Purpose of Road Pricing

Manage Demand

Reduce traffic congestion, promote environmental goals, improve cost of doing business, and support liability and quality of life with road charges based on amount of traffic reduction sought (i.e., congestion pricing, cordon/urban area pricing, facility pricing).

Generate Revenue

Pay for roadway infrastructure, operations and/or transportation system capacity with road user charges (i.e., flat toll rates, variable charges, or distance-based user fees).

Problems with Current Highway Funding Mechanism

- **Inadequate**

- No change in fuel tax rate in decades.
- Increasing fuel efficiency.
- Use of hybrid and electric vehicles.

- **Environmentally unfriendly**

- Encourages emissions of GHG and other air pollutants.

- **Lack of equity**

Possible Solutions to Revenue Shortfall

- Increase fuel tax rate
- Index to inflation or other measure
- Increase state registration fees
- Adopt local tax for road use
- Impose a sales tax
- Increase local property tax rate
- **Direct charging**

Direct vs. Indirect Road User Charging

- **Indirect Charging:** User is charged for vehicle ownership and usage.
 - Example - license fees, registration fees, fuel tax, and other taxes.
- **Direct Charging:** User pays directly, in a manner that reflects the instance, amount of time or mileage of highway use.
 - Example – tolling.

Direct User Charge (DUC) Mechanisms – The Dimensions

- Highway facility type or coverage for which fee is charged
- Point at which payment is made
- Quantitative basis for the charge
- Technology applied to monitor the use and collect the payment

Types of DUC

Name	Description
Road Toll	A fixed fee for using a specific road at a specific time
Congestion Pricing (Time-variable)	Fixed or variable fee for road use at a specific time
Cordon Fees	Fees charged for driving in particular area of highway network, i.e., a CBD
HOT Lanes	HOV lanes that allow a limited number of low-occupancy vehicles for a fee
Distance or Weight-based Fees	Fee based on number of miles driven, or number of miles a certain weight is hauled

Road Pricing to Meet Highway Needs

- Accounting of Costs and Revenues
- Inventory of Road Use
- Allocate Costs and Revenues to User Groups
- Estimate Cost Responsibility and Revenue Contribution for Each User Group
 - Target: Revenue/Cost → 1.0 for Each User Group

Highway User Groups

(FHWA Vehicle Classes)

FHWA Vehicle Classifications			
<p>1. Motorcycles 2 axles, 2 or 3 tires</p> 	<p>2. Passenger Cars 2 axles, can have 1- or 2-axle trailers</p> 	<p>3. Pickups, Panels, Vans 2 axles, 4-tire single units Can have 1 or 2 axle trailers</p> 	<p>4. Buses 2 or 3 axles, full length</p> 
<p>5. Single Unit 2-Axle Trucks 2 axles, 6 tires (dual rear tires), single-unit</p> 	<p>6. Single Unit 3-Axle Trucks 3 axles, single unit</p> 	<p>7. Single Unit 4 or More-Axle Trucks 4 or more axles, single unit</p> 	<p>8. Single Trailer 3- or 4-Axle Trucks 3 or 4 axles, single trailer</p> 
<p>9. Single Trailer 5-Axle Trucks 5 axles, single trailer</p>  	<p>10. Single Trailer 6 or More-Axle Trucks 6 or more axles, single trailer</p>  	<p>8. Single Trailer 3- or 4-Axle Trucks 3 or 4 axles, single trailer</p>  	
<p>11. Multi-Trailer 5 or Less-Axle Trucks 5 or less axles, multiple trailers</p> 	<p>12. Multi-Trailer 6-Axle Trucks 6 axles, multiple trailers</p> 	<p>13. Multi-Trailer 7 or More-Axle Trucks 7 or more axles, multiple trailers</p> 	<p>12. Multi-Trailer 6-Axle Trucks 6 axles, multiple trailers</p> 

