Project performed in cooperation with the Texas Department of Transportation and the Federal Highway Administration.
Project Title: Wireline ITS Communications Training
URL: http://tti.tamu.edu/documents/5-4969-01-P1

16. Abstract

Texas Department of Transportation (TxDOT) engineers are responsible for the design, evaluation, and implementation of Intelligent Transportation System (ITS) solutions across the entire state. These installations occur with vast differences in requirements, expectations, and constraints. Many deployments require some type of communication system to complete the installation. A design/evaluation methodology and training material have been developed to assist engineers in assessing the available options and understanding the benefits and constraints of potential options. The CD-ROM contains:

- a participant's notebook suitable for classroom use and long-term desk reference,
- a set of slide presentations covering the material in the methodology and participant's notebook, and
- an instructor's notebook with slide notes to assist in teaching the material to new audiences.
