| 16. Abstract: Rural public transit systems are typically small, demand-responsive systems. Revenues are generally not sufficient to cover the system's costs, and the Federal Transit Administration (FTA) § 5311 program provides capital, planning, and operating assistance in support of these systems. State departments of transportation (DOTs) are responsible for developing and executing a process to fairly and equitably distribute federal transit funds to rural public transit systems. In fiscal year 2021 (FY21), more than \$728 million in federal funding was allocated nationwide for rural transit, and Georgia DOT (GDOT) distributed \$25 million to 85 rural transit operators. GDOT is responsible for disseminating federal transit funds fairly and equitably to rural transit operators in Georgia, which creates a key challenge. Specifically, the federal funding that GDOT receives each year is based on the total rural population and total rural land area for the state, as well as other factors. Because rural transit systems operate in specific counties, GDOT needs to know how much federal funding is associated with each county so that the amounts GDOT allocates to each county and to individual transit operators are aligned with the federal funding formula. This study calculates the FTA § 5311 funding appropriations at a county level for FY23, analyzes how funding levels for this program have changed since FY19, and illustrates ways in which these county-level calculations help support transit planning in Georgia. | | | |

EXECUTIVE SUMMARY

Rural public transit systems are typically small, demand-responsive systems. The Federal Transit Administration (FTA) provides federal funding to states for capital, planning, and operating assistance in support of transit systems in rural areas with populations less than 50,000 through two key programs: the FTA § 5311 (Formula Grants for Rural Areas) and § 5340 (Growing States and High Density States Formula Program). State departments of transportation (DOTs) are responsible for developing and executing a process to fairly and equitably distribute federal transit funds to rural public transit systems. In FY23, more than \$914 million in federal funding were allocated nationwide for rural transit, and Georgia DOT (GDOT) distributed \$31 million to 68 rural transit operators. In FY23, these operators provided demand-responsive transit service for 116 (of 159) counties in Georgia.

GDOT is responsible for disseminating federal transit funds fairly and equitably to rural transit operators in Georgia, and it faces two key challenges. First, the federal funding that GDOT receives each year primarily comes from the § 5311 program and is based on the total rural population and total rural land area for the state, but GDOT allocates funding to individual providers that provide service within specific counties. Thus, there is a need to replicate the federal funding formulas at the county level to ensure a fair and equitable distribution of funds across these providers. Second, about 85 percent of GDOT's funding has historically come from the § 5311 program and 15 percent from the § 5340 program. Conceptually, the § 5311 funding is based on population counts from the 2020 decennial census whereas the § 5340 program provides supplemental funding based on how fast the state's population is growing. Given that Georgia has recently been one of the fastest growing states in the nation, a significant portion of

its total federal funding would be from the § 5340 program. It is thus important to assess the drivers of both programs in order to forecast the total rural transit funding for Georgia.

The objectives of this research are to: (1) review how actual or established appropriation amounts for the § 5311 and § 5340 programs have evolved from FY20 to FY26 at a national level and for the state of Georgia and (2) calculate § 5311 and § 5340 funding appropriations for counties in Georgia for FY23. These county-level estimates of federal funding can be used to support GDOT's budget allocation process to individual transit providers in the state and support other transit planning efforts.

CHAPTER 1. INTRODUCTION

Rural public transit systems are typically small, demand-responsive systems. The Federal Transit Administration (FTA) provides federal funding to states for capital, planning, and operating assistance in support of these systems in rural areas with populations of less than 50,000 through two key programs: the FTA § 5311 (Formula Grants for Rural Areas) and § 5340 (Growing States and High Density States Formula Program). State departments of transportation (DOTs) are responsible for developing and executing a process to fairly and equitably distribute federal transit funds to rural public transit systems. In FY23, more than \$914 million in federal funding were allocated nationwide for rural transit and the Georgia DOT (GDOT) distributed \$31 million to 68 rural transit operators. In FY23, these operators provided demand-responsive transit service for 116 (of 159) counties in Georgia.

GDOT is responsible for disseminating federal transit funds fairly and equitably to rural transit operators in Georgia, and it faces two key challenges. First, the federal funding that GDOT receives each year primarily comes from the § 5311 program and is based on the total rural population and total rural land area for the state, but GDOT allocates funding to individual providers that provide service within specific counties. Thus, there is a need to replicate the federal funding formulas at the county level to ensure a fair and equitable distribution of funds across these providers. Second, about 85 percent of GDOT's funding has historically come from the § 5311 program and 15 percent from the § 5340 program. Conceptually, § 5311 funding is based on population counts from the 2020 decennial census whereas the § 5340 program provides supplemental funding based on how fast the state's population is growing. Given that Georgia has recently been one of the fastest growing states in the nation, a significant portion of

its total federal funding would be from the § 5340 program. It is thus important to assess the drivers of both programs in order to forecast the total rural transit funding for Georgia.

The objectives of this research are to: (1) review how actual or established appropriation amounts for the § 5311 and § 5340 programs have evolved from FY20 to FY26 at a national level and for the state of Georgia and (2) calculate § 5311 and § 5340 funding appropriations for counties in Georgia for FY23. These county-level estimates of federal funding can be used to support GDOT's budget allocation process to individual transit providers in the state and support other transit planning efforts.

This report comprises four chapters: Chapter 2 outlines the data and methodology used to calculate annual funding levels for the § 5311 and § 5340 FTA appropriations for Georgia counties from fiscal years 2020 to 2026. Chapter 3 presents the results, featuring an interactive map that allows users to explore how funding levels vary with changing inputs at the county level. The chapter also includes examples that demonstrate how the findings can support transit planning efforts across the state. The report is supplemented by an appendix, which summarizes county-level § 5311 and § 5340 FTA appropriations for FY23 in Georgia. The report concludes with a summary of key findings in chapter 4.

CHAPTER 2. DATA AND METHODOLOGY

This chapter reviews the data and methodology used to calculate annual funding levels for the § 5311 FTA appropriations for fiscal years 2020–2026 for counties in Georgia. The description of the methodology draws heavily from Garrow et al. (2020). The next chapter presents the key results from the analysis.

The calculation of annual funding levels is based on multiple inputs and can be categorized based on whether they are obtained from: (1) authorized or expected federal appropriations for the § 5311 program, (2) census, (3) revenue and operating metrics for different transit modes reported to the National Transit Database (NTD), or (4) FTA data value tables. Figure 1 provides an overview of the steps used to calculate annual funding levels for counties in Georgia.

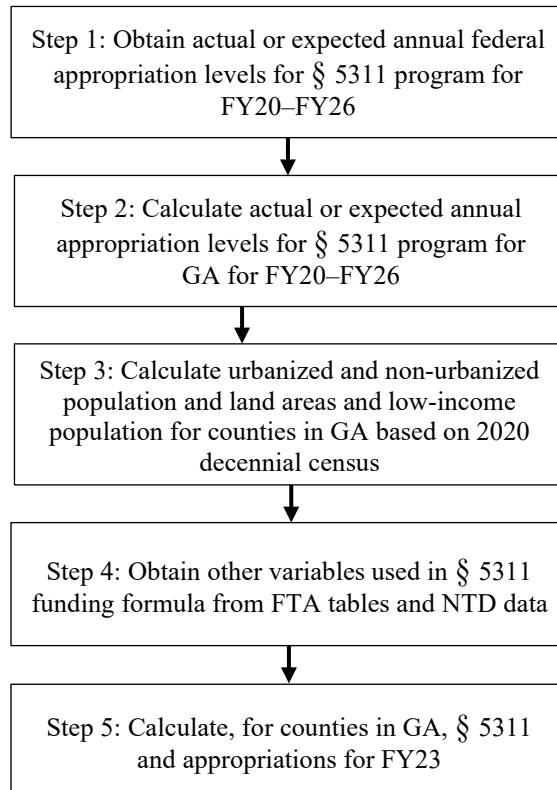

Figure 1. Flowchart. Overview of methodology.

