Fatalities Requiring Extrication: State Rates per 100,000 Licensed Drivers, 2020 - 2024

Between 2020 and 2024, 15.3 percent (n = 31,448*) of all motor vehicle crash fatalities required extrication (equipment used to remove a person from a vehicle). Of those, nearly two-thirds (65.3%) died either at the scene or during transport, and 34.7 percent reached the hospital alive but died within 30 days. Men accounted for approximately two-thirds (66.6%) of these fatalities compared to one-third (33.4%) for women. The majority (52.6%) of fatalities requiring extrication occurred in rural settings.

*Fatalities omitted for which sex was unknown or not reported, and DOA was unknown.
