Summary of Dataset

The National Transportation Atlas Databases 2022 is a set of nationwide geographic datasets of transportation facilities, transportation networks, associated infrastructure, and other political and administrative entities. These datasets include spatial information for transportation modal networks and intermodal terminals, as well as the related attribute information for these features. Metadata documentation, as prescribed by the International Organization of Standards, is also provided for each database. The data supports research, analysis, and decision-making across all transportation modes. They are most useful at the national level, but have major applications at regional, State, and local scales throughout the transportation community.

E. Update Log

This [README.md](#) file was originally created on 2025-02-25 by Peyton Tvrdy (0000-0002-9720-4725), Data Management and Data Curation Fellow, National Transportation Library peyton.tvrdy.ctr@dot.gov

2025-02-25: Original file created

2025-07-03: TIGERLine Roads data was separated out into 5 zip files. README and DCAT-US files were updated to reflect this change.