We discuss each of these modeling steps in detail in the sections that follow.

STEP 1: DETERMINE FEDERAL FTA § 5311 FEDERAL APPROPRIATIONS

The Bipartisan Infrastructure Law established appropriation levels for § 5311 (rural) program through FY26. Table 1 summarizes the actual or established appropriation amounts for each year of this program from FY20 to FY26. Note that the amount of § 5311 appropriation is often reported with a supplemental appropriation from the § 5340 program for “growing states/high density states.” Conceptually, we can think of the § 5340 program as a “bump” in appropriation that accounts for population changes between the 2010 decennial census and the 2030 decennial census. That is, because the § 5311 appropriation is based on the 2010 decennial census, the

§ 5340 program provides additional funding that is explicitly tied to more recent population trends.

Table 1. § 5311 appropriations (includes § 5340 amounts).

| FY | § 5311 |
|-----------|---------------|
| 2020 | 727,197,332 |
| 2021 | 728,734,295 |
| 2022 | 896,275,765 |
| 2023 | 914,581,455 |
| 2024 | 935,000,000 |
| 2025 | 955,000,000 |
| 2026 | 979,000,000 |

Sources: FTA (2020, 2021a, 2021b, 2022c, 2023e).

Because the funding formulas for the “pure” § 5311 program differ from that used for the § 5340 program, it is useful to separate out the appropriation levels for each program component (see table 2 and table 3).

Table 2. § 5340 appropriations included in § 5311 totals.

| FY | § 5340 (Growing States) |
|-----------|------------------------------------|
| 2020 | 85,648,257 |
| 2021 | 85,779,099 |
| 2022 | 112,286,712 |
| 2023 | 114,641,584 |
| 2024 | 117,000,000 |
| 2025 | 120,000,000 |
| 2026 | 123,000,000 |

Sources: FTA (2020, 2021a, 2021b, 2022c, 2023e).

| 2024 | 818,000,000 |
| 2025 | 835,000,000 |
| 2026 | 856,000,000 |

Sources: FTA (2020, 2021a, 2021b, 2022c, 2023e).

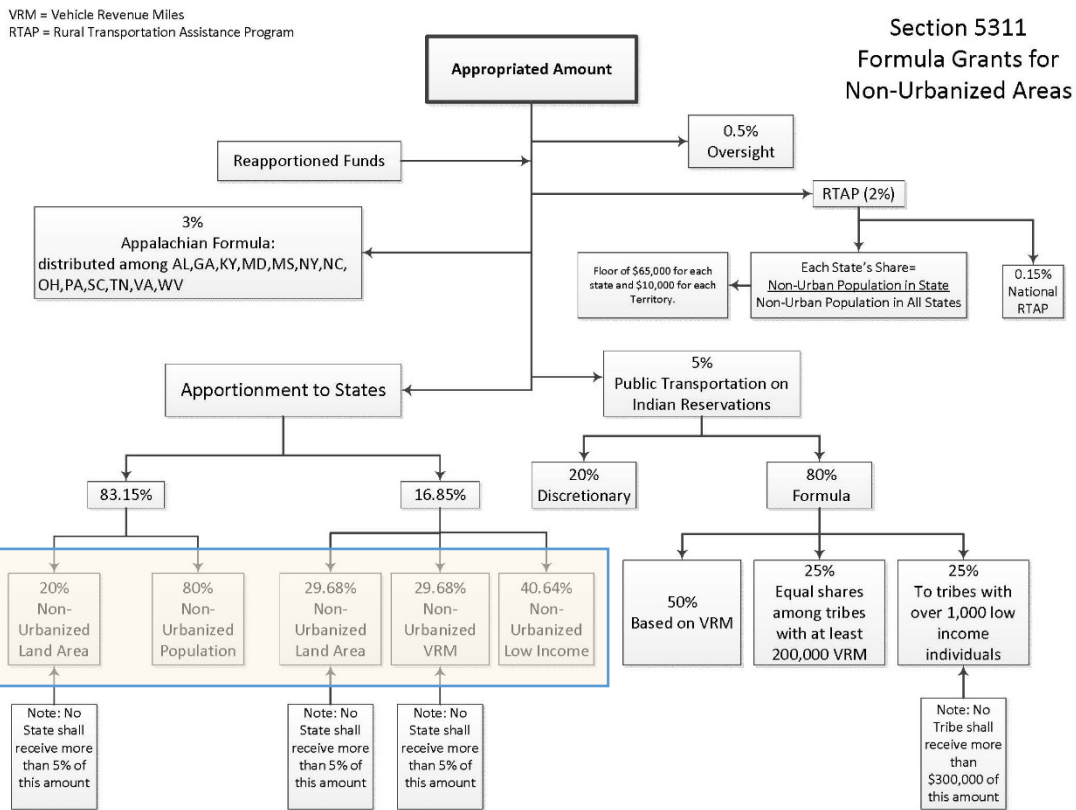

STEP 2: DETERMINE FTA § 5311 APPROPRIATIONS FOR GEORGIA

Overview of How Funds are Distributed to Individual States

In addition to establishing appropriation levels for the § 5311 program, the Bipartisan Infrastructure Law specifies how these funds are to be distributed across different programs and to individual states and U.S. territories. FTA publishes flowcharts that detail the methodology used to distribute funds, which are reproduced in this section as figure 2 and figure 3. Finally, FTA publishes information about how much funding each state received from different programs, including from the § 5311 program (FTA, 2023c). Having information on both the methodology as well as the final amount allocated to Georgia is helpful because it allows us to replicate the funding allocation formula and verify that the methodology and simplifying assumptions are accurate before applying the methodology to individual counties.

