INDEX OF MATERIALS, PARTS, AND APPLIANCES

CERTIFIED UNDER THE TECHNICAL STANDARD ORDER SYSTEM

Part 37 of the Federal Aviation Regulations prescribes procedures for the issuance of Technical Standard Order (TSO) authorizations for specified materials, parts, or appliances used on civil aircraft. The following index lists those manufacturers (along with the name, type, or model designation of the article) who have been authorized to manufacture articles conforming to the individual TSO under which they are listed; however, this index must be used in conjunction with FAR Part 37 to prevent misunderstandings about an article's use in a particular type design.

1--Based on FAR Subchapter Titles.
2--Based on FAR Part Titles, Excluding the 210
series.

Within the General Subject Number Areas,
specific selectivity in advisory circular mail
lists is available corresponding to the
applicable FAR Parts. For example: under the 60
general subject area, separate mail lists for
advisory circulars issued in the 61, 63, 65, or
67 series are available. An AC numbered "60 "
goes to all numbers in the 60 series--61, 63,
65, 67.

3. Breakdown of subject numbers. When
the volume of circulars in a series warrants a
subsubject breakdown, the general number is
followed by a slash and a subsubject number.
Material in the 150 series, Airports, is issued
under the following subsubjects:

Number and Subject

150/1900 Defense Readiness Program.
150/4000 Resource Management.
150/5000 Airport Planning.

Number and Subject

150/5020 Noise Control and Compatibility
Planning for Airports.

that there probably are variations which do not show on this map because of the local nature of thunderstorms and the sparsity of observations from some areas. July and August are the months with the greatest number of thunderstorms over most sections of the United States while December and January have the least number.

TORNADO FREQUENCY BY STATES

1958-1968

5. **TORNADOES.** Severe local storms, severe thunderstorms accompanied by high winds, hail, heavy rain, and possibly tornadoes, are small and short-lived weather phenomena. Although it is not possible to predict exactly where and when severe thunderstorms and tornadoes will occur, it is possible to predict general areas where the probability of severe thunderstorm and tornado development is greatest by detecting the larger-scale events which are usually associated with such storms.

Local weather bureau offices release storm information to the public in the form of a watch bulletin. A severe thunderstorm watch or tornado watch bulletin usually identifies an area about 140 miles wide by 240 miles long. Although the watch bulletin states approximately where and for how long the severe local storm threat will exist, it does not mean that severe local storms will not occur outside the watch area or time frame--the watch is only an indication of where and when the probabilities are highest.

TORNADO INCIDENCE BY MONTH 1953-1968

More tornadoes occurred in 1967 than in any prior year of record for the United States. In 44 States, 912 tornadoes killed 116 persons and caused property damage in the millions of dollars. In 1968, 660 tornadoes in 40 States killed 131 persons (72 of which died as a result of 41 tornadoes in 10 States on May 15 and early May 16) and caused damage estimated to exceed \$50 million. Only 10 States had no tornadoes in 1968: Alaska, California, Delaware, Hawaii; Maryland, Nevada, New Jersey, Rhode Island, Vermont, and Washington.
