UMTA 76-77

The U.S. Department of Transportation's Urban Mass Transportation Administration (UMTA) has published the third in a series of Urban Mass Transportation Abstracts, a general reference index to reports generated under contract to UMTA. This volume includes brief descriptions of 298 reports, including technical studies; research, development and demonstration project reports; and university research and training reports.

The reports document studies ranging from transit feasibility studies for specific localities, economic cost analyses of mass transit programs and mobility projects for elderly and handicapped persons to a wide range of technical developments, including automatic fare collection systems, automated vehicle monitoring systems, techniques of noise abatement for transit, and advanced bus and rail propulsion systems. Complete indices to the volume by report title, personal and corporate author, geographic location and keywords are included.

A limited supply of single copies of the Urban Mass Transportation Abstracts, Volume No. 3, is available from UMTA's Transit Research Information Center, 2100 2nd Street, S.W., Washington, D.C. 20590. Copies of individual reports listed in the Abstracts are available from the National Technical Information Service, U.S. Department of Commerce, 5285 Port Royal Road, Springfield, Virginia 22161.
