p. 40). This formula
the survey, but found that response was higher among some role groups ( PhD students, faculty, and staff) and lower among others (seniors and masters'/professional students) (see Table 3). For the first time this year, we assumed varying response rates by strata to account for these differences, planning for just a 17-percent response among seniors and masters'/professional students and up to a 30 -percent response among staff, as shown in Table 3. Overall, we invited 13,322 people to complete the 2009-10 survey, or about 33 percent of the overall campus population, which was about 700 fewer than were invited in 2008-09.

Table 3: Sampling plan for 2009-10, versus 2008-09 and 2007-08

| Role group | 2009-10 |  |  |  | 2008-09 ${ }^{\text {b }}$ |  |  | 2007-08 ${ }^{\text {c }}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Assumed population ${ }^{\text {a }}$ | Target response | Number invited | Percent invited | Invited | Response $(Q 0001)^{\mathrm{b}}$ | Response $(Q 0084)^{\mathrm{b}}$ | Invited | Response |
| Students | 28,876 | 20\% | 10,792 | 37.4\% | 37.5\% | 25.8\% | 22.4\% | 36.1\% | 22.9\% |
| Undergraduate | 23,404 | 19\% | 7,515 | 32.1\% | 31.7\% | 23.5\% | 20.3\% | 30.5\% | 22.4\% |
| Freshmen | 4,335 | 20\% | 1,765 | 40.7\% | 38.6\% | 26.7\% | 22.3\% | 39.9\% | 26.3\% |
| Sophomores | 4,444 | 20\% | 1,770 | 39.8\% | 39.4\% | 23.3\% | 20.6\% | 36.1\% | 21.8\% |
| Juniors | 6,363 | 20\% | 1,815 | 28.5\% | 31.1\% | 24.4\% | 21.5\% | 31.7\% | 21.4\% |
| Seniors | 8,262 | 17\% | 2,165 | 26.2\% | 23.7\% | 19.7\% | 17.1\% | 21.4\% | 20.2\% |
| Graduate | 5,472 | 20\% | 3,277 | 59.9\% | 61.0\% | 30.7\% | 26.9\% | 60.2\% | 23.9\% |
| Masters | 1,926 | 17\% | 1,889 | 98.1\% | 86.0\% | 20.4\% | 18.0\% | 83.8\% | 19.1\% |
| PhD | 3,546 | 25\% | 1,388 | 39.1\% | 47.8\% | 40.5\% | 35.3\% | 48.1\% | 28.2\% |
| Employees | 11,333 | 27\% | 2,530 | 22.3\% | 30.5\% | 40.5\% | 34.7\% | 28.4\% | 44.5\% |
| Faculty | 2,081 | 25\% | 1,300 | 62.5\% | 78.0\% | 34.4\% | 29.6\% | 64.6\% | 37.0\% |
| Staff | 9,252 | 30\% | 1,230 | 13.3\% | 19.8\% | 45.8\% | 39.2\% | 20.3\% | 49.8\% |
| Overall percent | 100\% | 21\% |  | 33.1\% | 35.5\% | 29.5\% | 25.5\% | 33.9\% | 28.0\% |
| Overall number | 40,209 | 2,800 | 13,322 |  | 14,031 | 4,133 | 3,577 | 13,770 | 3,849 |

${ }^{\text {a }}$ Population figures are based on those provided by the Budget and Institutional Analysis department. For employees, this consisted of a tabulation they prepared at our request that included a breakdown of the total number of on-campus faculty (ladder faculty plus other faculty) and on-campus staff (including academic support, senior management, MSP, and SSP). For students, figures are based on the 2008-2009 student population summary three-quarter average
 (teaching credential) students; "Masters" includes all academic-program masters students, plus professional-program students in Masters of Law, JD, MBA (full time and working professional program), Forensic Science, Masters of Advanced Study, and Master of Preventative Vet Med, and excluding all School of Medicine students; "PhD" includes all academic-program doctoral (D1 and D2) students, plus professional-program students in Veterinary Medicine (DVM), excluding all School of Medicine students.
${ }^{\text {b }}$ Includes valid responses to question Q0001 (the first question in the 2008-09 survey) and to question Q0084 (about respondents' gender, the first question in the final section of the 2008-09 survey, relating to sociodemographics), respectively. See Lovejoy, et al. (2009) for more information.
${ }^{c}$ As reported in Congleton (2009).
A stratified random sample of 13,322 was drawn from ostensibly complete lists of UC Davis email addresses maintained at two different departments within the university. The sampling of student email addresses was conducted by the Student Affairs Research and Information office.
assumes a two-sided test and includes a finite population correction. We assumed $S^{2}=0.25$ (since a binary variable assuming a given value with probability $p$ has maximum $S^{2} \approx p(1-p)$ when $p=0.5$ ); we assumed
acceptable margin of error of $+/-5 \%(e=0.05)$; and we aimed for $95 \%$ confidence level ( $\alpha=0.05$ or $z_{\alpha / 2} \approx 1.96$ ).
Values of $N$ used were those shown in Table 6.

Student addresses were screened based on students' level and departmental affiliation, including all academic and professional students except medical students, who are not based on the Davis campus. The sample of employee (faculty and staff) email addresses was drawn by Data Administration staff using the Campus Data Warehouse. Employees were screened to exclude those affiliated with the Medical Center or field stations, those without salary, Emeritus faculty, Extension School faculty, temporary employees, and employees without email addresses. In each case, the respective offices drew the sample and submitted to Kristin Lovejoy an Excel spreadsheet containing only those names and email addresses of individuals selected for inclusion in the sample.

## Survey administration and recruitment of participants

We invited 13,322 randomly selected students, faculty, and staff to participate in the survey via email to their UC Davis addresses. In these emails, faculty and staff recipients were addressed "Dear UC Davis Employee" and students were addressed "Dear UC Davis Student." Everyone received two emails, an initial email inviting them to take survey and a reminder email approximately one week later, regardless of whether they had already completed it. Copies of these recruitment emails are shown in Appendix C.

In the 2008-09 administration of the survey, the initial email invitation was sent to all members of the sample at the same time, resulting in excess traffic to the web server hosting the survey in the minutes and hours immediately after the invitations were sent (see Lovejoy, et al. 2009). In an effort to spread this load, this year's email invitations were sent in batches of approximately 1,000 per hour over two days. In particular, we randomized the order of the email addresses and divided them into 14 batches of 1,000 or fewer ( 11 batches consisting of student email addresses and 3 consisting of employee email addresses). The UC Davis Postmaster sent one batch per hour as bulk mail from the address "travelsurvey@ucdavis.edu," starting at 9am on Wednesday, November 4, 2009, and continuing through 3pm on Thursday, November 5, 2009. Reminder emails were sent in a similar batched fashion on Monday and Tuesday of the following week (November 9-10, 2009).

Offering a chance to win a desirable prize is thought to increase overall response to a survey. This year, TAPS allocated $\$ 150$ for incentives to participate in the 2009-10 survey, which is the same budget allocated for incentives in the 2008-09 survey. We opted to offer a drawing to win an 8 GB iPod Nano, the same prize offered in 2008-09 and one of several prizes that were offered in the 2007-08 survey. Entry into a drawing for the iPod was mentioned in the initial and followup recruitment emails, as well as on the first welcome page of the online survey, where the mention of the iPod was hyperlinked to the section of Apple's website featuring this product. On the final page of the survey, respondents were asked to indicate whether it would be okay for us to contact them again (1) with questions about their survey or (2) if they win the drawing for the iPod nano, or if instead they preferred not to be contacted. There were 3,294 respondents who indicated they were willing to be contacted if they won the drawing. We assigned each of these respondents a random number and selected the one with the lowest value as the winner, who was notified via email on January 4, 2010 and issued the prize shortly thereafter.

## Response rate

A total of 4,263 respondents at least commenced the survey (responding to question Q0001), which was about 32 percent of those invited. About 13 percent of those who started the survey did not continue through to the first question of the final section (question $Q 0072$ ). This attrition is comparable to that observed in the 2008-09 survey, but because the initial response was somewhat higher this year, the final response rates are somewhat higher than in 2008-09 (e.g. 28 percent completing through question Q0072 in 2009-10 versus 25 percent completing through question Q0084 in 2008-09; compare Table 3 and Table 4). Table 4 also shows response rates for two other key points in the survey: question $Q 0016$ on mode choice and questions Q0074-76 on residential location (and in particular whether the responses given were successfully geocoded). As shown, even in this most restricted set, target response rates were exceeded within all role groups. As in past years, response rates were highest among staff, PhD students, and faculty, and lowest among masters/professional students and seniors.

Table 4. Response rate, by role

| Role group | Assumed population | Number invited | Target response rate | Actual response rate (number of valid responses as a percent of the total number invited to take the survey) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Question $Q 0001$ | Question Q0016 | Question Q0072 | Questions Q0016 and Q0074-76 |
| Students | 28,876 | 10,792 | 20\% | 29.6\% | 26.9\% | 25.9\% | 25.0\% |
| Undergraduate | 23,404 | 7,515 | 19\% | 27.6\% | 25.6\% | 24.5\% | 23.8\% |
| Freshmen | 4,335 | 1,765 | 20\% | 34.8\% | 31.8\% | 29.7\% | 29.7\% |
| Sophomores | 4,444 | 1,770 | 20\% | 29.0\% | 27.5\% | 26.7\% | 25.5\% |
| Juniors | 6,363 | 1,815 | 20\% | 25.0\% | 23.0\% | 22.5\% | 21.5\% |
| Seniors | 8,262 | 2,165 | 17\% | 22.8\% | 21.2\% | 20.2\% | 19.4\% |
| Graduate | 5,472 | 3,277 | 20\% | 34.1\% | 29.7\% | 28.9\% | 27.8\% |
| Masters | 1,926 | 1,889 | 17\% | 25.7\% | 20.7\% | 20.1\% | 19.2\% |
| PhD | 3,546 | 1,388 | 25\% | 45.6\% | 42.0\% | 40.9\% | 39.6\% |
| Employees | 11,333 | 2,530 | 27\% | 41.1\% | 37.2\% | 36.6\% | 34.3\% |
| Faculty | 2,081 | 1,300 | 25\% | 32.4\% | 30.2\% | 29.5\% | 27.2\% |
| Staff | 9,252 | 1,230 | 30\% | 50.2\% | 44.6\% | 44.1\% | 41.9\% |
| Overall percent | 100\% | 33.1\% | 21\% | 32.0\% | 28.8\% | 27.9\% | 26.8\% |
| Overall number | 40,209 | 13,322 | 2,800 | 4,263 | 3,840 | 3,717 | 3,569 |

Staggering the email invitations seemed to successfully avoid server overload this year. The responses were substantially more spread over time than in 2008-09, with fewer than 200 respondents commencing the survey within any given hour, compared with 679 successfully accessing the survey in the first hour after the launch in 2008-09 and an unknown number attempting but unable to access the website during that time (see Figure 14). There was no evidence that traffic to the survey website slowed the server performance. Replies to the invitations sent from travelsurvey@ucdavis.edu were set to forward to Kristin Lovejoy’s UC Davis email account. There were no replies reporting technical difficulties.

Figure 15 depicts how responses were spread over the 10 days after the initial launch on November 4. About 68 percent took the survey during the first two days (on the days the initial
email invitations were sent). The reminder emails sent on November 9 and 10 generated a substantial bump in responses, with 705 ( 17 percent of the overall sample) taking the survey on those days. Although we continued to collect responses through November 24, fewer than 2 percent of respondents took the survey after November 14, 2009.

Figure 14. Number of respondents taking the survey each hour, 2009-10 versus 2008-09

Figure 15. Number of respondents taking the survey each day, 2009-10

## Screening respondents for eligibility

While incomplete survey responses were retained in the dataset, cases were excluded based on two criteria: role and office location. In particular, we wanted to include only respondents who are current students or employees affiliated with the campus in Davis (rather than in locations beyond the campus or city of Davis) and whose role at UC Davis is known. Although the sample frame was supposed to only include current students and employees affiliated with the main campus, we have learned that university records are not always accurate, either due to a student or employee's recent change in status or due to ambiguity about the geographic location associated with a nominal departmental affiliation. We attempted to improve our screening of these exceptions in this year's survey through more explicit questions about roles and office locations.

In particular, we offered more role categories in questions $Q 0001$ through $Q 0003$, making an attempt to explicitly list some of the types of programs respondents wrote in as an "other" description on the previous year's survey, in addition to adding the option to indicate "recent graduate" in question Q0001. (As an oversight, we did not offer the option of "retiree," which we recommend adding as an option to question $Q 0001$ in the future.) As a result, we screened 3 recent graduates (who were then skipped to the end of the survey, see Appendix A) and received only 13 write-in descriptions of "other" roles (compared with 211 in 2008-09), all of which we were able to re-code into the standard categories. After recoding these as well as one respondent whose role was determined by her email address, there were still 17 respondents whose roles were unknown due to non-response to questions $Q 0001$ and/or $Q 0002$. Because we planned to weight the results by role group (freshmen, sophomore, junior, etc.), we excluded these from the analysis.

Regarding office locations, we intended to include in the sample anyone who usually travels to campus regularly, even if temporarily stationed elsewhere -- such as for sabbatical, teaching abroad, field work, a joint appointment at another campus, or on leave (bereavement, maternity, etc.) -- but exclude those whose main work is elsewhere. We thought this was a potential issue for employees and grad students, and not undergraduates. Thus we screened graduate student and employee office locations in question Q0004 ("Where is your office, lab, or department? That is, wherever you usually spend your time when you travel to work or school at UC Davis.") There were 129 respondents who indicated that their offices were located outside of Davis, including 98 graduate students and 31 employees. All but two of these wrote a description of their office location in question Q0005. These included the following locations:

- Bay Area
- Berkeley, CA
- Fremont, CA
- San Francisco, CA
- Big Sur
- Lake Tahoe, NV
- San Jose, CA
- Biggs, CA
- Lakeport, CA
- San Ramon, CA / Bishop Ranch
- Bodega Bay
- Menlo Park, CA
- Vacaville, CA
- Del Norte County, CA
- Dublin, CA
- Eureka, CA
- Oakland, CA
- Woodland, CA
- Parlier, CA
- Washington state
- Fairfield, CA
- Redding, CA
- Washington, DC
- Five Points, CA
- Richmond, CA
- Burkina Faso (West Africa)
- Sacramento, CA
- Peru
- Salinas, CA

These 129 respondents were skipped to the end of the survey (see Appendix A) and are excluded from the analysis.

## Sociodemographic composition of respondents completing the survey

Table 5 shows sociodemographic characteristics of the unweighted sample. As in the 2008-09 survey, the sample is disproportionately comprised of females. In particular, males comprise about 34 percent of the sample compared with 44 percent of the population of undergraduates; 39 percent of respondents versus 48 percent of the population of graduate students; and 47 percent of respondents versus 57 percent of the population of employees. ${ }^{2}$ This may mean that there is bias in the results presented in this report for any responses that tend to differ by gender.

In particular, we find that women respondents are substantially less likely to bike than are men ( 35 percent versus 45 percent doing so on an average weekday among women versus men, respectively), and somewhat more likely to drive alone ( 25 percent versus 20 percent) and to ride the bus ( 19 percent versus 14 percent). This means that the estimated bike mode share may be lower, while the drive-alone and bus mode shares may be higher than they would be in the actual population. ${ }^{3}$

Other biases may exist if there are other ways that the sample of respondents differs systematically from the rest of the population, though we have few ways of knowing the extent that it does. One attribute we can verify is the portion of the sample that owns parking permits, which we find matches the portion in the overall population (based on TAPS's records of permits issued), though with "A" permit-holders somewhat over-represented relative to "C" permitholders. (See the "Parking permits" section later in the report.)

[^0]Table 5. Sociodemographic characteristics of survey respondents

| Characteristic | Role group |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Undergraduates | Grad students | Employees | All |
| Gender: valid $n$ | 1,843 | 948 | 927 | 3,718 |
| \% male | 34.0\% | 38.6\% | 47.2\% | 38.5\% |
| Age: valid $n$ | 1,849 | 946 | 900 | 3,695 |
| $\%<20$ years old | 49.8\% | 0.0\% | 0.0\% | 24.9\% |
| $\% 20$ to 29 years old | 48.9\% | 74.9\% | 8.2\% | 45.7\% |
| \% 30 to 39 years old | 0.9\% | 21.4\% | 23.7\% | 11.7\% |
| \% 40 to 49 years old | 0.3\% | 3.0\% | 25.7\% | 7.1\% |
| $\% 50$ to 59 years old | 0.2\% | 0.6\% | 28.6\% | 7.2\% |
| $\% 60+$ years old | 0.0\% | 0.1\% | 13.9\% | 3.4\% |
| Household size: valid $n$ | 1,843 | 945 | 922 | 3,710 |
| \% alone | 2.4\% | 16.4\% | 15.8\% | 9.3\% |
| \% 2 people | 13.0\% | 43.0\% | 37.5\% | 26.7\% |
| $\% 3$ to 5 people | 46.9\% | 38.8\% | 45.2\% | 44.4\% |
| $\% 6$ or more people | 9.2\% | 1.7\% | 1.4\% | 5.3\% |
| $\%$ in a dormitory | 28.4\% | 0.1\% | 0.0\% | 14.2\% |
| Highest level of education: valid $n$ | 1,848 | 952 | 930 | 3,730 |
| \% High school or less | 49.1\% | 0.2\% | 1.7\% | 24.8\% |
| \% Some college | 41.5\% | 0.0\% | 8.5\% | 22.7\% |
| \% 2-year degree | 6.7\% | 0.0\% | 5.2\% | 4.6\% |
| \% Bachelor's degree | 2.8\% | 21.1\% | 16.6\% | 10.9\% |
| \% Some grad school | 0.0\% | 47.1\% | 4.0\% | 13.0\% |
| \% Grad degree | 0.0\% | 31.6\% | 64.1\% | 24.0\% |
| Total household income: valid $n$ | 0 | 0 | 890 | $\mathrm{n} / \mathrm{a}$ |
| \$0-\$19,999 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 0.1\% | $\mathrm{n} / \mathrm{a}$ |
| \$20,000-\$39,999 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 5.1\% | $\mathrm{n} / \mathrm{a}$ |
| \$40,000-\$59,999 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 12.9\% | $\mathrm{n} / \mathrm{a}$ |
| \$60,000-\$79,999 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 17.0\% | $\mathrm{n} / \mathrm{a}$ |
| \$80,000-\$99,999 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 11.2\% | $\mathrm{n} / \mathrm{a}$ |
| \$100,000-\$119,999 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 14.4\% | $\mathrm{n} / \mathrm{a}$ |
| \$120,000-\$139,999 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 11.9\% | $\mathrm{n} / \mathrm{a}$ |
| \$140,000-\$159,999 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 7.0\% | $\mathrm{n} / \mathrm{a}$ |
| \$160,000-\$179,999 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 5.7\% | $\mathrm{n} / \mathrm{a}$ |
| \$180,000-\$199,999 | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 4.5\% | $\mathrm{n} / \mathrm{a}$ |
| Greater than \$200,000 | n/a | $\mathrm{n} / \mathrm{a}$ | 10.2\% | n/a |
| Total respondents (total $n$ ) | 2,074 | 1,020 | 1,007 | 4,101 |

The statistics shown are unweighted, based on responses to questions Q0072, Q0078, Q0088, Q0089, and Q0090.
Question $Q 0090$ (income) was not asked of students. Percentages reported are among valid (non-missing) responses to each question.

## Weighting responses by role

For the purposes of analysis, we assume that respondents are roughly similar to the rest of the population within their role group (freshmen, sophomore, etc.) with respect to sociodemographics or other attributes that may matter for transportation choices. For this reason, we weight the sample by role group. In particular, as described above, respondents were assigned one of eight role categories based on their responses to questions Q0001 through Q0003: freshmen, sophomores, juniors, seniors (and fifth-years and post-baccaleaureate), masters students (and professional students such as law and business and Ed.D. or CANDEL), PhD students, faculty, or staff (including Post-docs). All results presented in this report are weighted to be representative of the campus population by these role groups. That is, we apply a weight
factor to each case in a given role group so that the group's proportion in the sample is the same as their proportion in the overall population.

To accomplish this, the appropriate weight factor is a ratio of the population share to the sample share for each role group. That is, with $N$ total population, $n$ in the sample, and $N_{i}$ in role group $i$ in the population (for instance, freshmen), and $n_{i}$ of role group $i$ in the sample, we apply the weight factor $W_{i}=\left(N_{i} / N\right) /\left(n_{i} / n\right)$ to all cases in role group $i$. Applying the weight factors alters the apparent distribution of respondents by role, but the overall sample size is unchanged. In instances where we would like to expand the sample to a projection of the full population, we weight each case by an expansion factor $E_{i}$, equal to $\left(N_{i} / n_{i}\right)$. Applying the expansion factors alters both the distribution of respondents by role, and inflates the sample to the size of the population, or 40,209.

Although the number of valid responses varies from question to question (that is, $n$ and $n_{i}$ ), we use the same set of weight factors for most variables, based on the distribution of roles among the $n=3,840$ valid responses to question $Q 0016$, the main question relating to mode choice on each day during the travel week. However, for variables relying on geocoding of respondents' residential location, we generated a separate set of weight factors, based on the 3,569 cases successfully geocoded (by zip code and cross streets given in questions Q0074 and Q0076, or on-campus residence name given in Q0075; see Appendix E) and with non-missing mode data from question Q0016. Both sets of weights are shown in Table 6.

Table 6. Weight factors, applied by role

| Role group <br> (i) | $\begin{aligned} & \xi \\ & .0 \\ & \text { 흘 } \\ & 0 \\ & 0 \end{aligned}$ | Based on valid responses to question $Q 0016$ |  |  |  | Based on valid responses to question Q0016 and successful geocoding of home location (from responses to questions $Q 0074-Q 0076$ ) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Valid responses (n) | Weight factor $\left(N_{i} / N\right) /\left(n_{i} / n\right)$ | Expansion factor $\left(N_{i} / n_{i}\right)$ | Weighted sample size | Valid responses (n) | Weight factor $\left(N_{i} / N\right) /\left(n_{i} / n\right)$ | Expansion factor $\left(N_{i} / n_{i}\right)$ | Weighted sample size |
| Freshmen | 4,335 | 562 | 0.73665 | 7.71352 | 414.0 | 524 | 0.73431 | 8.27290 | 384.8 |
| Sophomores | 4,444 | 487 | 0.87147 | 9.12526 | 424.4 | 452 | 0.87269 | 9.83186 | 394.5 |

## Reference week

The main statistics we measure are based on questions asking respondents about their activity during each of the seven days of the week prior to receiving the invitation to complete the survey. We plan for the reference week to be approximately the same each year that the survey is administered, and also coinciding with the campus's biannual traffic counts (of vehicles entering campus), usually conducted the last week in October or the first week in November every other year. Therefore, this year's initial reference week was October 26-November 1, 2009 (Monday-

Sunday). As in 2008-09, we updated the reference week on the Sunday after the launch (and just before reminder emails were distributed), such that respondents would refer to the most recent week when completing the survey. Therefore, anyone who completed the survey from the launch on Wednesday, November 4 through midnight on Sunday, November 8 answered the survey referring to October 26-November 1, and anyone who completed the survey after that point answered referring to November 2-8. Initial invitations were sent Wednesday and Thursday (November 4 and 5) and reminder emails were sent Monday and Tuesday (November 9 and 10). ${ }^{4}$ In total, about 78 percent of the sample completed the survey with the earlier reference week.

The overall timeline of the survey launch and reference weeks is shown in Figure 16. Table 7 notes weather and other events occurring during each of the reference weeks. In general, there were no major events: no rain during either week, the Halloween holiday fell on a Saturday, and while Tuesday, November 3 (during the second reference week) was Election Day, it was not a presidential election as occurred during the 2008-09 Campus Travel Survey.

| Day | Temperature ranges, precipitation, and notable events |  |
| :--- | :---: | :---: |
|  | Week 1: October 26-November 1 | Week 2: November 2-8 |
| Monday | $51-80^{\circ} \mathrm{F}$ | $46-77^{\circ} \mathrm{F}$ |
| Tuesday | $55-77^{\circ} \mathrm{F}$ | $46-79^{\circ} \mathrm{F}$ |
|  | Wind ( 40 MPH gusts) | Election day |
| Wednesday | $46-64^{\circ} \mathrm{F}$ | $46-70^{\circ} \mathrm{F}$ |
|  | Wind ( 32 MPH gusts) | Wind $(17 \mathrm{MPH}$ gusts) |
| Thursday | $40-71^{\circ} \mathrm{F}$ | $47-68^{\circ} \mathrm{F}$ |
|  | $43-70^{\circ} \mathrm{F}$ | Wind (17 MPH gusts) |
| Friday | $45-73^{\circ} \mathrm{F}$ | $43-70^{\circ} \mathrm{F}$ |
| Saturday | Halloween holiday | $42-68^{\circ} \mathrm{F}$ |
|  | $46-77^{\circ} \mathrm{F}$ | $39-66^{\circ} \mathrm{F}$ |
| Sunday |  |  |

Weather data are for Sacramento, as reported in the Farmer's Almanac, available online by city and date at http://www.almanac.com/weatherhistory.

