### TEEL GETS PRESIDENT'S EXECUTIVE INTERCHANGE ASSIGNMENT

Stephen S. Teel has been named a staff engineer for The General Electric Company under the President's Executive Interchange Program that allows federal and industry middle-level managers to work in each other's sector for one year.

Teel is a general engineer for the U.S. Department of Transportation's Urban Mass Transportation Administration (UMTA), Office of Rail Technology.

At General Electric Research and Development Center in Schenectady, New York, Teel will work in the area of energy sciences and operations.

He holds a Bachelor of Science degree in mechanical engineering from Virginia Polytechnic Institute and a Master's degree in engineering administration from George Washington University.

Teel was born in Pensacola, Florida and grew up in Northern Virginia.

The President's Executive Interchange Program was established in 1969. It provides high calibre executives with the opportunity to learn about the opposite sector during the important middle period of their careers. It enables them to see, on a first hand basis, the operation and decision-making process of the opposite sector. It also allows them to bring their talent and experience to bear on the tasks to be accomplished during the interchange year.