The FTA flowcharts have several important characteristics. First, only certain sections of the flowcharts are relevant to calculating the appropriations distributed to the State of Georgia. For example, for the § 5311 program shown in figure 2, 7.5 percent of the appropriated amount is directed to oversight, rural transit assistance programs (RTAPs), and public transportation on Indian reservations, which are not relevant to Georgia's appropriation. Further, although Georgia

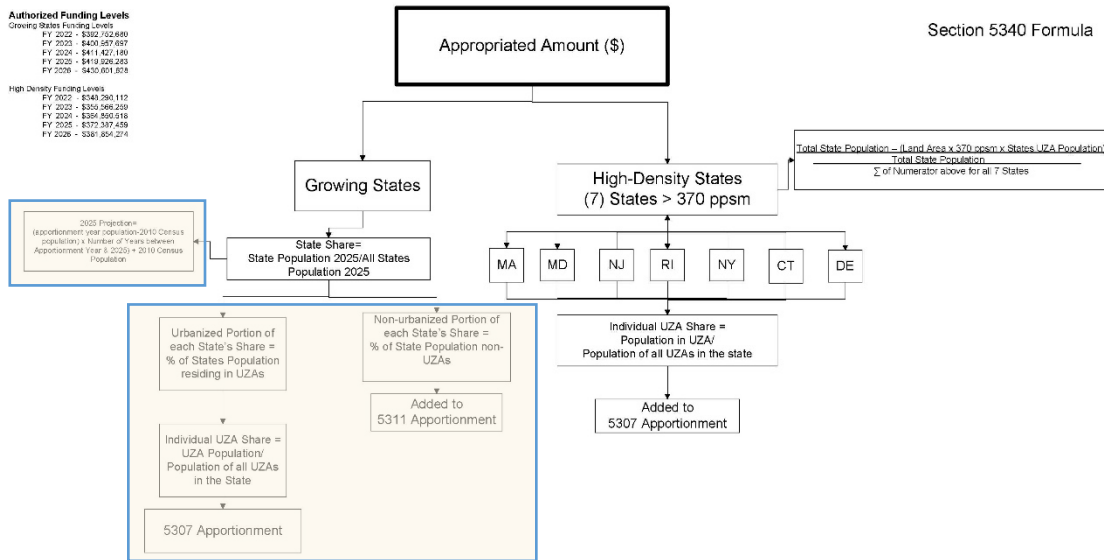

receives part of its appropriation because a portion of the state is located in the Appalachian area, only about 3 percent of the total funds for the § 5311 program are appropriated for the Appalachian area, and Georgia is one of 13 states that receive these funds.¹ Thus, the amount of funding Georgia receives through this program is modest. For these reasons, when calculating Georgia’s appropriation, we focus on the shaded boxes in figure 2 and figure 3 because these represent the majority of funding that the state receives from these grant programs.

Source: FTA (2022a).

Figure 2. Flowchart. § 5311 formula grant.

¹ Based on FTA (2023e), Georgia received \$794,732 in FY23 based on the Appalachian criterion, which represents 2.48 percent of Georgia’s total § 5311 funding.

Source: FTA (2022b). UZA = Urbanized area.

Figure 3. Flowchart. § 5340 formula grant.

A second key characteristic of these flowcharts is that the amount of funding Georgia receives depends on the values of a particular input variable for the State of Georgia as well as the nation. For example, rural population is used as an input to the § 5311 program. When determining the amount of § 5311 funding allocated to Georgia based on this input variable, we need to compute the percent of the nation’s rural population that is based in Georgia. Geographic information systems (GISs) and related tools can be used to determine these funding formula input variables for each state and U.S. territory; however, because this can be a time-consuming process, FTA publishes these input variables as well as “data value tables” that convert each unit of an input variable into an equivalent allocation dollar amount. For example, in the FY23 allocation, the data value associated with the rural population input variable was 5.9636 (FTA 2023f) and the rural population in Georgia was 3,353,382 (FTA 2023a); thus, Georgia’s § 5311 funding allocation based just on the rural population input variable was \$19,998,229. The complete

example calculation for Georgia’s § 5311 allocation is included in Example Calculations in this chapter.

A final point relevant to the discussion of funding flowcharts is that although FTA provides “all” of the input variables used to determine state allocations shown in figure 2 for the “pure” § 5311 program, FTA does not provide all of the input variables used to determine state allocations for the supplemental § 5340 amounts shown in figure 3 on its website. Because Georgia has been one of the nation’s fastest growing states, it receives a non-trivial amount of supplemental § 5311 funding through the § 5340 (growing states) program. For example, in FY19, 14 percent of Georgia’s total § 5311 funding was from the § 5340 (growing states) program (Garrow et al., 2020). For these reasons, we create the “missing” input variables used for the § 5340 (growing states) portion, specifically population for the nation and Georgia for the years 2020–2025.

Data Sources Used for Allocating Funds to Individual States

This section compiles all of the input data sources required to calculate the § 5311 (rural) and § 5340 (growing states) funding that is distributed to each state and U.S. territory. Table 4 summarizes each of the input variables used to determine the § 5311 allocations, and table 5 provides references for each data source used to create the input variables.

To determine the supplemental amount of funding added to the § 5311 appropriations for growing states as part of the § 5340 program, census data were used to determine rural and urban populations for different years (e.g., 2010, 2020, 2025). In particular, 2010 rural populations for the nation and Georgia were obtained from FTA data tables (FTA, 2023a) and more recent census data were used for other years (U.S. Census Bureau, 2022).

Table 4. Input variables used to determine § 5311 appropriations.

| Urbanized Status | Funding Subcategory | Variable | Data Source |
|-------------------------|--|-----------------------|--------------------|

Example Calculations

This section provides examples of how to calculate § 5311 (rural) and the supplemental § 5340 (growing states) funds to states.

Example 1: § 5311 Appropriation for Georgia

As shown in figure 2, we used four inputs to predict the § 5311 appropriation (the shaded parts of the figure). These are summarized in table 4 and include the non-urbanized² land area, non-urbanized population, non-urbanized vehicle revenue miles (VRM), and non-urbanized low-income population. We used “FTA Table 5” (FTA, 2023f) to convert each of these inputs into a dollar amount, and these “data values” are shown in table 6.

² In this report, we use the terms rural and non-urbanized interchangeably.

Table 6. FTA values used for § 5311 appropriation (FY23).

| Appropriation Formula Piece | Data Value |
|--|-------------------|
| Based on Land Area and Population | |
| Population | 5.964 |
| Land Area | 38.589 |
| Based on Land Area, Vehicle Revenue Miles, and Low-Income Population | |
| Land Area | 11.605 |
| Vehicle Revenue Mile | 0.067 |
| Low-Income | 2.683 |

The calculation for the FY23 § 5311 appropriation for Georgia (without the § 5340 [growing states] supplement) is the following:

$$2023 \text{ § 5311 Appropriation} = 5.964 \times (\text{2010 non-urbanized population}) + 38.589 \times (\text{2010 non-urbanized land area}) + 11.605 \times (\text{2010 non-urbanized land area}) + 0.067 \times (\text{2021 non-urbanized VRM}) + 2.683 \times (\text{2020 low-income})$$

Thus,

$$2023 \text{ § 5311 Appropriation} = 5.964 \times (3,353,382) + 38.589 \times (53,560) + 11.605 \times (53,560) + 0.067 \times (16,139,589) + 2.683 \times (900,434) = 26,185,178$$

Example 2: § 5340 Supplement to § 5311 Appropriation for Georgia

As shown in Example 1, the FTA input tables for the FY23 appropriation are based on 2010 non-urbanized populations and land areas. Since 2010, however, populations across different states have changed, with some states growing (or declining) in population faster than others. The § 5340 program provides additional funding to the base § 5311 calculation to account for these shifting populations using the following four equations:

$$\begin{aligned} \text{FY23 } \S \text{ 5340 Supplement to } \S \text{ 5311 Program for Georgia} &= \text{FY23 Appropriation} \times \\ &\text{GA Share} \times \text{Percent of GA's Population that is Rural} \end{aligned} \quad (1)$$

where,

$$\begin{aligned} \text{2025 Population Projection} &= (\text{Apportionment year population} - \text{2010 population}) \times \\ &(\text{2025} - \text{Apportionment year}) + \text{2010 population} \end{aligned} \quad (2)$$

$$\begin{aligned} \text{GA Share} &= \text{Georgia 2025 Population Projection} / \text{National 2025 Population} \\ &\text{Projection} \end{aligned} \quad (3)$$

$$\begin{aligned} \text{Percent of GA's Population that is Rural} &= \text{GA's 2010 rural population} / \text{GA's 2010} \\ &\text{total population} \end{aligned} \quad (4)$$