## FINDINGS

This section summarizes some of the results from the survey. Throughout this section, data presented are weighted by role, as described above. When "unweighted sample" size is reported it reflects the number of actual respondents in this category; "weighted sample" size reflects the number that would be in each category if the distribution of roles in the sample matched the distribution in the population (so the total number in the weighted sample equals the number in the weighted sample, but numbers within subgroups may change). "Projected population" size is a projection of the weighted proportions to the full population size, effectively multiplying each response by an expansion factor by role group.

Many statistics are presented by role group as defined above (freshmen, sophomores, juniors, seniors, master's students, PhD students, faculty, or staff). In addition, some are also broken down by students (including freshmen through PhD student role-group categories), undergraduates (freshmen through senior role-group categories), graduate students (master's and PhD student role-group categories), employees (faculty and staff role-group categories), within Davis (those living on campus or elsewhere in Davis among all role-group categories), and outside Davis (those living outside of Davis among all role-group categories).

## Number traveling to campus

About 90 percent of the sample physically travels to campus Monday through Thursday, with a low of about 82 percent traveling to campus on Friday (Table 8). Employees especially are less likely to travel to campus on Fridays. On weekends, students and faculty are more likely to travel to campus than are staff, with about a quarter of graduate students coming on weekends and almost 1 in 5 faculty.

Table 8. Percent traveling to campus by day of the week

| Role group | Percent physically traveling to campus |  |  |  |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  | Mon. | Tues. | Wed. | Thurs. | Fri. | Sat. | Sun. | No days |  |  |
| Sample |  |  |  |  |  |  |  |  |  |  | ( | Projected |
| ---: | :--- |
| population |

Results are based on responses to question Q0006. Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

In addition to trends by the day of the week, there are substantial differences in the percent traveling to campus among those living in different locations. In particular, among all role groups, those living outside of Davis are less likely to travel to campus on an average weekday ( 82 percent) than those living in Davis ( 91 percent) or on campus ( 94 percent). Grad students and faculty living outside of Davis are the least likely to come to campus, with less than threequarters coming to campus on an average day ( 70 percent of masters students, and 72 percent of PhD students and faculty). By contrast, 92 percent of grad students and 84 percent of faculty who are living in town come to campus on an average weekday. (See Table 54 for the overall percent of people living in each location by role group.)

Table 9. Percent traveling to campus on an average weekday, by role and residential location

| Role group | Overall |  | Among those living: |  | Weighted <br> sample | Projected <br> population |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  |  | On campus | Off campus in Davis | Beyond Davis | $90.8 \%$ | 2,758 |
| Students | $90.8 \%$ | $93.7 \%$ | $92.0 \%$ | 80,876 |  |  |
| Undergraduate | $91.5 \%$ | $94.3 \%$ | $92.1 \%$ | $86.0 \%$ | 2,235 | 23,404 |

| Staff | $83.9 \%$ | $70.0 \%$ | $85.3 \%$ | $83.6 \%$ | 884 | 9,252 |
| Overall | $93.6 \%$ | $90.5 \%$ | $81.8 \%$ |  |  |  |
| Weighted sample | 3,740 | 539 | 2,326 | 876 | 3,740 |  |
| Projected population | 40,209 | 5,794 | 24,999 | 9,415 |  | 40,209 |

Results are based on responses to question Q0006 (days traveling to campus) and Q0073 (residential location).
Percentages are calculated as the percent of five weekdays that an individual traveled to campus; then the average over all respondents represents the percent traveling to campus on an average weekday. See Table 54 for the overall percent living in each location by role group. Data are weighted by role group based on the 3,840 valid responses to question Q0016 (see Table 6).

About 4 percent of the sample did not physically travel to campus on any days during the reference week. These respondents were asked to give the reason they were away all week (Table 10). Employees were more likely to be away all week than students, with work travel and vacation being the most common reasons given for being away.

Table 10. Percent away from campus all week and reasons given, by role

|  |  | Among those away all week, percent away for: |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Role group | Percent away all week |  |  |  |  |  |  |  |  | Weighted sample | Projected population |

| Graduate | 3.7\% | 39.9\% | 2.4\% | 8.2\% | 8.2\% | 27.1\% | 11.2\% | 0.0\% | 2.9\% | 538 | 5,472 |
| Employees | 5.9\% | 36.2\% | 2.4\% | 31.3\% | 15.2\% | 11.9\% | 0.8\% | 0.8\% | 1.5\% | 1,129 | 11,333 |
| Faculty | 5.9\% | 66.7\% | 0.0\% | 0.0\% | 4.2\% | 12.5\% | 4.2\% | 4.2\% | 8.3\% | 206 | 2,081 |
| Staff | 5.9\% | 29.4\% | 2.9\% | 38.2\% | 17.6\% | 11.8\% | 0.0\% | 0.0\% | 0.0\% | 922 | 9,252 |
| Overall | 3.3\% | 29.5\% | 26.5\% | 16.9\% | 12.9\% | 10.0\% | 2.0\% | 0.4\% | 1.8\% | 4,012 | 40,209 |
| Weighted sample | 133 | 39 | 35 | 23 | 17 | 13 | 3 | 1 | 2 | 4,012 |  |
| Projected population | 1,333 | 393 | 353 | 226 | 172 | 133 | 27 | 5 | 23 |  | 40,209 |

Results are based on responses to question Q0012. Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Employees (and not students) who were away from campus just some of the days during the week were also asked to give the reason they did not travel to campus for each weekday they were away. Table 11 shows the percent of employees away from campus on an average weekday, and the reasons given. While about 6 percent of employees were away all week (Table 10), about 17 percent of employees do not travel to campus on an average weekday (Table 11). The most common reasons for being away from campus are work travel or other off-campus work commitments, as well as working from home (telecommuting).

Table 12 shows the percent of employees who were away from campus for each reason on at least one day during the reference week. This shows, for instance, that although a projected 360 employees work from home on an average weekday (Table 11), about 890 do so at some point during the week (Table 12). Similarly, while less than 1 percent of employees reported being on furlough on an average weekday, about 3 percent (a projected 350 people) took unpaid furlough days off at some point during the reference week. ${ }^{5}$

[^2]Table 11. Percent of employees not traveling to campus on an average weekday and reason

|  | Among those not coming to campus, reason given: |  |  |  |  |  |  |  |  |  | Total employees: |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| All employees | 34.0\% | 9.3\% | 7.9\% | 5.5\% | 4.5\% | 4.4\% | 3.1\% | 1.0\% | 0.3\% | 1,107 | 11,333 |
| Weighted sample | 376 | 103 | 87 | 61 | 50 | 49 | 34 | 11 | 3 | 1,107 |  |
| Projected population | 3,848 | 1,057 | 891 | 625 | 514 | 503 | 350 | 108 | 33 |  | 11,333 |

Results are based on responses to questions $Q 0007$ through $Q 0011$ for individual days absent and on responses to Q0012 for those absent all week; reasons given in Q0012 are assumed to apply to all five weekdays. Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Destination on campus

Employees and graduate students were asked the location of their office, lab, or department (in question Q0004). This was in part to screen out those whose offices or labs were outside of Davis (see above), who are excluded from the sample for this study. Among the included respondents, about 83 percent reported locations in the central campus area (a projected 13,958 people), including 88 percent of grad students, 92 percent of faculty, and 78 percent of staff (Table 13). About 17 percent (a projected 2,365 people) reported locations in west campus, south past years of this survey nor will likely apply in the future.
campus, or off-campus within the city of Davis, including 12 percent of grad students, 8 percent of faculty, and 22 percent of staff.

Table 13. Destination on campus, among employees and graduate students

| Role group | Central <br> campus <br> area | West campus <br> area (west of <br> SR 113) | South campus <br> area (south of <br> I-80) | Off-campus <br> but in Davis | Weighted <br> sample | Projected <br> population |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |

| Overall | $83.1 \%$ | $5.0 \%$ | $5.2 \%$ | $6.8 \%$ | 1,707 | 16,805 |
| Weighted sample | 1,418 | 86 | 88 | 115 | 1,707 |  |
| Projected population | 13,958 | 846 | 866 | 1,135 |  | 16,805 |

Results are based on responses to question Q0004. Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Mode split for primary means of transportation

For physical trips to campus, mode choice was determined by asking respondents to "Please select which means of transportation you used on your way to your first campus destination each day. (If you used more than one means, select whatever you did for most of the distance)" (question Q0016). Thus the modes identified are those used for most of the trip, and only on the way to campus at the beginning of the day. (Throughout this report, we refer to this as a respondent's "primary" mode, meaning what they did for most of the trip to campus.) For each respondent, we calculate the percent of days out of the five-day week that a given mode was used as a primary mode. (For instance, if someone biked one day, her bike share for the week would be 20 percent.) The overall mode split represents the average shares across all respondents, which is equivalent to the percent of all people using each mode on an average weekday.

Table 14 and Table 15 show the overall mode split among those physically traveling to campus on a given day (broken down by role group in Table 14; and further broken down by both residential location and role group in Table 15). (See Table 9 for a comparison of the percent of people physically traveling to campus on an average weekday by role and residential location.) On an average weekday, we estimate that among those physically traveling to campus, about 39 percent of people bike (a projected 13,974 people), 34 percent arrive by car ( 12,061 people), and 20 percent ride public transit ( 7,040 people). The percent biking is highest among freshmen (most of whom live on campus), and among grad students and faculty living off-campus within the city of Davis. Among those living off-campus within the city of Davis, undergrads are least likely to bike. With high Unitrans use, they are about equally likely to bike as ride the bus. By contrast, grad students and employees in Davis who do not bike are most likely to drive or get a ride. The overwhelming majority ( 89 percent) of those living outside Davis drive or get a ride, though the percentage is somewhat lower among faculty and grad students ( 81 and 84 percent, respectively; Table 15). Train ridership differs markedly by role, with 13 percent of faculty living outside of Davis riding on an average weekday, compared with 9 percent of grad students, 2 percent of undergrads, and 1 percent of staff.

Table 14. Percent using each mode on an average weekday, by role group (all locations)

| Role group | Percent physically traveling | Among those physically traveling, percent using: |  |  |  |  |  |  | Weighted Projected sample population |  |

Results are based on responses to question Q0006 (whether they traveled to campus each day) and question $Q 0016$ (primary means of transportation each day). All mode split percentages are calculated as follows: we first calculate the percent of five weekdays that an individual used a particular mode. Then the average over all respondents represents the percent using this mode on an average weekday. All data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

| Weighted sample | 3,442 | 1,334 | 230 | 14 | 887 | 265 | 652 | 20 | 40 | 3,840 |  |
| Projected population | 36,041 | 13,973 | 2,403 | 148 | 9,291 | 2,770 | 6,828 | 212 | 416 |  | 40,209 |

Results are based on responses to question $Q 0006$ (whether they traveled to campus each day), question Q0016 (primary means of transportation each day), and questions Q0007-Q0012 (reasons for not traveling, including telecommuting). See footnote 4 regarding student telecommuting. All mode split percentages are calculated as follows: we first calculate the percent of five weekdays that an individual used a particular mode. Then the average over all respondents represents the percent using this mode on an average weekday. All data are weighted by role group based on the 3,840 valid responses to question Q0016 (see Table 6).

Table 17 reports the mode split if we include telecommuting as a travel mode (sometimes considered virtual travel), as done in Lovejoy et al. (2009) and Congleton (2008), presented here for comparison purposes. The denominator here is all people who physically traveled to campus plus those who worked from home on a given weekday, but excluding those not traveling for any other reason, based on responses to questions $Q 0007$ through $Q 0012$. If working from home was indicated in Q0012 as the reason for not traveling to campus the entire week, we assumed that the individual did so on all five weekdays. ${ }^{6}$

As an overview of the differences between Table 14 and Table 17, Table 18 shows how the mode split percentages appear different, depending on who is included in the equation. For instance, we project that about 13,900 people bike to campus as their primary means of travel on a typical weekday, which represents just over 39 percent of everyone physically traveling to campus on a given day, just under 39 percent of those either physically traveling or telecommuting, and about 35 percent of the entire campus population (including those not traveling for other reasons).

Table 18. Comparison of mode split percentages using different denominators

| Among... (denominator used): | Bike | Walk | Skate | Drive alone | $\begin{aligned} & \text { Carpool } \\ & \text { or ride } \end{aligned}$ | Bus | Train | Work from home | Other nontravel | Denominator: |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  | As percent of the total population | Projected population included |
| Total population | 34.8\% | 6.0\% | 0.4\% | 23.1\% | 6.9\% | 17.0\% | 0.5\% | 1.0\% | 10.4\% | 100.0\% | 40,209 |
| Those traveling or telecommuting | 38.8\% | 6.7\% | 0.4\% | 25.8\% | 7.7\% | 18.9\% | 0.6\% | 1.2\% | n/a | 89.6\% | 36,044 |
| Those physically traveling only | 39.2\% | 6.8\% | 0.4\% | 26.1\% | 7.8\% | 19.2\% | 0.6\% | n/a | n/a | 88.6\% | 35,629 |
| Population projection | 13,974 | 2,406 | 151 | 9,289 | 2,768 | 6,828 | 212 | 415 | 4,165 |  | 40,209 |

While Table 11 through Table 18 present estimates for the percent doing various things on an average weekday, another consideration is the percent doing various things at least once on a given day during the week. Table 19 shows the percent using each mode as a primary mode at least once during the seven-day week (including Saturday and Sunday, although this addition does not affect these numbers substantially). We see, for instance, that although about 39 percent bike to campus (as their primary means of transportation, among those physically coming to campus) on an average weekday (from Table 14), about 47 percent bike to campus (as their primary means of transportation) at least once during the week (Table 19). So while about 14,000 people bike as their primary means of travel on an average day, about 19,000 people are regular bikers (at least once per week). The number of regular carpoolers and train-riders is also substantially greater than the average number doing it on a given day, projected to be 7,530 (versus 2,768 ) and 476 (versus 212) for carpooling and train-riding, respectively.

[^3]Table 19. Percent using each as a primary mode at least once during the seven-day week

| Role group | At least once during the seven-day week: |  |  |  |  |  |  |  | Weighted sample | Projected population |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Percent physically traveling | Among those traveling, percent using each as a primary mode: |  |  |  |  |  |  |  |  |
|  |  | Bike | Walk | Skate | Drive alone | $\begin{gathered} \text { Carpool } \\ \text { or ride } \\ \hline \end{gathered}$ | Bus | Train |  |  |
| Students | 97.5\% | 55.1\% | 16.1\% | 1.3\% | 27.9\% | 18.2\% | 35.4\% | 1.0\% | 2,758 | 28,876 |

| Outside Davis | 94.7\% | 3.9\% | 3.6\% | 0.0\% | 82.8\% | 21.8\% | 6.1\% | 3.9\% | 862 | 9,297 |
| Within Davis | 97.1\% | 60.2\% | 16.2\% | 1.3\% | 26.1\% | 17.7\% | 33.8\% | 0.4\% | 2,836 | 30,912 |
| Overall | 96.3\% | 47.3\% | 13.7\% | 1.0\% | 38.8\% | 18.7\% | 27.3\% | 1.2\% | 3,840 | 40,209 |
| Weighted sample | 3,699 | 1,815 | 525 | 37 | 1,489 | 719 | 1,050 | 45 | 3,840 |  |
| Projected population | 38,733 | 19,008 | 5,501 | 391 | 15,587 | 7,530 | 10,995 | 476 |  | 40,209 |
| Average weekday projected population | 35,629 | 13,974 | 2,406 | 151 | 9,289 | 2,768 | 6,828 | 212 |  | 40,209 |

Results are based on responses to questions Q0006 (whether traveled to campus) and Q0016 (primary means of transportation each day). Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$.

## Comparison of 2009-10 mode split with 2008-09 and 2007-08

While one of the main purposes of the Campus Travel Survey is to collect comparable data each year for the assessment of trends over time, as we refine how to best collect information such as mode choice, we have made some changes each year of the survey, potentially compromising comparisons across years. With that caveat in mind, meaningful comparisons can be made. First, there are almost no differences between the 2009-10 and 2008-09 surveys. There is more difference between these and the earlier 2007-08 survey (see Lovejoy, et al. 2009). In particular, the 2007-08 respondents were not given the options of train/rail, getting a ride, or skating, but they were given the option of "other" as well as "more than one of these," generating an additional category of ambiguously multimodal commuters (in 2007-08) who in later years were forced to indicate a single primary mode used for most of the trip. Another addition to the 200910 survey was the choice of "motorcycle/ scooter" as its own mode category. (In the 2008-09 survey, motorcylists were expected to choose "drive alone" as their means of travel. For the purposes of analysis in this report, we still group the motorcyclists with those driving alone.)

Roughly comparable mode-split data for all three years are presented in Table 20. (See Lovejoy, et al. 2009 for more information on the preparation of the 2007-08 mode splits.) Table 21 shows the percentage-point change across years (and tests for statistically significant changes), from 2007-08 to 2008-09, then from 2008-09 to 2009-10, and finally across the two-year span from 2007-08 to 2009-10.

Table 20. Percent using each mode on an average weekday, 2007-08 through 2009-10

| Year and role group | Percent physically traveling to campus | Among those physically traveling to campus, percent by: |  |  |  |  |  |  | Weighted sample |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Results from 2009-10 are based on responses to questions Q0006 (whether traveled to campus) and Q0016 (primary mode each day) and are weighted by role based on the 3,840 valid responses to $Q 0016$ (see Table 6). Results from 2008-09 and 2007-08 data are similarly calculated and weighted, as described in Lovejoy, et al. (2009).

Table 21. Percentage-point change in overall mode shares, 2007-08 through 2009-10

| Years of comparison | Percentage-point change in percent of people doing each on an average weekday |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Among those physically traveling to campus: |  |  |  |  |  |  | Physically traveling to campus |
|  | Bike | Walk | Personal vehicle |  |  |  | Train |  |
|  |  |  | Any | Drive alone | Carpool or ride | Bus |  |  |
| 2007-08 to 2008-09 | 3.0\% ** | 0.7\% | $-2.2 \%$ ** | -4.3\% ** | 2.1\% ** | 1.1\% | n/a | $-2.7 \%$ ** |
| 2008-09 to 2009-10 | -1.5\% | 1.1\% * | 1.6\% | 1.4\% | 0.2\% | -1.0\% | -0.2\% | -1.8\% ** |
| 2007-08 to 2009-10 | 1.5\% | 1.8\% ** | -0.6\% | $-2.9 \% * *$ | 2.3\% ** | 0.1\% | n/a | -4.5\%** |

Total sample sizes are 4,180 (in 2007-08), 3,929 (in 2008-09), and 3,840 (in 2009-10).

* Statistically significant difference with $\mathrm{p}<0.1$ in a two-category $\chi^{2}$ test of the frequency of those using this mode versus those using any other mode in one year versus the other.
** Statistically significant at $\mathrm{p}<0.05$.
We see that between 2007-08 and 2008-09, there was some shift toward what are thought of as more environmentally friendly, sustainable modes, but that this trend slowed between 2008-09 and 2009-10 (Table 21). In particular, between 07-08 and 08-09, the percent of people biking increased by about 3 percentage points (from 39 to 41 percent), but declined to 38 percent in 2009-10, not statistically significantly different from the 2007-08 figure. Similarly while the percent arriving in a car had been down by about 2 percentage points from 07-08 to 08-09, it was back up to the 07-08 levels this year. The percent driving alone is still lower in 2009-10 than in 2007-08, but by 3 percentage points (at 26 percent) rather than 4 percentage points, as found in 2008-09. And an overall increase in carpooling was sustained, still about 2 percentage points above 2007-08 levels (at 8 percent). There was also a statistically significant increase in the
percent of people walking in 2009-10, up about 2 percentage points since 2007-10 (to 7 percent). There was no statistically significant change in bus or train ridership over any of the years.

There appear to be some patterns within role groups that differ from the rest of the population. (Table 22 through Table 29 show the percentage-point changes in the number using each mode on an average weekday across survey years for more detailed role-group categories.) In particular, while in the overall population there was no significant change in the percent using a personal vehicle to get to campus (either as rider or passenger), the percent of undergrads arriving cars has decreased in each of the last two years (by about 3 percentage points since 2007-08, to 18 percent) while the percent of grad students using cars has increased in each of the last two years (by about 10 percent, to 37 percent, about three-quarters of them driving alone) (Table 24 and Table 20). The percent of employees arriving by car has not changed, but the percent of employees arriving by carpool has increased (by about 4 percentage points, to 11 percent) (Table 26).

The biggest change since 2007-08 is in the percent of people physically traveling to campus on an average weekday, down each of the last two years to about 89 percent (from 93 percent in 2007-08), representing approximately 1,800 fewer people traveling to campus on an average weekday in $09-10$ versus $07-08$. This trend exists among all role groups-students, faculty, and staff-but is most pronounced among employees, down by about 9 percentage points (to 83 percent) since 2007-08 (Table 29).

Table 22. Percent change in bike mode share, by role, 2007-08 through 2009-10

| Role group | Percentage point change |  |  | Sample size ${ }^{\text {a }}$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} 2007-08 \text { to } \\ 2008-09 \end{gathered}$ | $\begin{gathered} 2008-09 \text { to } \\ 2009-10 \end{gathered}$ | $\begin{gathered} 2007-08 \text { to } \\ 2009-10 \end{gathered}$ | 2007-08 | 2008-09 | 2009-10 |
| Students ${ }^{\text {a }}$ | 4.1\% ** | -2.0\% | 2.0\% | 2,812 | 2,589 | 2,503 |
| Undergraduate ${ }^{\text {a }}$ | 5.4\% ** | -2.1\% | 3.3\% ** | 2,308 | 2,096 | 2,046 |
| Freshmen | -0.1\% | -2.8\% | -2.9\% | 418 | 422 | 527 |
| Sophomores | 10.2\% ** | -2.4\% | 7.8\% ** | 445 | 387 | 471 |
| Juniors | 4.6\% | -0.4\% | 4.2\% | 399 | 385 | 383 |
| Seniors | 4.7\% | -0.9\% | 3.8\% | 356 | 315 | 401 |
| Graduate ${ }^{\text {a }}$ | -2.7\% | -1.4\% | -4.1\% | 504 | 492 | 457 |
| Masters | -2.2\% | 0.3\% | -1.9\% | 261 | 287 | 338 |
| PhD | -2.8\% | -2.2\% | -5.0\% | 412 | 604 | 512 |
| Employees ${ }^{\text {a }}$ | -0.2\% | -0.9\% | -1.0\% | 1,079 | 965 | 899 |
| Faculty | 0.6\% | -3.4\% | -2.8\% | 422 | 421 | 311 |
| Staff | -0.3\% | -0.4\% | -0.7\% | 1,147 | 689 | 461 |
| Outside Davis ${ }^{\text {a }}$ | -0.3\% | -0.5\% | -0.8\% | 888 | 741 | 705 |
| Within Davis ${ }^{\text {a }}$ | 2.8\% ** | -1.5\% | 1.3\% | 3,004 | 2,812 | 2,583 |
| Overall ${ }^{\text {a }}$ | 3.0\% ** | -1.5\% | 1.5\% | 3,891 | 3,553 | 3,402 |

For statistical tests, we used the unweighted sample for the eight basic role group categories (freshmen, sophomores, juniors, seniors, masters students, PhD students, faculty, and staff), but the weighted sample for consolidated groups (students, undergraduates, grad students, employees, outside Davis, within Davis, and overall).

* Statistically significant difference with $\mathrm{p}<0.1$ in a two-category $\chi^{2}$ test of the frequency of those using this mode versus those using any other mode in one year versus the other.
** Statistically significant at $\mathrm{p}<0.05$.