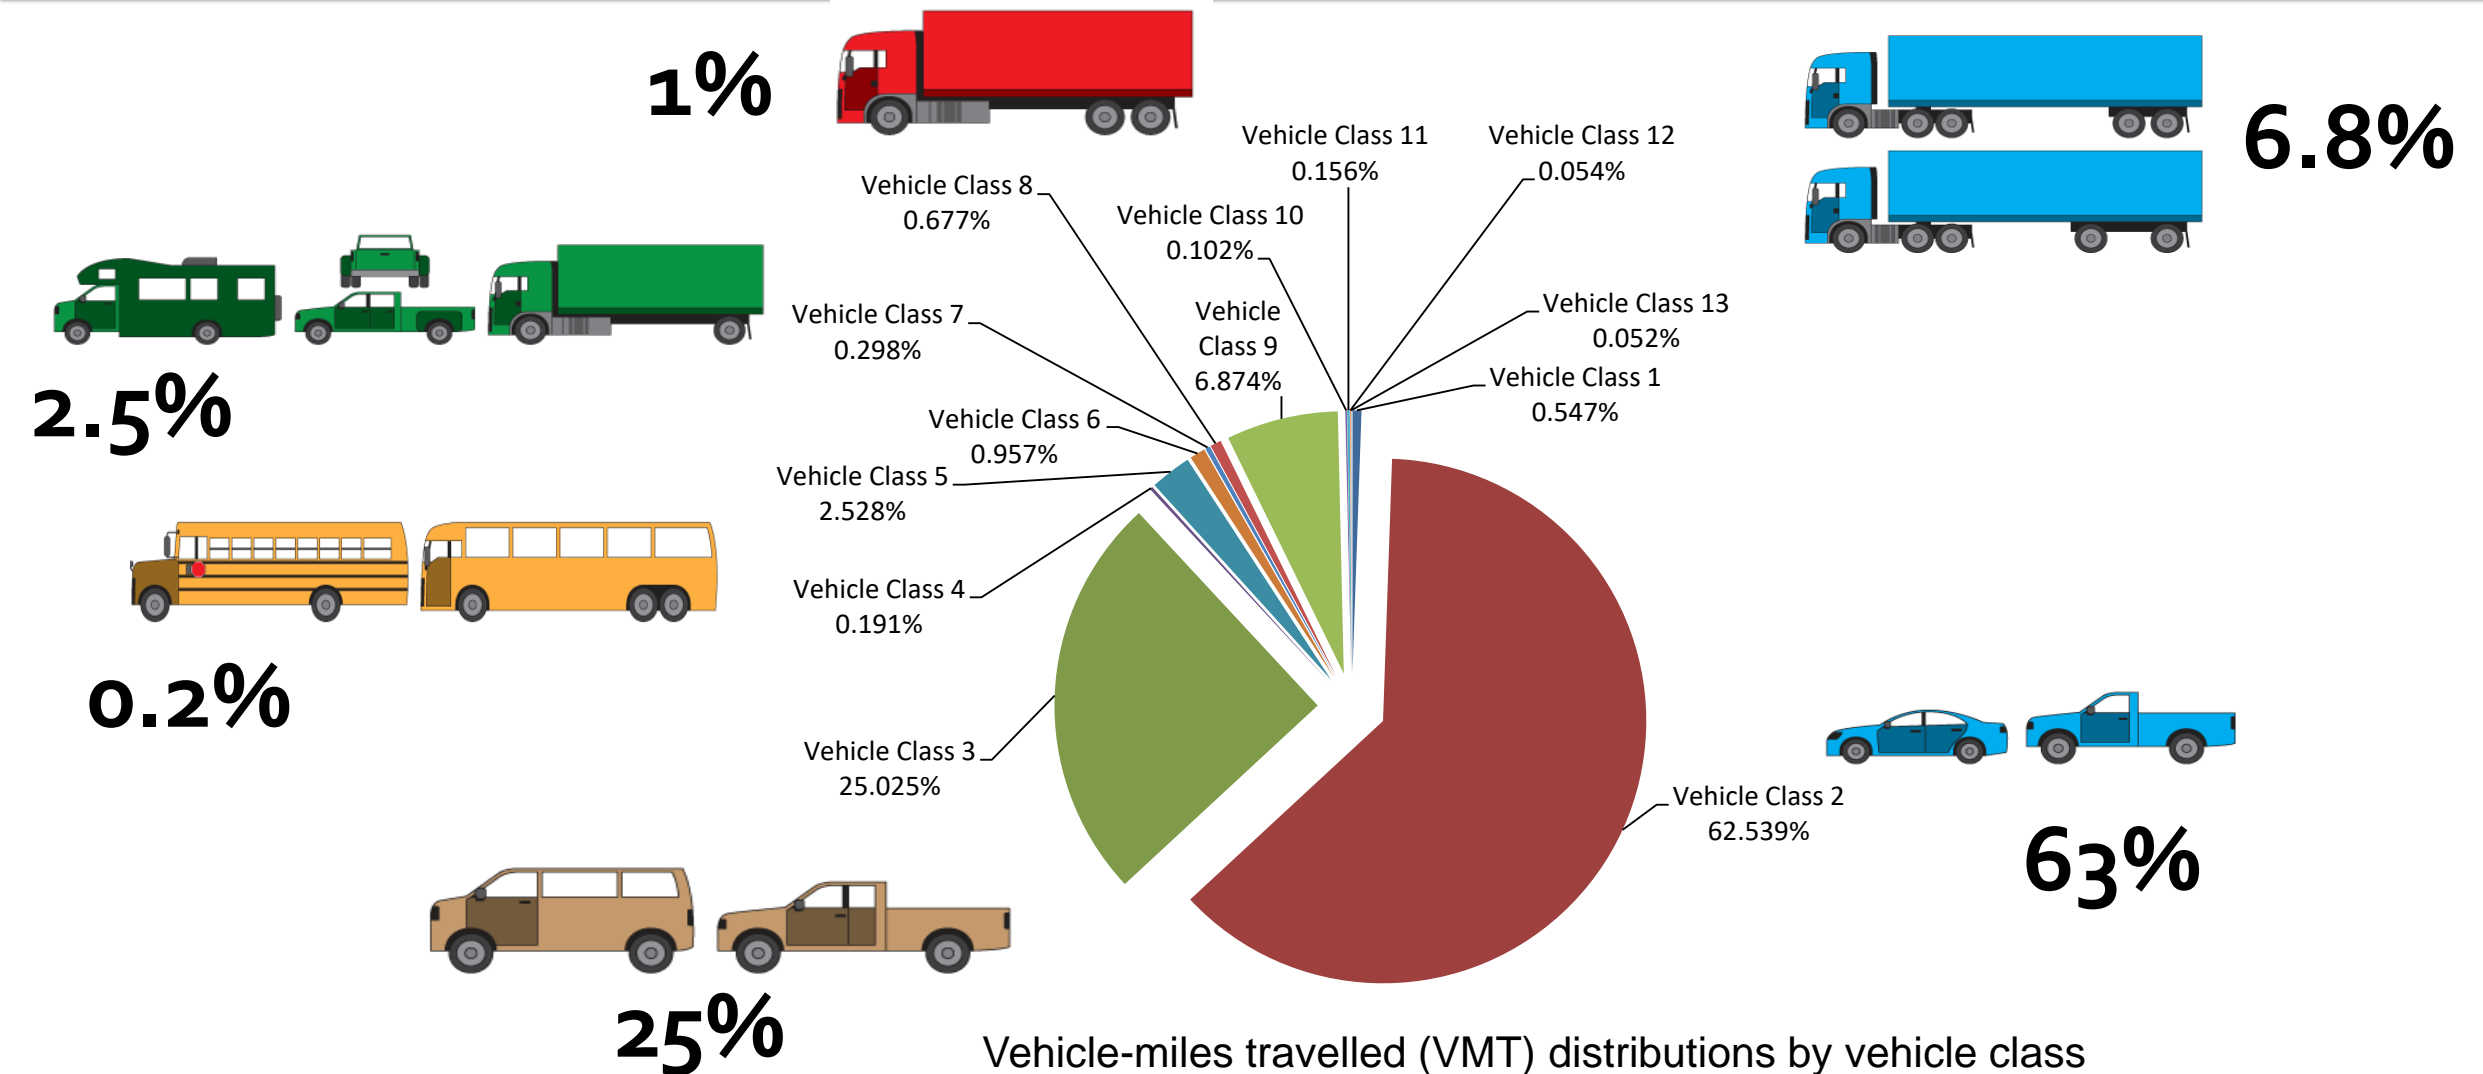

Federal Highway Administration (FHWA) 13-category vehicle classification. Reprinted with permission from Randall (2012).

Costs Occasioned by Road User/Vehicle Class

From Class 1 to Class 13:

- Increasing **physical degradation** of pavement and bridges
 - related to vehicle weight and axle configuration.
- Increasing **operational impairment** of traffic flow in terms of safety and mobility
 - affected by vehicle size.

Highway System Use by User/Vehicle Class

Vehicle-miles travelled (VMT) distributions by vehicle class in a typical state (Klatko et al. 2015).

Allocation of Pavement Costs

- For new construction, minimum base facility (VMT) vs. additional layers to heavier loads (ESAL-miles).
- For maintenance and rehabilitation, load (ESAL) and environment (VMT).

Allocation of Bridge Costs

- Costs allocated proportionally by vehicle class (stress levels): AASHTO design vehicles.
- Statistical correlation of critical stress levels caused by AASHTO design vehicles and FHWA operating vehicles.

Allocation of Common Cost

- VMT

Cost Responsibilities by Vehicle Class in Indiana

VMT=vehicle-miles travelled.