Applying these formulas to FY23 allocation using 2022 population data gives the following:

$$\begin{aligned} \text{FY23 } \S \text{ 5340 Supplement to } \S \text{ 5311 Program for Georgia} &= 400,957,697 \times 0.0357 \times \\ &0.35 = 5,009,966 \end{aligned} \quad (1)$$

where,

$$\begin{aligned} \text{2025 Georgia Population Projection} &= (10,912,876 - 9,687,653) \times 3 + 9,687,653 = \\ &13,363,322 \end{aligned} \quad (2)$$

$$2025 \text{ National Population Projection} = (333,287,557 - 312,740,087) \times 3 + 312,740,087 = 374,382,497 \quad (2)$$

$$\text{GA Share} = 13,363,322 / 374,382,497 = 0.0357 \quad (3)$$

$$\text{Percent of Georgia's Population that is Rural} = 3,353,382 / 9,687,653 = 0.35 \quad (4)$$

Adding the § 5340 supplement to the base § 5311 allocation gives a total FY23 § 5311 allocation to Georgia of $26,185,178 + 5,009,966 = 31,195,144$. As a check, we can compare this number to that reported by FTA (2023c), which is 31,249,628. Thus, our calculation based on the flowcharts matches within 0.17 percent.

Bringing it All Together: Georgia's § 5311 and § 5340 Appropriations for FY20–FY26

Table 7 summarizes the § 5311 (rural) funding for the State of Georgia for FY20–FY26 and breaks out the § 5340 supplement that is part of the total § 5311 allocations. Funding for FY20–FY23 is based on actual values (FTA, 2023c), and funding for FY24–FY26 is based on FY23 values that are scaled to reflect the higher authorized appropriation amounts in subsequent years. For all rows, the amount of § 5340 funding included in the total § 5311 amount is estimated based on the calculations in previous sections, showing that in FY23 15.9 percent of the total § 5311 funding could be attributed to the § 5340 supplement.

Table 7. § 5311 appropriations for Georgia.

| FY | § 5311 and § 5340 | § 5340 Supplement to § 5311 |
|-----------|--------------------------|------------------------------------|
| 2020 | 24,868,631 | 3,954,112 |
| 2021 | 24,968,615 | 3,970,010 |
| 2022 | 30,680,043 | 4,878,127 |
| 2023 | 31,249,628 | 4,968,691 |
| 2024 | 32,243,339 | 5,126,691 |
| 2025 | 32,893,232 | 5,230,024 |
| 2026 | 33,716,317 | 5,360,894 |

Sources: FTA (2023e) and table 1 in this report.

STEP 3: CALCULATE DATA INPUTS FOR GEORGIA COUNTIES BASED ON 2020 DECENNIAL CENSUS

Steps 1 and 2 provided information on how funding formulas are used to determine the § 5311 and § 5340 amounts appropriated to Georgia for FY20–FY26. Thus far, we have applied these formulas using statewide information. However, GDOT is responsible for distributing the funds it receives from the § 5311 program to rural transit providers in the state. Thus, we need to replicate the methodology outlined in step 2 using county and transit provider information as inputs.

Step 3 compiles required information based on census data. Consistent with funding formulas, the 2010 decennial census is used to calculate urbanized and non-urbanized population and land areas. Low-income populations are calculated consistent with the methodology reported in FTA (2023b): “Rural population estimates are derived by subtracting the number of persons up to 150% of poverty residing in urbanized areas over 50,000 in population from the total number of persons up to 150% of poverty statewide, based on data from ACS table ACSDT5Y2020.B17024, ‘Age by Ratio of Income to Poverty Level in the Last Twelve Months,’

(2016–2020 dataset).” See the U.S. Census Bureau (2021) for the American Community Survey (ACS) table.

STEP 4: DETERMINE DATA INPUTS FOR GEORGIA COUNTIES BASED ON NTD DATA AND FTA TABLES

Step 4 compiles additional inputs used to determine the § 5311 allocations based on the FTA data tables shown in table 3.

For the § 5311 appropriation calculations, we need information on VRM for each provider. This information is reported annually to the NTD and is available online at NTD (2021) under the “2021 Service_static” Excel file. In addition, GDOT compiles and reports service data for rural transit providers and maintains an Excel file with more recent data from 2023 that were used in the analysis (GDOT, 2024). However, because GDOT is not required to report VRM for “joint reporters” that offer both § 5311 (rural) and § 5307 (small urban) service, we use the NTD (2021) VRM data for these providers.

STEP 5: CALCULATE § 5311 AND § 5340 ALLOCATIONS FOR COUNTIES AND TRANSIT PROVIDERS IN GEORGIA FOR FY23

Given data inputs compiled from steps 3 and 4, the funding formulas for the § 5311 and § 5340 programs are applied based on county- and provider-level data inputs. For those providers that serve multiple counties, 2020 population data were used to allocate funding to individual counties. We used table 13 (provided in the appendix) to assign the counties served by a given provider and then used rural populations based on the 2020 census to allocate funding to individual counties.

CHAPTER 3. RESULTS

This chapter presents county-level appropriations for the FTA’s § 5311 (Formula Grants for Rural Areas) and § 5340 (Growing States and High Density States Formula Program) programs, with detailed results provided in the appendix. The chapter is organized into two key sections. The first section examines changes in the combined § 5311 and § 5340 appropriation levels from 2020 to 2026, contextualizing the funding increases relative to rising capital costs during the same period. It also includes a map illustrating how sensitive the appropriations are to different input assumptions. The second section illustrates how GDOT uses these county-level appropriations to support its decision-making processes. First, GDOT uses these data to ensure the fair and equitable distribution of transit funding across rural counties. Second, the appropriations data inform discussions about initiating or expanding transit services, enabling data-driven decisions that enhance mobility and accessibility for Georgia’s rural communities.

CHANGES IN COMBINED § 5311 AND § 5340 APPROPRIATION LEVELS SINCE 2020

The Bipartisan Infrastructure Law, signed on November 15, 2021, established funding levels for § 5311 from FY22 through FY26. As shown in table 8, at first glance, the program appears to have experienced a significant funding increase. For example, Georgia received 23 percent more funding in 2022 than in 2021, and annual funding is projected to rise by 34.6 percent from 2020 to 2026.

However, it is important to consider the impact of inflation and rising operational costs faced by rural transit systems during this period. For instance, in FY20, the 80 percent federal § 5311 match applied to the purchase of a rural transit vehicle was \$78,000. By FY26, this amount is

expected to rise to \$108,000—a 38 percent increase. This figure closely aligns with the projected 34.6 percent funding increase (see table 8) and indicates that appropriations have likely kept pace with inflation and have not provided additional resources for service expansion or wage increases beyond inflation adjustments.