## Secondary means of transportation and circulation on campus

Another consideration in evaluating the number of people regularly using particular modes is whether people use a particular means of transportation for some portion of the trip to campus, but not as a primary means of transportation for most of the way (as reported in question Q0016). While this year's survey did not ask respondents to provide a detailed accounting of what different (multiple) modes they typically use to get to campus (as in the 2008-09 survey; see Lovejoy, et al., 2009), it did include one question asking respondents to indicate "all the different means of transportation you used at some point on your way to school or work, from the moment you left home to when you arrived at your first destination on campus -- even if it was just for part of the way -- on any day last week. (Check all that apply.)" (See question Q0015.) We might infer that any means of transportation indicated in question Q0015 but not in question Q0016 (where respondents report their primary means of transportation for most of the distance on each day) was used by the respondent as a secondary mode, at least once at some point during the reference week (though we have no way of knowing how frequently each was used, or in combination with what other modes).

Table 30 shows the percent who reported using a given mode at least once during the week in question $Q 0015$, but who did not identify that mode as their primary means of transportation for most of the distance on any day (question Q0016). For instance, although about 47 percent biked as a primary means of transportation at some point during the week (Table 19), an additional 6 percent apparently biked in combination with some other means of transportation at least once during the week (Table 30). By this estimate, a projected 16,264 bike at least once a week, either
as a primary or secondary mode. Clearly, walking is the most commonly reported secondary mode, with about a third of respondents reporting walking for some portion of their trip. Relative to the number using it as a primary mode, skating is especially common as a secondary mode, approximately doubling the total number doing so for transportation at least once per week (to about 750). Similarly considering those who report riding a train or light rail but not as a primary mode increases the projected total number of train riders by about 33 percent (to 631, consisting of both Sac RT and Capitol Corridor Amtrak riders) and of carpoolers by 35 percent (to 10,198 ).

Table 30. Percent using each mode at least once as a secondary mode

| Overall | 96.3\% | 5.9\% | 33.6\% | 0.9\% | 5.0\% | 6.9\% | 4.5\% | 0.4\% | 3,880 | 40,209 |
| Weighted sample | 3,737 | 221 | 1,257 | 35 | 187 | 257 | 170 | 15 | 3,880 |  |
| Projected population | 38,733 | 2,290 | 13,023 | 358 | 1,936 | 2,668 | 1,760 | 155 |  | 40,209 |

Results are based on responses to questions Q0006 (whether traveled to campus), Q0015 (all means of transportation used to get to campus any days during the seven-day reference week) and compared with $Q 0016$ (primary means each day). Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Focusing on biking in particular, the survey explicitly asked all respondents about whether they biked after arriving on campus each day, regardless of their primary means of transportation to campus each day (question Q0017). Table 31 shows that on average weekday, in addition to the people biking as their primary means of transportation to campus, about 7 percent of people (a projected 2,637 ) bike on campus after arriving by some other means, with a high of 12 percent of sophomores doing so and a low of 5 percent of masters students and staff doing so.

Finally, question Q0032 asked respondents about how they "typically get around campus (or off campus)" during the day, after arriving at the beginning of the day and before leaving campus for the last time. This question did not ask about what respondents actually did during each day of the reference but rather to rate on a five-point scale from "never" to "always" the frequency that they walk, bike, or ride in a vehicle to get to different destinations around campus. About 6 percent of faculty and 19 percent of staff report "always" or "very often" using a vehicle to get around campus (Table 32). The percent that "always" or "very often" bike is highest among undergraduates ( 55 percent), then grad students ( 41 percent), faculty ( 34 percent), and staff ( 23
percent). About half report "always" or "very often" walking in all role groups except faculty, where the percent is somewhat higher ( 60 percent).

Table 31. Percent biking as a secondary mode on campus on average weekday, by role

| Role group | Physically traveling to campus | Among those physically traveling to campus |  |  | Weighted sample | Projected population |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Bike was primary mode | Other primary mode, then biked on campus | Other primary mode, and did not bike on campus |  |  |
| Students | 90.6\% | 46.0\% | 8.2\% | 45.8\% | 2,693 | 28,876 |
| Undergraduate | 91.4\% | 44.8\% | 8.9\% | 46.3\% | 2,176 | 23,404 |

| Employees | 83.1\% | 22.7\% | 5.2\% | 72.1\% | 1,039 | 11,333 |
| Faculty | 78.7\% | 37.5\% | 6.7\% | 55.8\% | 191 | 2,081 |
| Staff | 84.1\% | 19.6\% | 4.8\% | 75.6\% | 848 | 9,252 |
| Outside Davis | 81.8\% | 1.7\% | 10.6\% | 87.6\% | 829 | 9,297 |
| Within Davis | 91.0\% | 50.1\% | 6.5\% | 43.4\% | 2,765 | 30,912 |
| On campus | 90.4\% | 44.0\% | 6.9\% | 49.2\% | 2,236 | 5,915 |
| Off campus | 93.6\% | 75.4\% | 4.9\% | 19.7\% | 529 | 24,997 |
| Overall | 88.5\% | 39.9\% | 7.4\% | 52.7\% | 3,732 | 40,209 |
| Weighted sample | 3,304 | 1,489 | 276 | 1,967 | 3,732 |  |
| Projected population | 35,599 | 14,202 | 2,637 | 18,760 |  | 40,209 |

Results are based on responses to questions Q0006 and Q0017. We first calculate the percent of five weekdays that an individual biked, and then the average over all respondents represents the percent biking on an average weekday. All data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Table 32. Means of transportation typically used during the day to get around campus

| By role group |  | How do you typically get around campus (or campus) during the day? <br> How frequently for each means of transportation: |  |  |  |  |  | Weighted sample |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | Vehicle | 2.5\% | 3.5\% | 2.8\% | 10.1\% | 23.4\% | 57.6\% | 2,970 |

Results are based on responses to question $Q 0032$. Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Overnight bike parking

Question Q0027 asked respondents if they left "a bike on campus overnight any nights last week," and if so which nights. This can be used to estimate the total number of bikes on campus that are not abandoned, by day of the week. We find that about 18 percent report leaving a bike overnight at least once during the reference week, with somewhat fewer leaving bikes over the weekend. Overall, about 15 percent leave bikes overnight on the average weekday, a projected 6,031 bikes (Table 33). About half of these belong to people living on campus. Among the other half, about three-quarters belong to students ( 69 percent to undergrads and 7 percent to grad students) and one-quarter belong to employees ( 6 percent to faculty and 18 percent to staff). About 71 percent belong to people living (off campus) within Davis, and the remainder to people living outside of Davis.

Table 33. Percent of people with bikes on campus overnight each day, by role

Results are based on responses to question $Q 0027$ (nights during reference week that bike left on campus overnight). Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Table 34 shows the total number of nights respondents reported leaving their bikes overnight per week. Among those living off campus and leaving a bike overnight at least once during the week, about half stored their bike on campus overnight all seven days of the week. The remainder left a
bike overnight only some days, including 21 percent leaving a bike overnight just one day of the week. Table 34 also shows whether respondents reported that they "typically store this bike on campus," that is "deliberately keep this bike on campus somewhat permanently" versus "generally bring the bike home or intend to bring it home at some point" (question Q0028). In retrospect, this question is somewhat redundant, and does not capture much more information about why bikes are stored overnight (e.g. deliberate and pre-planned versus inadvertent or careless). In general, the percent giving affirmative responses to question Q0028 is about the same as those reporting storing it overnight 4 or 5 nights or more during the reference week.

Table 34. Percent with bikes on campus various numbers of nights per week, by role

Results are based on responses to questions $Q 0027$ (nights during reference week that left a bike on campus overnight) and Q0028 (whether typically store this bike on campus). Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Table 35 shows responses to question $Q 0029$ "About how long has it been since you rode this bike?" with respondents choosing between the five categories shown. Most people ride the bike they leave on campus overnight somewhat regularly, with 74 percent riding it within the last day, 87 percent riding within the last week, and 91 percent within the last two weeks (or 65,83 , and 89 percent, respectively, among those living off-campus). About 6 percent reported that the bike
had been idle for a month or more (about 480 bikes), with the highest incidence of this among grad students and faculty.

Table 35. Time elapsed since last riding bikes stored on campus overnight

| Role group | Among those who left a bike on campus overnight at least once during the week, percent who rode it within the last: |  |  |  |  | Total who left a bike overnight at least once: |  |

| Living off-campus | 3,160 | 559 | 162 | 126 | 277 |  | 4,284 |

Results are based on responses to questions Q0027 (nights during reference week that left a bike on campus overnight) and $Q 0029$ (time elapsed since riding this bike). Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Number of (claimed) bikes on campus and gross movements of bikes

A physical count of the total number of bikes parked on campus bike racks was last conducted by TAPS on June 4, 2009, including counts at 10:00am (13,933 bikes), 2:00pm (15,554 bikes), and 5:00am (to capture a nighttime baseline, 10,168 bikes). ${ }^{7}$ These counts included bikes parked around on-campus residences, but only included bikes visible from the outdoors in typical bike parking areas. In addition, it is unknown from these counts what percent of the bikes are abandoned, as well as the extent of gross movements of bikes during the day. The survey data provide some estimates of these figures.

In particular, we can estimate the total number of people bringing (or having) bikes on campus on an average weekday by combining responses of how many rode a bike as their primary mode (question Q0016), how many rode a bike as a circulator mode (Q0017), and how many left a bike on campus overnight (with or without riding it, question Q0027), each night of the reference

[^4]week. In total, we estimate that 45 percent of the campus population has a bike on campus on an average weekday, a projected 18,123 people with bikes during the day. In addition, we estimate that 13 percent of the campus population stores a bike on campus overnight on an average weeknight, a projected 5,383 bikes (included in the daily total of 18,123 ). We estimate that of all the 18,123 people reporting having a bike on campus on average weekday, only about 7 percent left their bike idle on campus ( 1,218 bikes), and remaining 93 percent $(16,905)$ rode it at some point during the day. (See Table 36 and Figure 17.)

The estimated figure of 18,123 total (claimed) bikes on campus includes 35 percent of the campus population who have ridden a bike from home as their primary means of transportation ( 14,121 bikes), 3 percent who have brought a bike for use on campus during the day after using some other mode to get there (1,263 bikes), 4 percent who have stored a bike on campus overnight for use during the day after using some other mode to get there ( 1,521 bikes), and 3 percent who have a bike stored on campus without riding it that day ( 1,218 bikes). Among the bikes people intentionally store on campus overnight on a typical weekday (a projected 5,383 bikes), about 77 percent are ridden at some point during the day. Among those using a bike to get around campus during the day after using some other means of transportation to get to campus (about 7 percent of the campus community, or 2,784 people on an average weekday), about 55 percent leave this bike on campus overnight, though this figure is somewhat lower among graduate students ( 37 percent) and staff ( 45 percent).

Table 36. Number of people with bikes on campus on an average weekday

| Overall | 54.9\% | 28.5\% | 3.1\% | 31.7\% | 6.6\% | 3.8\% | 3.0\% | 13.4\% | 45.1\% | 3,782 | 40,209 |
| Weighted sample | 2,077 | 1,080 | 119 | 1,198 | 249 | 143 | 115 | 506 | 1,705 | 3,782 |  |
| Projected population | 22,086 | 11,477 | 1,263 | 12,740 | 2,644 | 1,521 | 1,218 | 5,383 | 18,123 |  | 40,209 |

Results are based on responses to questions Q0016 (primary means of transportation to campus), Q0017 (whether biked on-campus only), and Q0027 (whether left a bike on campus overnight). Percentages in each category are calculated by first calculating the percent of five weekdays that an individual had a bike (or not), and then hen the average over all respondents represents the percent with a bike on an average weekday. All data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Figure 17. Tree diagram depicting sources of the estimated 18,123 bikes on campus on an average weekday

Comparing these projections to the numbers of bikes counted on bike racks by TAPS, we find that our daytime total is substantially higher than the TAPS counts and that our overnight figure is substantially lower (see Table 37). As for the daytime figures, the results from the two surveys are not exactly comparable statistics, since ours is an estimate of those who had a bike on campus at any moment during the day, rather than the snapshot of bikes on campus at a particular hour, which ought to be substantially lower. ${ }^{8}$ By contrast, we might expect the nighttime figures

[^5]to be more comparable, because we do not expect bikes to move around much at night, and therefore the 5am snapshot could be compared to the number reporting leaving a bike overnight. Yet we find a discrepancy of about 4,785 more nighttime bikes in the June rack count than the projected number owned by campus community members according to the Campus Travel Survey. To the extent that the figures from the two surveys are comparable, this discrepancy may be interpreted as an estimate of the total number of abandoned bikes on campus at any given time: 4,785 bikes, or 47 percent of the nighttime total. If this number are abandoned and idle, they might be deducted from the 10 am and 2 pm snapshot counts from TAPS, meaning that the number of unabandoned bikes parked at 10 am and 2 pm would be 9,148 and 10,769 , respectively. These figures can then be compared to our total daytime estimates of 16,905 "active" bikes and 1,218 idle bikes, to give some idea of the gross movements of bikes during the day. In particular, we might conclude that at 10 am , about 50 percent of the (unabandoned) bikes that would be on campus at all during the day are currently there and parked (and 47 percent of the active, unabandoned bikes); at 2 pm , about 59 percent of the total unabandoned bikes are there and parked (and 56 percent of the active, unabandoned bikes).

Table 37. Comparison of bike counts: Rack count versus survey results

| Estimated number <br> of bikes on campus: | Data source: |  |  |  |
| :--- | :--- | :--- | :--- | :---: |
|  | 10,168 | (5am count) | 5,383 |  |
| (left overnight, on an average weekday) |  |  |  |  |
|  | 13,933 | (10am count) | 18,123 (at any point during the day, |  |
|  | 15,554 | (2pm count) | on an average weekday) |  |

## Carpooling and ridesharing

Among those physically traveling to campus on an average weekday, we estimate about 34 percent arrive by personal vehicle (including carpooling, getting a ride, and driving alone in a car, motorcycle or scooter) (see Table 14 and Table 39). Among these, about 77 percent drive alone, 16 percent carpool, and 5 percent get a ride with someone who drops them off (Table 39). Within all role groups, those coming from outside Davis are more likely to drive alone than those coming from within Davis ( 83 percent versus 69 percent of those arriving in personal vehicles). Among those living within Davis and arriving by car, undergrads are especially likely to be dropped off (14 percent) and least likely to drive alone, although the majority do ( 62 percent).

Both those arriving in carpools (multiple people in the vehicle arriving on campus together) and those getting a ride to campus (where the driver continues on to another destination after the drop-off) were asked how many other people were in the vehicle. The percent of vehicle users arriving in 2- and 3-plus-person carpools and of those getting a ride as the sole passenger or multiple passengers dropped off is shown in Table 39. The average vehicle occupancy for carpools and rides is shown in Table 38. Among those who carpooled at any point during the reference week, the average number of passengers was 2.54 (including the driver). Most people dropped off on campus were the sole passenger dropped (Table 39), with an average of 1.45 passengers dropped off per ride to campus (excluding the driver) (Table 38).

[^6]Table 38: Average carpool size

| Role group | Average occupancy among those that carpooled /rode at least once |  | Weighted sample |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Carpool occupants (including driver) | Ride passengers (excluding driver) | Carpoolers | Riders |
| Undergraduate | 2.68 | 1.54 | 305 | 338 |
| Graduate | 2.31 | 1.08 | 75 | 35 |
| Faculty | 2.65 | 1.20 | 23 | 13 |
| Staff | 2.34 | 1.18 | 143 | 45 |
| Outside Davis | 2.33 | 1.19 | 168 | 35 |
| Within Davis | 2.63 | 1.47 | 353 | 378 |
| Overall | 2.54 | 1.45 | 547 | 430 |

Vehicle occupancy is based on responses to question $Q 0018$ for those carpooling and to question $Q 0019$ for those who got a ride. Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

| Overall | 88.6\% | 33.9\% | 77.0\% | 12.9\% | 3.6\% | 4.3\% | 0.8\% | 3,840 | 40,209 |
| Weighted sample | 3,402 | 1,152 | 887 | 148 | 41 | 50 | 10 | 3,840 |  |
| Projected population | 35,626 | 12,061 | 9,291 | 1,554 | 428 | 520 | 100 |  | 40,209 |

Results are based on responses to questions Q0006 (days physically traveling), Q0016 (mode used), Q0018 (carpool size), and Q0019 (number given a ride). Motorcyclists are included with those driving alone. All Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Number of vehicles on campus

The results on the number of people driving alone, carpooling, getting a ride, and the number of people per vehicle can be combined to estimate the total number of vehicles arriving on campus. In particular, we estimate the total number of vehicles as the number of people driving alone, plus fractional vehicles counted in proportion to vehicle occupancy. That is, if a respondent reports arriving in a three-person carpool, we count this as 0.33 vehicles arriving on campus on behalf of that respondent. We weight and expand the sample to project the total number of vehicles for the entire campus population, using the expansion factors shown in Table 6. We estimate that 10,891 vehicles come to campus on an average weekday, or about one vehicle for every 3.69 people traveling to campus (Table 40). About 959 of these contain carpools and 640 are vehicles just dropping passenger(s) off. (Note that these estimates are the number of vehicles arriving, regardless of whether or where those vehicles are parked. See Table 44 for an estimate of the number of vehicles actually parking on campus on a typical weekday.)

Table 40. Projected vehicles arriving on an average weekday, by occupancy and role

| Role group | Projected number of vehicles on an average weekday |  |  |  | Ratio of total people to total vehicles | Ratio of physically traveling people to total vehicles |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Drive alone | Carpool | Ride | Total |  |  |
| Students | 4,058 | 472 | 465 | 4,995 | 5.78 | 5.25 |
| Undergraduate | 2,668 | 335 | 367 | 3,371 | 6.94 | 6.36 |
| Freshmen | 127 | 17 | 42 | 186 | 23.29 | 21.84 |
| Sophomores | 307 | 65 | 79 | 451 | 9.86 | 9.53 |
| Juniors | 731 | 102 | 134 | 967 | 6.58 | 6.04 |
| Seniors | 1,504 | 151 | 111 | 1,767 | 4.68 | 4.09 |
| Graduate | 1,389 | 136 | 98 | 1,624 | 3.37 | 2.95 |
| Masters | 512 | 40 | 35 | 587 | 3.28 | 2.84 |
| PhD | 877 | 97 | 63 | 1,037 | 3.42 | 3.01 |
| Employees | 5,233 | 488 | 175 | 5,896 | 1.92 | 1.60 |
| Faculty | 653 | 68 | 42 | 763 | 2.73 | 2.17 |
| Staff | 4,580 | 420 | 133 | 5,134 | 1.80 | 1.51 |
| Outside Davis | 5,476 | 488 | 65 | 6,030 | 1.54 | 1.26 |
| Within Davis | 3,551 | 428 | 565 | 4,543 | 6.80 | 6.20 |
| Off campus | 3,477 | 405 | 516 | 4,398 | 5.68 | 5.14 |
| On Campus | 74 | 22 | 49 | 145 | 40.78 | 38.16 |
| Overall | 9,291 | 959 | 640 | 10,891 | 3.69 | 3.27 |

Results are based on responses to questions Q0006 (days physically traveling to campus), Q0016 (mode of transportation used each day), Q0018 (carpool size), and Q0019 (number given a ride). "Drive alone" includes driving alone in a vehicle as well as driving a motorcycle or scooter. The distinction between carpools and rides is whether the driver's destination is campus: Carpool is "Carpool or vanpool with others also going to campus (either as driver or passenger)" and rides are "Get a ride (someone drops you off and continues on elsewhere)." All data are weighted (and expanded) by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Average Vehicle Ridership

Average vehicle ridership (AVR) is a statistic calculated at each UC campus representing a ratio of the number of people arriving on campus to the number of personal vehicles brought to campus. In particular, we use a formula developed by the South Coast Air Quality Management District, intended to count weekday arrivals of employees from off-campus (only) and making adjustments (credits) for employees who telecommute, who adopt a compressed work week schedule, or who use a zero-emissions vehicle to commute to campus (see Appendix D for
details on the calculation of AVR). In general, a way to interpret AVR is that if everyone drove by themselves to campus, the campus AVR would be one, and so higher values (greater than 1.0) indicate more carpooling or use of alternative modes of transportation. Among those traveling from off campus, campus-wide AVR is estimated to be 2.83 , or 1.66 among employees only. This means that for every car coming to campus, there are about 2.83 off-campus people coming to campus or telecommuting. This is down somewhat from 2008-09, meaning relatively more cars came to campus in 2009-10.

Table 41: Average Vehicle Ridership (AVR), 2007-08 through 2009-10

| Role group | Off-campus only |  |  | All (on and off-campus) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2007-08 | 2008-09 | 2009-10 | 2007-08 | 2008-09 | 2009-10 |
| Students | 1.67 | 4.76 | 4.28 | 5.04 | 5.91 | 5.25 |
| Undergraduate | 4.24 | 5.80 | 5.11 | 5.04 | 7.37 | 6.36 |
| Freshmen | 5.32 | 5.35 | 4.69 | 26.39 | 33.40 | 21.84 |
| Sophomores | 6.46 | 10.24 | 9.38 | 6.78 | 10.67 | 9.53 |
| Juniors | 4.05 | 6.26 | 5.48 | 4.46 | 6.56 | 6.04 |
| Seniors | 3.55 | 4.39 | 3.88 | 3.77 | 4.67 | 4.09 |
| Graduate | 3.43 | 2.81 | 2.57 | 3.94 | 3.21 | 2.95 |
| Masters | 3.22 | 2.71 | 2.60 | 3.49 | 2.94 | 2.84 |
| PhD | 3.55 | 2.86 | 2.56 | 4.20 | 3.36 | 3.01 |
| Employees | 1.67 | 1.69 | 1.66 | 1.67 | 1.71 | 1.66 |
| Faculty | 2.23 | 2.34 | 2.37 | 2.23 | 2.35 | 2.38 |
| Staff | 1.58 | 1.60 | 1.56 | 1.58 | 1.62 | 1.55 |
| Non-student and student employees | n/a | n/a | 2.20 | n/a | n/a | 2.31 |
| Outside Davis | 1.33 | 1.32 | 1.26 | 1.33 | 1.33 | 1.26 |
| Within Davis | 4.60 | 5.17 | 4.99 | 5.61 | 6.32 | 5.99 |
| Overall | 2.75 | 2.99 | 2.83 | 3.20 | 3.51 | 3.30 |

See Appendix D for details on AVR calculations.
Table 42 compares the employee AVR at UC Davis with that at other UC campuses for which statistics are available. The comparison suggests that UC Davis draws more vehicles per (nonstudent) employee than UC San Francisco, UC Irvine, and UC Santa Cruz, but fewer than UC San Diego and UC Riverside. UC Davis was one of just two campuses (along with UC San Diego) for which AVR decreased between 2008-09 and 2009-10, that is with an increasing number of vehicles per employee.

Table 42. Off-campus employee AVR at Davis versus other UC campuses

| UC Campus | $2007-08$ | $2008-09$ | $2009-10$ |
| :--- | :---: | :---: | :---: |
| Irvine | $\mathrm{n} / \mathrm{a}$ | 1.82 | 1.90 |
| Los Angeles | $\mathrm{n} / \mathrm{a}$ | 1.58 | 1.67 |
| Riverside | $\mathrm{n} / \mathrm{a}$ | 1.53 | 1.55 |
| San Diego | $\mathrm{n} / \mathrm{a}$ | 1.69 | 1.60 |
| San Francisco | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 2.20 |
| Santa Cruz | $\mathrm{n} / \mathrm{a}$ | 1.80 | 1.89 |
| Davis, non-student employees only | 1.67 | 1.69 | 1.66 |
| Davis, including student employees | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | 2.20 |

See Appendix D for details on the calculation of the Davis AVR. Other campus figures are from the Systemwide Transportation Survey Matrix 08-09 and 09-10, available online at http://www.universityofcalifornia.edu/sustainability/trans_pres.html.

## Parking on and off campus

Question Q0020 asked "Where did you (or whoever drove you) park?" among the choices: on campus, off-campus in Davis, outside of Davis, or being dropped off while the driver continued on elsewhere. It was asked (once) of any respondent who indicated having driven, carpooled, gotten a ride, or rode a motorcycle or scooter to campus on any day during the reference week (question Q0016), and therefore did not give respondents a chance to indicate parking in different places on different days, if they had done so (the questionnaire advised, "If it was different on different days, please indicate what you did most often"). Therefore, to estimate the number parking in each location on an average weekday, we assume that wherever they indicated parking in question $Q 0020$ is where they parked anytime they drove, carpooled, or got a ride to campus on any day during the week.

