DOMESTIC AIRLINE FARES CONSUMER REPORT

First Quarter 2021 Passenger and Fare Information

July 2021

Each month the Department of Transportation releases an Air Travel Consumer Report that includes information about various service quality elements, including flight delays, mishandled baggage, over sales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department's Office of Aviation Analysis decided to release a quarterly fare report. The first such report, for the third quarter of 1996, was released in June 1997.

The initial report provided information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 49 percent of all 48-state passengers and 47 percent of total domestic passengers. Information regarding all 4,052 city-pair markets for the first quarter of 2021 is available at https://www.dot.gov/policy/aviation-policy/domestic-airline-consumer-airfare-report. Once at the site, click on the appropriate Table 6 link.

Table 1 of this report continues to cover the 1,000 largest city-pair markets in the 48 contiguous states. For each of the 1,000 largest city-pair markets, Table 1 lists the number of one-way passenger trips per day, the nonstop distance, the average market fare, and identifies the airlines with the largest market share and the lowest average fare; market share and average fares are provided for both airlines. Average fares are average prices paid by all fare paying passengers. They therefore cover first class fares paid to carriers offering such service but does not cover free tickets, such as those awarded by carriers offering frequent flyer programs.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower-cost competing carriers where available, can provide useful consumer information. Also, fare comparisons between markets allow consumers to further evaluate prices.

In particular, a high average fare in a market is an indication that a broad range of fares is available and that the number of seats sold at low fares are likely to be both very limited and subject to various travel restrictions. In such markets, travelers must make extra efforts to get the lowest price for the service they want. Air Travel Tips can be found on the web page maintained by the Department's Aviation Consumer Protection Division—Air Travel Tips—and includes advice on how to get the best air fare. This information can be obtained on the web at https://www.transportation.gov/airconsumer/air-travel-tips or by calling (202) 366-2220.

To assist consumers in making average fare comparisons, Table 1 segregates markets by mileage block, since distance is a major factor that affects the level of prices charged. Markets are then sorted within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market, carriers with higher average prices might offer some seats at prices as low as, or even lower than, carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus nonstop service, or service to different area airports. Note that the "lowest fare carrier" is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the "market average" fare will be lower than the fare for the 'lowest fare carrier" because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower average fares than individual carriers with greater market participation.

Table 1A, which is available only on the Internet, is a version of Table 1 (limited as well to the top 1,000 largest city-pair markets) that lists all airport-pair markets that average at least 10 passengers each day where either the origin city or destination city is a hub and has more than one airport (i.e. Chicago with O'Hare (ORD) and Midway (MDW)).

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets with 100,000 or more passengers in the top 1,000 in the current period that involve each city (e.g., 13 for Boise, ID), the number of passengers traveling to and from each city in the specified markets, the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of at least 15 percent compared with the same period one year prior. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. Each market's average fare and total passenger count are provided, along with the absolute and percent change in both average fares and passengers.

Table 5 provides detailed fare information for short-haul, high-fare markets. For a more complete explanation, please read the introductory information at the beginning of Table 5 in this report.

Table 6, which is available only on the Internet, is the expanded version of Table 1 that lists all city-pair markets that average at least 10 passengers each day.

Table 7 provides fare premiums for airports in the top 1,000 city pairs, and demonstrates the impact of low-fare service and hub domination on fare levels.

Footnotes and a key for carrier codes used in this report can be found at the end of the report. Telephone inquiries should be referred to (202) 366-2347.

DOT Domestic Airline Fares Consumer Report:

COVID -19 Impact Adjustments

The COVID-19 global health emergency began reducing air traffic volumes in the first quarter of 2020. The emergency's full impact on traffic levels and fares is reflected beginning in the second quarter 2020 report and will be reflected in subsequent Domestic Airline Fares Consumer Reports.

For example, as a result of the COVID-19 global health emergency, traffic volumes fell more than 80% in the second quarter 2020 when compared to the second quarter of 2019. Revenue and fare levels have also fallen sharply. Traffic and revenue levels are expected to fluctuate for some time to come. To account for these negative fluctuations, we have adjusted report parameters for Tables 3, 4, and 5 in this report.