Table 8. Trends in § 5311 appropriations for Georgia (2020–2026).

| FY | Federal Appropriation | Georgia’s Appropriation | % Increase from Prior Year for Georgia | % Increase from 2020 for Georgia |
|-----------|----------------------------------|------------------------------------|---|---|
| 2020 | 727,197,332 | 28,822,743 | | |
| 2021 | 728,734,295 | 28,938,625 | 0.2 | 0.2 |
| 2022 | 896,275,765 | 35,558,170 | 23.0 | 23.3 |
| 2023 | 914,581,455 | 36,218,319 | 2.0 | 25.8 |
| 2024 | 935,000,000 | 37,370,030 | 2.2 | 28.6 |
| 2025 | 955,000,000 | 38,123,256 | 2.1 | 31.3 |
| 2026 | 979,000,000 | 39,077,211 | 2.5 | 34.6 |

To better understand how sensitive federal allocations are to different inputs, we can examine the FTA’s data input values specific to Georgia (see table 9). Using FY23 figures for the § 5311 program, each person contributes \$5.96 in allocation dollars (\$8.64 for a person classified as low-income), each square mile of rural land generates \$50.19, and each VRM adds 6.7¢ to the total allocation.

Applying these values to Georgia’s FY23 data reveals that 85 percent of the total § 5311 allocation came from the rural population, 10 percent from rural land area, and 4 percent from VRM, resulting in a total of \$26 million in § 5311 funding. An additional \$5 million was allocated through the § 5340 Growing States Formula, which is based solely on population. Combining the § 5311 and § 5340 program allocations, 88 percent of Georgia’s funding came from rural population, 9 percent from rural land area, and 4 percent from VRM. These figures

underscore that the majority of federal funding through these programs is driven by rural population metrics.

Table 9. Contribution of population, land area, and VRM to § 5311 funding in Georgia.

| Georgia | | | | |
|------------------------------|--------------------|--------------------|------------------------|-----------------------|
| § 5311 Input Value | \$ per Unit | Input Value | \$ Contribution | % Contribution |
| Population | \$5.96 | 3,353,382 | \$19,986,157 | 76 |
| Low-income Population | \$2.68 | 900,434 | \$2,413,163 | 9 |
| Land Area (mi ²) | \$50.19 | 53,560 | \$2,688,176 | 10 |
| VRM | \$0.067 | 16,340,485 | \$1,094,812 | 4 |
| TOTAL | | | \$26,182,309 | |

Note: An additional \$5M is included in the total appropriation as part § 5340.

To help understand how § 5311 funding may change for a specific county experiencing above- or below-average rural population growth, initiating new rural transit service, or expanding existing service by increasing VRM, we developed an interactive map-based tool that can be used by GDOT. This tool provides funding forecasts based on changes in rural population and VRM, offering a dynamic way to explore potential allocation adjustments.

We developed the mapping tool using a user-friendly Tableau interface (see figure 4). The map displays county-level distributions of the four key inputs to the § 5311 funding formula: (1) non-urbanized population, (2) non-urbanized low-income population, (3) non-urbanized land area, and (4) non-urbanized VRM. Separate calculations are provided for the § 5311 and § 5340 programs, enabling a clear and detailed view of how each input contributes to federal transit funding allocations. The choropleth map of Georgia counties is arranged according to the distribution of the selected attribute (which includes one of the four key inputs, the § 5340 appropriation, or the combined § 5311 and § 5340 appropriation). This distribution and the color ranges are shown directly under the drop-down menu.

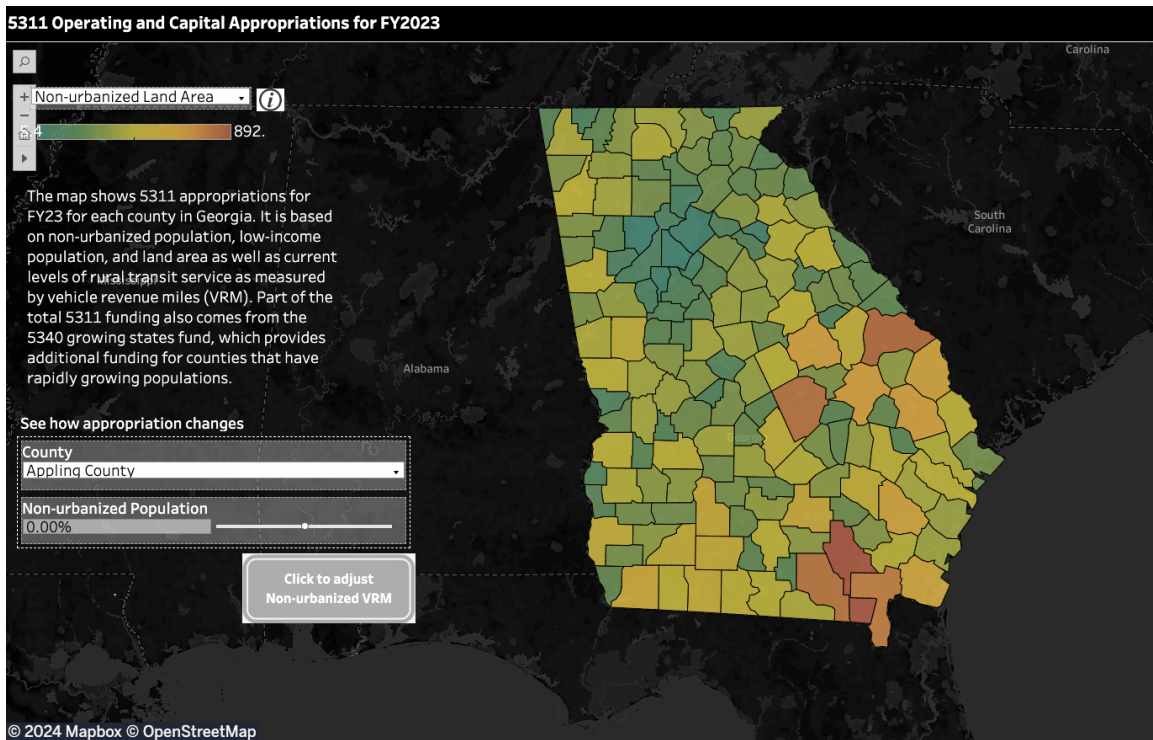

Figure 4. Map. § 5311 operating and capital appropriations for FY23 for counties in Georgia.

One feature of the map is the ability to conduct scenario analyses of the § 5311 appropriations based on changes in non-urbanized populations and VRM. The selection parameters are available at the bottom left of the portal. The scenarios are prepared for the county selected in the drop-down menu, together with the projected non-urbanized population and non-urbanized VRM that are user-adjusted in the slider windows. It is important to note that all counties do not have an existing rural transit network and, therefore, may not have a baseline allocation to project from. For the counties without such a system, we used a different method to project the § 5311 appropriations based on user-supplied VRM. Accordingly, the map portal displays a different menu for selecting the non-urbanized VRM for those counties without transit. The visibility of either of the two non-urbanized VRM menus is context-dependent on the selected county.

As an example, we perform a sensitivity analysis for two counties: Dooly, which currently has rural transit service, and Montgomery, which does not. By entering Dooly County into the search bar in the upper-left corner of the mapping tool, details about its current FY23 allocation are displayed. The tool shows that Dooly County’s current § 5311 appropriation is \$146,413 (see figure 5).