Table 43 shows an estimated percent of people parking in each location on an average weekday while Table 44 shows the estimated number of vehicles parking in each location on an average weekday. The number of vehicles differs from the number of people depending on how many people arrived in each vehicle. We estimate total numbers of vehicles by counting each person who drove alone as contributing one vehicle, while each person who carpooled or got a ride as contributing a partial vehicle in inverse proportion to the total number of occupants (e.g. a respondent reporting arriving in a carpool of two is assumed to generate 0.5 vehicles).

Among those arriving by vehicle, we estimate that about 82 percent of people (also 82 percent of vehicles) park on campus on an average weekday, a projected 8,925 vehicles (carrying 9,947 people). For calibration, we can compare this figure to counts conducted by TAPS. In particular, a vehicle count conducted October 19-21, 2009 (the week just prior to the first reference week for the survey) indicates that there were 6,313 vehicles parked on average (at a 76 percent average utilization rate) in the parking areas in the core of campus included in their study, and potentially 2,982 additional vehicles parked in areas not included in their study, if the same utilization rate is assumed. ${ }^{9}$ However, their counts also include university, service, and vendor vehicles (whereas our figures do not), a difference that would at least partially offset the discrepancy between an overall figure of 9,295 vehicles (based on the count data) and 8,925 vehicles (based on our Campus Travel Survey data).

Among those parking vehicles parking on campus, we estimate that about 47 percent are staff, 30 percent are undergraduate students, 16 percent are grad students, and 8 percent are faculty. About 59 percent of vehicles parking on campus bring people traveling from outside Davis, while 41 percent bring people from within Davis. A projected 1,337 vehicles park off-campus in the city of Davis on an average weekday (carrying 1,460 people), and 525 vehicles dropped passengers off on campus without parking (dropping off a projected 585 people).

[^7]Table 43: Percent of people parking on and off campus on a typical weekday, by role

| Role group | Percent Among those arriving by vehicle, percent of people parking: |  |  |  |  | Weighted sample | Projected population |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | arriving by vehicle | On campus | Off campus in Davis | Outside Davis | Drop off (did not park) |  |  |
| Students | 19.3\% | 82.2\% | 11.4\% | 0.2\% | 6.4\% | 2,758 | 28,876 |
| Undergraduate | 16.3\% | 80.0\% | 12.2\% | 0.2\% | 7.4\% | 2,198 | 23,404 |
| Freshmen | 4.9\% | 69.0\% | 11.6\% | 2.2\% | 16.7\% | 410 | 4,335 |
| Sophomores | 12.3\% | 78.6\% | 10.1\% | 0.0\% | 11.5\% | 419 | 4,444 |
| Juniors | 17.1\% | 77.3\% | 14.7\% | 0.3\% | 8.5\% | 602 | 6,363 |
| Seniors | 23.6\% | 83.7\% | 11.6\% | 0.0\% | 4.6\% | 767 | 8,262 |
| Graduate | 32.4\% | 86.6\% | 9.7\% | 0.2\% | 4.5\% | 515 | 5,472 |
| Masters | 32.6\% | 88.7\% | 7.3\% | 0.6\% | 4.1\% | 181 | 1,926 |
| PhD | 32.3\% | 85.5\% | 11.0\% | 0.0\% | 4.6\% | 335 | 3,546 |
| Employees | 57.2\% | 82.9\% | 12.7\% | 1.6\% | 3.5\% | 1,061 | 11,333 |
| Faculty | 40.3\% | 90.5\% | 4.7\% | 0.6\% | 5.1\% | 197 | 2,081 |
| Staff | 61.0\% | 81.8\% | 13.9\% | 1.7\% | 3.2\% | 864 | 9,252 |
| Outside Davis | 72.9\% | 84.5\% | 12.9\% | 1.3\% | 1.5\% | 848 | 9,297 |
| Within Davis | 17.2\% | 79.4\% | 11.5\% | 0.2\% | 9.3\% | 2,787 | 30,912 |
| Overall | 30.0\% | 82.5\% | 12.1\% | 0.9\% | 4.8\% | 3,774 | 40,209 |
| Weighted sample | 1,132 | 934 | 137 | 11 | 55 | 3,774 |  |
| Projected population | 12,061 | 9,947 | 1,460 | 113 | 585 |  | 40,209 |

Results are based on responses to questions Q0016 (mode used) and to question Q0020 (parking location). The parking location indicated in question $Q 0020$ is assumed to be true for all days that the respondent arrived in a vehicle. As with mode split, we calculated the share of the five days that each respondent parked, and then the average of this over all respondents is equivalent to the share of all respondents parking on an average weekday. Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Table 44. Projected vehicles parking on and off campus on a typical weekday, by role

| Role group | Total | Vehicles parking: |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: |
|  | vehicles | On campus | Off campus in Davis | Outside Davis | Drop off (did not park) |
| Students | 4,995 | 4,011 | 574 | 8 | 332 |

| Within Davis | 4,679 | 3,672 | 541 | 9 | 457 |
| Percent of total | $100 \%$ | $82.0 \%$ | $12.3 \%$ | $0.9 \%$ | $4.8 \%$ |
| Total number | 10,890 | 8,925 | 1,337 | 103 | 525 |

Results are based on responses to questions Q0016 (mode used), Q0018 (carpool size), Q0019 (number given a ride), and $Q 0020$ (parking location). All data are weighted (and expanded) by role group based on the 3,840 valid responses to question Q0016.

## Parking permits

Whether or not they had a car, all respondents were asked whether they currently have a UC Davis parking permit, and if so which type (questions Q0081 and Q0082). About 29 percent of respondents reported having a monthly, quarter, or annual parking permit, a projected 11,819 people (Table 45). This matches closely with TAPS's records of actual permits issued. ${ }^{10}$ TAPS records and the survey results also both indicate that about three-quarters of the permits issued are either "C" or "A" permits, but those with "C" permits are somewhat under-represented in the survey data, with about 1.8 "C" permit holders for every "A" permit holder in the survey sample, compared to about 2.6 "C" permits for every "A" permit issued by TAPS. ${ }^{11}$ (See Table 46.)

Table 45. Percent of people with a parking permit, by role

| Role group | Annual (or <br> multi-year) | Monthly or <br> quarter | Daily | None | Weighted <br> sample | Projected <br> population |

| Resurs |  |  |

Results are based on responses to questions Q0082. Data are weighted by role group based on the 3,840 valid responses to question Q0016 (see Table 6).

## Ridership by transit provider

If respondents indicated that they rode a bus (or a train) at any point on their way to campus any days during the prior week (question $Q 0015$ ), they were then asked to indicate which bus (or train) service(s) they used ("Check all that apply"). Therefore we know which bus and train services people used at least once on their way to campus during the prior week (Table 47 and Table 48), but do not know how many days they used each service or if it was used as their primary means of transportation or in combination with some other mode. Table 49 and Table 50 offer some estimate of the total number riding a given system on an average weekday by showing the percent riding the bus (or train) on an average weekday as their primary mode who reported using each service at least once during the week. This excludes anyone riding a bus or train not as their primary means of transportation, such as if they drove to Davis, then rode Unitrans to the campus core.

Many more people ride Unitrans than any other service, with a projected 11,517 riding at least once per week (Table 47) and 6,466 riding on an average weekday as their primary means of transportation (Table 49). Unitrans riders are predominately undergraduates, comprising 94 percent of average daily riders. For all providers, the number riding at least once during the week is substantially more than the estimated number riding as their primary mode on an average weekday. This is either due to the fact that people do not ride everyday, or because they ride not as their primary mode. For instance, while a projected 464 ride Yolobus on an average weekday as their primary means of transportation to campus (Table 49), a projected 958 ride at least once per week (Table 47). Similarly, a projected 208 ride Amtrak as their primary mode on an average weekday (Table 50), while 563 ride at least once per week (Table 48).

Among train riders，all of the trains aside from the Amtrak Capitol Corridor are located outside of Davis and therefore must be used in combination with some other provider or means of transportation to get to campus．In particular，we find that all those who report riding BART， Muni，and Caltrain also rode the Capitol Corridor．The only rail system respondents reported using not in combination with Amtrak was the Sacramento Regional Transit，although 60 percent of those riding that system did use it in combination with Amtrak．

${ }^{\text {a }}$ Only includes those who reported riding a train as their primary means of transportation in question $Q 0016$.
Percentages do not sum to 100 because respondents could indicate using more than one service.
b "Other" includes those riding Muni and Caltrain, presumably in combination with Amtrak.
Results are based on responses to questions $Q 0006, Q 0016$, and $Q 0026$. Data are weighted by role based on the 3,840 valid responses to question $Q 0016$.

## Time arriving on campus

Table 51 and Table 52 show the percent of respondents traveling to campus who arrived during the morning peak ( $6 \mathrm{am}-10 \mathrm{am}^{12}$ ), by day and by role group. Among those traveling to campus on an average weekday, about three-quarters arrive during this period, or a projected 26,017 people.

Table 51. Arrivals during the peak period, by day

| Day | Percent | Arrival time |  |
| :--- | ---: | ---: | ---: |
|  | on campus | 6am-10am | Off-peak |
| Monday | $90.1 \%$ | $75.1 \%$ | $24.9 \%$ |
| Tuesday | $90.7 \%$ | $72.4 \%$ | $27.6 \%$ |
| Wednesday | $90.6 \%$ | $74.4 \%$ | $25.6 \%$ |
| Thursday | $89.7 \%$ | $72.2 \%$ | $27.8 \%$ |
| Friday | $81.6 \%$ | $71.3 \%$ | $28.7 \%$ |
| Saturday | $20.3 \%$ | $32.2 \%$ | $67.8 \%$ |
| Sunday | $17.4 \%$ | $23.2 \%$ | $76.8 \%$ |
| Average weekday | $88.5 \%$ | $73.1 \%$ | $26.9 \%$ |
| Projected population | 35,598 | 26,017 | 9,581 |

Results are based on responses to question Q0013, which had a weighted sample size of 3,964 . Data are weighted (and expanded) by role group based on the 3,840 valid responses to question Q0016 (see Table 6).

[^9]Table 52. Percent arriving during the peak period on an average weekday, by role

| Role group | Percent on | Arrival time |  | Unweighted | Projected |
| :--- | ---: | ---: | ---: | ---: | ---: |
|  | campus | $6 a m-10 a m$ | Off-peak | sample | population |
| Freshmen | $93.5 \%$ | $61.0 \%$ | $39.0 \%$ | 579 | 4,335 |
| Sophomores | $96.6 \%$ | $63.2 \%$ | $36.8 \%$ | 495 | 4,444 |
| Juniors | $91.8 \%$ | $66.1 \%$ | $33.9 \%$ | 427 | 6,363 |
| Seniors | $88.0 \%$ | $64.7 \%$ | $35.3 \%$ | 475 | 8,262 |
| Masters | $86.6 \%$ | $72.6 \%$ | $27.4 \%$ | 399 | 1,926 |
| PhD | $87.6 \%$ | $78.5 \%$ | $21.5 \%$ | 591 | 3,546 |
| Faculty | $79.2 \%$ | $85.9 \%$ | $14.1 \%$ | 399 | 2,081 |
| Staff | $84.1 \%$ | $93.1 \%$ | $6.9 \%$ | 560 | 9,252 |
| Overall | $88.5 \%$ | $73.1 \%$ | $26.9 \%$ | 3,925 | 40,209 |
| Projected population | 35,598 | 26,017 | 9,581 |  | 40,209 |

Results are based on responses to question Q0013. "Overall" figures are weighted by role group based on the 3,840 valid responses to question $Q 0008$ (see Table 6).

## Self-reported travel time

Question Q0030 asked respondents to indicate how many minutes it usually takes them to get from home to their first campus destination (in categories of five-minute intervals up to an hour, then 1-2 hours, or 2 hours or more). Taking the midpoints of each category as the travel time, the average minutes spent ranges from 11 minutes among freshmen to 26 minutes among faculty (Table 53). About 14 percent reports spending more than a half hour, with a high among staff at 25 percent.

Table 53: Reported number of minutes spent traveling to campus, by role

| Role group | Average minutes | Percent reporting... |  |  |  | Weighted sample | Projected population |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Less than 10 minutes | $\begin{array}{r} 10-29 \\ \text { minutes } \end{array}$ | $\begin{array}{r} 30-59 \\ \text { minutes } \end{array}$ | 1 hour or more |  |  |
| Students | 17.2 | 26.1\% | 64.1\% | 7.9\% | 2.0\% | 2,737 | 28,876 |
| Undergraduate | 16.4 | 27.9\% | 63.1\% | 7.7\% | 1.3\% | 2,213 | 23,404 |
| Freshmen | 10.6 | 61.7\% | 34.9\% | 2.6\% | 0.9\% | 404 | 4,335 |
| Sophomores | 15.9 | 18.1\% | 76.8\% | 4.7\% | 0.4\% | 424 | 4,444 |
| Juniors | 18.1 | 20.0\% | 68.0\% | 10.6\% | 1.4\% | 605 | 6,363 |
| Seniors | 18.3 | 21.9\% | 66.4\% | 9.7\% | 2.0\% | 780 | 8,262 |
| Graduate | 20.6 | 18.4\% | 68.1\% | 8.8\% | 4.8\% | 524 | 5,472 |
| Masters | 21.1 | 17.9\% | 66.1\% | 12.0\% | 4.1\% | 184 | 1,926 |
| PhD | 20.4 | 18.6\% | 69.2\% | 7.0\% | 5.1\% | 340 | 3,546 |
| Employees | 24.4 | 9.3\% | 66.5\% | 20.6\% | 3.5\% | 1,089 | 11,333 |
| Faculty | 25.5 | 15.3\% | 64.9\% | 10.2\% | 9.7\% | 199 | 2,081 |
| Staff | 24.2 | 8.0\% | 66.9\% | 23.0\% | 2.2\% | 890 | 9,252 |
| Outside Davis | 36.1 | 1.4\% | 49.4\% | 39.2\% | 9.9\% | 875 | 9,297 |
| Within Davis | 14.1 | 27.2\% | 69.8\% | 2.8\% | 0.1\% | 2,858 | 30,912 |
| On campus | 9.6 | 62.4\% | 36.1\% | 1.2\% | 0.3\% | 538 | 5,915 |
| Off campus | 15.1 | 19.0\% | 77.6\% | 3.2\% | 0.1\% | 2,320 | 24,997 |
| Overall | 19.2 | 21.3\% | 64.8\% | 11.5\% | 2.4\% | 3,827 | 40,209 |
| Weighted sample |  | 814 | 2,478 | 441 | 93 | 3,827 |  |
| Projected population |  | 8,557 | 26,042 | 4,631 | 979 |  | 40,209 |

Results are based on responses to question $Q 0030$, which was categorical. To calculate average minutes, we assumed that the travel time for each individual is the midpoint of the category reported (e.g. " $0-4$ minutes" was treated as 2 minutes) or as 120 minutes for those reporting the highest category (" 2 hours or more"). Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Residential location and distance from campus

The survey included several ways of measuring respondents' residential locations and how far they typically travel to get to campus. The first way was to ask them whether they lived on campus, elsewhere in Davis, or outside of Davis (question Q0073). The results suggest that about 14 percent live on campus (a projected 5,794 people), 62 percent live elsewhere in Davis ( 24,999 people), and 23 percent live outside of Davis ( 9,415 people), as shown in Table 54. A comparison with results from the 2008-09 and 2007-08 surveys shows no change in this overall distribution (Table 54).

Table 54: Residential location by role group: on or off-campus, in our outside of Davis

| Role group | On <br> campus | Off <br> campus <br> in Davis | Outside <br> of Davis | Off campus <br> (in and outside <br> of Davis) | In Davis <br> (on and off- <br> campus) | Weighted <br> sample | Population <br> projection |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Students | $20.1 \%$ | $69.3 \%$ | $10.7 \%$ | $79.9 \%$ | $89.3 \%$ | 2,664 | 28,876 |
| Undergraduate | $21.4 \%$ | $70.0 \%$ | $8.6 \%$ | $78.6 \%$ | $91.4 \%$ | 2,153 | 23,404 |

| For $2009-10, ~$ |  |  |  |  |  |  |  |

For 2009-10, results are based on responses to question $Q 0073$ and are weighted by role group based on the 3,840 valid responses to question Q0016 (see Table 6). Previous years' data are based on results from the 2008-09 and 2007-08 Campus Travel Surveys (see Lovejoy, et al. (2009), Table 31; and Congleton (2009), Table 3-3, respectively).

Table 55 shows what percent of residents in each location are in each role group. For instance, among those living on campus, over 99 percent are students and 86 percent are undergraduates. Of the 25,000 living off campus in the city of Davis, 80 percent are students and 20 percent are employees. Employees, particularly staff, are more likely to live outside of Davis: 58 percent of the 9,415 living outside of Davis are staff, though staff accounts for just 23 percent of the total university population.

Table 55. Role group by residential location: on or off-campus, in our outside of Davis

| Role group | Among those who are living in this location, percent who are in this role group: |  |  |  |  | This role group's percent of the total population |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Loction ar |  |  |  |

Locations are based on the geocoded cross-streets (given in questions Q0074 and Q0076, or dorm name given in $Q 0075$ ) and the city and county area that the point was within or nearest (see Appendix E). Data are weighted by role group for the 3,569 cases successfully geocoded (based on $Q 0074-76$ ) and with non-missing mode choice data in question $Q 0016$.

The survey also asked respondents more detailed information about where they live, including their zip code, if outside of Davis, and the set of cross-streets nearest where they live (or the name of their on-campus residences) in questions Q0074 through Q0076. This information was geocoded in ArcGIS, enabling a variety of spatial analyses (see Appendix E for details on the methodology). Table 56 shows the cities and counties where respondents report living, among those who gave answers that could be successfully geocoded, which was about 88 percent of all respondents. Of these, about 22 percent live outside of Davis (as found in question Q0074 and Table 55 above), including 5 percent in Sacramento, 5 percent in Woodland (a projected 2,000 people or so in each), and another 9 percent elsewhere in Sacramento, Yolo, or Solano counties (a projected 3,730 people). The remainder (about 3 percent or a projected 1,049 people) live in farther flung locations, including about 600 in the Bay Area.

We also used the geocoded addresses to estimate the distance respondents must travel (along a shortest-time route) to get to campus (in particular, to the Silo) on a daily basis (see Appendix E). Table 57 and Table 58 summarize distances traveled by role group, showing that employees, especially staff, tend to travel from farther away. The median distance traveled among students is about 1.8 miles, versus 3.0 among faculty and 11.0 among staff (Table 57). While about 85 percent of undergraduates live within 3 miles of campus, only 51 percent of faculty and 30 percent of staff do (Table 58). About 18 percent of the campus population lives more than 10 miles away and 7 percent more than 20 miles away (a projected 7,401 people and 2,648 people, respectively). Note that the threshold for living within Davis is about 5 miles, and that very few people live 5 to 10 miles from campus. That is, once they live outside of Davis, it is likely that they live more than 10 miles away, given the agricultural belt that surrounds Davis.

Table 57. Average distance from campus, based on geocoded addresses, by role

| Role group | Percentsuccessfullygeocoded | Among those successfully geocoded, distance from campus (in miles): |  |  |  | Weighted sample | Projected population |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Mean | Median | Minimum | Maximum |  |  |
| Students | 87.5\% | 4.3 | 1.8 | 0.4 | 106.0 | 2,955 | 28,876 |
| Undergraduate | 86.8\% | 3.5 | 1.6 | 0.4 | 79.2 | 2,412 | 23,404 |
| Freshmen | 85.7\% | 1.3 | 0.7 | 0.5 | 35.4 | 452 | 4,335 |
| Sophomores | 89.3\% | 2.6 | 1.8 | 0.4 | 57.6 | 448 | 4,444 |
| Juniors | 87.2\% | 4.1 | 1.8 | 0.4 | 75.5 | 654 | 6,363 |
| Seniors | 85.8\% | 4.7 | 1.8 | 0.4 | 79.2 | 859 | 8,262 |
| Graduate | 90.4\% | 7.5 | 2.2 | 0.4 | 106.0 | 543 | 5,472 |
| Masters | 89.5\% | 7.5 | 2.0 | 0.4 | 103.9 | 193 | 1,926 |
| PhD | 90.8\% | 7.5 | 2.3 | 0.5 | 106.0 | 350 | 3,546 |
| Employees | 88.4\% | 12.0 | 9.0 | 0.5 | 84.7 | 1,159 | 11,333 |
| Faculty | 87.0\% | 11.0 | 3.0 | 0.5 | 84.7 | 217 | 2,081 |
| Staff | 88.7\% | 12.3 | 11.0 | 0.6 | 80.0 | 942 | 9,252 |
| Outside Davis | 91.5\% | 22.7 | 18.0 | 1.1 | 106.0 | 873 | 9,297 |
| Within Davis | 97.9\% | 1.9 | 1.8 | 0.4 | 19.4 | 2,865 | 30,912 |
| Off campus | 97.5\% | 2.1 | 1.9 | 0.4 | 19.4 | 2,327 | 24,997 |
| On campus | 99.7\% | 0.8 | 0.6 | 0.4 | 2.4 | 537 | 5,915 |
| Overall | 87.7\% | 6.5 | 2.0 | 0.4 | 106.0 | 4,114 | 40,209 |

Distances are calculated as the shortest-time network distance between respondents' geocoded cross-streets (given in questions $Q 0074$ and $Q 0076$, or dorm name given in $Q 0075$ ) and a centroid on campus near the Silo (see Appendix E). Data are weighted by role group for the 3,569 cases successfully geocoded (based on Q0074-76) and with non-missing mode choice data in question Q0016 (see Table 6).

Table 58. Cumulative percent of people living within each distance of campus, by role

| Distance from campus | Overall | Students |  | Employees |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Undergraduate | Graduate | Faculty | Staff |
| 0.5 miles or less | 2.1\% | 3.4\% | 0.7\% | 0.3\% | 0.0\% |
| 1 mile | 17.5\% | 26.6\% | 10.7\% | 4.2\% | 1.9\% |
| 1.5 miles | 32.9\% | 44.6\% | 31.5\% | 15.5\% | 8.4\% |
| 2 miles | 49.6\% | 67.0\% | 47.2\% | 23.8\% | 13.0\% |
| 2.5 miles | 57.7\% | 74.3\% | 57.0\% | 35.7\% | 21.6\% |
| 3 miles | 68.0\% | 84.6\% | 69.4\% | 51.2\% | 29.6\% |
| 4 miles | 76.6\% | 91.5\% | 80.6\% | 64.8\% | 39.5\% |
| 6 miles | 77.9\% | 92.0\% | 81.4\% | 69.5\% | 42.4\% |
| 8 miles | 78.1\% | 92.0\% | 81.5\% | 70.4\% | 43.1\% |
| 10 miles | 79.2\% | 92.3\% | 82.1\% | 70.9\% | 46.4\% |
| 12 miles | 81.6\% | 92.7\% | 83.4\% | 74.2\% | 54.4\% |
| 14 miles | 84.4\% | 93.4\% | 85.1\% | 78.4\% | 62.8\% |
| 16 miles | 86.3\% | 94.1\% | 87.2\% | 80.3\% | 67.6\% |
| 18 miles | 88.9\% | 95.0\% | 89.1\% | 83.9\% | 74.6\% |
| 20 miles | 91.4\% | 95.9\% | 90.7\% | 87.0\% | 81.5\% |
| 25 miles | 93.4\% | 96.9\% | 92.2\% | 89.2\% | 86.5\% |
| 30 miles | 96.7\% | 98.7\% | 93.8\% | 90.6\% | 94.8\% |
| 40 miles | 97.7\% | 99.1\% | 95.0\% | 91.1\% | 97.3\% |
| 50 miles | 98.2\% | 99.3\% | 95.6\% | 92.0\% | 98.5\% |
| 60 miles | 98.7\% | 99.4\% | 97.0\% | 92.8\% | 99.0\% |
| 70 miles | 99.3\% | 99.7\% | 98.4\% | 97.2\% | 99.4\% |
| 100 miles | 100.0\% | 100.0\% | 99.8\% | 100.0\% | 100.0\% |
| More than 100 miles | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% |
| Weighted sample | 3,609 | 2,094 | 491 | 188 | 836 |
| Projected population | 40,209 | 23,404 | 5,472 | 2,081 | 9,252 |
| Group's percent of the overall population | 100.0\% | 58.2\% | 13.6\% | 5.2\% | 23.0\% |

Distances are calculated as the shortest-time network distance between respondents' geocoded cross-streets (given in questions Q0074 and Q0076, or dorm name given in $Q 0075$ ) and a centroid on campus near the Silo (see Appendix E). Data are weighted by role group for the 3,569 cases successfully geocoded (based on Q0074-76) and with non-missing mode choice data in question $Q 0016$ (see Table 6).

