SAE INTERNATIONAL

ADVANCING GLOBAL MOBILITY SOLUTIONS

Tim Weisenberger, Program Manager, Emerging Technologies
Annie Change, Program Manager, Shared and Micromobility

Our Mission: To advance mobility knowledge and solutions for the benefit of humanity.

145,000

ENGINEERS

EXECUTIVES

EDUCATORS

STUDENTS

SAE International's core competencies are life-long learning and voluntary consensus standards development.

A Multi-faceted Company Driving the Future of Mobility

SAE is the leader in connecting and educating mobility professionals to enable safe, clean, and accessible mobility solutions.

SAE Standards in Advanced Technology Portfolio

Wireless Charging

Driver-Vehicle Interface

Electronics System Reliability

Driving Automation Systems

ADAS and Active Safety

The Common Thread?
Emerging, Disruptive Technologies

Shared Mobility

EV/Hybrid/FC Vehicle & Battery

Vehicle Electronics Cyber Security

Intelligent Transport Systems

Mobility for Elderly and Persons with Disabilities

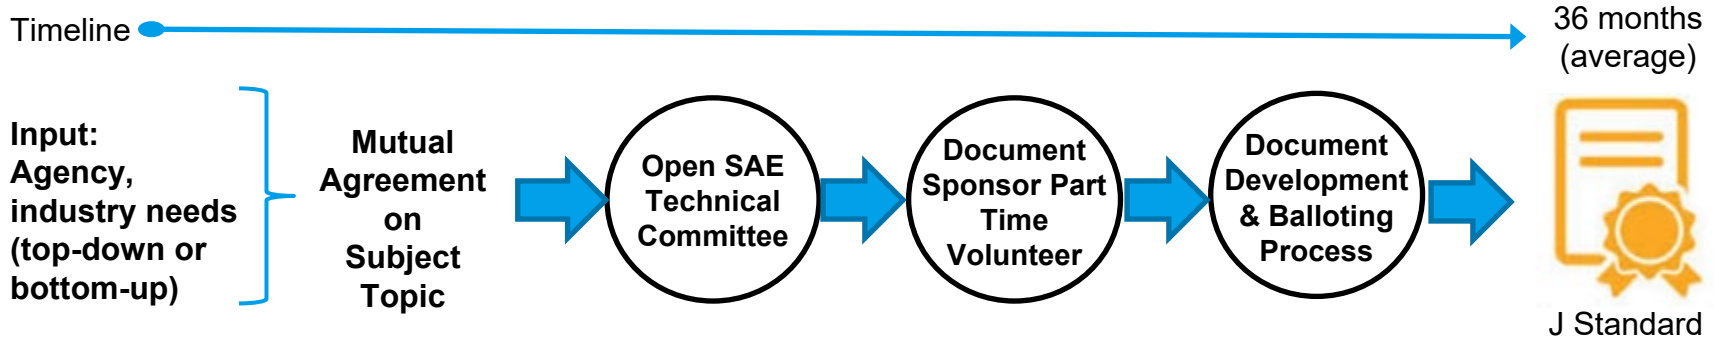

Standards in Disruptive Technologies

Require new methods...

SAE Traditional Standards Development Process

Open, Transparent and Consensus-based

Drawbacks:

Consensus takes time

Standards experts are volunteers

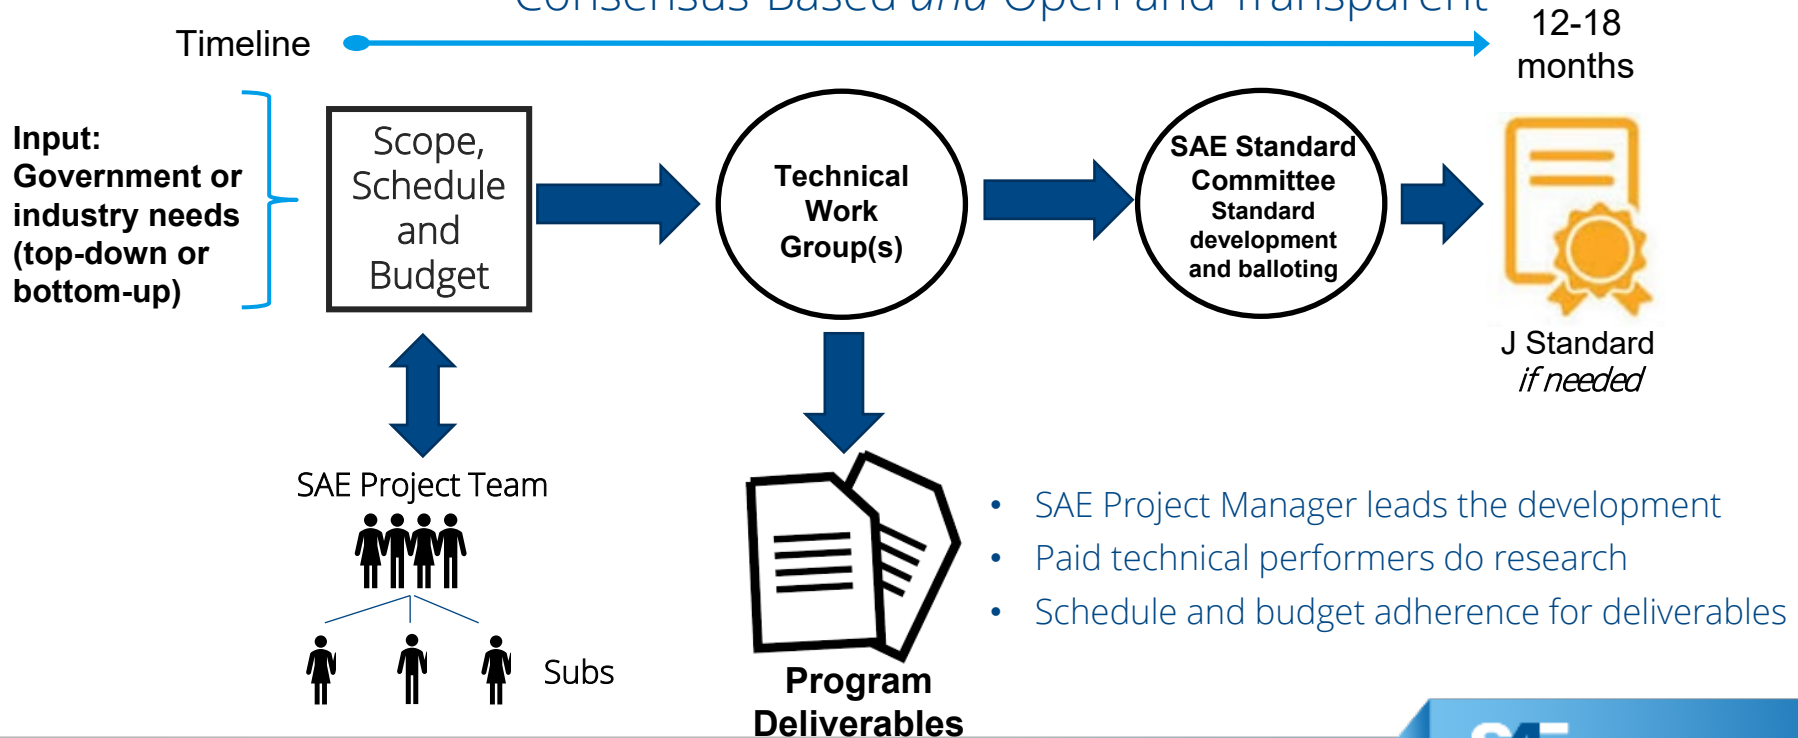

Competitive pressure waters down detail

Caveat:

Traditional standards are developed for mature technologies, systems, and business approaches

SAE Expedited Standards- Pre-competitive Research + Standards

Cooperative Research Projects: Consensus-Based *and* Open and Transparent

SAE Consortium Approach

SAE Industry Technologies Consortia (SAE ITC)

SAE ITC is a 501(c)(6), which allows SAE to promote common business interests to improve business in industry.

ITC can bring together industry competitors in an environment “closed” to the public to engage in pre-competitive research while avoiding anti-trust concerns.

