

Technical Report Documentation Page

1. Report No.	2. Government Accession No.	3. Recipient's Catalog No.
4. Title and Subtitle Extended Reality in Cabin Safety: A Practical Approach to Implementation		5. Report Date May 2, 2024
		6. Performing Organization Code
7. Author(s) L. L. Breeding & T. M. Phipps		8. Performing Organization Report No.
9. Performing Organization Name and Address Civil Aerospace Medical Institute (CAMI) 6500 S. MacArthur Boulevard Oklahoma City, OK 73169		10. Work Unit No. (TRAIS)
		11. Contract or Grant No.
12. Sponsoring Agency Name and Address Office of Aerospace Medicine Federal Aviation Administration 800 Independence Ave., S.W. Washington, DC 20591		13. Type of Report and Period Covered Presentation
		14. Sponsoring Agency Code
15. Supplementary Notes Author ORCIDs: Breeding (0000-0003-2740-2790), Phipps (0009-0009-1290-2048).		
The Federal Aviation Administration (FAA) funded this through the Research, Engineering, and Development (RE&D) program budget. The authors had no conflicts of interest to disclose. All authors read and approved this presentation. This document is disseminated under the sponsorship of the U.S. Department of Transportation in the interest of information exchange. The U.S. Government assumes no liability for the contents thereof.		
16. Abstract Extended reality (XR) is a collection of technological modalities that have increasingly grown and expanded over several decades. The technology's growth and expansion has given way to new and novel use cases across an array of practical applications. XR is a unifying term that describes existing technologies such as augmented reality (AR), virtual reality (VR), and mixed reality (MR), and is expected to describe similar future technologies in this area. Several industries are applying various aspects of XR into training and daily operational tasks. Yet, there is a general lack of data-based evidence that significantly supports XR's use as an effective training modality in trade-specific and adult learning applications. Beyond the science of knowledge transfer, airlines are looking to regulatory authorities to approve and certify the use of this technology in flight attendant training, among others. Work is underway to develop such guidance for regulators, as is scientific research to understand if there are any quantifiable benefits or value in incorporating this technology into the classroom or workflow. Research in these areas is needed the most. Each area requires the input, cooperation, and collaboration from an array of knowledge reservoirs among industry, academia, and government to understand the best application of this technology in Advanced Qualification Programs and traditional Part 121 N and O training approaches. The future of XR in training and operational job tasks is broad. There is also potential for positive outcomes in other areas such as passenger education, integration with emerging technologies and trends, and cabin safety research.		
17. Key Word Aviation safety, extended reality, virtual reality, augmented reality, mixed reality, flight attendants	18. Distribution Statement Document is available to the public through the National Transportation Library: https://ntl.bts.gov/ntl https://doi.org/10.21949/1529664	
19. Security Classification (of this report) Unclassified	20. Security Classification (of this page) Unclassified	21. No. of Pages

Extended Reality in Cabin Safety

A Practical Approach to Implementation

Presented to: WATS 2024

By:

Levi Breeding, Ph.D. 0000-0003-2740-2790
Tanya Phipps, ASI-CS 0009-0009-1290-2048
DOI <https://doi.org/10.21949/1529664>

Date:

02 May 2024

**Federal Aviation
Administration**

Overview

- **XR background**
- **Problem**
- **Current work and application**
- **Future**

Introduction

- **eXtended Reality (XR)**
 - Umbrella term referring to current (and future) technologies:
 - Virtual Reality (VR)
 - Augmented Reality (AR)
 - Mixed Reality (MR)

How long ago are XR's roots?

- **2000s**
- **1980s**
- **1940s**
- **1830s**

How long ago are XR's roots?