Table 59 and Table 60 show the correspondence between distance and mode choice. In particular, Table 59 shows the percent of people using each mode as their primary means of transportation on an average weekday, among those who live various distances from campus. Table 60 shows distance from campus, among those who reported using each mode as their primary means of transportation at least once during the reference week. For instance, we see that the percent of people biking on an average weekday drops from 68 percent, to 47 percent, to 28 percent at the thresholds of 1 mile, 3 miles, and 5 miles from campus, respectively, while walking drops from 21 percent to 4 percent at the 1 -mile versus 3 -mile threshold, respectively (Table 59). Bus use is most prevalent among those within 5 miles of campus (within Davis), while the train attracts a substantial share ( 5 percent) only among those living 20 miles away or farther - which makes sense, given the locations of the train stations along the Amtrak Capitol Corridor. From the converse perspective, among those who biked as their primary mode at least once, 30 percent lived within 1 mile, 91 percent within 3 miles, and 99 percent within 5 miles; while about 67
percent of train users (those who rode the train at least one weekday) live 20 miles away or more (Table 60). Among those arriving in personal vehicles, carpooling (or getting a ride) is less likely from greater distances: The percent of vehicle users who carpool drops from 48 percent among those living within 1 mile to 13 percent among those living 20 or miles away (Table 59); and the average (and median) distance among those driving alone is 12.8 miles (and 9.0 miles) versus 7.8 miles ( 2.9 miles) among those carpooling or getting a ride (Table 60).

Table 59. Primary means of transportation on an average weekday, by distance from campus

Mode data are based on responses to question $Q 0016$ and distance data are calculated network distances between the geocoded cross-streets (given in Q0074 and Q0076, or dorm name given in Q0075) and a centroid on campus near the Silo (see Appendix E). Data are weighted by role group for the 3,569 cases successfully geocoded (based on Q0074-76) and with non-missing mode choice data in question $Q 0016$ (see Table 6).

Table 60. Distance from campus, by mode group

| Mode group | Percent using this mode at least one weekday | Among those using this mode as their primary means of transportation at least one weekday during the reference week: |  |  |  |  |  |  |  | Weighted sample |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Mean Median Maximum distance distance distance |  |  | Percent living within: |  |  |  |  |  |
|  |  |  |  |  | 1 mile | 3 miles | 5 miles | 10 miles | 20 miles |  |
| Bike | 44.9\% | 1.9 | 1.4 | 79.2 | 29.6\% | 90.6\% | 98.5\% | 98.8\% | 99.6\% | 3,569 |

| Drive alone | $33.1 \%$ | 12.8 | 9.0 | 88.7 | 2.3\% | 35.0\% | 47.4\% | 50.7\% | 79.5\% | 3,569 |
| Carpool or ride | 14.4\% | 7.8 | 2.9 | 74.0 | 8.3\% | 57.1\% | 69.6\% | 71.2\% | 90.8\% | 3,569 |
| Bus | 25.9\% | 3.0 | 1.9 | 35.9 | 7.2\% | 82.3\% | 94.8\% | 94.8\% | 98.9\% | 3,569 |
| Train | 1.1\% | 45.8 | 62.4 | 106.0 | 4.3\% | 17.0\% | 17.0\% | 17.0\% | 32.9\% | 3,569 |
| Work from home | 2.4\% | 24.3 | 15.2 | 96.1 | 3.2\% | 24.5\% | 34.8\% | 34.8\% | 65.8\% | 3,569 |
| Other no travel | 23.6\% | 9.8 | 2.5 | 106.0 | 12.1\% | 58.7\% | 67.8\% | 69.0\% | 84.5\% | 3,569 |
| Overall | 100.0\% | 6.5 | 2.0 | 106.0 | 17.6\% | 68.1\% | 77.9\% | 79.3\% | 91.4\% | 3,569 |
| Weighted sample | 3,840 |  |  |  | 629 | 2,429 | 2,781 | 2,829 | 3,262 | 3,569 |
| Projected population | 40,209 |  |  |  | 7,086 | 27,369 | 31,331 | 31,868 | 36,751 |  |

Mode data are based on responses to question $Q 0016$ (primary means of transportation each day during the reference week) and distance data are calculated network distances between the geocoded cross-streets (given in Q0074 and Q0076, or dorm name given in $Q 0075$ ) and a centroid on campus near the Silo (see Appendix E). Data are weighted by role group for the 3,569 cases successfully geocoded (based on $Q 0074-76$ ) and with non-missing mode choice data in question $Q 0016$, except for those in the first column showing the percent using this mode, which are weighted by role group for the 3,840 valid responses to question $Q 0016$ (see Table 6).

This year's survey also asked respondents to estimate the number of miles it is "from where you're living to the UC Davis campus (one-way)?" (and specifying "for where you live locally, from where you would come to school or work at UC Davis on a daily basis" to avoid having students report their parents' home addresses) in question Q0031. In general, these self-reported distances (Table 61) are slightly longer than distances estimated from respondents' geocoded addresses.

A comparison including just cases for which both sets of data are non-missing shows that the figures are closer, but still with longer self-reported distances, on average (Table 62). In particular, about half of respondents ( 53 percent) have a higher self-reported distance than a calculated distance and for the other half it is lower. However, for those cases where the selfreported distances are higher, the discrepancy tends to be greater than when they are lower. For cases with a higher self-reported distance than a calculated distance, the average discrepancy (amount that the self-reported distance is greater) is 2.0 miles, whereas for cases with a lower self-reported distance, the average discrepancy (amount that the self-reported distance is lesser) is 0.94 miles. Across all respondents, the self-reported distance is greater than the calculated distance by an average of 0.65 miles, or by 25 percent of the calculated distance.

Table 61. Self-reported distance from campus, by role

Self-reported distances are based on responses to question Q0031 and estimated distances are calculated as the shortest-time network distance between respondents' geocoded crossstreets (given in questions Q0074 and Q0076, or dorm name given in Q0075) and a centroid on campus near the Silo (see Appendix E). Only the 3,532 cases with non-missing data for both sets of variables are included in this table. All data are weighted by role for the 3,569 cases successfully geocoded (based on Q0074-76) and with non-missing mode choice data in question Q0016 (see Table 6).

## Aggregate person-miles and vehicle-miles traveled

For estimates of the numbers of miles traveled, we rely on the calculated distances between respondents' geocoded home locations and a centroid on campus (rather than the self-reported distances discussed above). We assume respondents take this shortest path to and from campus on the days they report having traveled to campus, which likely underestimates the true number of miles traveled to and from campus, since it does not take into account side trips respondents might make on the way to or from campus (for instance stopping at the store, to pickup children, or visit friends), or trips away from campus during the middle of the day (such as to go to lunch or to an off-site meeting).

We estimate the number of miles (person-miles, versus vehicle-miles, described below) traveled each day as the doubled network distance between respondents' geocoded home location and the Silo on campus (as described in Appendix E), multiplied times the percent of weekdays a respondent travels to campus. Thus, if a person lives 10 miles from campus and traveled to campus all five days, her average daily person-miles would be 20 miles; by contrast, if she traveled to campus only one day, her average daily person-miles would be 4 miles. We further attribute person-miles to each mode based on the share of weekdays a respondent used each mode. Thus, if a respondent biked one day and drove four, we count 20 percent of his miles as bike miles and 80 percent as driving miles. Summed across all respondents, this represents the person-miles traveled by each mode on an average weekday. We also report miles avoided for those who do not travel to campus on a given day, either because working from home or for
other reasons. We weight and inflate all responses by role group to estimate a projection of the total person-miles traveled in the entire population.

To estimate the number of person-miles traveled annually, we first assume that respondents travel the same number of days per week and using the same modes as in the reference week for the entire 36 weeks of the academic year. Then to estimate summer travel, we rely on responses to questions Q0033 and Q0034 about the number of weeks and average number of days per week traveled to campus during the summer, but assuming they used the same modes used during the survey reference week throughout the summer. For instance, annual miles biked $=($ distance from campus $\times 2) \times($ share of days biked during reference week $) \times[(36$ weeks $\times 5$ days $/$ week $)+$ (weeks traveled to campus during the summer $\times$ days/week traveled per summer)].

Our estimates for the number of miles traveled, by mode and role, are shown in Table 63 and Table 64. We estimate that the campus population travels about 418,340 miles on an average weekday. We see that trips in cars account for a disproportionate share of the miles ( 72 percent of miles but 30 percent of people) as do train trips ( 5 percent of miles but $0.5 \%$ percent of people), relative to biking, walking, and bus use. Considering role groups, employees cover a disproportionate share of miles ( 52 percent of miles, while comprising only 28 percent of the population). Miles avoided by employees working from home reduces the total miles traveled by about 5 percent, to the extent that this activity truly replaces physical trips to campus that otherwise would have taken place.

Table 63. Total miles traveled daily and annually, by mode used

| Mode group | Aggregate round-trip <br> Miles traveled |  | Percent of <br> total daily | Percent of <br> total <br> people | Projected <br> population |
| :--- | ---: | ---: | ---: | ---: | ---: |
|  | Daily | Annually |  |  |  |
| Bike | 49,780 | $10,342,862$ | $11.9 \%$ | $34.8 \%$ | 13,973 |

| Skate | 348 | 71,001 | $0.1 \%$ | $0.4 \%$ | 148 |
| Personal vehicle | 299,426 | $66,959,570$ | $71.6 \%$ | $30.0 \%$ | 12,061 |
| $\quad$ Drive alone | 249,599 | $55,887,435$ | $59.7 \%$ | $23.1 \%$ | 9,291 |
| $\quad$ Carpool or ride | 49,827 | $11,072,135$ | $11.9 \%$ | $6.9 \%$ | 2,770 |
| Bus | 39,982 | $8,305,542$ | $9.6 \%$ | $17.0 \%$ | 6,828 |
| Train | 19,090 | $3,831,615$ | $4.6 \%$ | $0.5 \%$ | 212 |
| Work from home | $(20,837)$ | $(4,166,756)$ | $(5.0 \%)$ | $1.0 \%$ | 416 |
| Other no travel | $(81,774)$ | $(17,096,259)$ | $(19.5 \%)$ | $10.4 \%$ | 4,168 |
| Overall | 418,340 | $91,589,770$ | $100.0 \%$ | $100.0 \%$ | 40,209 |

Mode groups are the estimated number using each means of transportation on a typical weekday during the reference week, based on responses to questions Q0006, Q0007-12, and Q0016. Personmiles are calculated as described in the text, drawing on data from questions $Q 0006, Q 0007-12$, Q0016, Q0033-34, and Q0074-76. "Overall" miles includes those for all physical travel, not including miles avoided by those not traveling to campus by working from home or for other reasons. All data are weighted (and expanded) by role group for the 3,569 cases successfully geocoded (based on Q0074-76) and with non-missing mode choice data in question $Q 0016$ (see Table 6).

Table 64. Total miles traveled daily and annually, by role

| Role | Aggregate round-trip <br> Miles traveled |  | Percent oftotal dailymiles traveled | Percent of total people | Projected population |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Employees | 217,667 | 51,826,728 | 52.0\% | 28.2\% | 11,333 |
| Faculty | 30,616 | 6,625,805 | 7.3\% | 5.2\% | 2,081 |
| Staff | 187,051 | 45,200,923 | 44.7\% | 23.0\% | 9,252 |
| Outside Davis | 312,239 | 69,432,712 | 74.6\% | 23.1\% | 9,297 |
| Within Davis | 105,553 | 22,045,153 | 25.2\% | 76.9\% | 30,912 |
| Off campus | 96,804 | 20,347,896 | 23.1\% | 62.2\% | 24,997 |
| On campus | 8,749 | 1,697,257 | 2.1\% | 14.7\% | 5,915 |
| Overall | 418,340 | 91,589,770 | 100.0\% | 100.0\% | 40,209 |

Person-miles are calculated as described in the text, drawing on data from questions Q0006, Q000712, Q0016, Q0033-34, and Q0074-76. "Overall" miles includes those for all physical travel, not including miles avoided by those not traveling to campus by working from home or for other reasons. All data are weighted (and expanded) by role group for the 3,569 cases successfully geocoded (based on $Q 0074-76$ ) and with non-missing mode choice data in question $Q 0016$ (see Table 6).

Vehicle-miles traveled (VMT) accounts for vehicle use and occupancy per mile. To estimate VMT, we assume that each person-mile contributes a fractional vehicle-mile equivalent to one divided by vehicle occupancy, for any travel in a personal vehicle or public transit vehicle (including driving alone, carpooling, getting a ride, riding a bus, and riding a train). We assume that travel by walking, biking, or skating contributes no VMT. Vehicle occupancy for carpooling and getting a ride varies for each respondent, as reported in questions $Q 0018$ and $Q 0019$ for those carpooling/vanpooling or getting a ride, respectively. If a respondent lives 10 miles from campus and traveled in a 3-person carpool all five weekdays, her average daily VMT would be $(10$ miles $\times 2) / 3=6.67$ miles. Occupancy for those driving alone and for those who got a ride and were the only person dropped off on campus by the person giving them a ride was assumed to be one.

For bus and train occupancy, we assume average occupancy for all trips on those modes. In particular, we estimated average bus occupancy based on annual ridership data from Unitrans, since the majority of bus riders use Unitrans. According to 2008 figures from the National Transit Database, Unitrans provided 6,847,971 annual passenger miles and 704,711 vehicle revenue miles, suggesting an average of about 9.72 passengers per mile (up from 8.90 passengers per mile in 2007; see Lovejoy, et al. 2009). ${ }^{13}$ Thus, for someone who lives 10 miles from campus

[^10]and traveled by bus all five weekdays, average VMT per day is $(10$ miles $\times 2) / 9.72=2.06$ vehicle-miles. In general, each mile someone travels by bus contributes $1 / 9.72 \approx 0.103$ vehiclemiles per passenger-mile.

We estimated train occupancy based on annual ridership data from Amtrak's Capitol Corridor, since they provide the majority of train rides to campus. According to figures in the Capitol Corridor Business Plan Update, the Capitol Corridor provided 110,036,259 passenger-miles and $1,183,109$ train-miles of service in FY2007-08, suggesting an average of about 85.6 passengers per mile (down from about 93.0 in FY 2007-08; see Lovejoy, et al. 2009). ${ }^{14}$ So if a respondent lives 100 miles from campus and traveled by train all five days, her average VMT per day is estimated to be $(100$ miles $\times 2) / 85.6=2.34$ vehicle-miles. In general, each mile someone travels by train contributes $1 / 85.6 \approx 0.117$ vehicle-miles per passenger-mile.

Our estimates for vehicle-miles traveled, by mode and role, are shown in Table 65 and Table 66. We estimate that travel to campus in personal vehicles contributes about 274,626 miles to VMT on an average weekday or 61.4 million VMT annually. Including estimates of VMT on buses and trains raises the total to 278,964 miles on an average weekday or 62.3 million miles annually. Those driving alone account for 23 percent of the population, 60 percent of (person) miles traveled, and 90 percent of VMT, while those carpooling account for 7 percent of the population, 12 percent of (person) miles traveled, and 9 percent of VMT. About 53 percent of the population contributes no VMT. Employees, and especially staff, contribute the most VMT, corresponding to living farther away, which in turn corresponds to more driving in lower-occupancy vehicles. In particular, those coming from outside Davis account for 23 percent of the campus population, 75 percent of (person) miles traveled, and 90 percent of VMT.

Table 65. Vehicle-miles traveled, by mode, daily and annually

| Mode | Daily |  |  | Annually |  |  | Percent of total people | Population projection |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total VMT | VMT per person | Percent of total <br> VMT | Total VMT | VMT per person | Percent of total <br> VMT |  |  |
| No vehicle (bike, skate, walk, no travel) | 0 | 0.0 | 0.0\% | 0 | 0 | 0.0\% | 52.5\% | 21,108 |
| Personal vehicles | 274,626 | 22.8 | 98.4\% | 61,415,760 | 5,092 | 98.6\% | 30.0\% | 12,061 |
| Drive alone | 249,599 | 26.9 | 89.5\% | 55,887,435 | 6,015 | 89.7\% | 23.1\% | 9,291 |
| Carpool or ride | 25,028 | 9.0 | 9.0\% | 5,528,325 | 1,996 | 8.9\% | 6.9\% | 2,770 |

| Total | 278,964 | 6.9 | 100.0\% | 62,315,192 | 1,550 | 100.0\% | 100.0\% | 40,209 |

Vehicle-miles are calculated as described in the text, drawing on data from questions Q0006, Q0007-12, Q0016, Q0018-
19, Q0033-34, Q0074-76, and the average number of passengers per mile on Unitrans and Amtrak's Capitol Corridor. All data are weighted (and expanded) by role group for the 3,569 cases successfully geocoded (based on Q0074-76) and with non-missing mode choice data in question Q0016 (see Table 6).

As one assessment of the extent that alternative transportation reduces campus-wide VMT, we might consider that if everyone drove alone to campus but all else were unchanged (e.g. the distances traveled and frequency that people came to campus), then VMT would be equivalent to the number of person-miles traveled. Thus comparing VMT to person-miles, we might conclude that there are 139,376 fewer vehicle-miles traveled each day (or 29,274,578 miles annually) as a result of using alternative transportation. On the other hand, there are 278,964 more vehiclemiles traveled each day than there would have been if everyone biked or walked.

## Carbon emissions

As in 2008-09, we estimate the amount of $\mathrm{CO}_{2}$ produced by campus travelers by assuming that each means of transportation generates a certain quantity of carbon (pounds-equivalent) per mile traveled, and multiplying this times our estimate of miles traveled by each mode on an average weekday. In particular, we assume driving alone generates 1.1 pounds-equivalent of $\mathrm{CO}_{2}$ per vehicle-mile (regardless of vehicle type), and that carpooling/getting a ride, riding a bus, and riding a train produce some fractional amount of the emissions produced for the entire vehicle, adjusted for the total number of passengers in the vehicle. For carpooling and getting rides, we adjust vehicle occupancies based on occupancies reported by the respondents themselves. For transit, we assume average occupancies apply for all respondents. We consider estimates based on national averages (provided by TravelMatters.org) as well as an alternative (lower) estimate for buses based on Unitrans data, as summarized in Table 67.

Table 67. Formula for calculating average weekday pounds-equivalent of CO2, by mode

| Mode |  |  |  |
| :---: | :---: | :---: | :---: |
| Driving alone | 1.1 lbs / mile |  | aggregated average weekday person-miles traveled (or equivalently, vehicle-miles traveled) by driving alone (from Table 63 or Table 65) |
| Carpool / ride | 1.1 lbs / mile |  | aggregated average weekday carpool/ride vehicle-miles traveled (from Table 62, this is the equivalent of adjusting person-miles by the reported carpool size) |
| Bus (high) | $0.90 \mathrm{lbs} / \mathrm{mile}$ |  | aggregated average weekday person-miles traveled by bus (from Table 61) x 0.90 lbs. / mile |
| Bus (low) | $0.091 \mathrm{lbs} / \mathrm{mile}$ |  | aggregated average weekday person-miles traveled by bus (from Table 61) |
| Train | 0.46 lbs / mile | $\times$ | aggregated average weekday person-miles by train (from Table 61) |
| The "low" estimate for bus emissions is based on annual fuel use and passenger-miles of service at Unitrans, as described in Lovejoy, et al. (2009). All other estimates are drawn from the TravelMatters website, Individual Emissions Calculator Methodology, available online at http://www.travelmatters.org/calculator/individual/methodology, which is meant to capture national averages. Annual estimates of CO 2 generated are based on comparable figures of miles traveled annually. |  |  |  |

Table 68. Estimated daily carbon emissions by mode and role

| Role group | Pounds-equivalent of $\mathrm{CO}_{2}$ generated on an average weekday |  |  |  |  |  |  |  |  |  |  |

a Estimated number of (or percent of) users of this mode on average weekday, as shown in Table 14. For instance, from Table 14, a total of $26.1 \%$ drive alone plus $7.8 \%$ carpool/ride is a total of $33.9 \%$ using a personal vehicle among those physically traveling, times $88.6 \%$ physically traveling to campus, means $30.0 \%$ of the total population using a personal vehicle on an average weekday, or .300 times 40,209 people equals a projected 12,061 total people using personal vehicles. b High estimates assume 0.90 pounds/passenger-mile (as estimated by TravelMatters.org). Low estimates assume 0.091 pounds/passenger-mile, as estimated using Unitrans data on annual fuel use and passenger-miles of service provided as described in Lovejoy, et al. (2009).
c Total and average are based on the "high" estimate of bus emissions.

| Total | 27,885 | 2,758 | 3,391 | 344 | 799 | 34,834 | 0.87 | 100.0\% | 100.0\% | 40,209 |

[^12]We do not take into account emissions associated with the manufacture of bicycles or vehicles, or of home energy use for those working from home, assuming that biking, walking, skating, working from home, or otherwise not traveling contributes no emissions. As with our estimates of total miles traveled on which these are based, side trips made on the way to or from campus, and any trips made in the middle of the day are not taken into account. See Lovejoy, et al. (2009) for additional caveats regarding the assumptions made estimating overall carbon emissions.

Using these assumptions, we estimate that travel to campus generates a total of 346,854 poundsequivalent of carbon on an average weekday, or 8.6 per person (Table 68) and about 34,834 metric tons-equivalent annually, or 0.87 per person (Table 69). This is down somewhat from the 2008-09 estimate of 357,438 pounds-equivalent daily (or 9.03 per person) and 35,831 metric tons annually (or 0.91 per person) (See Lovejoy, et al., 2009). Undergraduates, but especially freshmen and sophomores, contribute much less to campus-wide $\mathrm{CO}_{2}$ emissions than their share of the population. Employees, and especially staff, contribute the most $\mathrm{CO}_{2}$ relative to their share of the campus population, comprising 28 percent of the population while contributing 57 percent of $\mathrm{CO}_{2}$ daily (and 61 annually).

Again, as an assessment of the extent that alternative transportation reduces carbon emissions, we might consider that if everyone drove alone to campus but all else were unchanged (e.g. the distances traveled and frequency that people came to campus), then there would be 460,174 pounds-equivalent (daily) or 45,699 metric tons-equivalent (annually) of $\mathrm{CO}_{2}$ generated, and so
we might conclude that there are 113,320 pounds saved (daily) or 10,865 tons saved (annually) as a result of using alternative transportation.

## Car ownership

All respondents were asked whether they "have access to a car (for driving to campus, if you wanted to use it)?" (question Q0080). About three-quarters of respondents indicated that they have access to a car (Table 70). Among undergraduates, the percent with cars grow substantially each class level, from 15 percent among freshmen to 83 percent among seniors. Those living (off-campus) within Davis are less likely to have a car than those living outside Davis (76 percent versus 98 percent).

Table 70. Percent with access to a car

| Role group | Percent <br> with access | Weighted <br> sample | Projected <br> population |
| :--- | ---: | ---: | ---: |
| Students | $66.5 \%$ | 2,653 | 28,876 |
| Undergraduate | $62.0 \%$ | 2,142 | 23,404 |
| Freshmen | $14.6 \%$ | 390 | 4,335 |
| Sophomores | $57.4 \%$ | 410 | 4,444 |
| Juniors | $69.5 \%$ | 592 | 6,363 |
| Seniors | $83.0 \%$ | 751 | 8,262 |
| Graduate | $85.6 \%$ | 511 | 5,472 |
| Masters | $86.8 \%$ | 178 | 1,926 |
| PhD | $85.0 \%$ | 332 | 3,546 |
| Employees | $96.3 \%$ | 1,070 | 11,333 |
| Faculty | $96.1 \%$ | 195 | 2,081 |
| Staff | $96.3 \%$ | 876 | 9,252 |
| Outside Davis | $98.1 \%$ | 864 | 9,297 |
| Within Davis | $68.0 \%$ | 2,852 | 30,912 |
| On campus | $32.7 \%$ | 538 | 5,915 |
| Off campus | $76.3 \%$ | 2,314 | 24,997 |
| Overall | $75.1 \%$ | 3,723 | 40,209 |

| Rest |  |  |  |

$\overline{\text { Results are based on responses to question } Q 0080 \text {. Data are weighted by }}$ role group based on the 3,840 valid responses to question Q0016.

## Vehicle type

Anyone who reported driving, carpooling, or getting a ride at any point on their way to campus during the reference week (based on question $Q 0015$ ) was asked to indicate the type and technology (questions $Q 0020$ and $Q 0021$ ) of the vehicle they used. About 20 percent used a truck or SUV (Table 71) and about 6 percent of respondents reported using a hybrid or alternative-fuel vehicle (Table 72). Note that the percentages shown are the percent of people using these vehicles at any point during the week, not necessarily the percent of vehicles arriving on a typical weekday (due to varying numbers of days that respondents might travel to campus and varying occupancies per vehicle).