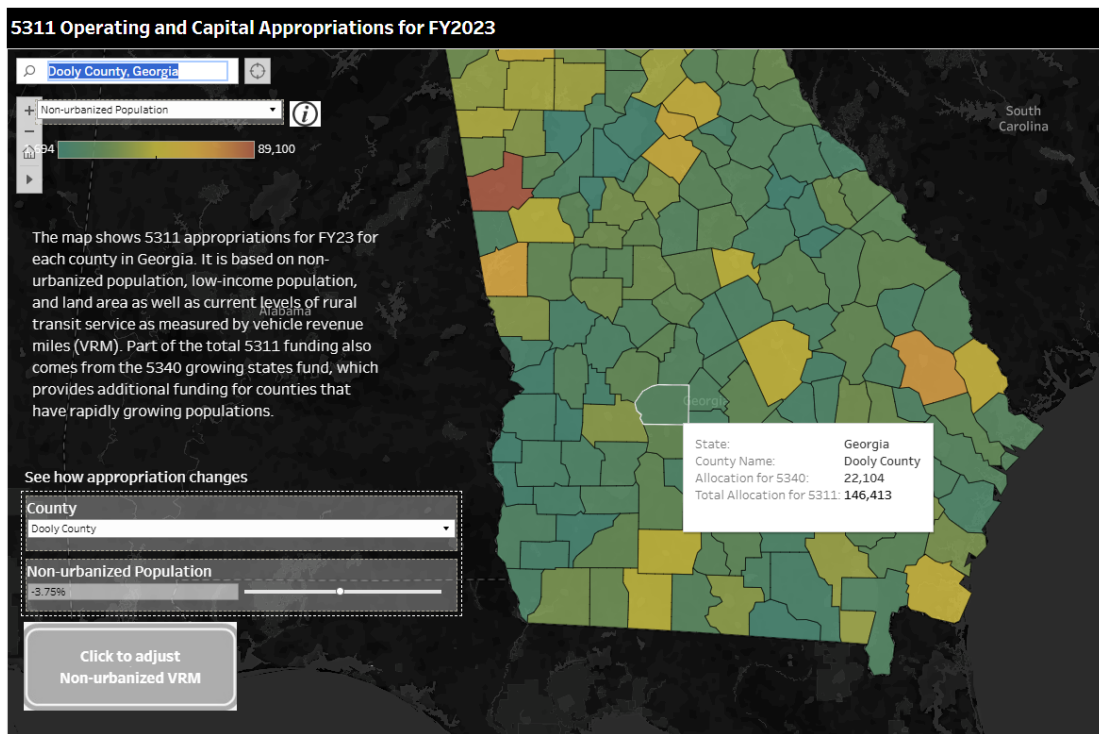

Figure 5. Map. Baseline § 5311 funding allocation for Dooly County (has transit service): \$146,413.

To perform a sensitivity analysis, the user can adjust the non-urbanized population slider from –100 to 100 percent of current levels. For counties like Dooly that currently have transit service, the user can also click the “Click to adjust Non-urbanized VRM” tab in the lower-left corner of the interface (figure 6) and adjust VRM from –100 to 100 percent (see figure 6). Applying these

extreme adjustments—reducing the population by 100 percent and increasing VRM by 100 percent—results in Dooly County’s § 5311 allocation decreasing to \$75,238.

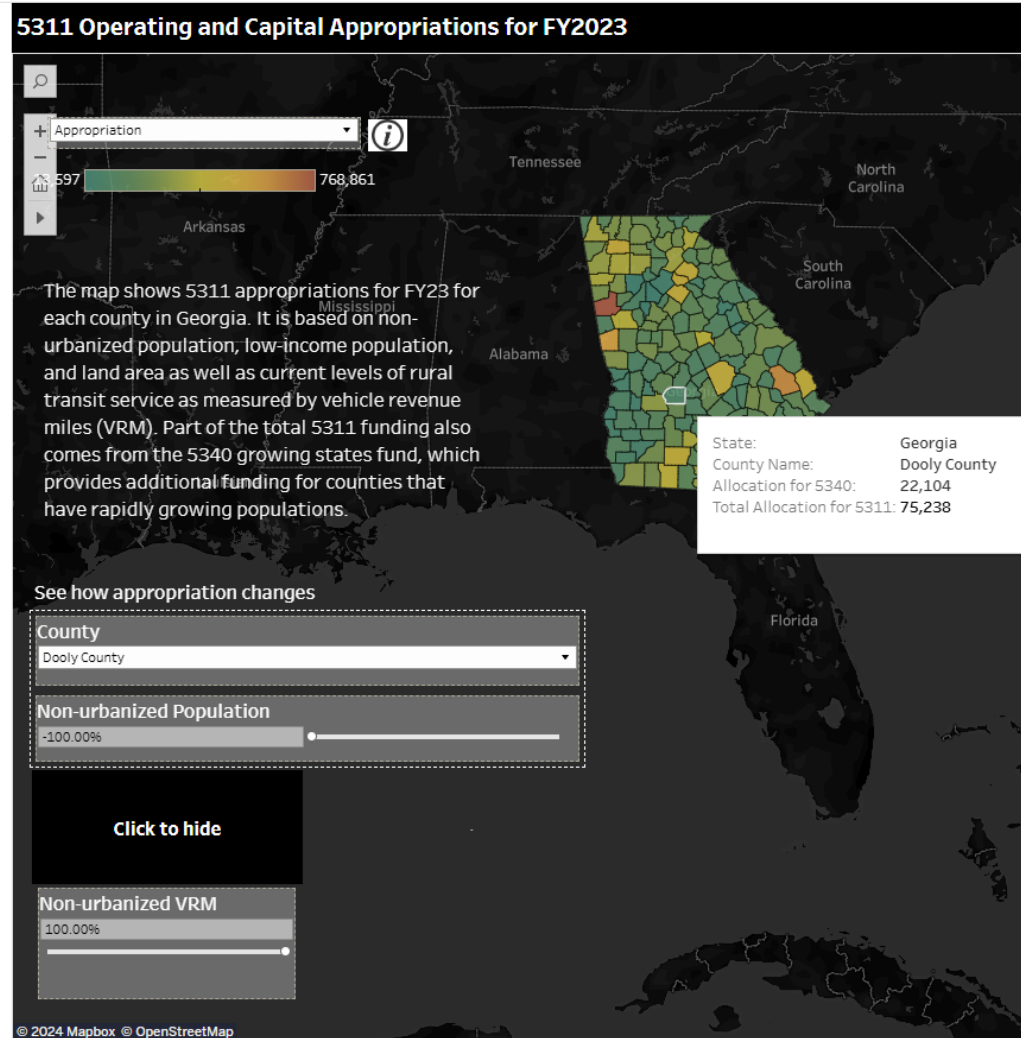

Figure 6. Map. Example sensitivity analysis of § 5311 funding allocation for Dooly County: \$75,238.

The process is similar for counties that do not currently have transit service. Because the current VRM is zero, taking a percentage of this value would be meaningless. Instead, a separate tab is provided, which defaults to the average VRM across all rural transit systems for FY23, with a range spanning from the FY23 minimum to maximum values. This tab is initially hidden but can

be accessed by clicking just to the right of the VRM adjustment tab for counties with existing service. Figure 7 and figure 8 illustrate this process for Montgomery County, showing the sensitivity analysis using the default VRM setting.