- 2000s
- 1980s
- 1940s
- ✓ 1830s

XR Types: VR Evolution

XR Types: AR Evolution

1901

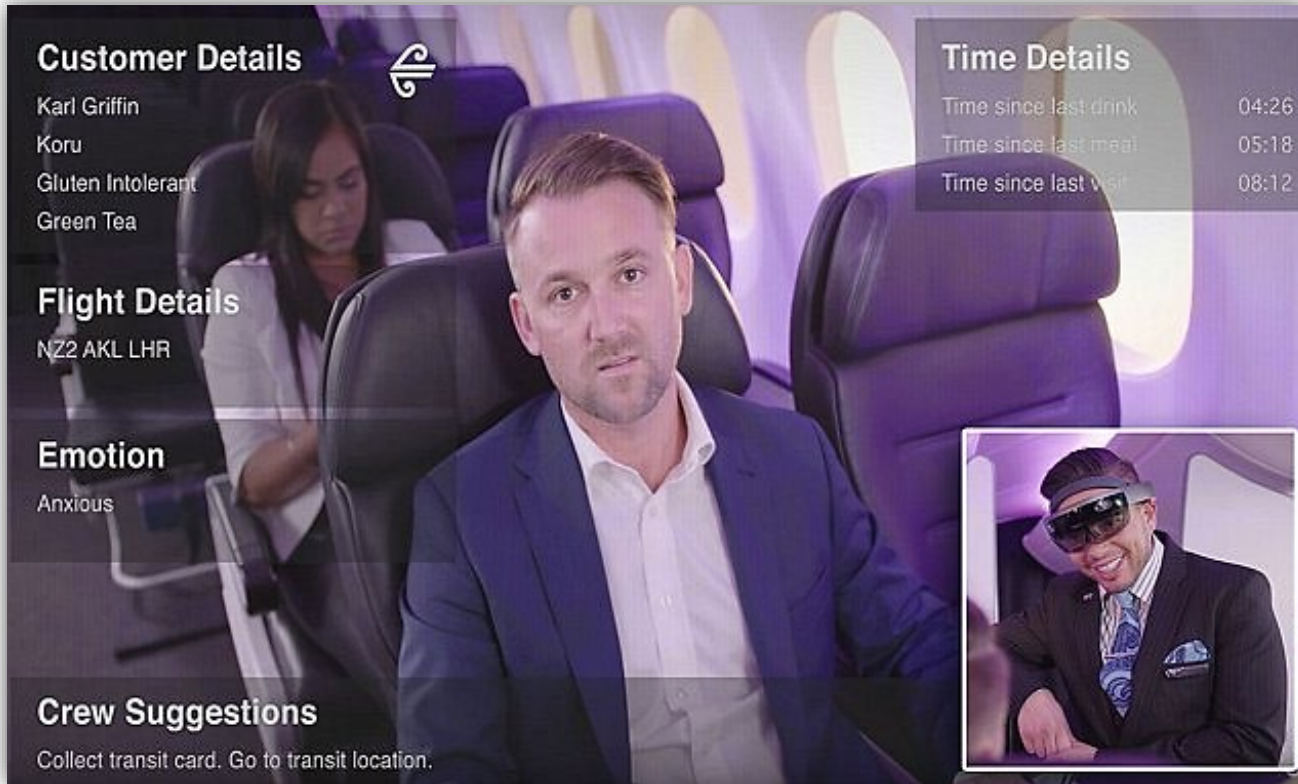

1918

XR Technology Use

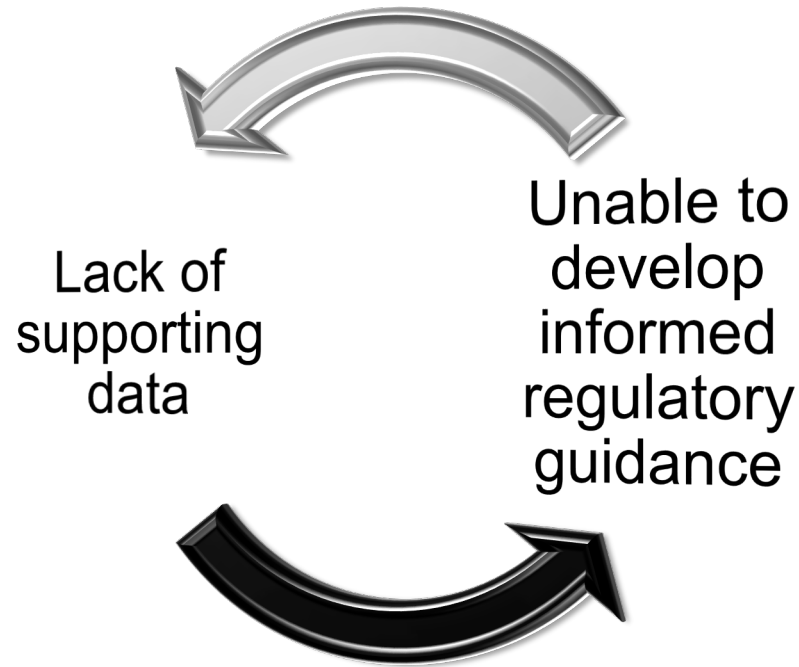

Current Use Cases

- **Laparoscopic surgery study**
 - Brain overload is an important issue (Frederiksen et al., 2020)
- **PTSD clinical intervention**
 - Effective over imagined exposure therapy (Comer, 2016)
- **Rehabilitation**
 - Significant improvement in mobility (Cano Porras et al., 2018; Mirelman et al., 2016)
- **Familiarization**
 - Flight attendant supplemental

Problem

Current Work and Application

- **ICAO Ad Hoc Working Group on Cabin Crew Digital Learning**
- **AQP/N&O and XR outlook**
- **“What’s in it for me?”**
 - Uncertain: A call to action

Future Research Areas

- **Cabin crewmembers**
 - Training (initial, recurrent, TTT, calibration, etc.)
 - Effective hiring models?
- **Cabin safety**
 - Egress and evacuations
 - Passenger education
 - Emerging technologies