Table 71. Types of vehicles used

|  | Percent Among those using a vehicle at least once, percent using: |  |  |  |  |  | Weighted sample | Projected population |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | using a vehicle | Regular car or sedan | SUV | Truck | Van, minivan, or stationwagon | Motorcycle or scooter |  |  |
| Overall | 56.2\% | 71.6\% | 14.0\% | 6.5\% | 6.2\% | 1.8\% | 3,806 | 40,902 |
| Weighted sample | 2,138 | 1,530 | 299 | 139 | 132 | 39 | 3,806 |  |
| Projected population | 22,975 | 16,442 | 3,210 | 1,491 | 1,416 | 417 |  | 40,902 |

Results are based on responses to questions Q0015 (for whether any vehicle was used and whether motorcycle/ scooter used) and Q0021 (type of vehicle other than a motorcycle/scooter). Percent using a vehicle includes those who indicated driving alone, carpooling, getting a ride, or riding a motorcycle/scooter at any point on their way to campus at least once during the reference week (question Q0015), whether or not as their primary means of transportation on a given day. Data are weighted by role group based on the 3,840 valid responses to question Q0016 (see Table 6).

Table 72. Types of vehicle technologies (fuel) used

|  | Percent <br> using a <br> vehicle | Among those using a vehicle at least once, percent using: | Regular diesel <br> or gasoline | Hybrid Natural gas | Biodiesel | All <br> electric | Weighted <br> sample | Projected <br> population |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Overall | $56.2 \%$ | $94.3 \%$ | $4.1 \%$ | $1.0 \%$ | $0.4 \%$ | $0.2 \%$ | 3,812 | 40,902 |
| Weighted sample | 2,141 | 2,019 | 87 | 21 | 9 | 4 | 3,812 |  |
| Projected population | 22,975 | 21,666 | 938 | 224 | 102 | 46 |  | 40,902 |

Results are based on responses to question $Q 0015$ (for whether any vehicle was used) and Q0022 (type of vehicle technology). Percent using a vehicle includes those who indicated driving alone, carpooling, getting a ride, or riding a motorcycle/scooter at any point on their way to campus at least once during the reference week (question $Q 0015$ ), whether or not as their primary means of transportation on a given day. All data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Bicycle ownership and bike-riding aptitude

This year, rather than asking where a bike was obtained (as in the 2008-09 survey), we asked whether respondents "own (or have access to) a functioning bike" (question Q0083) and if so how much they spent on it (question Q0084). Respondents were asked to choose among the price categories shown in Table 73. Overall, about 82 percent have access to a bike. Faculty spend most on their bikes, followed by staff, grad students, and undergraduates. Undergraduates are most likely to spend nothing. Those spending less than $\$ 100$ includes 53 percent of undergrads, 40 percent of grad students, 33 percent of staff, and 23 percent of faculty. Conversely, those spending more than $\$ 300$ includes 44 percent of faculty, 32 percent of staff, 26 percent of grad students, and 14 percent of undergrads.

Question Q0085 asked all respondents to rate their ability to ride a bike, specifying that we were interested "whether you know how or are physically able to ride a bike, regardless of whether it is practical or desirable for you to do so as a means of transportation to campus." About 2 percent indicated that they did not know how to ride a bike at all, a projected 775 people (or 573 living within Davis) (Table 74). An additional 7 percent indicated that they were "not very confident" riding, making for a projected 2,501 people living within Davis who do not know how or are not confident riding a bike. Overall, about 90 percent of people indicated that they were "somewhat" or "very confident" riding, which mostly held across all role groups. The percent reporting that they were "very confident" was highest among PhD students, faculty, and seniors ( 73,72 , and 72 percent, respectively), and lowest among freshmen ( 58 percent).

Table 73. Percent who own a bike and expense paid

Results are based on responses to question $Q 0085$. Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Crashes while biking, walking, or riding in a vehicle

All respondents were asked if they experienced "a fall or crash that resulted in personal injury to you" while walking, biking, or riding in personal vehicle between home and campus, at any point within the last year. For each type of activity (e.g. walking on campus), respondents were asked to select among the following choices, "I did this at least once in the last year, but was not injured," "Yes, I was injured doing this in the last year," or "Not applicable: I did not do this in the last year". An implausibly large number of respondents indicated the last category (Not applicable / did not do this," (for instance, 48 percent of respondents indicated not walking on campus), suggesting that this option was widely misinterpreted. We suspect that respondents tended to indicate "not applicable" if they were not injured, regardless of whether they did the activity at all. While question wording should be revised for next year, for this year we assume that our estimate of the percent for whom the question is applicable is an underestimate, and therefore reporting the percentage of injuries among the applicable respondents may appear as overestimates (e.g. 2.6 percent of all "applicable" respondents reported walking injuries, but only 1.4 percent of all respondents reported walking injuries). However, the total projected number of injuries would not be affected by this bias.

Table 75 shows that about 10 percent of respondents said they experienced an injury in the last year. About 15 percent of these required a hospital visit, a projected 634 individuals overall. Cyclists are more likely to experience an injury than walkers or those in vehicles, with 16 and 11 percent reporting injuries on and off-campus respectively (versus 1 or 2 percent of walkers or those in vehicles). While injuries occurring while driving or walking are most likely to require a hospital visit ( 27 percent and 18 percent off campus, respectively), because bike injuries are more frequent, cyclists are more likely to report an injury requiring a hospital visit overall about 2 percent of all cyclists versus about 0.2 percent of walkers and 0.3 percent of vehicleusers, with a projected total of 593 hospital visits by cyclists, or 83 percent of the total hospital visits reported.

Table 75. Crashes while traveling between home and campus in the last year, by mode

| Type of activity | Percent injured in the last year: |  |  |  |  | Projected number | Total. |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | "applicable" (did this in the last year) |  |  | Among injured: |  |  |  |  |
|  |  | Among total population | Among applicable population | Percent requiring a hospital visit | Percent police report filed | experiencing injuries in the last year | Weighted sample | Projected population |
| Walking on campus | 52.0\% | 1.4\% | 2.6\% | 6.5\% | 1.6\% | 550 | 3,653 | 40,209 |
| Walking off campus | 38.0\% | 0.5\% | 1.3\% | 17.5\% | 0.0\% | 192 | 3,615 | 40,209 |
| Biking on campus | 45.1\% | 7.3\% | 16.3\% | 11.6\% | 3.5\% | 2,950 | 3,670 | 40,209 |
| Biking off campus | 38.2\% | 4.1\% | 10.8\% | 15.2\% | 4.3\% | 1,658 | 3,634 | 40,209 |
| Driving or riding in a vehicle | 44.5\% | 0.5\% | 1.0\% | 26.8\% | 40.4\% | 181 | 3,620 | 40,209 |
| For any of the above |  | 10.5\% |  | 15.1\% | 4.6\% | 379 | 3,749 | 40,209 |
| Projected population |  | 4,207 |  | 634 | 193 | 4,207 |  | 40,209 |

Results are based on responses to questions Q0035 (whether experienced an injury); and Q0039-40, Q0044-45,
Q0050-51, Q0056-57, and Q0061-62 (on hospital visits and police reports). Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Table 76 and Table 77 provide more information about the circumstances of bike crashes occurring on and off campus, respectively. Respondents were asked to indicate where the incident happened and could check all that apply or write in another response, as well as if the crash was "a result of colliding with someone or something," again with the option of checking all that applied. The results show that the majority of on-campus crashes ( 56 percent of the total), as well as 40 percent of crashes requiring a hospital visit, were the result of collisions with other bikers. Only 8 percent of on-campus crashes requiring a hospital visit involved a collision with a vehicle. By contrast, 8 percent of off-campus crashes requiring a hospital visit involved collisions with other bikers and 40 percent collisions with vehicles. About a quarter of all oncampus crashes-and about 15 percent of those requiring a hospital visit-occurred in roundabouts.

Table 76. Location and circumstances of injuries from on-campus bike crashes

|  | Of total injuries, percent of this type: | Percent of these requiring a hospital visit | Of thoserequiring ahospital visit,percent ofcrashes ofthis type | Total injuries: |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Weighted sample | Population projection |
| Injuries from bike crashes on campus | 100.0\% | 11.6\% | 100.0\% | 269 | 2,950 |
| By location |  |  |  |  |  |
| In a roadway | 17.1\% | 17.0\% | 25.6\% | 46 | 506 |
| In a bike lane (on a street shared with cars) | 15.6\% | 15.9\% | 21.8\% | 42 | 459 |
| On a bike or pedestrian path (separated from the street) | 44.0\% | 9.4\% | 36.6\% | 118 | 1,297 |
| On a sidewalk | 6.0\% | 17.2\% | 9.2\% | 16 | 178 |
| At an intersection (of any kind) | 17.7\% | 14.9\% | 23.3\% | 48 | 523 |
| At an intersection with a stop sign | 3.1\% | 10.3\% | 2.9\% | 8 | 92 |
| At a signalized intersection | 1.2\% | 0.0\% | 0.0\% | 3 | 35 |
| In a crosswalk | 3.5\% | 0.0\% | 0.0\% | 9 | 102 |
| In a roundabout | 24.1\% | 7.1\% | 15.1\% | 65 | 712 |
| In a parking lot | 4.6\% | 0.0\% | 0.0\% | 12 | 137 |
| Missing / no answer | 2.2\% | 0.0\% | 0.0\% | 6 | 65 |
| By collision type |  |  |  |  |  |
| No collision | 30.9\% | 18.8\% | 51.1\% | 83 | 911 |
| Car or truck | 3.4\% | 25.5\% | 7.5\% | 9 | 99 |
| Bus | 0.0\% | 0.0\% | 0.0\% | 0 | 0 |
| Another biker | 56.1\% | 8.0\% | 39.8\% | 151 | 1,656 |
| Someone walking or running | 8.8\% | 0.0\% | 0.0\% | 24 | 258 |
| Animal | 0.0\% | 0.0\% | 0.0\% | 0 | 0 |
| Parked car or bike | 2.3\% | 0.0\% | 0.0\% | 6 | 67 |
| Road element | 7.7\% | 2.8\% | 1.9\% | 21 | 227 |
| Other/missing | 3.7\% | 35.0\% | 5.3\% | 10 | 109 |

Results are based on responses to questions $Q 0035$ (whether experienced an injury), Q0037 (incident location), Q0038 (collision circumstances), and Q0044 (hospital visits). All data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Table 77. Location and circumstances of injuries from off-campus bike crashes

Results are based on responses to questions $Q 0035$ (whether experienced an injury), $Q 0047$ (incident location), $Q 0048$ (collision circumstances), and Q0050 (hospital visits). All data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Table 78 shows the incidence of injuries by role group. Undergraduates are much more likely to experience injuries than others on campus, with a full quarter reporting an injury in the last year, versus 13 and 10 percent of grad students and employees respectively. The injuries experienced by staff and faculty are most likely to require a hospital visit, at 45 and 38 percent, respectively, compared with 16 and 19 percent of injuries experienced by undergraduates and grad students, respectively.

Table 78. Injuries from bike crashes, by role group

| Role group | Percent "applicable" (biked in the last year) | Among applicable population, percent injured | Among injured: |  | Projected number of injuries requiring a hospital visit | Weighted sample | Projected population |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Percent of incidents occurring on campus | Percent of requiring a hospital visit |  |  |  |
| Students | 50.9\% | 22.9\% | 59.2\% | 16.4\% | 551 | 2,652 | 28,876 |
| Undergraduate | 51.5\% | 25.1\% | 60.3\% | 16.2\% | 489 | 2,142 | 23,404 |
| Freshmen | 35.6\% | 21.6\% | 65.9\% | 16.7\% | 56 | 393 | 4,335 |
| Sophomores | 71.5\% | 32.9\% | 65.8\% | 10.8\% | 113 | 410 | 4,444 |
| Juniors | 48.0\% | 23.7\% | 52.2\% | 14.6\% | 106 | 587 | 6,363 |
| Seniors | 51.6\% | 21.3\% | 58.3\% | 24.3\% | 221 | 751 | 8,262 |
| Graduate | 48.1\% | 13.2\% | 50.2\% | 18.5\% | 64 | 510 | 5,472 |
| Masters | 42.4\% | 14.2\% | 47.8\% | 13.3\% | 15 | 180 | 1,926 |
| PhD | 51.1\% | 12.7\% | 51.4\% | 20.7\% | 48 | 331 | 3,546 |
| Employees | 35.6\% | 10.3\% | 36.5\% | 43.6\% | 181 | 1,025 | 11,333 |
| Faculty | 45.2\% | 10.6\% | 47.1\% | 38.5\% | 38 | 180 | 2,081 |
| Staff | 33.5\% | 10.2\% | 33.3\% | 45.5\% | 144 | 845 | 9,252 |
| Outside Davis | 24.9\% | 9.7\% | 62.2\% | 32.6\% | 73 | 829 | 9,297 |
| Within Davis | 53.2\% | 21.6\% | 55.0\% | 18.0\% | 638 | 2,791 | 30,912 |
| Overall | 65.4\% | 20.2\% | 56.7\% | 18.8\% | 997 | 3,677 | 40,209 |
| Weighted sample | 2,404 | 486 | 276 | 91 |  | 3,677 |  |
| Projected population | 26,282 | 5,313 | 3,015 | 997 | 997 |  | 40,209 |

Results are based on responses to questions Q0035 (whether experienced an injury) and $Q 0039$ and $Q 0050$ (on hospital visits). Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Bicycle theft

Table 79 shows the number of respondents who report having been the victim of a bicycle theft on the UC Davis campus. About 19 percent of the total campus population has experienced a theft at some point (almost a quarter of those who have ever brought a bike to campus). Among those who have brought a bike on campus, about 11 percent reported that they experienced a theft in the last year, but only 23 percent reported the theft to campus police. Overall, we project about 3,710 people had a bike stolen within the last year, and that about 871 would have been reported to police. Actual records from Campus Police indicate 430 bike thefts reported during the corresponding period (November 1, 2008 through October 31, 2009). ${ }^{15}$ UC Davis Bicycle Program Coordinator David Takemoto-Weerts and Police Lieutenant Matthew Carmichael suggested that one reason for the discrepancy might be that many people think they have reported a theft when they have not actually filed an official report. A new online reporting system may increase the number filing reports in the future.

Based on the survey results, undergraduates were most likely to experience thefts, with about a third of seniors with bikes on campus having experienced a theft, including 19 percent stolen within the last year.

[^13]Table 79: Victims of bike theft, by role

| Role group | Percent ever had a bike on campus | Among applicable population, percent that: |  |  | Weighted sample | Projected population |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Ever had a theft | Had a theft last year | Reported theft police last year |  |  |
| Students | 87.1\% | 22.2\% | 13.2\% | 21.6\% | 2,708 | 28,876 |
| Undergraduate | 87.6\% | 23.2\% | 14.6\% | 21.1\% | 2,186 | 23,404 |

| Staff | 72.0\% | 23.6\% | 4.3\% | 35.3\% | 892 | 9,252 |
| Living outside Davis | 57.6\% | 22.8\% | 5.8\% | 29.5\% | 876 | 9,297 |
| Living in Davis off campus | 91.0\% | 24.9\% | 12.6\% | 21.9\% | 2,325 | 24,997 |
| Living on campus | 92.9\% | 13.1\% | 9.2\% | 28.4\% | 539 | 5,915 |
| Overall | 83.5\% | 22.6\% | 11.1\% | 23.5\% | 3,798 | 40,209 |
| Weighted sample | 3,170 | 716 | 350 | 82 | 3,798 |  |
| Projected population | 33,561 | 7,578 | 3,710 | 871 |  | 40,209 |

Results are based on responses to questions Q0063 (theft ever), Q0064 (theft in the last year), and Q0065 (reported to police). Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

## Awareness of TAPS and other transportation programs

Respondents were presented a list of services and asked to indicate, "It's new to me," "I've heard of it, but never used it," or "I've used it." Table 80 summarizes the responses for each service, and Table 81 compares responses for the past three years, for those items that appeared on each of the surveys. TAPS launched the GoClub, Zimride, and Zipcar programs in the Fall of 2009.

Table 80. Awareness of transportation services

| Service | Have <br> used it | Have only <br> heard of it | Never <br> heard of it | Weighted <br> sample |
| :--- | :---: | :---: | :---: | :---: |
| GoClub program | $3.2 \%$ | $14.3 \%$ | $82.5 \%$ | 3,747 |
| Emergency Ride Home Program for goClub members | $1.0 \%$ | $15.3 \%$ | $83.7 \%$ | 3,747 |
| Discount Unitrans bus passes for those without a parking permit | $4.7 \%$ | $25.5 \%$ | $69.8 \%$ | 3,748 |
| Yolo TMA "TRIP" Incentive Program | $0.7 \%$ | $8.2 \%$ | $91.1 \%$ | 3,747 |
| Yolo TMA Emergency Ride Home Program (yolotma.org) | $0.5 \%$ | $9.0 \%$ | $90.5 \%$ | 3,744 |
| Sacramento Region "Commuter Club" | $0.6 \%$ | $9.6 \%$ | $89.8 \%$ | 3,742 |
| www.sacregion511.org | $1.8 \%$ | $10.5 \%$ | $87.7 \%$ | 3,741 |
| TAPS motorist assistance program | $8.5 \%$ | $42.8 \%$ | $48.7 \%$ | 3,750 |
| Comet in-vehicle parking meters on campus | $2.9 \%$ | $21.4 \%$ | $75.7 \%$ | 3,743 |
| Social network for ride matching: Zimride.ucdavis.edu | $1.2 \%$ | $14.3 \%$ | $84.6 \%$ | 3,742 |
| Zipcar carsharing program | $1.5 \%$ | $55.8 \%$ | $42.7 \%$ | 3,741 |
| Enterprise Rental Car Voucher Program | $0.9 \%$ | $18.9 \%$ | $80.2 \%$ | 3,734 |
| Ten bike tire air stations around campus | $31.9 \%$ | $23.2 \%$ | $44.9 \%$ | 3,746 |
| Bike lock-cutting service | $3.3 \%$ | $37.6 \%$ | $59.1 \%$ | 3,746 |
| UC Davis Bike Auction | $8.0 \%$ | $73.5 \%$ | $18.5 \%$ | 3,750 |

Results are based on responses to question Q0071. Data are weighted by role group based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

Table 81. Awareness of transportation services, 2007-08 through 2009-10

| Serrvice | Percent who have heard of it |  |  |
| :--- | ---: | ---: | ---: |
|  | $2009-10$ | $2008-09$ | $2007-08$ |
| GoClub program | $17.5 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| Carpool/vanpool program | $\mathrm{n} / \mathrm{a}$ | $62.9 \%$ | $56.9 \%$ |
| 24 free parking days for carpoolers/ transitpoolers | $\mathrm{n} / \mathrm{a}$ | $34.1 \%$ | $24.5 \%$ |
| Online ridematching service | $\mathrm{n} / \mathrm{a}$ | $32.8 \%$ | $26.3 \%$ |
| Emergency Ride Home Program for goClub members | $16.3 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| Emergency ride home service | $\mathrm{n} / \mathrm{a}$ | $39.4 \%$ | $29.7 \%$ |
| Discount Unitrans bus passes for those without a parking permit | $30.2 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| Discounted transit passes | $\mathrm{n} / \mathrm{a}$ | $43.8 \%$ | $28.4 \%$ |
| Yolo TMA "TRIP" Incentive Program | $8.9 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| Yolo TMA Emergency Ride Home Program (yolotma.org) | $9.5 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| Yolo TMA Commuter Club | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| Sacramento Region "Commuter Club" | $10.2 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| www.sacregion511.org | $12.3 \%$ | $13.5 \%$ | $10.3 \%$ |
| TAPS motorist assistance program | $51.3 \%$ | $49.0 \%$ | $\mathrm{n} / \mathrm{a}$ |
| Comet in-vehicle parking meters on campus | $24.3 \%$ | $34.2 \%$ | $\mathrm{n} / \mathrm{a}$ |
| Social network for ride matching: Zimride.ucdavis.edu | $15.4 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| Zipcar carsharing program | $57.3 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| Enterprise Rental Car Voucher Program | $19.8 \%$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| Ten bike tire air stations around campus | $55.1 \%$ | $58.3 \%$ | $\mathrm{n} / \mathrm{a}$ |
| Bike lock-cutting service | $40.9 \%$ | $49.0 \%$ | $\mathrm{n} / \mathrm{a}$ |
| UC Davis Bike Auction | $81.5 \%$ | $84.3 \%$ | $\mathrm{n} / \mathrm{a}$ |

As in Table 80, data for 2009-10 are based on responses to question Q0071. See Lovejoy, et al. (2009) for results from 2008-09 and Congleton (2009) for results from 2007-08.

## ACKNOWLEDGEMENTS

TAPS and the Sustainable Transportation Center at UC Davis provided financial support for this project, with helpful oversight from Cliff Contreras and Susan Handy, respectively. Members of the UC Davis Transportation Planning Working Group, Transportation and Parking Administrative Advisory Committee, and the Bicycle Committee provided valuable feedback to make the survey data more relevant. Thanks to Anthony Palmere, Geoff Straw, Matt Dulcich, Camille Kirk, Joe Krovoza, Tara Goddard, and Chris Congleton for their insightful suggestions throughout the project. Thanks to Andrew Hoguin for conducting GIS analysis; to students at the Institute of Transportation Studies for helping in pre-testing the survey instrument; to Josh Miller for reviewing this document; and to Chris Congleton for spearheading the survey as an annual data-collection effort in 2006-07.

## APPENDICES

## Appendix A: Survey instrument, 2009-10 Campus Travel Survey

Below is the full text of the survey instrument, shown without the formatting as it would have appeared to online survey-takers. Notes about the conditional display of questions based on respondents' prior answers are shown in brackets. Answer options that were offered as checkboxes in the online survey (allowing respondents to select more than one response) are denoted here with a $\square$. Answer options that were implemented either as radio buttons or as part of a dropdown list in the online survey (allowing respondents to select only one response) are denoted here with a $O$. Questions that were required for respondents to proceed are denoted here with an asterisk (only the first three questions). Figure 18 at the end of this Appendix shows a sample screenshot of a page from the online version of the survey. On November 8, 2009, the dates of the reference week changed from Oct. 26- Nov. 1 to Nov. 2 - Nov. 8.

## Welcome to the 2009-10 Campus Travel Survey!

If you already took this year's survey, thank you! But please don't take it more than once.
This survey provides campus planners with valuable feedback on how people get to campus and their experiences with various transportation programs. It should take less than 15 minutes to complete. Doing so is entirely voluntary, and we assure you that all responses are confidential and the results will only be published in the aggregate, without connection to any individual.

As a token of our appreciation, we're offering entry into a drawing for an $\underline{8 \mathrm{~GB}}$ iPod Nano to anyone who completes the survey.

Thanks for participating!
Q0001: What is your primary role at UC Davis?*
O Undergraduate student (including Post-bac)
O Graduate student
O Faculty
O Staff
O Visiting Scholar
O Post doc
O Recent graduate
[If undergraduate student]
Q0002: What year are you?*
O Freshman
O Sophomore
O Junior

O Senior
O Fifth-year senior
O Post-bac
O Visiting / exchange student
O Other: $\qquad$
[If graduate student]
Q0003: What type of graduate program are you in?*
O Master's
O PhD
O Law
O MBA
O Veterinary
O Ed.D. or CANDEL
O Other: $\qquad$
[If employee or grad student]
Q0004: Where is your office, lab, or department? (That is, wherever you usually spend your time when you travel to work or school at UC Davis)|
O On the Davis campus, in the Central campus area (including everything on this map) -- this is most people
O On the Davis campus, in the West campus area (west of SR 113)
O On the Davis campus, in the South campus area (south of I-80)
O Technically off-campus, but within the city of Davis
O Outside of Davis
[If located outside of Davis, ask this question, then skip to end, to "Optional" page.]
Q0005: Where outside of Davis is your office, lab, or department?
Consider your activities during the seven days last week, from Monday (Oct. 26) through Sunday (Nov. 1). If you have a day planner, it might be useful to look at the last week's activities as you complete this section.