Tables 3 and 4 identify which markets have seen the greatest changes in fare levels during the quarter, while Table 5 identifies markets under 750 miles with the highest and lowest fares. We expect continued volatility in these measures over the coming quarters as traffic recovers, and will continue to adjust the parameters for these reports on a quarterly basis.

Table 5 (abridged): Detailed Fare Information for Highest- and Lowest-Fare Markets Under 750 Miles

As discussed earlier in this report, airlines offer a wide variety of prices in any given market, and it is unlikely that the average fares listed in this report will match any particular fare being offered. A high average fare usually indicates that a broad range of fares is offered in the market. It is likely that low fare seats in these markets are offered in limited numbers, and are subject to various travel restrictions. Fares in markets with low average fares tend to be clustered closely around the average fare. Because only a small percentage of passengers in these markets pay high fares, it is much easier for consumers to find competitive prices. In markets with high average fares, consumers must make extra efforts to get low price service.

The attached table shows detailed fare and passenger data for all city-pairs with a stage length of less than 750 miles that have average fares above \$180. Fare and passenger information is provided for individual competitors in the market. Any airline that carries ten percent or more of the passengers in a market is considered a competitor for the purpose of this report. Following the high-fare markets, identical information is provided for city-pairs with a stage length of less than 750 miles that have an average fare of \$120 or less.

The markets covered in Table 5 were limited in this manner for the sake of brevity. The 750-mile stage length was chosen for demonstrative purposes, because a greater percentage of passengers are affected by fare disparities in short-haul markets with high average fares.

For each competitor in the market, the table shows the number of passengers carried, the competitor's market share, and the competitor's average fare. To demonstrate the various levels of fares within these markets, we show the least and most expensive \$25 fare interval available to at least five percent of passengers in the market, along with the percentage of the competitor's passengers that flew in those fare intervals. The fare listed is the top of the \$25 fare interval. The last column shows the percentage of each competitor's traffic that flew at fares greater than three times the least expensive significant fare interval.

For example, American flew 5,770 passengers between Dallas/Fort Worth, TX and Eagle, CO, or 46% of market passengers, at an average fare of \$280 each way. The Minimum \$25 Fare Interval for this carrier between these two cities is \$125; and the percent of passengers in that interval was 20%. This means that 20% of American's passengers in this market paid between \$101 and \$125 each way. The \$101 to \$125 fare interval was the lowest in which at least five percent of American's passengers flew. American's Maximum \$25 Fare Interval is listed as \$300; the percentage of passengers in that interval was 8%. This means that 8% of American's passengers in this market paid between \$276 and \$300 each way. The \$276 to \$300 fare interval was the highest in which at least five percent of American's passengers flew. In this market, 21% percent of American's passengers paid more than \$375 each way (three times \$125, the top of the lowest significant fare interval for American in this market).

Carrier Code Identifier and Footnotes

<u>Code</u>	<u>Name</u>
AA	American Airlines Inc.
AS	Alaska Airlines Inc.
B6	JetBlue Airways
DL	Delta Air Lines Inc.
F9	Frontier Airlines Inc.
G4	Allegiant Air
NK	Spirit Air Lines
SY	Sun Country Airlines d/b/a MN Airlines
UA	United Air Lines Inc.
WN	Southwest Airlines Co

Data Source:

The Origin and Destination Survey of Airline Passengers is composed of a ten percent sample of passenger tickets that certificated airlines submit on a quarterly basis. The information in this report is extracted from DB1B, using the directional components of domestic itineraries from fare-paying passengers only.

- 1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent or more of total traffic.
- 2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.
- 3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.
- 4/ Low fare markets defined as airport markets where one or more of (Allegiant Air (G4), Frontier Airlines Inc. (F9), JetBlue Airways (B6), Southwest Airlines Co. (WN), Spirit Air Lines (NK)) have a combined airport market share of at least 5%.