Mission

SAE ITC enables organizations to connect, collaborate and positively impact global industries by empowering implementation of precompetitive solutions and innovative technologies.

Vision

We are a trusted global leader in consortia-based collaborative tools and services for highly technical industries' operations and supply chain, especially automotive and aerospace.

Collaborative Innovation. Trusted Implementation.

SAE Shared and Digital Mobility Committee

The mission of this committee is to advance the field of shared and digital mobility through the development of industry standards. The standards will serve to:

CREATE A COMMON
LANGUAGE

HARMONIZE GLOBAL
MARKETS

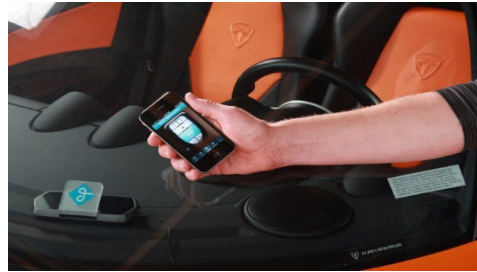

FACILITATE
INTEROPERABILITY

This Committee Could Work on...

SHARED
AUTOMATED VEHICLES

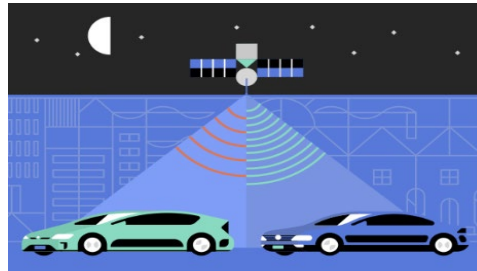

CARSHARING
VEHICLE ENTRY

BIKESHARING
TECHNOLOGIES

MOBILITY-AS-A-SERVICE
API

DATA FROM
MOBILITY PROVIDERS

SURFACE TRANSPORTATION RECOMMENDED PRACTICE	J3163™	SEP2018
	Issued	2018-09

Taxonomy and Definitions for Terms Related to Shared Mobility and Enabling Technologies

RATIONALE

Standardizing definitions of shared mobility and supporting terms serves several purposes:

- It will help reduce traveler uncertainty regarding shared mobility services, confusion about terminology used by the media, and discrepancies in terminology used internationally that contribute to public confusion and misperceptions.
- It will allow public agencies to clarify policies related to shared mobility, such as insurance, taxation, rights-of-way, parking, and zoning.
- It will help unify public and private sector definitions and aid in the development of services, as well as the formation of public-private partnerships.

This document has been developed according to the following guiding principles. It should:

- Be descriptive and informative rather than normative;
- Provide functional definitions;
- Be consistent with current industry practice;
- Be consistent with existing literature to the extent practicable;
- Be useful across disciplines including: engineering, planning, law, and journalism;
- Be clear and cogent and, as such, it should avoid or define ambiguous terms;
- Address inconsistencies in overlapping work and competing definitions in the field of shared mobility to achieve standardization; and
- Not provide any competitive advantage for any particular shared mode or service provider.

SAE Technical Standards Board Rules provide that: "This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user." SAE reserves each technical report at least every five years at which time it may be revised, reaffirmed, stabilized, or canceled. SAE invites your written comments and suggestions.

We created a GLOSSARY

Taxonomy and Definitions for Terms Related to Shared Mobility and Enabling Technologies

Scope

A taxonomy describing the spectrum of shared mobility services, including definitions for shared modes (e.g., carsharing, bikesharing, etc.) and related terms and definitions (i.e., one-way, roundtrip, etc.).

Led by

Susan Shaheen, Ph.D., UC Berkeley
& Adam Cohen, UC Berkeley

What is Covered in SAE J3163?

TRAVEL
MODES

e.g. bikesharing
& carsharing

MOBILITY
APPLICATIONS

e.g. mobility tracker
apps

SERVICE
MODELS

e.g. P2P service
model

OPERATIONAL
MODELS

e.g. station-based
roundtrip

BUSINESS
MODELS

e.g. B2B services
& B2C services

DEPRECATED
TERMS

e.g. ridesharing