Q0006: Did you go somewhere on campus any of the seven days last week for school or work? (If you went to a UC Davis office or lab that is technically off-campus, but within the city of Davis, please count that as well.)*
Yes, I traveled to campus destinations for school/work last week (check all that apply):
O Monday
O Tuesday
O Wednesday
O Thursday
O Friday
O Saturday
O Sunday
or
O No, I was away all week, Oct. 26 - Nov. 1

## About the days you did not travel on campus last week

[If no travel on some weekdays and an employee, for each weekday not traveled]
Q0007-11: What was the main reason you did not travel to work on campus [Monday]?
O Work or school-related activities elsewhere (field work, meetings, teaching appointment, etc.)
O Working from home (telecommuting) or from elsewhere
O START or furlough day
O Regularly scheduled day off
O Day off as part of a 4/40 compressed work week
O Day off as part of a $9 / 80$ compressed work week
O Day off as part of $3 / 36$ compressed work week
O Vacation
O Sick or personal leave
O Other: $\qquad$
[If no travel to campus all week]
Q0012: What was the main reason you did not go to campus destinations last week for school or work?
O Study abroad
O PELP (Planned Educational Leave Program)
O Sabbatical
O Temporary appointment elsewhere (internship, visiting scholar, teaching appointment, exchange program, etc.)
O Telecommuting (working from home or another remote location)
O Work or school-related travel or field work
O Vacation
O Sickness or personal leave
O Other: $\qquad$
On the days you were on campus last week for school or work
[For any days that traveled]

## Q0013: What time did you arrive at your first destination?

|  | Between <br> 6am and 10am | Either before <br> 6am or after 10am |
| :--- | :---: | :---: |
| Monday | O | O |
| Tuesday | O | O |
| Wednesday | O | O |
| Thursday | O | O |
| Friday | O | O |
| Saturday | O | O |
| Sunday | O | O |

[If traveled at least one day last week]
Q0014: How did you get to your campus destinations last week?
[If traveled at least one day last week]
Q0015: First think back to the entire week (Monday, Oct. 26 - Sunday, Nov. 1). Please tell us all the different means of transportation you used at some point on your way to school or work, from the moment you left home to when you arrived at your first destination on campus -- even if it was just for part of the way -- on any day last week. (Check all that apply.)
$\square$ Bike

- Walk
- Skate
- Motorcycle or scooter

D Drive alone in a car (or other vehicle)
Carpool or vanpool with others also going to campus (either as driver or passenger)
Get a ride (someone drops you off and continues on elsewhere)
$\square$ Bus

- Train or light rail
- Other: $\qquad$
[For any days that traveled]
Q0016: Next, consider each day specifically. Please select which means of transportation you used on your way to your first campus destination each day. (If you used more than one means, select whatever you did for most of the distance.)

|  | Biked | Walked | Skated | Motorcycle or scooter | Drove myself (arrived alone) | Carpooled <br> or <br> vanpooled (arrived with others) | Got a ride (dropped off by someone going elsewhere) | Bus | Train <br> / light rail |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Monday | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | O | $\bigcirc$ |
| Tuesday | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Wednesday | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Thursday | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | O | O | O | O | O | $\bigcirc$ |
| Friday | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Saturday | O | O | $\bigcirc$ | $\bigcirc$ | O | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Sunday | 0 | 0 | 0 | O | O | O | O | O | O |

[For any days that traveled]
Q0017: On any of these days, did you ride a bike on campus after traveling by some other means most of the distance from home to campus?

|  | No, because I was <br> already biking | No, I did not bike | Yes, I switched to <br> biking after using some <br> other means |
| :--- | :---: | :---: | :---: |
| Monday | O | O | O |
| Tuesday | O | O | O |
| Wednesday | O | O | O |
| Thursday | O | O | O |
| Friday | O | O | O |
| Saturday | O | O | O |
| Sunday | O | O | O |

[If checked carpool in Q0015]
Q0018: During the times when you carpooled with others last week, how many total people were in your carpool or vanpool (including yourself)? (If it was different on different days, please indicate what you did most often.)
O 2 (you plus one other person)
O 3 people
O 4 people
O 5 people
O 6 people
O 7 people
O 8 or more
[If checked got a ride in Q0015]
Q0019: During the times when you got a ride on your way to campus last week, how many
total people did your driver drop off? (If it was different on different days, please
indicate what you did most often.)
O 1 (just you)
O 2 people
O 3 people
O 4 people
O 5 people
O 6 people
O 7 or more
[If checked motorcycle, drove alone, carpooled, or got a ride in Q0015]
Q0020: Where did you (or whoever drove you) park? (If it was different on different days, please indicate what you did most often.)
O On the UC Davis campus
O Within Davis, but not on campus
O Outside of Davis
O I was dropped off (and the driver went elsewhere)
[If checked drove alone, carpooled, or got a ride in Q0015]
Q0021: What type of car or vehicle did you ride in on your way to campus? (If it was different on different days, please indicate what you use most often.)
O SUV
O Truck
O Van or minivan
O Stationwagon
O Other car (sedan, etc.)
O Other: $\qquad$
[If checked motorcycled, drove alone, carpooled, or got a ride in Q0015]
Q0022: Was this vehicle a hybrid, alternative fuel, or electric vehicle?
O No, it is a regular gasoline or diesel vehicle, or
Yes, it was:
O Hybrid
O Plug-in hybrid
O All electric
O Biodiesel
O Natural gas
O Hydrogen fuel cell
O Other: $\qquad$
[If checked bus in Q0015]
Q0023: Which bus service did you use on your way to campus last week? (Please check all that apply.)

- Unitrans
[ Yolobus
- Sacramento Regional Transit
- UCD/UCDMC Shuttle
[ Fairfield Suisun Transit
$\square$ Davis Community Transit
- UC Berkeley - UC Davis Shuttle
$\square$ Amtrak motorcoach (bus)
- AC Transit
- Muni
- Other:
[If used Unitrans]
Q0024: Which Unitrans line(s) did you ride on your way to campus last week? (Check all that apply.)
- $A$
- B
- C
- D
- E

## F

$\square \mathrm{G}$
$\square \mathrm{H}$

- J
$\square \mathrm{K}$
$\square \mathrm{L}$
$\square \mathrm{M}$
$\square \mathrm{P}$
$\square \mathrm{Q}$
$\square S$
$\square \mathrm{T}$
$\square \mathrm{W}$
[If used Unitrans and a grad student]
Q0025: What type of Unitrans ticket did you use?
O 10-ride pass
O Monthly pass
O Quarter pass
O Annual pass
O Paid cash
O Other: $\qquad$
[If checked train in Q0015]
Q0026: Which train service did you use on your way to campus last week? (Check all that apply.)
- Amtrak Capitol Corridor
- Sacramento Regional Transit
- BART
[ Muni
Caltrain
- Other: $\qquad$
Q0027: Did you leave a bike on campus overnight any nights last week (Oct. 26 - Nov. 1)?
$\square$ No, not any nights last week
Yes, I had a bike on campus overnight (check all that apply):
[ Monday night
- Tuesday night
- Wednesday night
$\square$ Thursday night
$\square$ Friday night
$\square$ Saturday night
$\square$ Sunday night
[If left bike any nights last week]
Q0028: Do you typically store this bike on campus?
O Yes, I deliberately keep this bike on campus somewhat permanently
O No, I generally bring the bike home or intend to bring it home at some point
O Other: $\qquad$
[If left bike any nights last week]
Q0029: About how long has it been since you rode this bike?
O One day or less
O 2 to 7 days
O 8 to 14 days
O 15 to 30 days
O 31 days or more
Now consider your normal routine, whatever you do most often when you are in town and going to UC Davis on a regular basis.
[Everyone, even if no travel last week]
Q0030: About how many minutes does it usually take to get from where you live to your first campus destination on a given day (door-to-door)?

O 0-4 minutes
O 5-9 minutes
O 10-14 minutes
O 15-19 minutes
O 20-24 minutes
O 25-29 minutes
O 30-34 minutes
O 35-39 minutes
O 40-44 minutes
O 45-49 minutes
O 50-54 minutes
O 55-59 minutes
O 1-2 hours
O More than 2 hours
[Everyone, even if no travel last week]
Q0031: How many miles would you estimate it is from where you're living to the UC Davis
campus (one-way)? (Please answer for where you live locally, from where you would come to school or work at UC Davis on a daily basis.)
[write-in numerical response?]
[Everyone, even if no travel last week]
Q0032: After arriving on campus at the beginning of your day, how do you typically get around campus (or off campus) before leaving campus for the last time?

|  | Never | Very <br> rarely | Sometimes | Fairly <br> often | Very <br> often | Always |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| I walk around between <br> different destinations around <br> campus. | 0 | 0 | 0 | 0 |  | 0 |
| I bike between different <br> destinations around campus. | 0 | 0 | 0 | 0 | 0 |  |
| I ride in a vehicle to get to <br> different destinations around <br> campus. | 0 | 0 | 0 | 0 | 0 |  |

Now consider this past summer, from June 16 - September 19, 2008.
Q0033: How much time did you spend at UC Davis over the summer? We're interested in the number of weeks you spent last summer traveling to and from campus destinations on a regular basis. Please estimate how many weeks you were on campus at least once a week during this period.
If you went to a UC Davis office or lab that is technically off-campus, but within the city of Davis, please count that as well.
(Note: There were a total of 14 weeks in the academic summer.)
[Dropdown list:]
O All summer / 14 weeks (June 15 - September 18)
O 13 weeks
O 12 weeks (equivalent to Summer Session I and Summer Session II)
O 11 weeks
○ ...
O 7 weeks
O 6 weeks (equivalent to just ONE summer session, I or II)
O 5 weeks
O ...
O 1 week
O None
[For any answer other "none"]
Q0034: During this period, how many days per week were you on campus, on average?
[Dropdown list:]
O 1 day per week
O 2 days per week
O 3 days per week
O 4 days per week
O 5 days per week
O 6 days per week
O 7 days per week

Now think back on the last year, from November 1, 2008 through November 1, 2009.
Q0035: During this period, did you experience a fall or crash that resulted in personal injury to you while doing any of the following?

|  | Yes, I was <br> injured doing <br> this in the <br> last year | Not applicable: I <br> did not do this in <br> the last year |
| :--- | :---: | :---: | :---: |
| last year, but was not injured |  |  |

[If on-campus bike crash, shown Q0036-40]
Q0036: About your on-campus bike crash
Q0037: Where did this incident happen? (If you were in more than one crash on campus last year, please answer regarding the most serious one. Check all that apply for that incident.)
O In a roadway
O In a bike lane (on a street shared with cars)
O On a bike or pedestrian path (separated from the street)
O On a sidewalk
O At an intersection (of any kind)
O At an intersection with a stop sign
O At a signalized intersection
O In a crosswalk
O In a roundabout
O In a parking lot
O Other: $\qquad$

Q0038: Was the crash a result of colliding with someone or something?
$\square$ No, the crash was not the result of a collision, or
Yes, I collided with (check all that apply):

- Car or truck
[ Bus
- Another biker
$\square$ Someone walking or running
- Animal
- Parked car or bike

R Road element (curb, pole, tree, etc.)
$\square$ Other: $\qquad$

Q0039: Did you require a hospital visit?
O Yes
O No
Q0040: Was there a police report filed for this incident?
O Yes
O No
[If on-campus walking incident, shown questions Q0041-45]
Q0041: About the incident that occurred while you were walking on campus
Q0042: Where did this incident happen? (Check all that apply)
O In a roadway
O In a bike lane (on a street shared with cars)
O On a bike or pedestrian path (separated from the street)
O On a sidewalk
O At an intersection (of any kind)
O At an intersection with a stop sign
O At a signalized intersection
O In a crosswalk
O In a roundabout
O In a parking lot
O Other: $\qquad$
Q0043: Did this incident involve a collision (for instance being hit by a car)?
$\square$ No, this incident was not the result of a collision, or
Yes, I collided with (check all that apply):
Car or truck

- Bus
- Biker

Someone else on foot (walking or running)

- Animal
- Other: $\qquad$

## Q0044: Did you require a hospital visit?

O Yes
O No

Q0045: Was there a police report filed for this incident?
O Yes
O No
[If off-campus bike crash, then shown questions Q0046-51]
Q0046: About your off-campus bike crash
Q0047: Where did this incident happen? (If you were in more than one crash wile biking offcampus last year, please answer regarding the most serious one. Check all that apply for that incident.)
O In a roadway
O In a bike lane (on a street shared with cars)
O On a bike or pedestrian path (separated from the street)
O On a sidewalk
O At an intersection (of any kind)
O At an intersection with a stop sign
O At a signalized intersection
O In a crosswalk
O In a roundabout
O In a parking lot
O Other: $\qquad$

## Q0048: Was it in Davis?

O Yes, it happened within the city of Davis.
O No, it happened somewhere outside of Davis.

## Q0049: Was the crash a result of colliding with someone or something?

$\square$ No, the crash was not the result of a collision, or
Yes, I collided with (check all that apply):

- Car or truck
- Bus
- Another biker
$\square$ Someone walking or running
$\square$ Animal
$\square$ Parked car or bike
$\square$ Road element (curb, pole, tree, etc.)
- Other:

## Q0050: Did you require a hospital visit?

O Yes
O No

Q0051: Was there a police report filed for this incident?
O Yes
O No
[If off-campus walking incident, then shown questions Q0052-57]

## Q0052: About the incident that occurred while you were walking off campus

Q0053: Where did this incident happen? (If you experienced more than one accident while walking off campus last year, please answer regarding the most serious event. Check all that apply for that incident.)
O In a roadway
O In a bike lane (on a street shared with cars)
O On a bike or pedestrian path (separated from the street)
O On a sidewalk
O At an intersection (of any kind)
O At an intersection with a stop sign
O At a signalized intersection
O In a crosswalk
O In a roundabout
O In a parking lot
O Other: $\qquad$

## Q0054: Was it in Davis?

O Yes, it happened within the city of Davis.
O No, it happened somewhere outside of Davis.
Q0055: Did this incident involve a collision (for instance being hit by a car)?
O No, this incident was not the result of a collision, or
Yes, I collided with (check all that apply):
O Car or truck
O Bus
O Biker
O Someone else on foot (walking or running)
O Animal
O Other: $\qquad$
Q0056: Did you require a hospital visit?
O Yes
O No
Q0057: Was there a police report filed for this incident?
O Yes
O No
[If vehicle crash, then shown questions Q0058-62]
Q0058: About your car crash
Q0059: Was this incident in Davis? (If you were in more than one crash while going to/from campus last year, please answer regarding the most serious one. Check all that apply for that incident.)
O Yes, it happened within the city of Davis.
O No, it happened somewhere outside of Davis.

Q0060: Which of the following were involved in the crash? (Check all that apply.)
O Another car or truck
O Bus
O Biker
O Someone on foot
O Animal
O Parked car or bike
O Road element (curb, pole, tree, etc.)
O Other: $\qquad$
Q0061: Did you require a hospital visit?
O Yes
O No
Q0062: Was there a police report filed for this incident?
O Yes
O No

Q0063: Have you ever been the victim of a bicycle theft on the UC Davis campus?
O Yes
O No
O Not applicable: I have never had a bike on campus
[If theft ever]
Q0064: Have you been the victim of a bicycle theft on the UC Davis campus within the last year (November 1, 2008 through November 1, 2009)?
O Yes
O No
O Not applicable: I haven't had a bike on campus in the last year
[If theft in the last year]
Q0065: Did you report this theft to campus police?
O Yes
O No
Q0066: Please indicate whether you agree or disagree with the following. Even if you don't have any experience with something (for instance biking on campus), it's okay to offer an opinion anyway or to indicate that you don't know.

|  | Strongly <br> disagree | Disagree | Neutral or <br> don't <br> know | Agree | Strongly <br> agree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Walking on campus is generally safe. | O | O | O | O | O |
| It is convenient to walk between the places I <br> go on campus. | O | O | O | O | O |
| All the bikes make it unpleasant to walk <br> places on campus. | O | O | O | O | O |
| Campus bike racks are an eyesore. | O | O | O | O | O |

|  | Strongly <br> disagree | Disagree | Neutral or <br> don't <br> know | Agree | Strongly <br> agree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Biking off campus in the city of Davis is <br> generally safe. | O | O | O | O | O |
| Biking on campus is generally safe. | O | O | 0 | 0 | O |
| It is convenient to bike between the places I <br> go on campus. | O | O | O | O | O |
| All the bikes make it unpleasant to bike <br> places on campus. | O | O | O | O | O |
| If I had a safe and convenient place to store <br> my bike, I would bring a nicer bike to <br> campus. | O | O | O | O | O |
| If I had a safe and convenient place to store <br> my bike, I would ride on campus more often. | O | O | O | O | O |

[For grad students only]

## Q0068:

|  | Strongly <br> disagree | Disagree | Neutral or <br> don't <br> know | Agree | Strongly <br> agree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Unitrans buses stop close to where I'm <br> living. | O | O | O | O | O |
| Unitrans buses stop close to where I usually <br> go on campus. | O | O | O | O | O |
| I make trips across campus that I would like <br> to use the bus for. | O | O | O | O | O |
| Biking off campus in the city of Davis is <br> generally safe. |  |  |  |  |  |
| I would ride Unitrans, or ride more often, if <br> it cost me less. | O | O | O | O | O |
| I probably would not ride Unitrans more, <br> even if it were free for me. | O | O | O | O | O |

[For grad students only]
Q0069: If grad students were offered unlimited access to Unitrans like undergrads are (incorporated as a part of student fees), how many times per week do you think you would ride Unitrans? [dropdown list]
O None
O 1 roundtrip per week (e.g. to and from campus one day)
O 2 roundtrips per week
O 3 roundtrips per week
O 4 roundtrips per week
O 5 roundtrips per week
O 6 roundtrips per week
O 7 roundtrips per week
O 8 roundtrips per week
O 9 roundtrips per week
O 10 or more roundtrips per week
[For grad students only]
Q0070: If you were able to purchase an unlimited-use pass for Unitrans, how much would you be willing to pay for it?
\$ $\qquad$ per quarter

Q0071: Are you familiar with any of these programs?

|  | It's new <br> to me | I've heard of it, but <br> never used it | I've <br> used it |
| :--- | :---: | :---: | :---: |
| GoClub program | O | O | O |
| Emergency Ride Home Program for goClub members | O | O | O |
| Discount Unitrans bus passes for those without a <br> parking permit | O | O | O |
| Yolo TMA "TRIP" Incentive Program | O | O | O |
| Yolo TMA Emergency Ride Home Program <br> (yolotma.org) | O | O | O |
| Sacramento Region "Commuter Club" | O | O | O |
| www.sacregion511.org | O | O | O |
| TAPS motorist assistance program | O | O | O |
| Comet in-vehicle parking meters on campus | O | O |  |
| Social network for ride matching: Zimride.ucdavis.edu | O | O | O |
| Zipcar carsharing program | O | O | O |
| Enterprise Rental Car Voucher Program | O | O | O |
| Ten bike tire air stations around campus | O | O | O |
| Bike lock-cutting service | O | O | O |
| UC Davis Bike Auction |  |  |  |

Finally, this section asks a few questions about you. We use this information to help understand travel choices and how the people taking the survey might represent the UC Davis as a whole. Your answers are confidential and will not be used for any other purposes.

Q0072: What is your gender?
O Male
O Female
Q0073: Where do you live?
O On the UC Davis campus
O Off-campus in the city of Davis
O Outside of Davis
[If resides outside of Davis]
Q0074: What is your zip code?
Zip code: $\qquad$
[If resides on campus]
Q0075: What is the name of your campus residence?
[Dropdown list:]
O Agrarian Effort co-op
O Alder Hall

O Atriums at La Rue Park
O Baggins End co-op
O Bixby Hallf
O Castilian Hall
O Colleges at La Rue
O Davis Student Co-op
O Domes
O Emerson Hall
O Gilmore Hall
O Kearney Hall
O La Rue Park living group
O Laben Hall
O Lysle Leach Hall
O Malcolm Hall
O Miller Hall
O Orchard Park
O Pierce Co-op
O Pierce Hall
O Primero Grove
O Regan Hall
O Russell Park
O Ryerson Hall
O Solano Park
O Thille Hall
O Thompson Hall
O Thoreau Hall
O Webster Hall
O Other: $\qquad$
[If resides off campus (in Davis or outside of Davis)]
Q0076: What is an intersection near your home? (Please answer for where you live locally.
This information will only be used to calculate the approximate distance you travel to campus. It will be kept confidential and will not be used in any other way.)
Your street: $\qquad$
Nearest cross-street: $\qquad$
Q0077: What best describes the place you are living? (Please answer for where you live locally.)
O In a dorm
O Alone in an apartment, house, or other unit
O In an apartment, house, or other unit with roommates or housemates
O In an apartment, house, or other unit with my family or partner (or others with whom I share some income -- not including conventional roommates)
O In an apartment, house, or other unit with both a family/partner and roommates/housemates
[If not living in a dorm or alone]
Q0078: How many people live with you? (Please answer for where you live locally.)
O 1 other person with you ( 2 people total)
O 2 other people (3 including you)
O 3 other people (4 including you)
O 4 other people (5 including you)
O 5 other people (6 including you)
O 6 other people ( 7 including you)
O 7 other people (8 including you)
O 8 other people ( 9 including you)
O 9 or more other people (10 or more including you)
[If not living in a dorm or alone]
Q0079: How many people of each category are there where you live (including yourself)?
(Please answer for where you live locally.)
Children, age under 6: $\qquad$
Teenagers, age 6-15: $\qquad$
Youth, age 16-17: $\qquad$
Total adults, age 18-64: $\qquad$
Elders, age 65 or older: $\qquad$
Q0080: Do you have access to a car (for driving to campus, if you wanted to use it)?
O Yes
O No
Q0081: Do you currently have a UC Davis parking permit?
O No, I don't have one
Yes, I have:
O Annual (or multi-year) permit
O Monthly or quarter permit
O Daily permits (such as complimentary GoClub parking permit)
[If has parking permit]
Q0082: Which type of parking permit do you have?
[Dropdown list:]
O A permit
O 2-person A Carpool permit
O 3-person A Carpool permit
O Bike commuter A permit
O C permit
O 2-person C Carpool permit
O 3-person C Carpool permit
O K permit
O L permit
O M permit

O N permit
O Vanpool permit
O Complimentary commuter or GoClub permit
O Disabled permit
O Retired permit

## Q0083: Do you own (or have access to) a functioning bike?

O Yes
O No
[If owns a bike]
Q0084: Approximately how much did you spend on your bike? If you have more than one, please tell us about the bike you would use for transportation to/on campus.
O Nothing
O $\$ 1$ to $\$ 50$
O $\$ 51$ to $\$ 100$
O $\$ 100$ to $\$ 200$
O $\$ 201$ to $\$ 300$
O \$300 to \$400
O $\$ 400$ to $\$ 500$
O \$500 or more
Q0085: How would you rate your ability to ride a bike? In particular, we are interested whether you know how or are physically able to ride a bike, regardless of whether it is practical or desirable for you to do so as a means of transportation to campus.
O I cannot ride a bike at all because I do not know how
O I cannot ride a bike at all because I am physically unable to do so
O I can ride a bike, but I am not very confident doing so
O I am somewhat confident riding a bike
O I am very confident riding a bike

## Q0086: How many years have you been at UC Davis (in any role)?

O 0 (this is my first)
O 1 year
O 2 years
O 3 years
O [... each year listed ...]
O 18 years
O 19 years
O 20 years or more
[For students only]
Q0087: As a student, are you also a paid employee of UC Davis?
O Yes
O No

Q0088: What year were you born?
[Dropdown list:]
O 1930
O 1931
○ 1932
O 1933
O [... all years listed between...]
O 1991
O 1992
Q0089: What is your highest level of education?
O No formal education
O Some grade school or high school
O High school diploma or equivalent
O Some college
O Associate degree or technical school certificates
O Bachelors' degree
O Some graduate school
O Graduate degree(s)
[For employees only]
Q0090: What is the approximate total annual combined income of all the working adults in your household?
O \$0-\$19,999
O \$20,000-\$39,999
O \$40,000 - \$59,999
O \$60,000 - \$79,999
O \$80,000-\$99,999
O \$100,000-\$119,999
O \$120,000-\$139,999
O \$140,000-\$159,999
O \$160,000-\$179,999
O \$180,000-\$199,999
O \$200,000 or more
[If indicated that work/school location is outside Davis (in Q0004)]
Q0091: Since your office or department is outside of Davis, we do not need any further information from you at this time. But thanks for volunteering to participate! You are still eligible to enter the drawing for the iPod nano, if you wish.
[If indicated that recently graduated (in Q0001)]
Q0092: Since your office or department is outside of Davis, we do not need any further information from you at this time. But thanks for volunteering to participate! You are still eligible to enter the drawing for the iPod nano, if you wish.