Based on data from Volovski et al. (2016)

Comparison

Direct User Charging to **Self-finance** Highway Infrastructure

- Funding needs by work category
- Administrative costs
- Costs for implementation of DUC
- Need vs. expenditure
- Periodic updates in cost allocation

Technologies, Costs and Benefits of DUC

Technologies for Road Use Monitoring & Fee Collection

- Automated Number Plate Recognition (ANPR)
- Dedicated Short Range Communications (DSRC)
- Satellite Systems
- Cellular Networks
- In-Vehicle Equipment

Technologies: ANPR

- Roadside infrastructure and digital cameras used with optical character recognition (OCR) software
 - Purpose: to record and process images of vehicles and their license plates.

Technologies: DSRC

- A means of Automated Vehicle Identification (AVI), an example of “tag & beacon” recognition systems.
- As vehicle passes beneath/near overhead gantry, antennas mounted on gantries communicate with vehicle-mounted tags or transponders.

Technologies: Satellite Systems

- Satellite-based locationing systems, e.g., Global Positioning System (GPS).
- Does not require roadside infrastructure.

Technologies: Cellular Networks

- Advantages:
 - increased communication capacity
 - reduced power use
 - larger coverage area,
 - reduced interference from other signals.
- Does not require roadside infrastructure.

DUC Payment Procedures

- Use of smartphones
- In-vehicle vs. out-of-vehicle
- Electronic payment
- Periodic reporting

Agency Costs

- Infrastructure and Equipment Capital Costs
- Operation and Administration
- Upgrade and Maintenance
- Oregon DOT Estimates:
 - 10% of revenue (\$4 million) for 100,000 use
 - 5% of revenue (\$2 million) for 1 million use

Collection Costs

- Estimated collection costs as a fraction of toll revenues are:
 - 21% in Singapore
 - 22% for the Stockholm Trial, and
 - 50–60% for London

User Costs

- OBU: \$50-\$80 per user
- Initial intangible costs
- Mileage fee (passenger vehicles)
 - Oregon (ODOT, 2014)
 - 1.56 cents/mile
 - Minnesota (Baker, 2014)
 - 1 cent/mile (off-peak)
 - 3 cents/mile (peak)

Benefits of DUC

- **Primary benefit:** a stable pricing mechanism
- **Secondary effects:**
 - travel reduction
 - lowering road and parking facility costs,
 - increasing road safety
 - protecting the environment
 - encouraging more efficient land use, and
 - improving community livability.