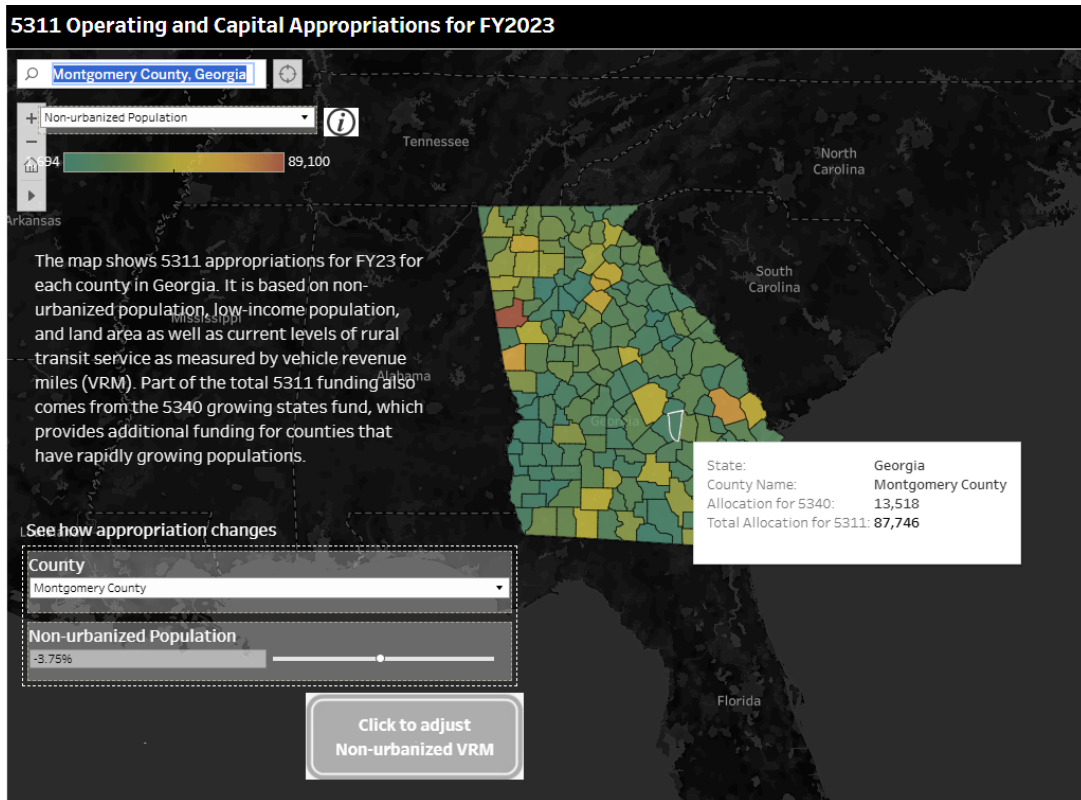

Figure 7. Map. Baseline § 5311 funding allocation for Montgomery County (does not have transit service): \$87,746.

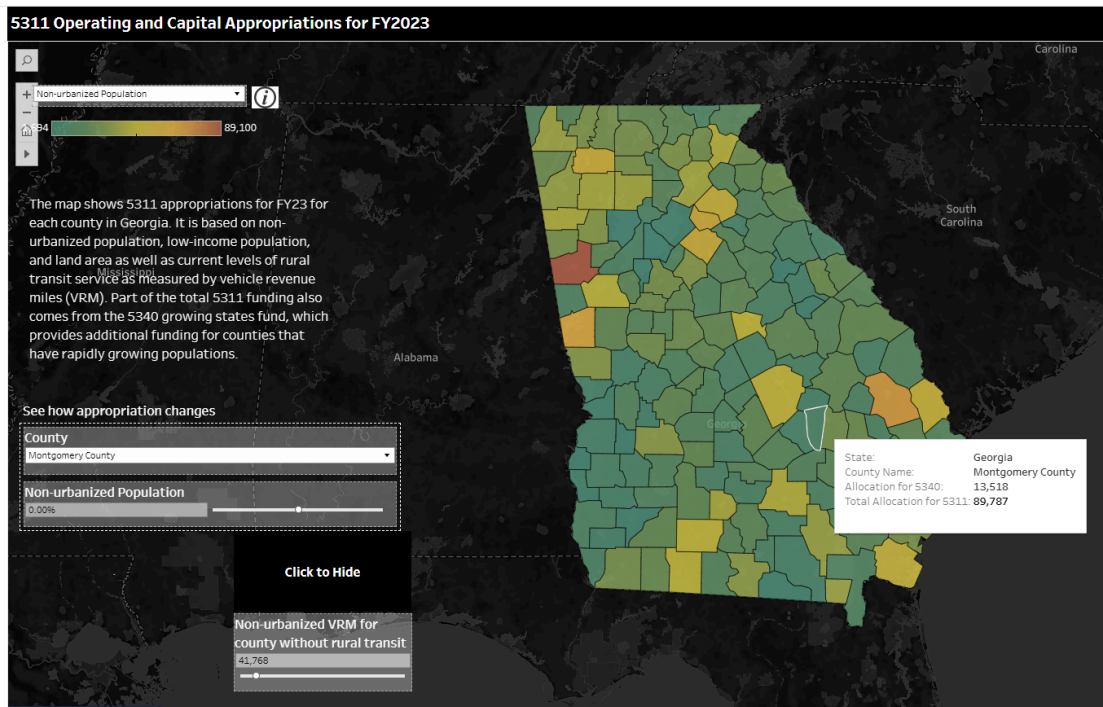

Figure 8. Map. Example sensitivity analysis of § 5311 funding allocation for Montgomery County: \$89,797.

In summary, the interactive mapping tool provides a dynamic way to explore how federal transit funding allocations under the § 5311 program respond to changes in key inputs such as rural population and VRM. By allowing users to perform sensitivity analyses for counties with and without existing transit service, the tool supports data-driven planning and decision-making. It highlights the significance of these inputs in determining funding levels, enabling transit planners and policymakers to better anticipate how demographic and service-level changes impact federal appropriations.

TYPICAL COMBINED § 5311 AND § 5340 APPROPRIATION LEVELS FOR COUNTIES IN GEORGIA

The appendix presents estimates for the combined § 5311 and § 5340 appropriations for each county in Georgia for FY23. The average county appropriation was \$194,428, with significant

variation across counties. The minimum appropriation received by a county was \$13,597, whereas the maximum reached \$768,861, with a standard deviation of \$126,448. This variation can be attributed to several factors. Understanding these factors is crucial because they guide how the data should be segmented and analyzed to provide meaningful insights that can help transit providers make informed decisions.

One key point is that there are two primary reasons why a county may receive a small § 5311 appropriation. The first reason is that the county is predominantly rural but has a small land area and/or population. For example, Montgomery County in southeast Georgia has a rural population of less than 10,000 and received an appropriation of about \$87K in FY23. The second reason is that the county is predominantly urban, with only a small rural population. An example of this is DeKalb County, which encompasses much of the Atlanta metro area and has a rural population of fewer than 2,000. DeKalb County received an appropriation of about \$15K in FY23.

With an understanding of the factors influencing whether a county receives § 5311 funding, the next two examples illustrate how GDOT leverages this information to support its decision-making processes.