Q0093: Is it okay for us to contact you again in the future? Please check all that apply:
$\square$ No, I prefer not to be contacted again.

- Yes, with questions about my survey.
- Yes, if I win the drawing for the iPod nano.
[If yes, okay to contact]
Q0094: If you answered "yes" to any of the above questions, please provide the following contact information. This information will ONLY be used for the purposes you specified.
Name: $\qquad$
Daytime phone number: $\qquad$
Email address: $\qquad$

Q0095: Optional: Is there anything else you would like to tell us about transportation at UC Davis? We welcome any additional comments in the space below.

Figure 18. Sample screenshot of a page from the online survey

## Appendix B: Changes in the 2009-10 survey instrument and suggestions for the future

The following changes were new in the 2009-10 survey:

- Role questions (Q0001 through Q0003): We offered more categories in initial question of primary role (post-bac, visiting scholar, post doc, recent graduate; the latter was disqualifying). In the future we should also included "retiree," as another criteria for disqualification. We also offered more categories for undergraduate role (adding explicit options for fifth-year senior, post-bac, and visiting/exchange student) and for graduate role (adding explicit options for Law, MBA, Veterinary, and Ed.D. or CANDEL).
- In 2008-09 we used the screening question, "Do you go to the Davis campus regularly, either for work or classes?" but felt it was problematic because it was unclear what "regularly" meant and if it applied to just this quarter or more permanently. This year, we replaced this question with a question about office/lab/department location, only among employees or grad students (question Q0004). It is assumed all undergraduates regular travel to campus. Grad/employees can indicate where their office is, captured in $Q 0005$, giving us some idea of the range of locations unintentionally included in the sample (see discussion on eligibility in this report). Anyone whose main office/lab is in Davis, but is away all quarter (so not coming in regularly these days, but only temporarily stationed away), is retained in the sample and the fact and nature of their absence is captured in question Q0012. In the future, may refine options for indicating why they were away all week (question Q0012) to distinguish between those permanently/normally away from campus and those temporarily away from campus.
- We added a question regarding office/lab location, whether in central campus or elsewhere in Davis (question Q0004; see Table 13.)
- Regarding respondents' reasons for not traveling to campus for just some of the weekdays, we decided to only ask the reason among employees (questions Q0007 through Q0011). This is because the question is cumbersome and not as relevant for students. It is required that we ask it of employees in order to estimate CWW and telecommuting days for the calculation of AVR. In addition, we changed the options offered, adding "START or furlough day," encompassing "personal leave" as part of sick, and amending off-site work description. For those away all week (question Q0012, asked of both students and employees), we added options incorporating all-quarter commitments, including Study Abroad, PELP, Sabbatical, Off-site appointments, in addition to other options, and removed the option "regularly scheduled days off.". A field for writing in "other" reasons was provided for questions Q0007 through Q0012.
- Among the mode choice options listed in questions Q0015 and Q0016, we added "motorcycle or scooter" as an explicit separate choice, rather than assuming people would report this as driving alone, although for most analyses in this report, we group these with those driving alone.
- The 2008-09 survey included an entire section on "typical" travel, in addition to questions
about primary means of travel each day during the reference week. That section included detailed questions about multiple modes used during the trip to campus, transit agencies used, and time spent on each leg of the trip. This entire section was omitted this year because it was cumbersome and we thought that multi-modalism is captured to some extent with comparison of responses to question Q0015 and Q0016, plus newly added question Q0017 (see below).
- We added question Q0017 regarding biking as a circulator mode for each day during the reference week. A related question is Q0032, about typical circulator mode, which we realize in retrospect suffers from the problem of not knowing how much people travel around during the day. (Compare to questions 6.0 and 6.1 from the 2007-08 survey.)
- We changed the answer options in question Q0022 to encompass more detailed vehicle-type choices. The purpose was to capture more specific alternative-fuel vehicles, as well as to be able to identify truly zero-emissions vehicles for adjustment of AVR (all-electric and hydrogen fuel cell), versus hybrids, plug-in hybrids, etc. In practice, no respondents reported using qualifying vehicles.
- We reduced the maximum vehicle occupancy respondents could report in question $Q 0018$ to " 8 or more" for carpools (instead of 16 or more, as suggested by the AQMD) and increased the maximum vehicle occupancy could report in question Q0019 to the equivalent number of "7 or more" for those getting a ride.
- We made separate the questions regarding bus and train agencies used (questions Q0023 and Q0026) rather than having them combined in a single question, in addition to adding more detail about Unitrans use (which lines, type of ticket among grad students, the latter upon request of the Graduate Student Association for a special analysis this year).
- We replaced the question on bike source from the 2008-09 survey with a question about bike purchase price (question Q0084). These are related, but they tell different pieces of information.
- As a part of continued evolution of how to better understand abandoned bikes and how to ask about bikes (intentionally) left on campus overnight (see 6.3.3 in 2007-08; questions Q0061 through Q0065 on the 2008-09 survey), rather than asking whether respondents "regularly leave a bike on campus overnight," we used a similar measure as for mode choice and asked about bikes on campus overnight for each of the nights of the reference week. This allows us to calculate the number on campus overnight on an average weekday, and to combine this information with circulator mode and primary mode choice for that respondent on each day (see Table 36). Question Q0028 was intended to capture reasons for leaving bikes, but the language of "generally bring it home" is too vague to give much information about behavior and neither answer choice gives much information about motivations. This should be revised. (Compare to questions Q0064 and Q0065 on the 2008-09 survey.)
- Regarding crashes, as in 2008-09, we again asked about crashes by bike, walk, and car occurring within the last year, but asked for much more detail this year, including distinguishing between on- and off-campus bike and walk incidents, asking where the incident occurred, what else was involved in the collision, if it required a hospital visit, and if a police
report was filed. (Compare Q0068 through Q0071 on the 2008-09 survey with questions Q0036 through Q0062 on the 2009-10 survey.) A change in the question format may have resulted in respondents erroneously indicating "Not applicable" in question $Q 0035$ if they were in no injury incident ("I did this at least once" sounds confusingly like they fell at least once.) The multiple choice options offered for the location of the incident and what they collided with were new this year, and may be reviewed for relevance for next year's survey.
- Regarding bike theft, in 2008-09 we only asked if respondents had "ever" been the victim of bike theft; this year we asked "ever," and then also "if in the last year," specifying the dates November 1, 2008-November 1, 2009. We may consider changing the reference year to calendar years to better correspond with police records, currently compiled by calendar year. In addition, we added a question about whether reported to campus police, removed question about total number of bikes ever stolen, and about the origin of the stolen bike.
- The attitudinal questions Q0066 through $Q 0068$ are unique to the 2009-10 survey (replacing Q0072 in the 2008-09 survey).
- Question Q0073 was moved to the end of the survey rather than the beginning (in the past it was in the beginning because of survey branching that relied on these responses; because the branching no longer depends on it, we moved it to the sociodemographic section). However, as a result of attrition, response rate is lower for this question this year than in past year's survey. If it's important information, for instance for partitioning results, we may consider moving it (and any other important partitioning questions) earlier in the survey.
- In Q0075, we made the improvement of asking respondents about their residence halls as drop-down list rather than as a write-in response
- We added a questions about biking ability (question Q0085). We also altered the question about bike and car access (questions $Q 0083$ and $Q 0080$ ) to be Yes/No rather than checkboxes to avoid ambiguity about non-response (compare to Q0086 on the 2008-09 survey). In addition, phrasing the car-access question as "access" in lieu of ownership is new.
- We added back question Q0081 about parking permits, which was included in the 2007-08 survey but not the 2008-09 survey, for better calibrating with TAPS data on parking permits purchased.
- We added a question Q0087 about students being paid employees of UC Davis for AVR calculation.

A few on-going challenges include the following:

- How to measure multimodal travel, without the survey becoming too cumbersome.
- How to measure daily transit ridership by agency, without the survey becoming too cumbersome.
- How to properly define telecommuting, perhaps an increasingly fuzzy concept as more people work anywhere, anytime without thinking of it as replacing a physical trip. Assessing the
extent that remote work replaces a physical trip is challenging, as is finding appropriate language for referencing this kind of work. Some of the write-in answers for respondents reasons for not traveling to campus included explanations such as "no reason to be there" or "Worked at my office (off campus)," which may qualify as telecommuting.
- In trying to evaluate the relative safety of different modes, how to measure exposure levels (as a denominator) for each mode. For instance, should it be per mile or per hour spent? How can we know this from just the reference-week travel information? Walking is especially difficult to measure, since clearly almost everyone does it almost all the time.

## Appendix C: Text of the recruitment emails

Initial recruitment email:
From: Campus Travel Survey [travelsurvey@ucdavis.edu](mailto:travelsurvey@ucdavis.edu)
To: [...@ucdavis.edu](mailto:...@ucdavis.edu)
Subject: 2009-10 Campus Travel Survey
Dear UC Davis Student [Employee],
You have been selected as part of a small group of students, faculty, and staff to participate in the 2009-2010 UC Davis Campus Travel Survey. This survey provides campus planners with valuable feedback on how people get to campus and their experiences with transportation programs. It should take less than 15 minutes to complete. As a token of our appreciation, we're offering entry into a drawing for an 8 GB iPod Nano for those completing the survey.

To start the survey, click on the link below:
http://survey.its.ucdavis.edu
Thanks for your participation in this year's survey!
Best regards,
Kristin Lovejoy, Graduate student, Institute of Transportation Studies
Susan Handy, Professor, Institute of Transportation Studies
Cliff Contreras, Director, Transportation and Parking Services
Reminder recruitment email
From: Campus Travel Survey [travelsurvey@ucdavis.edu](mailto:travelsurvey@ucdavis.edu)
To: [...@ucdavis.edu](mailto:...@ucdavis.edu)
Subject: 2009-10 Campus Travel Survey
Dear UC Davis Student [Employee],
Last week we invited you to take the 2009-10 Campus Travel Survey. If you have already done so, thank you! And you can disregard this message. If not, I would like to encourage you to take the survey.

Your responses will provide valuable feedback on how people get to campus and their experiences with transportation programs. It should take less than 10 minutes to complete. Because the survey asks about your activities last week, the sooner you take it, the easier it might be to recall those answers. As a token of our appreciation, we're offering entry into a drawing for an 8 GB iPod Nano for those completing the survey.

To start the survey...
[The remainder was identical to the initial recruitment email.]

## Appendix D: Calculation of Average Vehicle Ridership (AVR)

AVR (average vehicle ridership) is a ratio of the number of person-arrivals to private-vehiclearrivals. If everyone drove by themselves to campus, the campus AVR would be 1.0. Higher AVR values (greater than 1.0) indicate more carpooling and/or use of alternative modes of transportation.

To compare AVR statistics on the Davis campus with other UC campuses, we calculate AVR using a standard formula developed by the South Coast Air Quality Management District (AQMD) in "Rule 2202 - On Road Motor Vehicle Mitigation Options." ${ }^{16}$ We attempt to adhere to the AQMD formula, although our overall survey methodology deviates to some extent from that prescribed by the AQMD. ${ }^{17}$ The AQMD formula excludes weekend travel (considering Monday through Friday only) and excludes on-campus residents (considering travel among offcampus residents only). It includes adjustments for vehicle occupancy and the use of zeroemissions vehicles (ZEV).

In particular, we use the following formula:

$$
A V R=\frac{\text { Total weekly arrivals }}{\text { Weekly vehicle arrivals }}=\frac{(\text { Arrivals by all modes })+(\text { Employee telecommuting days })+(\text { CWW days })}{(\text { Drive alone arrivals })+(\text { Fractional carpool arrivals })}
$$

with:
Arrivals by all modes $=$ a count of all respondents arriving by bus, driving, carpooling, getting a ride, walking, biking, skating, and riding transit on Monday, plus the same for Tuesday, Wednesday, etc. through Friday (using question Q0016 in the 2009-10 survey).

Employee telecommuting days $=$ a count of respondents telecommuting on Monday, plus those doing so on Tuesday, etc. through Friday. These are based on responses to questions Q0007 through Q0011 for any respondents who traveled some days and telecommuted other days. But for respondents who indicated no travel during any of the eight days of the reference week (in Q0006) and then indicated the reason for no travel was telecommuting (in Q0012), we assume the respondent telecommuted all five days of the reference week.

Employee CWW days = a count of respondents reporting that they did not travel on Monday because they had a CWW (compressed work week) day off, plus those who did so for Tuesday, Wednesday, etc. through Friday (using responses to questions Q0007 through Q0011).

Drive-alone arrivals $=$ a count of respondents arriving by driving alone on Monday, plus

[^14]those doing so on Tuesday, Wednesday, etc. through Friday (using responses to Q0016). As an adjustment for the use of ZEV vehicles, we exclude from the count any arrivals by a respondent who has indicated using an all electric vehicle for their travel during the reference week (in question Q0022). (We would have also excluded those indicating use of a hydrogen fuel cell vehicle in question $Q 0022$, but none did.)

Fractional carpool arrivals $=$ A count of the fractions of vehicle-arrivals accounted for those arriving in carpools (or getting rides) for each day Monday through Friday. In particular, for each day a respondent carpools (or gets a ride, using Q0016) we add to the arrival count a fraction equal to one divided by the total number of people in the carpool (using Q0018) or the number of passengers dropped off by the driver (using Q0019). We exclude from the count any arrivals by a respondent who has indicated using an all-electric vehicle (in question Q0022).

In all cases, the estimated number of arrivals for the entire campus community is a projection. In particular, we weight (and expand) the sample responses by role, based on the 3,840 valid responses to question $Q 0016$ (see Table 6).

We calculate AVR both excluding and including on-campus residents, and by each role group. The AQMD and most other UC campuses exclude on-campus residents and most only calculate AVR for employees rather than for students. The inclusion of student employees can greatly change AVR statistics, though to a different extent at different campuses. For the first time this year, we included a question about whether student respondents are also a paid employees of UC Davis (question Q0087) to allow us to estimate AVR including student employees.

## Appendix E: Geocoding and network distances

We used the ESRI Streetmap USA dataset to do all of the geocoding and network route assignments. It is based on the TIGER/Line 2000 streets dataset produced by the U.S. Census Bureau, and has been enhanced by ESRI and Tele Atlas. The Streetmap dataset was released by ESRI in 2006, but it only represents the ground condition as of 2000. As a result, parts of some rapidly developing areas such as Natomas, West Sacramento, and Elk Grove are not fully represented. This made it difficult to geocode some of the addresses in these areas. However, in all of these locations there were at least some roads present before the most recent development occurred. If the exact street was not available, then we geocoded the point to the nearest preexisting road. In all cases, the differences were minor and expected to be negligible.

## Geocoding residential locations

We used address information to geocode points to the ESRI Streetmap USA dataset. First, we imported all of the data into Microsoft Access and used a series of queries to filter out empty records, divide the data into separate tables for each subcategory (Campus, Davis, and Outside Davis), and concatenate the street names into a single field. This allowed us to input the data into an appropriate address locator that would be able to automatically geocode as many addresses as possible.

Inputting the data directly into an address locator resulted in successful matching of about half the addresses (matched automatically, see Table 82). Because there was the potential for a small percentage of addresses to be matched incorrectly by the address locator, we also manually verified that the match address was the same as the input address. We geocoded unmatched addresses by manually placing points in the correct locations, or by modifying the input addresses so that they matched correctly using an automatic address locator. In total, about 88 percent of the sample provided addresses that we could successfully geocode.

## Table 82. Geocoding results

|  | Number of records <br> (unweighted sample) | Percent of <br> records |
| :--- | ---: | ---: |
| Matched automatically | 2,059 | $50.2 \%$ |
| Matched manually | 1,543 | $37.6 \%$ |
| Total matched | 3,602 | $87.9 \%$ |
| Unmatched | 498 | $12.1 \%$ |
| Total | 4,100 | $100.0 \%$ |

Network distance
The network route assignments were created using the ArcGIS Network Analyst extension and the ESRI Streetmap USA dataset (the same dataset used to geocode the residential locations). All distances were calculated from the residential location points to a point located on the UC Davis campus at the corner of Hutchison Drive and California Avenue, near the Silo. The network route assignments were calculated by optimizing for the fastest travel times (based on assumptions about the expected speed of travel on each facility type), which was deemed to produce more realistic routes than optimizing for distance, because it produces routes that favor major roads
and highways where possible. While this is especially appropriate for those traveling by car, manual inspection of alternative routes indicated that the shortest-time routes also seemed to be more realistic for bike and walk trips, where differences existed. Note that in this analysis, we used the street network, which was not augmented to include additional bike- and pedestrianonly links, which are especially prevalent in Davis.

Comparability with results from previous surveys
We used the same procedures to geocode and calculate network distances as was used in the 2008-09 Campus Travel Survey, and so results from the 2009-10 and 2008-09 surveys should be comparable. Because the 07-08 survey employed a different method both to collect data on the respondents' residential locations (allowing respondents to click on a map versus typing cross streets into a text field); to geocode points; and to calculate network distances, the estimated distances and calculations based on them (miles traveled and emissions) are not comparable to later survey years.

## Appendix F: Fuel energy assumptions used for calculation of $\mathrm{CO}_{2}$ emissions

We calculate pounds equivalent of carbon per gallon of fuel $=$ mass of carbon per unit energy $\times$ energy per gallon of fuel $\times$ oxidation rate $\times$ molecular weight of carbon, as done by the Environmental Protection Agency (see http://www.epa.gov/otaq/climate/420f05001.htm\#carbon). We assume inputs for this formula as shown in Table 83.

Table 83. Fuel energy assumptions used for calculating carbon emissions

| Item | Value | Source |
| :--- | :--- | :--- |
| Mass of carbon <br> per unit energy <br> for diesel fuel | 19.95 Tg Carbon / QBtu | U.S. Environmental Protection Agency, 2009 U.S. Greenhouse Gas <br> Inventory Report, Table A-39 (Distillate Fuel), available online: <br> http://epa.gov/climatechange/emissions/usinventoryreport.html |
| Mass of carbon <br> per unit energy <br> for CNG | 14.47 Tg Carbon / QBtu | U.S. Environmental Protection Agency, 2009 U.S. Greenhouse Gas <br> Inventory Report, Table A-31 (Natural Gas), available online: <br> http://epa.gov/climatechange/emissions/usinventoryreport.html |
| Energy per <br> gallon diesel | 138,691 Btu/gallon | U.S. Department of Energy, Energy Information Administration, online <br> Energy Calculator, available online: <br> http://www.eia.doe.gov/kids/energyfacts/science/energy_calculator.html |
| Energy per cubic <br> ft CNG | 1,028 Btu/ cubic foot | U.S. Department of Energy, Energy Information Administration, online <br> Energy Calculator, available online: <br> http://www.eia.doe.gov/kids/energyfacts/science/energy_calculator.html |
| Oxidation rate | 0.99 | U.S. Environmental Protection Agency, Emission Facts (EPA420-F-05- <br> 001 February 2005), available online: <br> http://www.epa.gov/otaq/climate/420f05001.htm\#carbon |
| Molecular weight <br> of carbon | $44 / 12 \approx 3.667$ | U.S. Environmental Protection Agency, Emission Facts (EPA420-F-05- <br> 001 February 2005), available online: <br> http://www.epa.gov/otaq/climate/420f05001.htm\#carbon |

[^0]:    2 Figures for the composition of the campus population by gender are drawn from "Student Headcount by Gender, Fall 2009," "Employees by Gender and Ethnicity, Fall 2009," and "Teaching Faculty by Gender, Fall 2009" available on the UC Davis Facts website, online at http://facts.ucdavis.edu/. These population counts include medical (non-Davis campus) affiliates who are excluded from the survey sample. In addition, the employee count includes employed students, who are not included as employees in the survey sample.
    3 These differences are statistically significant (with $p$-value $<0.05$ ) based on a t-test of equivalence of means among the female versus male segments of the sample, in particular of the mean share of weekdays that respondents biked, drove alone, and rode the bus, respectively. There were also small but statistically significant differences (with $p$-value $<0.05$ ) in the share riding the train ( 0.3 percent among women versus 0.9 percent among men) and in the share not physically traveling to campus for reasons other than telecommuting ( 11 percent among women versus 9 percent among men) and marginally significant small differences (with $p$-value $<$ 0.10 ) in the share telecommuting ( 0.9 percent among women versus 1.2 percent among men). There was no statistically significant differences by gender in the share walking or carpooling.

[^1]:    4 With the aim of having respondents recall their behavior during the week of Monday, October 26, 2009, we had hoped to invite participants to respond to the survey as soon as possible the following week, starting on Monday, November 2. However, we did not receive final approval from the UC Davis Institutional Review Board (IRB), which is needed for all research involving human subjects, until Tuesday, November 3. Thus initial email invitations were not sent until Wednesday and Thursday of that week (November 4-5, 2009). Reminder emails were sent less than a week later, on Monday and Tuesday of the following week (November 9-10, 2009), to avoid (by preceding) the November 11 Veterans Day holiday and because it is thought to be desirable to query respondents as soon after the reference week as possible.

[^2]:    5 In the face of budget shortfalls, the UC Regents implemented a temporary cost-saving measure that required employees to take unpaid furlough days off, numbering between 11 and 26 over the course of the year (from September 1, 2009 through August 31, 2010). For the purposes of this survey, this represents an additional reason employees might be away from campus during the reference week in 2009, but one that did not apply in

[^3]:    ${ }^{6}$ Only employees were asked questions $Q 0007$-11 (reasons for not traveling to campus on particular days of the week), and so only employees could indicate telecommuting on these days. Both employees and students were asked question $Q 0012$ (reason for not traveling to campus the entire week), and could indicate working from home as the reason for being away all week. Thus student telecommuting is only measured if it was done the entire week, and therefore the estimated percent of students working from home (shown in Table 14) may be may low, which would make our estimates of their use of all other modes correspondingly high.

[^4]:    ${ }^{7}$ For more information, contact David Takemoto-Weerts at TAPS regarding the Bike Parking Utilization Survey.

[^5]:    8 Other reasons we might expect the estimates from the Campus Travel Survey to be higher than the TAPS bike rack counts include: people parking bikes in places other than visible outdoor parking areas (only the latter were

[^6]:    counted in the TAPS count); to differences in the number of people biking in the fall versus the spring (some attrition is expected, especially among undergraduates, on the other hand the overall campus population would have grown somewhat); or to measurement error in either survey.

[^7]:    9 For more information, see the "TAPS Parking Space Utilization Survey: October 19-21, 2009" (available from George Lamb at TAPS).

[^8]:    10 Jeremy Dalbeck at TAPS compiled a tabulation of permits active as of November 1, 2009 by role group as on file in July 2010. There were a total of 11,770 annual, multiyear, quarterly, or monthly permits issued as of November 2009 to individuals whose role (as of July 2010) was on record as any of: undergraduate student, graduate student, employee, new employee, other program, or visiting scholar (notably excluding retirees, contractors, Sodexho, and vendors). As found in the survey data, this is about 29 percent of the campus population.
    11 The TAPS records may include permits issued to people not included in the survey, especially vendors and contractors, which may affect the relative numbers of different permit types.

[^9]:    ${ }^{12}$ This period was chosen to match the peak period defined by the SCAQMD for the purposes of adjusting AVR calculations for off-peak travel, which we do not currently do but wanted to have the option of doing so should we elect to in the future (see Appendix D).

[^10]:    13 U.S. Department of Transportation, Federal Transit Administration, 2008 National Transit Database, Annual Transit Profile, Unitrans - City of Davis/ASUCD (NTD ID 9142)
    (http://www.ntdprogram.gov/ntdprogram/data.htm).

[^11]:    14 Capitol Corridor Intercity Passenger Rail Service Business Plan Update FY 2010-11 - FY 2011-12, Appendix C (http://www.capitolcorridor.org/about_ccjpa/business_plan.php).

[^12]:    ${ }^{a}$ High estimates assume 0.90 pounds/passenger-mile (as estimated by TravelMatters.org). Low estimates assume 0.091 pounds/passenger-mile, as estimated using Unitrans data on annual fuel use and passenger-miles of service provided as described in Lovejoy, et al. (2009).
    b Total and average are based on the "high" estimate of bus emissions.

[^13]:    ${ }^{15}$ Tabulation reported by Lieutenant Matthew Carmichael, UC Davis Police Department.

[^14]:    ${ }^{16}$ As of May 1, 2010, this rule is available online (at http://www.aqmd.gov/trans/doc/regform/all_registration.pdf).
    ${ }^{17}$ For instance, the AQMD specifies that response to the survey must be 90 percent response rate, whereas we rely on surveying only a sample and weighting the responses.
