TranStats

Intermodal Transportation Database

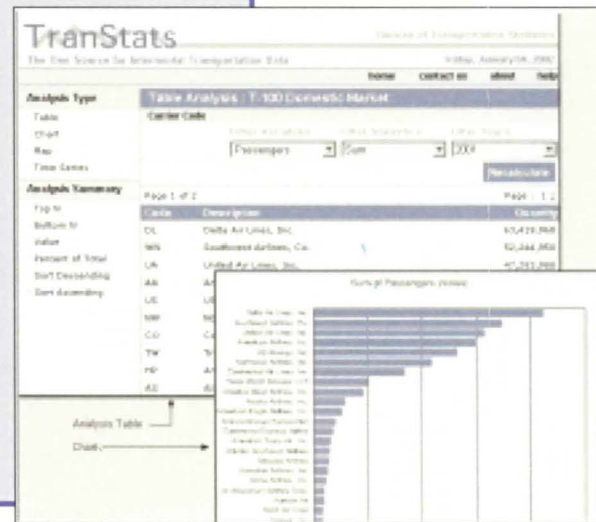

U.S. Department of Transportation
Bureau of Transportation

TranStats is a new web-based application from the Bureau of Transportation Statistics that provides centralized access to a wide variety of intermodal transportation data. Data compiled by the Department of Transportation and other federal agencies are available through an easy-to-use interface that provides services such as selective downloading, interactive analysis, and knowledge management.

Explore TranStats data by transportation mode or subject area, perform keyword searches to access data sets, and get on-line help. Whether pursuing an intensive research project or simply looking for a quick answer, you are never more than a few clicks away from the data you need in TranStats.

TranStats Mapping Center to access pre-defined GIS applications or explore spatial data through interactive analysis features, you are never more than a step away from on-line information discovery.

As the central repository of on-line data provided by the Department of Transportation, TranStats aims to provide the best service and support possible. We welcome your comments and suggestions at answers@bts.gov.

TranStats provides a knowledge base complete with meta data, dynamic lookup tables, and other documentation. Drill-down to table-level details, get information about data updates, and find out about partners who provide data to TranStats. Selectively down-

load data to your PC and quickly import the results into your favorite application.

Using a variety of analytical tools, you can easily perform interactive analysis on line by creating tables and charts—filtering results by selective statistics (e.g., totals, averages, and ranks), database variables, and time period. And results can be downloaded to your PC with just a click of a mouse!

With built-in mapping tools, you can quickly query and display data geographically at the national, state, and county levels. Whether you use the