Business Application 1: Using County-Level Appropriations to Help Ensure Fair and Equitable Funding Allocations

GDOT is responsible for distributing federal transit funds fairly and equitably to rural transit operators in Georgia. County-level estimates play a critical role in supporting this objective by serving as benchmarks for assessing proposed budgets from subrecipients against actual federal appropriations. These estimates were instrumental during GDOT's December 2024 meetings to determine FY26 funding levels for subrecipients, providing valuable insights in several ways.

When a third-party operator provides transit services, county-level estimates help evaluate whether the operator's costs are reasonable, particularly when compared to counties offering similar services in-house. They are also crucial when new transit service is being initiated, as historical data may be unavailable. In such cases, the estimates provide a baseline for assessing transit needs in the proposed service area. Similarly, when expanding transit service into a new county, the estimates offer insight into the expected level of service and potential demand that could be supported by the new service.

Overall, county-level estimates provide GDOT with a data-driven foundation for making informed decisions about transit funding, ensuring that resources are allocated efficiently, equitably, and in alignment with the transportation needs of Georgia's rural communities.

Business Application 2: Using County-Level Appropriations to Help Initiate Discussions with Counties on Offering or Sustaining Rural Transit Service

GDOT has used county-level appropriation information to facilitate discussions with counties about launching new services and forming partnerships with neighboring counties when economies of scale suggest a regional approach would be more sustainable. In particular, when we exclude counties in Georgia that provide urban transit service, we can gain insights into why counties may be struggling to offer rural transit service and develop strategies to help them initiate and/or help them participate in regional systems to help them sustain service.

Specifically, when we exclude the 20 counties in Georgia that provide urban transit service, we observe that smaller counties are generally less likely to offer rural transit service. As shown in table 10, among the 139 counties in this category, the likelihood of providing rural transit service increases with the amount of combined § 5311 and § 5340 appropriations. In FY23, 66 percent of counties receiving less than \$100K in appropriations offered rural transit service, compared to

76 percent of those receiving between \$100K and \$250K, and 87 percent of those receiving more than \$250K.

Table 10. Likelihood of providing rural transit service as a function of combined § 5311 and § 5340 appropriation amount.

| FY23 Combined § 5311 and § 5340 Appropriation | # (%) Counties Without 5311 Transit Service | # (%) Counties With 5311 Transit Service |
|--|--|---|
| < \$100K | 10 (34%) | 19 (66%) |
| [\$100K, \$250K) | 19 (24%) | 60 (76%) |
| ≥ \$250K | 4 (13%) | 27 (87%) |

Note: Table excludes 20 counties that offer 5307 (urban) transit service.

This insight is helpful because it suggests that counties with smaller appropriations may need to join regional systems to gain scales of economy to be successful. The 10 counties in Georgia that have the smallest combined § 5311 and § 5340 (and that do not provide urban transit service) are shown in table 11. Several of these counties—most notably Montgomery and Treutlen—have previously provided § 5311 transit service but were unable to sustain it. Notably, since the publication of our last report in 2020 (Garrow et al., 2020), four counties listed in the appendix—Atkinson, Charlton, Coffee, and Irwin—have launched § 5311 service as part of regional transit systems in part due to GDOT initiating conversations with these counties on their willingness to join a regional system.

Additionally, several counties that have faced challenges providing service independently are planning to collaborate with neighboring counties in FY25. For example, Morgan County assumed transit service responsibilities for the City of Americus (Sumter County), and Dodge County took over service for Telfair County.

Table 11. Counties in Georgia with smallest FY23 appropriation that do not have § 5311 transit service.

| County | FY23 Appropriation |
|---------------|---------------------------|
| Webster | 33,651 |
| Chattahoochee | 38,649 |
| Schley | 48,921 |
| Echols | 53,161 |
| Treutlen | 68,363 |
| Montgomery | 86,988 |
| Marion | 93,660 |
| Lanier | 95,989 |
| Johnson | 97,727 |
| Clinch | 98,988 |

These examples highlight how county-level appropriation estimates are valuable for helping GDOT: (1) identify potential challenges that subrecipients may face in initiating and sustaining rural transit service due to economies of scale and (2) find solutions that often include forming multi-county service areas that provide economies of scale needed to sustain operations.

CHAPTER 4. SUMMARY

This report examined how federal transit funding under the § 5311 and § 5340 programs is allocated to Georgia counties and how these allocations influence transit planning decisions by GDOT. Through detailed modeling, data analysis, and an interactive mapping tool, we provided a transparent and data-driven method for evaluating funding levels based on key inputs, including rural population, low-income population, rural land area, and VRM. This approach supports GDOT's mission of ensuring equitable and efficient allocation of transit funds across Georgia's rural communities.

KEY FINDINGS

Our analysis revealed that rural population remains the most significant driver of § 5311 and § 5340 funding allocations, contributing 88 percent of total funding when combined with the § 5340 program. VRM plays a role, particularly in counties that plan to establish or expand service. The sensitivity analyses conducted through the newly created interactive mapping tool demonstrated how funding levels respond to changes in these key inputs, offering a valuable resource for forecasting and planning.

Case studies of Dooly and Montgomery Counties highlighted the practical implications of our findings. For counties with existing transit service, adjustments in population levels led to significant changes in funding. For counties without service, the tool helped project potential funding levels based on estimated VRM, enabling data-supported discussions about initiating transit operations. These examples underscored the tool's potential to guide decisions on resource allocation, service expansion, and funding sustainability.

POLICY IMPLICATIONS AND RECOMMENDATIONS

1. **Data-Driven Decision-making:** GDOT should continue to integrate county-level funding estimates into its budget planning process. These estimates provide a transparent basis for evaluating subrecipient budgets, ensuring that proposed costs align with federal funding formulas.
2. **Supporting Regional Partnerships:** The findings suggest that smaller counties with limited federal appropriations may benefit from forming regional transit partnerships. Counties such as Montgomery and Treutlen, which faced challenges sustaining independent transit systems, could explore regional collaboration models to achieve economies of scale. GDOT's ongoing engagement with counties on forming multi-county systems is a promising approach that should be expanded.
3. **Funding Forecasting and Planning:** The interactive mapping tool should be maintained and regularly updated as a forecasting resource. Incorporating more recent census data, updated VRM figures, and inflation-adjusted cost projections would further enhance its accuracy and usefulness.
4. **Equitable Resource Allocation:** As the § 5311 and § 5340 programs evolve, GDOT should remain vigilant about changes in federal funding formulas and population trends. Periodic reassessments will ensure that allocations continue to reflect Georgia's transit needs fairly and equitably.

By leveraging data-driven tools and fostering regional collaboration, GDOT can maximize the impact of federal transit funds while ensuring access and mobility for Georgia's rural communities. These steps will strengthen transit systems, promote service sustainability, and support the state's broader transportation goals.

APPENDIX.
SUPPORTING TABLES FOR § 5311 FUNDING ALLOCATIONS
BY COUNTY IN GEORGIA

In this appendix, table 12 reports the breakout of FY23 funding for the rural program for the § 5311 portion, the § 5340 (growing states) portion, and the total combined § 5311 and § 5340 programs for individual counties in Georgia. Counties that belong to regional or multi-county systems are identified in table 13.

Table 12. FY23 § 5311 and § 5340 funding for counties in Georgia.

| | § 5311 only | § 5340 only | § 5311 and § 5340 combined |
|---------------|----------------|----------------|----------------------------------|
| County | FY23 | FY23 | FY23 |