Requirements For Road User

- Easy to understand.
- Convenience.
- Availability of alternative modes or routes.
- Multiple payment options.
- Transparency – charges must be known before trip is undertaken.
- User privacy must be assured.

Requirements For Highway Agency

- Minimal traffic impacts
- Efficiency and equity
- Effectiveness
- Flexibility
- Scalability
- Reliability
- Security and enforceability
- Cost effectiveness
- Implementability

Transport for London

Requirements For General Public

- Economic efficiency
 - Should reflect positive net benefits
- Political acceptability
- Environmental compatibility
- Integration

Selected Instances of DUC: HOT Lanes

I-15 /San Diego, California (2009)

Singapore (1998)

Electronic Road Pricing Gantry at North Bridge Road, Singapore

Selected Pilots for Distance-based DMC

- Oregon (2004-2006)
- Puget Sound (2002-2008)
- Iowa (2005-2010)
- FHWA Grants to 12 DOTs (2016)

Threats to DUC Implementation

- Institutional
- Equity
- Financial
- Technology and Operations
- Public Acceptance
- Several attempts have been aborted due to public outcry or political opposition. (Edinburgh/ Manchester/ New York/ Netherlands)

Estimated VMT Elasticity w.r.t VMT Fees

Vehicle Category	Elasticity

FHWA Grants

- Pilot basis in Oregon for the first time (2 projects)
 - 2007: Road User Fee Pilot Project
 - 2012: Road Usage Charge Pilot Project
- Implemented: 5,000 volunteer motorists in Oregon (started in July 01, 2015)
- For trucks in Illinois and Germany
- 12 cities in the U.S as part of a National Evaluation of a Mileage-Based Road User Charge study conducted by the University of Iowa

Mileage Trucks

12,000 lbs. or less

24,001 lbs. to 28,000 lbs.

40,001 lbs. to 45,000 lbs.

64,001 lbs. to 73,280 lbs.

12,001 lbs. to 16,000 lbs.

28,001 lbs. to 32,000 lbs.

45,001 lbs. to 54,999 lbs.

73,281 lbs. to 77,000 lbs.

16,001 lbs. to 20,000 lbs.

32,001 lbs. to 36,000 lbs.

55,000 lbs. to 59,500 lbs.

77,001 lbs. to 80,000 lbs.

20,001 lbs. to 24,000 lbs.

36,001 lbs. to 40,000 lbs.

59,501 lbs. to 64,000 lbs.

Mileage Trailers

14,000 lbs. or less

14,001 lbs. or 20,000 lbs.

20,001 lbs. or 36,000 lbs.

36,001 lbs. or 40,000 lbs.

National Evaluation of a Mileage-Based Road User Charge study

- Four-year study
 - investigating and testing a new approach to assessing and collecting road user charges
 - 2-year field study conducted by the University of Iowa Public Policy Center
 - 2,650 volunteers from 12 areas throughout the country participated in the study
- Study involves two major issues:
 - testing the appropriateness of the technology and
 - looking at user accessibility and acceptability.

National Evaluation of a Mileage-Based Road User Charge study

- System mileage charges totaled and apportioned to the federal, state, and local levels .
- Average participant drove approximately 9,000 mi during the study (the study totaled more than 21 million miles).
- 92.5 percent of all driven miles were successfully measured by both the GPS and the onboard diagnostics system
- 71 percent had a highly or somewhat positive view, and 17 percent held a highly or somewhat negative view.
- Participants consistently (but to varying degrees) preferred audit ability, which consisted of receiving detailed monthly invoices, over maximum privacy protection.

Distance based Charging

Research Issues

- / New York/ Netherlands)

Research Issues

- / Netherlands)

Conclusions

- DUC is the most appropriate and sustainable road pricing mechanism.
- Success depends on how well concerns of key stakeholders are resolved.
- Challenge is to keep up with rapidly changing technologies.
- Logical integration with autonomous transportation.
